

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

## ART-UNION OF LONDON.

THE Subscribers and the Public are informed that, in consequence of the extension of this Society's operations, an OFFICE for the transaction of all business connected with it has been OPENED at No. 72, GREAT RUSSELL-STREET, corner of Bloomsbury-square, where the Clerk attends daily, from Twelve till Five o'clock, to furnish Prospectuses, and afford any additional information that may be required.

As the Subscription Lists will be closed early in the ensuing season, to afford Prizeholders an opportunity of selecting from all the Public Exhibitions of Works of Art, an early subscription is earnestly requested.

Every Subscriber of the past year will receive, for each Guinea subscribed, an impression of a Line Engraving, by Mr. H. C. Shenton, from Mr. Landseer's picture, 'The Tired Huntsman.'

GEORGE GODWIN, Esq., F.R.S., F.S.A. } Hon.  
LEWIS POCOCK, Esq. } Secretaries.

By Order, T. E. JONES, Clerk to the Committee.  
\*.\* Any Gentleman desirous of acting as Provincial Honorary Secretary is invited to communicate with the above.

## ROSS'S PORTRAITS OF HER MAJESTY AND HIS ROYAL HIGHNESS PRINCE ALBERT.

THE admirable Engravings by H. T. RYALL, Esq., from these Portraits of Her Majesty and his Royal Highness Prince Albert—price, Prints, 5s.; Proofs, 10s. 6d.—are published by Colnaghi and Puckle, Printers to the Queen, &c., 23, Cockspur-street, Charing-cross.

Now ready,  
**THE LAST PORTRAIT OF HIS GRACE THE DUKE OF WELLINGTON, K.G., D.C.L.,** as Chancellor of the University of Oxford. Engraved in Mezzotint by G. H. PHILLIPS, Esq., from the very beautiful picture painted by R. P. BRIGGS, Esq., R.A., for the Right Hon. the Earl of Eldon.—Prints, £2 2s.; Proofs, £4 4s.; Proofs, before Letters, £6 6s.  
London: Hodgson and Graves, Printers and Publishers, by Special Appointment, to her Majesty and H.R.H. Prince Albert, 6, Pall Mall.

Preparing for publication,  
**LANDSCAPE, HISTORICAL-LANDSCAPE, AND ARCHITECTURAL ILLUSTRATIONS TO THE WORKS OF SHAKESPEARE.** A Series of Line Engravings from Original Designs by G. F. SARGENT.

PLAN OF THE WORK.—No. I. to appear on the 1st of March, 1841, and to be continued Monthly, in Half-crown Numbers. Each Number to contain five highly-finished Line Engravings, on Steel, of Landscapes, Architectural Restorations, or Interiors. The Landscapes in all cases, where possible, shall be from Drawings made on the spot, or from the best authorities. The Restorations will be carefully compiled from existing Remains, and the Works of ancient Authors. The Interiors will represent the Domestic Architecture of the Ancients, as well as the Halls and Chambers of our own forefathers. In all cases, where judicious, the Historical Figures will be introduced from the Plays, the Costumes, Decorations, or Musical Instruments: in short, whatever object introduced will be strictly true to the time and place represented. A Series of Two Illustrations to each Play will be complete in about Sixteen Numbers. The Work to be printed in such a size as to bind up with any of the editions of Shakespeare now publishing of a larger size than foolscap 8vo.

London: How and Parsons, 132, Fleet-street.

Now ready, 8vo., with Plates, 12s.  
**GOETHE'S THEORY OF COLOURS.**  
Translated from the German, and Edited, with Notes, by CHARLES LOCK EASTLAKE, R.A.  
John Murray, Albemarle-street.

Now ready, dedicated, by permission, to H.R.H. Prince Albert—folio, 25s.  
**A SERIES OF PICTURESQUE VIEWS ON THE RIVER NIGER,** Sketched on the Spot by COMMANDER WILLIAM ALLEN, R.N.  
John Murray, Albemarle-street.

Just published, royal 8vo., price 12s. cloth lettered,  
**THE ART OF ENGRAVING,** being an Historical and distinct Account of the various Styles now practised, with Instructions as to the various modes of operation, treating on Etching, Line, Stipple, Chalk, Aquatint, Mezzotint, Lithography, Zincography, Wood and Medallion Engraving, Electrophotography, and Photography, illustrated with ten specimen Engravings of the various styles. By T. H. FIELDING, Esq.

London: Ackermann and Co., 96, Strand.

## THE ONLY MODERN GENERAL HISTORY OF QUADRUPEDS.

Just published, in demy 8vo., price 21s., cloth.  
**A NATIONAL HISTORY OF BRITISH AND FOREIGN QUADRUPEDS;** containing many modern discoveries, original observations, and numerous anecdotes. By JAMES H. FENNELL. Illustrated with 200 Wood Engravings, designed expressly for the work.  
Joseph Thomas, Finch-lane, Cornhill.

Elegantly Printed, in 1 vol. post 8vo., price 9s. in cloth,  
**GRAY'S ELEGY IN A COUNTRY CHURCHYARD.** Each stanza illustrated with an engraving on wood, from thirty-three original drawings, expressly made for the volume, by the most eminent artists.

A Polyglot Edition of this Volume, with inter-paged Translations in the Greek, Latin, German, Italian, and French Languages, price 12s.  
John Van Voorst, 1, Paternoster-row.

## RYALL'S PORTRAITS OF EMINENT CONSERVATIVES AND STATESMEN.

This day, Part XV., containing  
**PORTRAITS AND MEMOIRS of the Right Hon. VISCOUNT MAIDSTONE, M.P.—G. A. HAMILTON, Esq., M.P.—FITZROY KELLY, Esq., M.P.** Royal folio, India proofs, 21s.; Royal folio, French proofs, 18s.; Imperial quarto, prints, 12s.

Published for the Proprietor, by James Fraser, 215, Regent-street; and George Virtue, 26, Ivy-lane.  
\*.\* Complete sets of Parts I. to XIV. may also be had.

Just published,  
**THE PLUNDERING OF BASING HOUSE.**  
Engraved by J. C. MURRAY, from the splendid and celebrated Painting by CHARLES LANDSEER, A.R.A. Size of the Engraving, 28½ in. by 22½ in. Prints, £3 3s.; Proofs, £5 5s.

This fine historical picture, for the production of which the artist obtained the prize at Liverpool, has been engraved in the best style of art. It illustrates one of the most remarkable incidents of the civil war, and contains portraits of the Marquis of Winchester and his daughter, General Harrison, Hugh Peters, and various troopers of the Parliament.

Published by Mary Parkes (successor to the late Mr. Robert Bowyer), 22, Golden-square.

## BARNABY RUDGE IN MASTER HUMPHREY'S CLOCK.

MESSRS. CHAPMAN AND HALL have the pleasure of announcing, that BARNABY RUDGE will form the next Tale in "MASTER HUMPHREY'S CLOCK." It will commence immediately upon the completion of "The Old Curiosity Shop," which will extend to about the Forty-fifth Number of the Work. Barnaby Rudge, though originally projected with a view to its separate publication in another and much more expensive form, will be, like its predecessor, written by Mr. DICKENS expressly for these pages.—Strand, January 1841.

## THE LATE WAR IN SYRIA.

Now ready, post 8vo., 9s. 6d.

**CAIRO, PETRA, AND DAMASCUS, DESCRIBED.** From Original Notes made during a Tour in those Countries, in 1839. By JOHN G. KINNEAR, Esq., of Glasgow.

"Mr. Kinnear's Narrative is short, pleasant, and interesting, and we find ourselves, when we close his book, in a tolerable state of familiarity with Eastern manners."—Times.

"Mr. Kinnear writes extremely well, and his descriptions proclaim him a good observer."—Examiner.  
John Murray, Albemarle-street.

Just published,

**ILLUSTRATIONS OF CAIRO.** By ROBERT HAY, Esq., of Linplum. Drawn on Stone by J. C. BOURNE, under the superintendence of OWEN B. CARTER, Architect. Printed in the new tinted style, with descriptive notices. Imperial folio, half morocco, £4 4s.

**PROUT'S MICROCOSM.** The Artist's Sketch Book of Groups of Figures, Boats, and other Picturesque Objects; with Prefatory Remarks on the Importance of Figures. By SAMUEL PROUT, F.S.A. Printed in the new tinted style. Imperial 4to. 21s. neatly bound.

**HARDING'S DRAWING-BOOK FOR 1841.** Sketches in Sepia and Chalk, partly original and partly selected, by J. D. HARDING. Imperial 4to. Six Numbers, each 3s.; neatly bound 21s.  
Tilt and Bogue, Fleet-street.

This day is published, by Messrs. LONGMAN, ORME, and Co., London, price 10s.,

**THE SCIENTIFIC AND LITERARY TREASURY;** a New and Popular Encyclopedia of the THE BELLES LETTRES; condensed in form, familiar in style, and copious in information; embracing an extensive range of subjects in Literature, Science, and Art. The whole surrounded with about 3500 illustrative Facts in Science, &c., &c.  
By SAMUEL MAUNDER.

Also, just ready,  
**MAUNDER'S BIOGRAPHICAL TREASURY** (the Third Edition); containing the Lives of Twelve Thousand Eminent Persons, of all ages and nations, from the earliest periods to the death of William IV. With a SUPPLEMENT, from the accession of Queen Victoria to the end of 1840.

And, price 8s. 6d., the Twelfth Edition of  
**MAUNDER'S TREASURY OF KNOWLEDGE.**

**PAGANINI.**—Public opinion having stamped the late Signor Paganini as the greatest violinist that ever lived, Madame TUSSAUD and SON have added a model of him to their collection, which, in addition to numerous novelties, consists of a hundred public characters, and is acknowledged to be the most interesting display of the kind existing.—Open from 11 till 4; and from 7 till 10. Admittance One Shilling.—Bazaar, Baker-street, Portman-square.

**OSLER'S ANEMOMETER at WORK,** at the ROYAL POLYTECHNIC INSTITUTION, where the most ingenious Novelties in Practical Science and the most interesting Works of Art are exhibited in the EVENINGS as well as the MORNINGS. **INGLIS'S TOUR THROUGH NORWAY, SWEDEN, and DENMARK.** Fifth edition, post 8vo., with a Map, price 9s. cloth.

"A most delightful volume."—Literary Gazette.

## THE ART-UNION.

LONDON, JANUARY 15, 1841.

THE TREATMENT OF PICTURES  
OF FANCY SUBJECTS, AND FAMILIAR LIFE.

In a former number of the ART-UNION we endeavoured to define the leading features, and character of the historical or grand style of art; in this we shall attempt to explain, as briefly as possible, the best mode of treating subjects of familiar life—a class of works which come more within the vortex of an English fire-side than any other, and has, therefore, met with greater encouragement. But though the subjects may be national, and peculiarly our own, yet the principles upon which the various works are most successfully conducted, are borrowed entirely from the contemplation of the best pictures of the Dutch school: for as it is to the eye alone that the works of this school are addressed, we naturally find the most effective mode of gratifying this sense; though often to the exclusion of every other requisite in art. Reynolds observes, “A market woman with a hare in her hand, a man blowing a trumpet, or a boy blowing bubbles, a view of the inside or outside of a church, are the subjects of some of their most valuable pictures; but there is still (he adds) entertainment even in such pictures, however uninteresting their subjects; there is some pleasure in the contemplation of the truth of the imitation. But to a painter they afford likewise instruction in his profession; here he may learn the art of colouring and composition, a skilful management of light and shade, and indeed, all the mechanical parts of the art, as well as in any other school whatever. The same skill which is practised by Rubens and Titian in their large works is here exhibited, though on a smaller scale. Painters should go to the Dutch school to learn the art of painting, as they go to a grammar school to learn languages.” But if a constant contemplation of their works is of advantage to all painters, to those who paint familiar subjects, they are the sole groundwork and only sure test of their future progress: for though, in the higher departments of the art, light and shade, colouring, and the mode of handling the colours, are subordinate to the great essentials of action and expression, yet a liquid pencil, a sweetness of tint, and a facility of handling, are indispensable requisites in subjects of familiar life.

Rubens, the greatest master of his pencils that ever existed, may be considered the founder of the Dutch and Flemish schools; for though, both in Germany and in Holland, many artists had arrived at a purity of tint, and transparency of colour, yet “the facile charm that seems to mock at toil,” and liquid touch, which characterize these schools, emanated from his studio. This fascinating charm is to be seen in perfection in the works of Brower, Teniers, the Ostades, and indeed in all the contemporaries of the great original, whose example sheds its influence over all; for we find it also in the luminous landscapes of Cuyp, and the dark recesses of Rembrandt: but as the Dutch school declined, this brilliancy faded to a leaden and heavy mode of colour. Yet even in the works of Rubens this attractive quality is

not always to be perceived: in his earlier pictures he still retains the dryness of Otho Venius, and the harshness of the earlier German masters; as in the earlier works of Raffaele we see the influence of Perugino: it was only when these great artists acquired a facility of execution, and a confidence in their own powers, that their genius developed itself. This luminous transparency Rubens seems to have imbibed in the study of the Venetian pictures, evidently painted over water-colour preparations, the most lucid and brilliant style of painting; and though his works are commenced from the beginning in oil-colour, yet most of them, both of large and small dimensions, are upon pannels prepared with whiting and size, sufficient to resist the oil: this imparts to his pictures great brilliancy, as water-colour reflects and refracts light, while oil absorbs and retains it; independent of which, chalk is indestructible, while flake-white and other oxides return partially to their metallic bases. By examining his sketches and unfinished studies, he appears to have gone over this ground with a vehicle, such as oil and varnish; and while wet drawn in his subjects with dark brown, heightening the lights with white: this not only enables the brush to flow with ease, but gives a liquid softness to the touch. In many of the Dutch school we perceive this ground tinted: in Potter and Wouvermans often of a buff colour; Ostade and Cuyp of a yellow or cane-colour; and in De Hooe and Peter de Laer dull brown. We have been thus particular in the commencement of the work, as the ground influences, in a great degree, its future appearance; as any one may perceive by painting over a chess-board, which in time will reappear, though covered with several coatings. In sketching in the subject, the depth or tone of the colour, which is to form the shadows, must depend on the lightness or darkness of the picture. In the works of Brower and the two Ostades, we find it approaching to burnt sienna, or bone brown; in Potter and Wouvermans burnt sienna and black; while in Teniers it is often little warmer than raw umber; their shadows gradually getting richer and warmer, according to the general depth of their pictures. They seem, however, all to agree in keeping their darks transparent and thin, while the light portions are opaque and solid; and as the tone of their several works vary, so does the vehicle with which they paint: for assuming drying oil and mastic varnish, mixed together, to be the substance used, Cuyp and Teniers have an excess of varnish, which enables their colours to stand up with a fine and sharp edge; while Ostade and Wouvermans use a more oily and unctuous mixture, giving thereby a greater softness to their works. The best mode is to have on the palette a little of different proportions, to be used according as the touch best represents the object to be imitated; but, whatever may be the vehicle used, no one can hope to compete with the cabinet pictures of the Dutch school, unless his colours are ground exceedingly fine; they not only will not give a sharp and precise touch, but they will not spread out under the brush with that enamel appearance which their colours possess: the oil with which they are ground also ought to be fresh and limpid. In large historical works this is of less moment; but in subjects of familiar life, which are generally painted small, and to be viewed close, this is indispensable; and the colours ought not only to be pure of themselves but preserved pure in the working: if too much tortured they invariably become muddy. From Rubens down to the most inferior workman we perceive this quality; and portions of colour, of endless variety, are heightened, and freshened by touches pure from off the palette: nor is their dexterity and freedom of handling more wonderful than their harmony and breadth of hue; for

we seldom see either their dark or light masses broke up by colours of a discordant hue; except when purposely introduced, when it tells with tenfold effect. From having been introduced into this country, either by Vandyke or others of the Flemish school, their colours may be supposed to be nearly the same as we have now in use: and being mostly earths are not liable to change, viz, ultramarine, ivory-black, madder, and dark lake, Vandyke brown, burnt umber, raw umber, burnt sienna, raw sienna, Indian red, light red, brown ochre, yellow ochre, vermilion, Naples yellow, flake-white, with a few glazing colours, such as yellow lake, bone brown, asphaltum, &c.

The fewer colours a painter makes use of the greater command he will have over them, as the eye gets a more intimate knowledge of their properties and capabilities; and though, like the changes of bells, their combination will produce an endless variety of tone, their chemical effects are less liable to destroy the durability of each other. In going into an examination of the various manners, or style of the principal Dutch masters who have excelled as colourists, we ought to commence with the works of Brower, as they possess the most transparent and fascinating tones; great breadth and great truth, both as regards the local colour and touch of the pencil, that the object appears removed on to the canvass, with all the vividness and freshness of nature: but, as his pictures are little known in this country, we must content ourselves with noticing a few of the peculiarities of Teniers, Ostade, and Wouvermans, as we have in England many of their finest productions. Teniers was in small pieces, what both Tintoret and Rubens were in large—the most dexterous manager of his brush: his rapidity does not seem to have allowed him time to torture and render his tints muddy, but has spread them over his pannel fresh and pure from his palette. His colour combines, and is rendered subservient to his effect of light and shade; for instance, if an out-door scene, the blue of his sky is never so strong as to destroy the breadth of his light, but is merely dark enough to define his white and silvery clouds; nor do the lights or colour of his ground or trees, ever interfere with the form or luminous character of his skies: the light, if in darker portions of the picture, is seldom brighter than dull ochre, or if in lighter or more distant, Naples yellow, reduced with a little black, thus keeping the upper and lower part of the picture subservient to each other; for as the blue is of the most delicate tint, so is the green of the trees and ground, seldom beyond what black and ochre would produce; by thus keeping the whole of his colours of the most indefinite tints, he preserves the utmost harmony over the picture; and as his landscapes are little more than back grounds to his figures, it enables him to endow every touch he gives to them with the brilliancy and sharpness of nature. His vehicle assists in enabling him to produce this effect: in the shadows the colour is driven out with little more oil than what is necessary to make them flow, while in the lights each touch stands up with a sharp edge, such as this varnish would produce; it must have dried quick, as we see one touch cross another without disturbing it, and after the masses were laid in, which seems to have been his practice, the high lights and extreme darks are touched in with the greatest precision; we never perceive any pinto or alteration; if the touch did not express the object, he appears to have defined it and shaped it out by using a clean pencil: thus it is that his works are animated with the appearance of nature: his clouds float in air, his trees twitter with the rustling touch of the pencil, while his figures move over his pannel with the vivacity of life. But though his works are of

that character which "takes the reason prisoner" and sets criticism at defiance, they are to be studied with caution; his faults only can be imitated: flat brushstrokes may give his broad touch and sharpness, small sables will give his precision; but without his matchless colour and dexterity of handling, the work will sink down only to a better sort of Birmingham ware.

Though Adrian Ostade and Teniers both had the advantage of the example and instruction of Brower, the one being his fellow student and the other his pupil, yet the pictures of Ostade more closely resemble in tone, the sweetness and brilliancy of their great contemporary. The pictures of Ostade are conducted upon a totally different principle from those of Teniers: in the one we have all the freshness and touch arising from their being painted at once in the other from repeated glazings often revived with fresh touching into, we have a fulness and richness of effect which nothing can surpass; in the interior of his cottages the light wall assumes a brightness of tone, that makes it serve as a mass for the flesh colour of the heads and hands of his figures, while his draperies are toned up to the greatest depth with hot and cold hues, which gives space and air to the whole picture: his works, however dark, are never heavy, but on the contrary, his lakes, blues, or greens, are pronounced with the greatest richness of colour. In contemplating the works of Teniers, you are captivated by the wonderful dexterity of the painter; Ostade never draws your attention from the subject to himself, you perceive his whole aim was to give the best imitation of the object to be represented; in Teniers, from his sharp and defined edges, everything looks newly purchased: in Ostade's pictures, the various articles introduced have all the bluntness and colour of things long in use, they are also in their natural situations; while we can see that the objects in Teniers' compositions are placed for the entire purpose of being painted. Their tastes, as regards colour, are not more dissimilar than they are when the forms are compared; the skies, buildings, figures, and draperies, are full of square and angular shapes in one master, and in the other, we find the same things rendered with a round, blunt style of drawing. Without carrying on the comparison further, we will now notice the manner of Philip Wouwerman, whose works often possess the fresh, and feathery touch of Teniers, with the round, full, and pulpy effect observable in Ostade's pictures; this union of style is produced neither by the repeated glazings of the one, nor the flat washes of the other, but by a judicious mixture of sharp and soft handling: for the better explanation of our meaning, let us take one of his pictures painted on a buff-coloured ground. We perceive the sky laid in with firm colour in the lights which prevents the ground shining through; while in the shadows and half tint of the clouds, a greater quantity of vehicle is made use of, which gives a transparency from the influence of the colour of the pannel: he seems then to have heightened the lights and reflections with yellow and red tints, so as to represent the prismatic effects of the light shining through various strata; and while the whole was wet taken ultramarine and white upon the points of a large softener, and thrust it into the colour firmly where the blue of the sky was to be represented, and more gently upon the surface of the clouds, touching in portions with the lightest hand—a clean softener seems then to have been taken to unite the several tints; after which a few touches of light give a precision and shape to the whole: this gives his skies that variety and fullness of effect observable in nature; in parts the appearance of the light shining through, in other portions the appearance of a delicate strata of cool grey floating over the surface; in fact, a

mixture of what is termed glazing, and scumbling without being either; it gives his works also the appearance of the highest finish, as if stippled with the labour of a miniature. Now this mode of treatment is not confined to the sky; but we find it in his animals and figures, ay, even to the smallest face. His vehicle, though not so much charged with varnish as that of Teniers or Cuyp, is less oleaginous than that of Ostade and others; for we find in the transparent handling of his foregrounds, it is capable of defining single blades of grass: in works of this class, the vehicle with which the colours are mixed is of as much consequence as the fineness of the colours themselves; it is this that enables the artist to give the touch that best expresses the object; it is this which gives the colours their beauty and transparency, by keeping the particles separate from each other; and, independent of giving that full, juicy effect, it preserves them from the action of the atmosphere. Without a mixture of this kind, a work, even though often painted over, will in time become as flat, and opaque as the wall of a room, in place of every year becoming more transparent and finished in its effect, from the repeated touching and tints shining through each other. Without going further into this department of the subject, we have said sufficient to enable any one to investigate the works of Metz, Terburgh, or others of the Dutch school, the only school to learn this branch of the art; "and by a close examination of their works," Reynolds observes, "an artist may, in a few hours, make himself master of the principles on which they wrought, which cost them whole ages, and perhaps the experience of ages to ascertain." These few observations, however necessary to be known, can only assist the artist in the mechanical part of the subject, the mental part must be his own work, drawn from his observation of nature, and knowledge of the human mind; and here the English artist has a much more difficult task to perform; the Dutch pictures seldom embrace the varieties of action or expression, but are confined to brawls, merry-meetings, figures smoking, or playing at games of tric-trac; and where, if the general character is given, the colour or handling is never disturbed, by endeavouring to give a more intricate or correct definition of the passions; neither do their figures require to occupy that situation which a dramatic story, or a complicated composition demands, but merely serve the purposes of an effect of light and shade, or a beautiful combination of colour. The inimitable works of Hogarth have taught the English taste to be much more fastidious, by showing the extent to which this department is capable of being carried; and the invention is not only to be kept on the stretch, for a variety of character, but every incident that can illustrate and render the story effective. However appalling this combination may be to the young painter of subjects of familiar life, the works of Wilkie not only demonstrate the capability, but exemplify the best mode of uniting the dramatic invention of Hogarth, with the rich colouring and delicate handling of Ostade and Teniers: he is more simple in his arrangement and plan of composition than Hogarth, while his expression is more refined, and his incidents higher wrought; such, for instance, as in the 'Distraining for Rent,' where the boy draws the attention of his father, absorbed in the ruin which surrounds him, to the mother swooning, with her child slipping from her lap; or the woman in the picture of the 'Chelsea Pensioners,' who, stretching over the gazette of the battle, scans the list of the killed with a countenance of wild affliction, that proclaims the crying babe in her arms an orphan: these are the incidents that ennoble a work, and place it on a level with the great productions of the Italian school. Neither are the

accessories which embellish and illustrate his story less attractive than those of the best Dutch masters, but are given with all the finesse and beauty of colour, which theirs possess.—Since the appearance of the 'Village Politicians,' in 1805, the English school has made greater advances in this department of the art; and the invention and composition of the 'Rent Day,' with the admirable mode in which the whole story is told from beginning to end, is sufficient of itself to form a school of subjects in familiar life. It is not our usual practice to bring forward examples from living artists; but as this painter has in some measure gone into a larger, and higher style of art, we consider as if a vacancy was left in this class of subjects: we can only, therefore, recommend the student to endeavour to fill it up, but which can only be done by subjecting a strength of intellect to a life of laborious study.

#### FOREIGN ART.

ITALY.—ROME.—At the exhibition of the *Società degli Amatori e cultori delle belle Arti*, similar in many respects to our own British Institution, there were many pictures of real merit. Those which were the objects of most general attraction were two pictures by a very young Florentine artist, Benedetto Servolino. One represents an historical fact, called 'The Daughter of the Bardi,' the other 'Cola di Rienzi triumphant in the Campidoglio.' These pictures are painted with good taste and truth, and a great fervour of invention; but the colouring is somewhat deficient in brilliancy. There is, however, that in the young Servolino's works which gives promise that he will become a great artist. His most powerful rival is Cesare Masini, a young Bolognese artist, who is also a good poet, particularly in the humorous style of Salvator Rosa; and has adopted his favourite motto "*Pinger per gloria e poetar per gioco*." He exhibits many pictures full of spirit and talent—'The Death of Carrara,' 'Dante Ambassador of the Florentine Republic to the Pope Boniface VIII.,' and a splendid picture of 'Petrarch near the Certosa di Monterivo, hearing News of Lelius from Roman Pilgrim Girls.' The style of this young artist is a happy mixture of that of Dominichino and Guido.

FLORENCE.—The celebrated sculptor Bertolini exhibits in his studio a very charming statue in marble, called 'Resignation'; it is executed for an amateur in London. It is elegant in invention and pure in style. This artist, from the admiration one of his works excited in Paris, has received from Louis Philippe the Cross of the Legion of Honour.

PISA.—Professor G. Rosini having dedicated to Louis Philippe his important work, entitled '*Storia della Pittura Italiana esposta co' Monumenti*' (history of art in Italy illustrated by monuments), to which we hereafter mean to refer, has received also the decoration of the Legion of Honour.

BOLOGNA.—The last exhibition was very rich in number of works, in variety and in excellence. G. Piatti, a Florentine, has received the first prize for his picture, 'A Scene of the Deluge'; it is sublime in conception, excellent in drawing, but rather weak in colouring. Ottavio Campedelli exhibited four glorious landscapes, really worthy of the most classic authors of the old happier epoch.

FRANCE.—PARIS.—M. Ingres, Director of the French Academy of Fine Arts at Rome, has sent to Paris a drawing, intended to serve as a model for the tomb of Napoleon. The highest praise is bestowed on the grandeur and severe simplicity of the design. M. Ingres is expected at Paris from Rome in a very short time. He is succeeded in the Presidency of the French Academy at Rome by M. Schnetz.

M. Viardot, a very learned writer, has published his book, entitled "*Notices sur les principaux Peintres de l'Espagne*." It is valuable in many respects; and we trust the quantity of interesting matter here collected on the history of painting in Spain may excite amateurs to a deeper study of the Spanish schools generally so little

known. We may, perhaps, devote a future article to this subject, more particularly as regards the genius of art in Spain. The same author has published an elegant little book on the genius of art in Italy, which he intends as an introduction to a great work speedily to be printed, to be entitled "*Histoire de la Peinture en Italie*." The introduction is an agreeable work, though it contains more recollections of other authors than new or original observations; we should desire more of that critical philosophy so essential in an author of the present day, who would treat of the Fine Arts. We trust, in his great work, M. Viardot will escape the error of being led, like M. de Rio, M. de Somherand, and some other clever writers on art, into the ethereal disquisitions and metaphysical abstractions of the German taste, as well as, that with his real talent, he may not deserve the epigram of Voltaire for the tomb of some one addicted to making use of the thoughts of others—

"Ici repose \*\*\*\*\* quand il vivait,  
Il compilait, compilait, compilait."

When we have named the works published on the theory, history, and intellectual progress of art in France, little remains to be said, for few are the productions of a high order which are the fruit of the real practice of art in the present day.

Among the decorations of every description which were executed by order of the French Government for the funeral of Napoleon, it seems that only two statues were really considered excellent. The first by Bosio, a model for a bronze statue representing the Emperor in the imperial robes; it is colossal, beautiful in conception and in the ensemble. The attitude is simple, and the countenance majestic: connoisseurs admire the purity of the style and the good taste of the draperies. This grand work is to be executed by order of Government, and it will be placed on some public monument. The other statue, which has pleased the critics, is by Du Seigneur; it is of smaller proportions than the last named, though also larger than life: it represents Marshal Jourdan. The strong resemblance and noble countenance of the warrior, together with the general excellence of the work, made such an impression on the old comrades of the marshal, that a deputation of them presented themselves to M. Du Seigneur to request he would execute a reduced cast of his work, adapted to salons; which, till the decision of Government as to his work was known, M. Du Seigneur was obliged to decline.

Of the immense number of almanacs, keepsakes, and illustrated works, which being *bouton* to present at this season, are published in Paris, we shall name but one, the most elegant for its splendid illustrations: it is a new translation, or rather the old one with corrections and notes, by M. Jules Janin, of "*Sterne's Sentimental Journey*." The *Frisé* literary world of Paris greatly praise this translation of our Yorick. We shall only remark on the illustrations, which are really exquisite, full of originality, nature, and fancy. They are from the celebrated pencils of Messrs. Johannot and Jaques.

DENMARK.—COPENHAGEN.—It is certainly not the first time we have noticed the recent labours of Thorwaldsen; but the fertility of his genius and his industry are so great, that many sheets might be filled with even a short notice of the works he has executed in the course of the last year: we shall merely name some of them: 'Christ teaching young Children,' a bas relief; Model of a bas relief of 'Christ on the way to Golgotha,' 36 feet in length, and 3 feet in height; Medallion of 'Perseus and Andromeda'; Model of a 'Kneeling Angel,' intended for a sepulchral monument at Lubeck; Model in bas relief of 'Christ's Entry into Jerusalem'; 'Christ in Emmaus,' bas relief, for an altar in a church in the barony of Stampenberg; 'The Genius of Years'; 'Diana, to whom Jupiter indicates the life of a Virgin and Huntress'; 'Love adorning the Goddess of Truth'; 'Love and Hymen'; 'Fawn and Bacchante Dancing,' bas reliefs; Model for the reverse of a Medal for the commemoration of the commencement of the reign and marriage of Christian VIII; two statues of Goethe. Thorwaldsen is superintending the execution of several of the models above-mentioned, especially the two immense bas reliefs for the *Frauenkirsche*. 'Christ's Entry into Jerusalem' is in the studio of Freund; it is 72 feet in length by 6 feet in height. 'The Passage to Golgotha' is in Thorwaldsen's own studio; it is 108 feet

in length, and 9 feet in height, probably the largest bas relief executed in modern times. In both these works the pupils of Thorwaldsen are employed, carefully superintended by himself. At this moment he is employed on the model for a bronze statue of Christian IV., to be placed in the cathedral of Roeskilde. We have not included in this list several busts executed by Thorwaldsen this year.

GERMANY.—VIENNA.—At the close of the exhibition here this year, about two-thirds of the pictures, that is, about five hundred, remained unsold; these were sent to Peste, where thirty-five pictures were chosen and disposed of by lot. The Hungarians showed much taste in the selection. From the exhibition at Peste, the unpurchased pictures were sent to Trieste; and when the exhibition there closed, they were sent to Lemberg, where an exhibition also was opened.

PRUSSIA.—BERLIN.—Professor Rauch has brought from St. Petersburg, a number of plaster casts of urns and various gold ornaments, found recently in digging near Cherson, in the Crimea. The invention, design, and execution, all betray a Grecian origin; a medallion of Minerva, and a group of warriors on an urn, recall the grand style of Phidias; and another group appear the work of some nearly allied school. But nothing is more remarkable than finding these treasures of Grecian art, as it were, in the very camp of the Scythians.

SCHINKEL, the great architect of Berlin, is, we regret to learn on his death bed; perhaps he is now no more. His published works are well-known to English professional men, and he embellished the city with some of its finest architecture.

RUSSIA.—ST. PETERSBURG.—Of the buildings in progress by order of government this year, three are remarkable: The Isaac's Church; the palace of the Grand Duchess Maria Nicolaina; and the new building at the 'Hermitage.' The Isaac's Church, it is expected, will be finished, and the consecration will take place this summer; the palace of the Grand Duchess has reached the second floor; and the façade of the old Hermitage is taken away. The whole immense collection at the Hermitage, containing paintings of every epoch and of every school, are placed under the care of M. Brioschi, to be cleaned, exactly classified and arranged in a gallery under his superintendence. To this collection are to be added the pictures which were in the celebrated imperial residence of Petershoff, built by Peter the Great; memorable on many accounts, and amongst these for the fate of its architect—an anecdote which may not be uninteresting to our readers. The cause is not known, but it is certain that Menzikoff, the first minister of the Czar, became the enemy of Le Blond, the architect employed in building the Castle of Petershoff, and tried to injure him in the opinion of Peter by every means in his power. Peter discovered that Le Blond was unjustly accused, and got into a passion on one occasion, and gave Menzikoff a beating, as was his custom in such cases. At last Menzikoff found an opportunity to ruin the poor artist. Le Blond, in ordering some alteration in the garden, was obliged to cut away some branches of the trees. Menzikoff went to the Emperor, and told him that Le Blond was cutting down the fine plantation which he prized so much. The Emperor saw the ladder placed against the trees, and some branches on the ground, and at the moment meeting Le Blond, he gave him some of the customary discipline of his stick. The unfortunate artist, deeply wounded by such treatment, became ill. Peter discovered his error immediately, and sent to make an apology to Le Blond, but it came too late; the wounds of the body were healed, but the wound of the spirit could not be cured, and in a little time Le Blond was dead.

The Castle of Petershoff is celebrated for its magnificent saloon of the throne, 78 feet by 44. There are the portraits of Peter I., Anne, Elizabeth, and Catherine II. Catherine is dressed as she was when she made her triumphal entry into St. Petersburg, the day before the revolution which placed her on the throne, in the uniform of the Guards, a branch of oak on her head, a sword in her hand, and riding a white horse. Here also are pictures representing the victories of Orloff in the Archipelago.

#### PROPOSAL FOR ESTABLISHING A BRITISH ASSOCIATION FOR THE ADVANCEMENT OF THE FINE ARTS.

A knowledge, and consequent due appreciation, of the fine arts,—the arts which purify and ennoble,—are now observable amongst much larger masses of persons in the metropolitan cities of the United Kingdom, than was the case twenty years ago; and must inevitably go on to augment in a greatly multiplied ratio, as every step gained becomes the means of further advances. In the provinces, too, where there are fewer "appliances and means to boot," the attention of the people to the importance of the fine arts as civilizing agents, and as tending to promote the general good and therefore the general happiness, has visibly increased, and has manifested itself in more than one good result. Still there is a wide field here open for exertion; and so undeniably important is the object to be attained, so vast is the good that would result from spreading a taste for the fine arts throughout the country, and inculcating a love of the beautiful, that no scheme of operations could be too extensive, which should propose to effect it.

Experience shows the advantages which have resulted from the establishment of the "British Association for the Promotion of Science," not chiefly to science *per se*, although these have been great and manifold, but to the people generally: attention has been awakened in the minds of thousands to subjects before unthought of; a spirit of inquiry has been induced; and whole towns inoculated with an admiration of knowledge, and a determination to pursue it, to the exclusion of demoralizing sources of excitement, until then indulged in. Why, then, might there not be formed an association for the encouragement of ART, which, like this, should meet annually at a different town in England, Ireland, or Scotland, and at which meeting painting, poetry, sculpture, architecture, &c., &c., in all their varieties, and with all their ramifications, should form the subjects for the consideration of the different sections. A large and important exhibition of works of art might be collected, and an Art-Union arranged so as to secure the sale of a certain number of them, and thus to ensure the assistance of the most eminent artists, by rendering the society directly as well as indirectly advantageous to them. A small subscription (say of one pound) would constitute a member of the association for the year, the aggregate of which, after deducting the expenses necessarily incurred, would probably enable the committee (which should be partly local, partly general) to offer prizes for competition in the higher branches of the various arts, and vote sums for the encouragement of any desirable object, in connexion therewith; such, for example, as for the prosecution of experiments in the preparation of colours, or for the purchase of particular pictures worthy of national regard.

During the meeting the various local collections would be thrown open to inspection; conversazioni would be held; and other means adopted to bring men into contact with each other, on one common ground. One of the first points to be achieved by the united sections would be, to obtain an able and correct report of the progress of Art in England, Ireland, and Scotland, for the last fifty years—a task to be fulfilled satisfactorily only by the joint co-operation of men in all parts of the country. This report would afterwards be continued from year to year, under its various heads, and could not fail to prove a work of the highest interest and value. It is not here attempted, however, to point out what *could* be done by a society organized on the footing suggested: its power of effecting much good must be apparent to all, and needs hardly to be insisted on. The writer is contented simply, but with great earnestness and but one object,—namely, strong desire to serve the cause of Art (the cause of morality and public good), to state the proposition, in the hope that others of more ability, influence, and leisure, may view it as it has appeared to him; and be induced to carry it into execution, efficiently and forthwith.

GEORGE GODWIN, Jun.

Pelham Crescent, Brompton, Jan. 1841.

[We willingly give insertion to Mr. Godwin's suggestion, which we think worthy of attentive consideration; although we are by no means sanguine as to the result.—Ed.]

## WORKS IN PROGRESS.

The Engravers, as well as the Painters, are busily preparing for the approaching "season;" and among the publishers' announcements of "forthcoming works," there are several of high value and importance. So many matters, this month, press upon our attention, that we can do little more than give a list of those that are likely to occupy prominent places; we shall, however, as occasion serves, notice them at greater length.

From the establishment of Messrs. Hodgson and GRAVES, one of the earliest prints to be issued is that which all lovers of Fine Art have been long anticipating with eager anxiety—"Highland Drovers departing for the South," from the pencil of Edwin Landseer, and the burin of J. H. Watt; it is drawing to a close, and will unquestionably be classed among the most perfect examples of the British School of Art. They announce, also, no fewer than five other works after Landseer—1. 'The Children of the Duke of Sutherland'; 2. 'The Children with Rabbits,' the son and daughter of the Hon. Mr. Bathurst; 3. 'The Portrait of Miss Eliza Peel'; 4. 'The Hawking Party'; and 5. 'The Highland Whiskey Still.' Of the latter there is an admirable etching by Mr. Robert Graves; and to this print we may also allude as certain to be one of the best productions of the English burin. Mr. Burnett's engraving of 'The Trial of Charles the First,' from his own painting, will also be published early; the subject is deeply interesting; it has been treated with the utmost judgment and skill, and we prophecy will be one of the most popular works that has appeared for years. The full length portrait of Prince Albert, by Mr. Patten, too, is in a forward state, having undergone considerable "alterations and improvements" since its appearance in the Royal Academy. 'A Gamekeeper's Hut, in the Highlands,' from a painting by Mr. Sydney Cooper, will also be an interesting acquisition to a numerous class; and of a still higher and more valuable order is 'The Melton Hunt,' which Mr. Humphreys is now about completing. The whole of these are for the approaching season; but their list contains several others, the publication of which will be postponed to a more distant period; the most remarkable of them being 'The Coronation,' which Mr. Ryall is engraving from Hayter's justly celebrated picture. To another print, however, we may refer, as in a very forward state, and we presume to appear early; it is engraving by Mr. F. Bromley, from an admirable and interesting picture by Mr. R. R. M'Lean—"The Missionary to the American Indians"—a worthy theme, and one to which the artist has done ample justice.\*

Mr. MOON announces a host of works of the very highest class, the larger proportion of which are engraving by Mr. Doo, Mr. Robinson, and Mr. Cousins, whose names will be a sufficient guarantee that the productions are to be of great value and importance, and to rank among the foremost publications of the age and country. The one most advanced, though not the best, is of great and general interest—"The Coronation of Queen Victoria," from the painting of the exciting scene by E. T. Parris. We have already described this work; its merits are of a very prominent order; the artist dealt skilfully and judiciously with a difficult subject, introducing so many actual portraits, yet adhering closely to truth; and as a work of Art, it is in all respects creditable to one of the most agreeable and graceful of our English painters. The etching, by Mr. Wagstaff, is, as our readers will readily believe, rich in promise. There can be no doubt of the print becoming a universal favourite, and attaining extensive popularity. Another work, an etching of which we have before us, is from Mr. Cattermole's wonderfully fine drawing of 'Old English Hospitality,'

\* Mr. M'Lean has just completed, also for Messrs. Hodgson and Graves, another work that will be immediately placed in the hands of a skilful engraver. The subject is 'A Covenanters' Marriage' among the mountain recesses of Scotland, during the persecution of the Scottish reformers, when it was more than merely perilous for the minister of the Kirk to perform the sacred ceremony. Mr. M'Lean is familiar with the peculiarities of the country he describes; he has treated this subject very happily; and with due care to the effect the picture will produce as an engraving. Armed peasants surround the youth and his young bride; old and young, the simple child and the hardy mountaineer, are as ready for the death struggle as to do honour to the festival—for the warning voice of one of their sentinels may give them, in a moment, notice to prepare for battle. There is strong truth as well as great beauty in the work of Mr. M'Lean; and we have no doubt it will make one of the most popular prints of modern times.

exhibited two years ago at the Gallery of the Society of Painters in Water Colours. A baron's hall is full of wandering pilgrims, feasting at the board of the good old English gentleman—

"All of the olden time."

It is a fine NATIONAL picture; one that commemorates the brightest point in British character; every episode is made deeply interesting. Of all the works of Mr. Cattermole, this is the one that ought to be multiplied by the engraver. The etching is from the burin of Mr. Egan. But these, although of no inconsiderable promise, are far less important than other works announced by this publisher. We can just now do no more than name a few of them. Of works by E. Landseer, Mr. Moon has several "in progress;" and two after Leslie—one a fine portrait of 'The Duchess of Sutherland,' with her page, in the hall of one of the castles of her lord; the other that famous one of 'Her Majesty receiving the Sacrament,' in praise of which so much has been written and said. Of engravings, after Turner, he announces two or three. Wilkie's picture of 'The First Council,' is advancing; and the 'Columbus,' of which we have seen an etching, will be a beautiful print. The picture of 'Sir David Baird at Seringapatam,' is also progressing. We rejoice to terminate our list by reference to three engravings from paintings by Mr. Eastlake—one of which is nearly finished by Mr. Doo; another on the eve of commencement by Mr. Watt; and a third about to be consigned to the artist most worthy to execute it. The first is the 'Pilgrims arriving in sight of the Holy City,' the second the 'Christ blessing little Children,' and the third, 'The Monks and Peasant Girls'—which formed the gem of the latest exhibition. It is highly creditable to a publisher to undertake works of this magnitude and value; and although a few years ago it might be said of such, they would inevitably

"Fit buyers find, though raw."

We trust that the extent of the circulation of such pure and beautiful productions will evidence that the taste for Art is not only more widely spread, but that it is established on a firmer and truer basis.

Mr. M'LEAN is also commencing the year's campaign with activity and spirit. He announces three prints after pictures by E. Landseer, all from the burin of his brother, T. Landseer. The first is 'Dignity and Impudence,' which our readers will recollect in the British Gallery, two years ago,—a fine blood-hound looking forth from its kennel, while a little sharp saucy terrier is snarling by his side. The second is the picture of a fair lady reclining on a natural couch, surrounded by her pet dogs—a pretty and pleasing composition, the face of the lady being exquisitely beautiful. The third is the one that attracted so much attention in the Royal Academy last year—"Laying down the Law." Mr. M'Lean is also preparing "for immediate publication," a portrait of Queen Adelaide, from a painting by W. C. Ross; and also a print from Mr. Grant's picture of 'Her Majesty Riding, attended by Viscount Melbourne and the Officers of her Household.'

We have filled the space we are this month enabled to devote to this subject; yet we must extend it to notice a charming etching just completed by Mr. Bromley, after a picture by Mr. Alex. Johnstone, on which we commented warmly in the exhibition last year. Mr. Johnstone is, we understand, a young artist—a native of Scotland; his career is more than likely to be honourable to his country and the Arts. The subject of this print, about to be published by Messrs. WELSH and GWYNNE, is from "The Gentle Shepherd;" the shepherd is leaning on a style, beside a hedge, while the "bra lassie" is unconscious that her lover watches her, "linkin o'er the lea."

"I saw my Meg, but Meggy saw na me."

It is conceived in the happiest spirit, the artist having precisely hit the medium between coarseness in depicting rustic life and character, and that refinement which is unbecoming and unnatural.

We must next month continue our list of "Works in Progress"—it is matter of congratulation that, although nearly a hundred engravings are announced to appear during the year, they are, with scarcely an exception, from works of undoubted merit; affording satisfactory evidence that, though the public may purchase productions of a good class, they will not buy those which are of a base, or even inferior, order.

The publishers are, as they ought to be, keen-scented; and in thus selecting for multiplication, only pictures of a high class—among them many purely historical—they hold out to British artists at once a warning and an encouragement.

FORGERIES  
OF  
PICTURES.

The following question having been put to us by a distinguished artist, we submitted it to two able and experienced lawyers, whose "Opinions" we think it right to publish. The case is one of very great importance to the profession generally.

"Are there any means that can be employed to stop the copying of pictures, and selling them for originals? a practice at present resorted to, in a wholesale way, by A. B. He is now having a picture of mine copied, which he bought of me at Suffolk-street; and also a picture by Mr. —. I should be much obliged if you would answer me this question."

Answer 1.—I think that A. B. has a right to make and sell copies as copies, without restriction; that if he were to *warrant* the copies to be originals, or even to sell them under a *representation* that they were originals, knowing them to be copies, the *purchaser* might maintain an action against him, in the former case on the warranty, and in the latter for the deceit. See *Lomi v. Tucker*, 4 Car. & P. 15; *Power v. Barham*, 7 Car. & P. 356; *Jendwine v. Slade*, 2 Esp. 573; and *Hill v. Gray*, 1 Stark, 434; that if he were to warrant, or even represent the copies to be originals, and sell them as such, and such copies were so far *inferior* to the original as to bring the artist into disrepute, the *artist* might maintain a special action on the case. See *Archbold v. Sweet*, 5 Car. & P. 219; *1 M. & Rob. 162*. S. C.; but if the copies were not such as would bring the artist into disrepute, he is, I think, without *legal* remedy, unless he can show that he has actually sustained some special (i.e. particular) damage by the sale thereof, though it is possible a court of equity might be induced to interfere in his behalf. But see *Blofield v. Payne*, 4 B. & Adol. 410; *Sykes v. Sykes*, 3 B. & P. 451; and *1 B. & Adol. 425*.

Answer 2.—The books are full of cases where relief has been afforded for the invasion of a *continuing* claim to remuneration, for the productions of individual skill or ingenuity; but in all these cases the ground of compensation has been the *past*, not future creations of genius or ability. The author who has disposed of the copyright of his work, stands in precisely the same situation as the painter who has sold his picture; his interest in that individual production of his art is entirely gone; he can have no pretension to exercise control over it in the hands of the purchaser; the latter is justified in reproducing it in every variety of form, whether by engraving or copy; and he can never become answerable to the law, so long as he shall not deal with the work in which he has acquired an absolute interest, in such manner as to depreciate the *future* productions of the artist. Two conditions, however, must combine, in order to constitute such offence as would entitle the latter to compensation, viz. the pictures sold must be productions of a character so inferior, that they may be reasonably looked upon as calculated to injure his professional reputation; for the mere forgery of the name to copies in no way, or but little inferior to the original, though contrary to good faith, would be but a *damnum sine injuria*, a case in which the damage, if any, would be too remote to be appreciable by a jury.

[It thus appears that the artist has, strictly speaking, no legal remedy for the infliction of a very serious injury; and that the swindler may escape scot free, unless the purchaser is informed of the fraud, and resolves to punish him. Artists must, therefore, first, be careful not to dispose of pictures to parties suspected of so gross a fraud; and, next, endeavour to ascertain to whom a forged picture has been sold—any gentleman of honourable feelings would, upon making the discovery, fight the artist's battle for him. Again, if an artist ascertain to a certainty that a copy of his picture has been made, and has reason to believe with a view to sale, let him inform us of the fact, that we may communicate it to those who are likely to be buyers. We must, of course, take care to avoid the libel law; but, at the same time, we shall use every effort to expose the culprit.]

## CORRESPONDENCE.

## THE PRIZES AT THE BRITISH INSTITUTION.

SIR,—Never was there a more evident truism than that in your last number, which introduces the subject of "the Prizes at the British Institution" as one of *very vital importance*.

The professed object and intentions of this body—the high character it has attained—together with the great names that compose its list of governors and directors—clothe all its acts with an importance (to the Arts) which belongs not to any other institution in the kingdom. Whatever it does should, therefore, be the result of calm consideration, and bear the impress of integrity of purpose, strict impartiality, and high feeling; its Council Chamber should be as a *Hall of Justice for British Artists*; and it is not too much to say, that all its communications with those who are affected by its determinations, should be open, clear, and explicit.

From the number of your dissatisfied correspondents, one might infer that the Institution has fallen short of what was expected from it; but, confining myself to one particular, I would observe, that the announcement as to "the prizes" was not quite what it ought to have been; and must confess that "Tyro, No. 6," has some grounds for his appeal to you. The time he has chosen for it is inappropriate, inasmuch as were he to meet immediate attention, it would be too late to be of use for the present occasion; but it should have been altogether unnecessary, as this very subject, you will remember, was brought to the notice of the Directors, and commented on in your number for August last; yet it does not appear that any opportunity was given you of affording the information then sought, which is much to be regretted. A little condescension or attention on this point could neither have lowered any proper dignity, or imposed any great amount of trouble; as it is, every one has been left in the dark, and no one seems to have supposed that the enlightenment asked for must have afforded great satisfaction. En parenthèse—I should wish to hint, that were some of your numerous readers as prompt in stating what "they do know," as you are ready to set an inquiry on foot, we should not remain so long in ignorance on many matters connected with the Fine Arts generally.

Although the Directors have not been so explicit as was desirable, it is to be hoped they will now make the only reparation that lies in their power to those who may have been injured by their remissness, viz., by being attentive and just as regards hanging the Pictures—seeing to this important matter themselves—taking care that no underlings be intrusted with more responsibility than is absolutely necessary—otherwise, as has happened before, two pictures of unequal merit will hang on the same line for sake of uniformity. Some artists may have to complain of their works being too well hung; while others might be unjustly mortified by theirs meeting with the reverse. Neither will the Directors heighten their reputation by permitting a repetition of last year's inconsistency, when, in the face of the printed notice in their own catalogues, to the effect, "that a preference would be shown to pictures painted expressly for the British Institution," it is a notorious fact, that many of the best places were monopolized by works which had been previously exhibited elsewhere. Anything of the nature of favoritism is impolitic, if not worse. There can be no excuse for an old painting having the place it is not entitled to, particularly if to the detriment of a new one. There is no lack of Directors, either in number, talent, or experience, to judge, ay, and I may say, to judge rightly, if they attend to their duty; there need be no errors in judgment, or injustice, either. There was a time (and why not again?) when these were scarce articles in the Gallery. The period I allude to, was when a high-minded, accomplished, and active Director (now no more), set the uncommon example of a public man faithfully performing, personally, to the utmost of his abilities, all the duties of the great trust which he had accepted, and never delegating any of his important powers to others.

If the important duty remaining to be performed be neglected, the good which it is presumed was intended will prove a nullity; an ill-feeling also will be engendered amongst the defeated, from their having been compelled to contend, blindfolded, for honour and reward. On another score, too, it is imperative that the directors be particular, taking for granted they intend to award their prizes in accordance with what might almost be called their former custom, allowing the public to have a voice in the matter after the fol-

lowing fashion, that is by looking to it for a confirmation of their own opinions, in the great attention and praise bestowed upon any particular picture when exhibited. The multitude are not often far out in the true estimation of the merits or demerits of a picture. If then the pictures be unfairly hung, how shall the public judge rightly?

By the way, one of your correspondents, it appears, offers to furnish you with the names of the artists who will receive the four prizes. By all means let him do so, leaving it to your discretion to publish them or not, as the future might render it necessary—he may safely trust his secret with you, seeing that you have but one interest, the advancement and prosperity of British Art. His assertion, apparently so scandalous, should not pass unnoticed—either let it be openly attacked, and proved to be without foundation in truth, or boldly maintained by bringing to light and exposing all the parties in any way connected with the disgraceful transaction. For myself, I cannot believe that any of the Directors, or the true sons of genius, would lend themselves to the work implied by the above offer.

Tyro, No. 6 (evidently fearing it may be so), asks whether the academicians and associates are entitled or likely to contend for the prizes. Yes; will be the answer to both questions, at least with reference to such of them as have not gained any in the good old times. He forgets, perhaps, that many of the dreaded magicians were reared in, and are for life students of, the British Institution; further, I would tell him not to believe that a man's thirst for fame, or desire to be rewarded for his labours, is easily satisfied. But, it is no part of genius, however young, to fear a contest with any one; may the victory be to the strong—better be beaten by a giant, than overcome a pigmy.

In conclusion, I hope to stand excused by the Directors for expressing my conviction, that their laudable intentions in offering the prizes would have been more surely fulfilled had they, instead of adopting their present silent system, made regulations somewhat similar to the following:

One prize to be given to the best painting in each of these four different styles:—Historical—Fancy or Picturesque—Landscape and Cattle—Still Life.—The name of each competitor to be given in by a certain day.—The pictures to be hung side by side on the line.

The contest would then, in my humble opinion, have been on more equal terms; each picture would thus have been judged by one of its kind—perfection in each style would have had its reward. The artist, who was very successful in depicting a piece of still life, would not then have borne the palm from him who was but moderately so when contending with the difficulties of high art in the fields of imagination.—I am, Sir,

Yours truly,

Jan, 4, 1841.

VIGILANS.

SIR,—In the 'ART-UNION' of last month, in the matter of the "British Institution Prizes," you lean to the opinion that R.A.'s and A.R.A.'s are, or should be, considered admissible candidates. I apologize for troubling you; especially as, for once, I differ from you upon the matter. I would first ask you to call to mind, that the members of the academy have the privilege of exhibiting eight pictures upon their own walls, with the assurance before hand that they will be well placed. They are not content with this vast advantage, but continue to send their pictures (which have not been sold at their own establishment) to the British Institution, to be there re-exhibited, although many good new pictures from young and needy painters are rejected to make room for them. Is not even this fair ground for complaint? If I felt inclined, nothing would be easier than to point out cases, which would at once convert the most strenuous advocate for R.A.-ism—but I must not be invidious. I believe, too, that the title of R.A. is not "merely honorary." Are you sure there is not at present a superannuated engraver connected with the establishment who receives a yearly stipend? Are there not several? Do not widows of R.A.'s receive pensions? That, at all events, is not "honorary." The cruelty we "Tyros" complain of is, the very unjust treatment we have hitherto experienced at the British Institution in the hanging of our pictures. Thus, if Mr. Howard, R.A., pleases to send one of his classical pictures, and Mr. Unknown one of his; we'll suppose there is but one good place left—to which artist would that place be given? Why, of course, to the R.A., although Mr. Unknown's picture be as good to the other's tissue. The best places will be taken up by the works of Landseer, Turner, Lee, C. Landseer, Etty, Howard,

Stanfield, MacIise. Then, where will our pictures be placed? On the ground, where Herbert's four beautiful pictures were two years ago; or near the ceiling, where Douglas Cowper's beautiful pictures were for years. We have not even the chance enjoyed by rich amateurs; especially if they happen to be directors.

Was not the "British Institution" founded for "rising artists?" We, certainly, have always understood it was to be the cradle of art, not its grave. If the conduct of the committee is to be of the same nature as formerly, it requires no conjurer to tell who will win the prizes. Number of works there exhibited are known to have been painted at the houses of the directors, and for them; thus violating their own express declaration, viz., "That the pictures must be the bona-fide property of the artist;" and, of course, those directors have sufficient influence to get the works of their pet painters placed where they please—even though a picture of a high class be rejected to make room for it. Many a splendid work of art has thus been ruined—the young artist's heart broken, at seeing his laborious task, of, probably, months duration, turned out to make room for 'Dead Fish,' or 'Rabbits and Cabbages,' because they are the choice subjects of the directors, and painted by the aristocracy of art. Rather than thus tantalize us, why not give the two hundred pounds towards purchasing a picture by some one of the academicians, and then present it to the National Gallery?

A. Z.

## EXHIBITION.

BURFORD'S PANORAMA OF DAMASCUS.—The appearance of this subject at this particular moment is extremely well-timed, since everlasting Damascus has again stirred up an interest in the world, not only by its position in the modern debateable land of the East, but by recent events within its own walls; however, from the Damascus of the political broad sheet, we turn to the Damascus of the canvas. The materials the painter has had to deal with, afford much of what is commonly understood by the term *picturesque*; for although we look down upon a mass of square cube-like habitations, there is yet a desolation in their very roofless compactness,—and being moreover, as it were, "bearded in hoary age," much of the rectangular drawing, here and there so necessarily prevalent, is admirably foiled. The houses of this city, like those of the East, generally are, excepting those of the rich, low and flat roofed; it may, therefore, with its population of 200,000 souls, be supposed to occupy a very extended site. The view, or rather views, have been taken from, perhaps, as favourable a point as could have been selected, considering that within the city there are domes and minarets to which it is necessary to give elevation; and the horizon is bounded by mountains, which must have the effect of height and magnitude. All this is done—we look up to the mountains of Haouran, up to the vast and distant chain of the Anti-Libanus; we raise our eyes to the minarets that tower above us, and yet we have the city at our feet. The general colour of the buildings is of a bright ochrytone, and the artist has chosen a happy hour for making the most of it. The time is evening, and the sun, yet some degrees from the mountain-bound horizon, pours a flood of light upon the city, which enhances into golden value the yellow hues it has already derived from the sun-baked bricks, of which it is built. The effect of sun-beam is well managed as coming well forward, and being highly transparent, inasmuch that distant objects are easily discernible through it; but the finish would have been improved, and more truth imparted by a subdued tone in other parts of the sky, of that azure, which at all hours of the day marks a southern or an eastern sky. These climes have their own sky; and this alone, had he not known it, would have told the spectator before he saw the rest of the picture, that he was about to look upon one of the oldest places of the old world. The palm-trees, too, which stud the place here and there, rearing their heads against the sky, hold the same language, and lower down the complexions, like that of the nut-brown maid associated with the Arab mantel and the Turkish costume, bespeak at once a locality, though not perhaps a name. Upon the whole, we consider it one of Mr. Burford's happiest efforts—the most interesting picture he has ever exhibited.

## VARIETIES.

**THE BRITISH INSTITUTION.**—The works intended for the approaching exhibition, which will probably be opened the first Monday in February, were received on the 11th and 12th of January. Contributions have been, as we anticipated, numerous beyond precedent: we understand the directors will be compelled to reject full as many as they can hang. We may be certain, therefore, that the collection will be excellent: indeed, we have a right to assume, that the gallery will not contain a single bad picture. The public and the artists, generally, will look forward to the exhibition with much anxiety—some with entire confidence, some with great suspicion. We trust there will be little or no reason for dissatisfaction. The directors will no doubt bear in mind that they have a most difficult duty to discharge; they will of course admit few pictures of very large size, and none that have already obtained elsewhere the advantage to be derived from inspection and examination: they will, we make no question, give as far as they can, every artist of merit his fair chance, and not accept three or four, or even two works, from one painter, if by so doing they will be obliged to reject those of another altogether. In short, the directors will remember they are the guardians of British Art—of all British artists, but of the younger British artists more especially. On the subject of the "Prizes," we refer our readers to two letters printed in another part of our Journal: we have selected them from a mass of correspondence commenting on the matter.

**BAILEY'S STATUE OF SIR RICHARD BOURKE.**—The bronze statue of General Sir Richard Bourke, cast from a model by Mr. Bailey, has been exhibited in the studio of that gentleman previously to its shipment for Sidney; the inhabitants of which place having subscribed for the execution and erection of this testimonial of respect to their late governor, the above-named officer. The statue is of course pedestrian, and will stand upon a pedestal, &c., fourteen feet in height, formed of Aberdeen granite, highly polished, and bearing a suitable inscription. The work has been represented as colossal; but it did not appear to us so much to exceed the heroic standard. The likeness is said to be perfect; certainly the features in *grande* are a faithful transcription from the original bust, for which the veteran sat, even to the scar on the right side of the mouth, the cicatrice of a wound received during the late French war. The figure is erect, and stands in an easy position, the left hand resting on the hilt of a sheathed sword, and the right planted on the right side. The statue is necessarily supported by a mass of metal behind, which is brought forward as drapery falling from the shoulders, as the effective and well-arranged folds of a military cloak. A work like this, not intended for a proximate and confined view, such as can be obtained in a studio, however extensive will, if judiciously placed, do ample honour to the accomplished sculptor, when, by a fitting elevation, the lines are subdued and harmonized.

**MR. PARTRIDGE** has completed two portraits of her most gracious Majesty and her royal Consort, which report states to be the most successful, both as likenesses and as works of art, that have been hitherto produced, notwithstanding there have been so many able and eminent competitors for the fame and fortune incident to having such august sitters. We hear, indeed, that the Prince expressed his approbation of the works of Mr. Partridge in the most unqualified terms. The artist has already attained to a high rank in his profession; his reputation is already established; and if these productions are what we have reason to believe they are, his promotion may be considered as certain. The portraits are to be engraved of course: it will be sufficient to say, that one is placed in the hands of Mr. Doo, the other in those of Mr. Robinson.

**MR. BECKFORD'S LANDDOWN TOWER.**—The announcement, that Mr. Beckford was about to dispose of the collection he had formed, at his celebrated tower on Lansdown-hill, Bath, created no little sensation in the artistic and "collecting" world. The reason, it appears, for Mr. Beckford's determination was, the frequent attempts made by burglars to plunder it. It would appear by the result of the sale, that the collection kept there

was much smaller than is generally supposed. The well-known taste of Mr. Beckford renders all that has been in his possession interesting; we, therefore, as the pictures sold are but twenty in number, give a copy of the catalogue:—

**Dietrich:** 'A Landscape, with Figures and Cattle—imitating Elsheimer,' £33. — **Wynants and A. Vander Velde:** 'Landscape, with a distant View of the Rhine,' £62. — **Van Kessel:** 'Landscape, with Birds, &c.'—a superior specimen of the master, £16 16s. — **Van Kessel:** its Companion, £19 12s. — **Canaletti:** 'View in Venice'—exquisitely finished, £58 16s. — **Canaletti:** its Companion—of equal excellence, £92 8s. — **Old Frank:** 'The Temptation of St. Anthony'—a highly curious and amusing Picture, elaborately finished, and heightened with gold, £28 7s. — **Breughel and Rotenhamer:** 'A Repose,' in a beautiful Landscape, £48 6s. — **Patel and Le Sueur:** 'Splendid Landscape, with Ruins of a Temple, surrounded with foliage and pastoral figures; in the foreground the Saviour with the Two Disciples, proceeding to Emmaus,' £67 4s. — **Martin de Vos:** 'Portrait of the Burgomaster Toucher,' £69 6s. — **Martin de Vos:** the Companion Picture—'His Lady seated in a Chair, and gorgeously attired in the fashion of the day'—both these Portraits are of a very distinguished excellence, £92 8s. — **Henry di Blis**—called Civetta: 'Rock Landscape, with St. Jerome kneeling before a Crucifix,' £61 19s. — **Cima di Conegliano:** 'The Virgin,' in a richly-coloured drapery, seated, with the Infant in her lap; in the distance is a View of the Castle of Conegliano, £147. — **Vander Ulft:** 'The Building of Carthage'—an exquisite and highly-finished production of this scarce master, £65 2s. — **Canaletti:** 'View at Venice.' This scene represents a Court within the precincts of the Doge's palace, exhibiting a variety of useful and ornamental articles of furniture exposed for sale.—The masterly grouping of the figures in this picture cannot be sufficiently admired, £256 4s. — **Breughel and Rotenhamer:** 'The Elements, allegorically described in a rich Landscape, full of Flowers, Fruits, Foliage, and all the productions of the four Elements—in Fowls, Fishes, Insects, and Animals, with several classic figures of Nymphs and Cupids.'—There is an inexhaustible variety of subject in this magnificent Picture, £147. — **Melchior Hondekoeter:** 'Poultry,' in a magnificent Landscape—evidently by Both, £111 6s. — **Bonifacio Bembi:** 'The Adoration of the Magi,' in a Venetian Landscape—a most pleasing and finely-coloured specimen of the master, £25 4s. — **Canaletti:** 'View in Venice—St. Mark's Place'—remarkable for firmness of execution, £32 19s. — **Old Franks:** 'Adoration of the Magi,' £13 13s.

**THE LATE GEORGE CHAMBERS.**—Arrangements are in progress to raise, by subscription, a sum of money to make some provision for the widow and children of this amiable gentleman and excellent artist. We sincerely hope the project may be successful; and will contribute to render it so to the best of our ability. As with many professors of art and literature, the sunshine of life was either too brief, or came too late, to enable Mr. Chambers to make provision against the day of rain. Death overtook him when the most wearisome part of a toilsome journey was passed; but too soon to have permitted him to taste the luxury of repose after labour—still less to enjoy the happy consciousness that those who depended upon his exertions for ease and comfort were secured them after he was gone. His early existence was a continued struggle with adversity; and he lived but a short time after he had achieved fame and attained to comparative prosperity. We shall recur to this subject when the plan in contemplation is so far matured as to be effective.

**MR. COCKERELL** commenced his series of lectures on Architecture at the Royal Academy on the 7th inst.; they will extend to six in number. He commenced with an eulogium on the late professors, Sir John Soane and Mr. Wilkins, and expressed the diffidence he felt in occupying the place that had been filled by men of such ability; in continuation, he stated the anxiety he felt that the students in architecture should have every advantage in the pursuit of their studies, and his determination to do his utmost in furnishing them with all the information in his power, while explaining the system of his present lectures. He

then proceeded to show how useful the study of architecture was to the painter, and the necessity of the study of the human figure to the architect; citing the ancient Greeks, and the Italians of the 16th century, in support of his argument. He applauded the system of the French Academy, which instituted six professors to teach the different branches of architecture to the students; in his concluding remarks he seemed to fear that the number of different inventions which had lately come before the public, might be prejudicial to the attention which this important branch of the Fine Arts merited. On the whole, the lecture, though merely introductory, was highly interesting as coming from a professor of very high talent, who has proved by his original works how capable he is of treating his subject; and we look forward with pleasure to his future lectures, for which we understand he has provided at considerable expense very valuable models and drawings for illustration.

**EDWIN LANDSEER** has returned to England from his tour in Germany; and although his health is much improved, we lament to learn that it is by no means restored. His stay during his residence on the Continent was principally at Vienna.

**THE PURCHASE OF HILTON'S PICTURE.**—We may state, on good authority, in reference to the Hilton Picture intended to be purchased for the National Gallery, that the subscriptions have already nearly completed the sum required, and that a final arrangement of the matter will shortly be accomplished. We are anxious to see this admirable work of one of our best painters placed among those few specimens of British Art at present adorning the walls of the Gallery; and we take this opportunity of suggesting, that all those who intend to join the ranks of the subscribers, should forward their subscriptions without delay.

**SCHOOL OF DESIGN.**—A meeting was lately held in Spitalfields, for the purpose of promoting the establishment of a School of Design in that district, as a branch from the Government Institution at Somerset House.

**PICTURES FOR CHURCHES.**—Our report from Liverpool contains one piece of intelligence exceedingly gratifying: we refer to the purchase of Mr. H. T. Townsend's large picture of 'Mary Magdalen at the Sepulchre,' by a clergyman of the established church (the Rev. H. Holmes), with a view to its adoption as an altar-piece for the church of St. Catherine, Upper Tranmere, Liverpool. We rejoice, at this circumstance, for two or three reasons; first, as evidencing a change of feeling, as regards the question whether our sacred edifices should be left with bleak and barren walls, or be fraught with forcible lessons in religion and morality; next, as an encouragement to our artists generally to persevere in attempting the highest efforts of art, and an assurance that there are some, at all events, by whom they will be appreciated; and next, as a worthy and fitting reward to an able and excellent artist, who, though young in the profession, has not been satisfied with that "superiority in mediocrity" which can only content meaner minds. Of Mr. Townsend's picture we have already expressed a very high opinion; it was a lofty and a successful attempt to attain the noblest object of the artist: it would have gained him a reputation anywhere. We are glad to find it will be placed where it will gratify thousands—and instruct thousands.

**THE CITY EXHIBITION.**—The exhibition in the Commercial-road has been closed above a month; we apprehend it has not been very successful, and that in the "East" they are not yet "wise" enough to estimate art. We have heard, however, of the sales of a few pictures; and among them two or three of some note, the principal being the excellent and accurate portrait of an 'Irish Hedge School,' by H. M. Manus, A.R.H.A.

**THORWALDSEN.**—In pursuance of a resolution of the inhabitants of Frankfurt to erect a statue in honour of Goethe, Thorwaldsen was requested to send in a design. In compliance with the requisition he sent in two, both of which have been rejected, and it is now supposed that the execution of the work will be entrusted to Launitz, whose statue of Gutenberg is so much admired.

## THE GLASGOW STATUE.

[The discussion of this subject, still in progress, cannot fail to interest our readers. We therefore gladly insert, from the pen of a correspondent, "some observations on the recent proceedings at Glasgow, in connexion with the proposed employment of a foreign artist, to execute the statue of the Duke of Wellington in that city." If the sub-committee succeed in achieving their purpose—and such a result is still greatly to be feared—there is no knowing where the evil may terminate; for it may have the effect of inducing a belief that Great Britain is really without competent sculptors; and that if a statue is to be erected anywhere, we must import a foreigner to make it worthy of our country: a gross error, and one that proceeds either from the most shameful ignorance, or a wilful and wicked design to prejudice the arts in the estimation of the kingdom. We are bound to keep this matter continually before the public; and shall offer no apology for the length at which we now treat it.]

It is well known that, at former periods, foreign sculptors and painters have visited Britain, in the prosecution of their profession; where they have met with both protection and encouragement. So early as the year 1590, Henry VII. employed the Italian sculptor Torreggiani to decorate his tomb in the Lady Chapel of Westminster Abbey. In speaking of the figures of this tomb, the late John Flaxman observes in his first lecture, that "they have a better proportion, and drawing of the naked (figure) than those of the chapel (which were by British artists); but the figures of the chapel are very superior in natural simplicity and grandeur of character." Here there seems to have been some shadow of reason for the employment of the Italian; although the British sculpture of this, and even of an earlier date, was possessed of very decided merit.

From the time of Henry VIII. to the close of the civil wars, the arts of Painting and Sculpture in Britain, may be said to have been not only checked, but annihilated. The ruling faction in the state, from a detestation of the objects to which these arts had chiefly been applied—namely, the decoration of the sanctuaries of the Catholic faith—proscribed their practice, and persecuted their professors; and the conflicts of contending zealots spread devastation over the face of the land. Thus, when it was desired to commemorate warriors, or statesmen, or sovereigns, artists were sought for from abroad; to whom we are indebted for specimens of sculpture remaining at the present day, of different degrees of merit. Amongst these may be mentioned the very tolerable statues of Charles I. at Charing-cross, and of William III. in Glasgow, and the inferior one of Charles II. in the Parliament-house in Edinburgh. In relation to the art of painting, a nearly similar tale may be told. From 1526 till 1564, Hans Holbein was the only painter, who deserved the name of an artist, in England. He died of the plague, in London, in 1554.

Rubens came to England as the envoy of Philip IV. of Spain, and not as a painter; and was only incidentally employed by Charles I., to paint the ceiling of the Banqueting House in Whitehall. He died Secretary of State in Flanders, in 1640.

Vandyke was naturalized as an Englishman, having married the daughter of the Earl of Gowrie, and died in London, in 1640.

Peter Van der Faes, of Westphalia, who took the name of Lely, was knighted by Charles II.; married an Englishwoman, was naturalized, and died in London, in 1680.

Godfrey Kneller, of Lubec, was knighted by William III., made a baronet by George I., was naturalized, and died in London, in 1723.

John Medina, of Brussels, was also knighted, naturalized, and died in Edinburgh, in 1711.

There were other foreign artists also settled in Britain about the same time; but our object in having been so minute on this point, is to show that, from the dates and circumstances stated,

there is no parallel whatever between the state of art in Britain at the time alluded to, or anything in the employment of these artists which can be urged as a precedent for the employment of foreign artists in Britain at the present day.\* On the contrary, no sooner was Britain restored to some degree of domestic tranquillity, than the English school sprung to life, numbering amongst its pupils the names of Hudson, Hogarth, Reynolds, Gainsborough, Ramsay, Wilson, Allan, Mortimer, Wright, Hamilton, Morland, Hopper, Opie, Barry, Harlow, Riley, Romney, Northcote, Beechey, West, Stothard, Raeburn, Naysmith (father and son), Williams, and Lawrence.† To particularize living artists might seem invidious; but a host continue at the present day, the worthy compeers of their illustrious predecessors. We should not pardon ourselves, were we to omit, at this place, marked allusion to the high character for worth and respectability, for which, almost without exception, the members of the British School of Art have been distinguished. The names of such men as Hogarth, Reynolds, Gainsborough, Northcote, West, Lawrence, Shee, and Chantry, would shed lustre on any rank or profession;—and even amongst those obnoxious to some of the foibles of humanity, there are none who have condescended to "manufacture furniture for the brothel." Can the same be said for the artists of the Continent? Alas, no! From the time of the wretched Tormentus of Amsterdam, whom his fellow-citizens consigned to a death of torture in 1610, down to his imitators of the present day, no inconsiderable portion of the avocation of the artists of the Continent, has been the manufacture of works degrading to the art and disgraceful to the artists.

Having thus far cleared our way, we proceed to the details of the subject more immediately under consideration.

It appears that the sub-committee of the subscribers to the Glasgow Wellington Statue, named to make inquiries relative to the most proper artist to execute the work, accompanied their report on this subject, with a recommendation to the general committee, to employ as the sculptor the Baron Marochetti, of Paris! The member of committee said to have been most instrumental in inducing such a decision, having been Mr. Sheriff Alison, the celebrated and accomplished author of the history of the French Revolution—the character which Mr. Alison most deservedly bears, for private worth and amiability of disposition, for agreeable manners and extensive and varied acquisitions, naturally causing great deference to be paid to his opinion. The recommendation of the sub-committee called forth, however, from Mr. Archibald M'Lellan, one of its members, and the sub-convenor of the general committee, a letter addressed to the Sheriff, stating his reasons for deprecating the employment of a foreign artist, and containing an able and elaborate view of the art of sculpture in ancient and modern times; and in all respects remarkable for force and perspicuity of reasoning, and intimate and accurate knowledge of the subject. That this letter must have proved conclusive in deciding the determination of the people of Glasgow, seems quite reasonable to be supposed; but in opposition to the arguments of Mr. M'Lellan, Mr. Alison forthwith published a lengthy and eloquently written letter, addressed to "the Duke of Hamilton, and the other noblemen and gentlemen composing the sub-committee;" which letter was published in a Glasgow newspaper, prefaced by a most injudicious editorial article, calling upon the citizens of Glasgow implicitly to defer in the affair, of the statue, to the members of the sub-committee (whose names it at the same time published), on the ground of supposed privilege! Mr. M'Lellan was not, however, thus to be put down; and he replied

\* The works of Charles de La Fosse and other foreign artists, who visited Britain about 1640, are many of them possessed of merit. De la Fosse painted the ceilings in Montague House, now the British Museum, and it might be no bad lesson for a young artist to copy some of them before they be finally demolished.

† Henry Fuseli, who became Professor of Painting in the Royal Academy, was a Swiss. His genius was of the first class; but the peculiarities of his powerful and imaginative style, deprived him of that general estimation which his works in many respects deserved.

at considerable length to the arguments of the learned Sheriff in favour of foreign, and in depreciation of British art and artists; as did also several other correspondents of the Glasgow newspapers, in particular the eminent artist, Mr. Graham Gilbert, the well known painter of 'The Love Letter,' who all deprecated, in forcible terms, the conclusion at which the sub-committee had arrived in the selection of Marochetti.

As Mr. Alison's letter can only be viewed as a direct, deliberate, and rather formidable attack upon the artists of Britain, we must be excused if we go somewhat more at length into the consideration of its contents, than either the force or accuracy of his reasonings and statements, may, to many of our readers, seem to demand. In his hostility to British art, the learned Sheriff is, we have no doubt, impelled by perfectly conscientious, although, as we hope to be able to show, most mistaken zeal; and his arguments, from their theoretical and hypothetical character and tendencies, are in the nature of things, when applied to matters of practical art, both fallacious and paradoxical; and indeed, if fairly and legitimately applied, are in themselves antagonistic to the conclusions to which he desires to lead his readers.

Although there is sometimes a difficulty in disentangling ourselves from much of what seems paradoxical in Mr. Alison's reasoning, his object would, upon the whole, appear to be, to demonstrate that we are in error in conceding that preference to Greek sculpture which has induced the most enlightened artists and connoisseurs to assign to it, the highest rank in the world of art; and indeed, to adopt it as the standard of unquestionable excellence. Greek sculpture, we have always considered as being admitted to possess that display of sedate tranquillity indispensable in the really beautiful, in which the exhibition of all violent passion and exertion was prohibited, and in which those admirable and graceful proportions are developed, without which the beautiful cannot exist,—qualities the existence of which in the sculpture of Greece, have led Winkelmann and others to declare, that modern artists have been more or less eminent, as they have attentively studied Grecian models; which species of study Winkelmann in particular maintains to be of superior utility to sculptors to that of nature itself. In contradistinction to Greek sculptures, what does Flaxman say in regard to that of the Romans? "The Roman compositions owe no inspiration to the Muses, urge no claim to the epic or dramatic. They are the mere paragraphs of military gazettes; vulgar in conception, ferocious in sentiment. On the columns and arches the principal objects are mobs of Romans, cased in armour, bearing down unarmed, scattered Germans, Dacians, or Sarmatians; soldiers felling timber, driving piles, building walls, or bridges, carrying rubbish, shouldering battering-rams, killing without mercy, or dragging and binding captives. The forms of their bodies and limbs are interrupted by mail or plate armour, and most of the heads so brutal and savage, as to excite compassion for the barbarians who have fallen into their hands."

Of the Gothic taste in which Mr. Alison's favourite statue by Marochetti is conceived and executed, what is Mr. Flaxman's opinion? In Lecture 8th, we find the following observations:—"The first deluge of various fashions came into Europe with the Crusaders: the princes of the West seem to have vied with each other in motly importations from Constantinople, Antioch, and Damascus." The length at which Mr. Flaxman enters into this part of the subject exceeds our limits, but we may sum up with the following:—

"Shall we not be induced to inquire to what causes can be attributed such an accumulation of absurdities? We may, perhaps, account for them in the spirit of the times—the wars, and their military distinctions, and particularly masquerades; and above all those military and party dissensions, those extensive and violent theological and political contests, which ferment the general mass of society beyond the control of reason and common sense."

On such principles is Gothic sculpture based; and the same has been carried out in the modern German school, which, as Mr. M'Lellan tells us, "originated some five-and-twenty years ago, and which in its school of portraiture exhibits the most

finical attention to costume and individuality." Something is said in one of "the Subscriber's" letters in the *Glasgow Courier*, of a German idea that this modern school owes its inspiration to the lays of the Edda and the Niebelungenlied; but it appears to us that there is not much in this theory, and that the German school at the present day is rather a sort of carving of costume, usually grotesque, and always unsculptural: the portraits are generally those of hideous whiskered and moustached figures, bearing a resemblance to the jaws of those wooden nutcrackers, which, at one time, used to find their way into this country from Switzerland and the Tyrol. It is quite possible that the artists of Germany may be capable of much better things; but such, in the mean time, is the style of sculpture into which the taste of their country has forced them. A really fine statue must either be in a state of nudity or draped, otherwise the form of the body and limbs become interrupted; as is the case with the Roman or Gothic plate-mail, or the scarcely less embarrassing details of modern costume. Flaxman's 'Sir John Moore,' at Glasgow, is a draped figure; the modern uniform, where visible, being softened down to the figure; and the military character being indicated by a massive sword, sufficiently removed from the statue by the position of the left hand and arm, as not to interfere either with the graceful lines, developed by the position of the limbs, or the gravitating flow of the drapery. The defects of the Roman and earlier Gothic sculpture are carried out, or rather greatly exaggerated, in the French school of Louis XIV. Bernini was the principal disciple of this school; and Marochetti holds fast at the present day by all its worst defects. After all, his statue of Philibert Emanuel, which has so tickled the fancy of the good people of the West, is a poor and imperfect thing in its own class of costume carvings. Where, we ask, is the knight's lance? Where is his shield and emblazonings? Where is his horse's armour?—Not a vestige of any of these indispensable knightly accoutrements is to be found in this statue! The vizor too is raised, and the point of the hero's nose projects, it is true; but a mounted knight did not thus in the olden time encounter his opponents! Even in the hall, we are told, that the doughty champions of those days—

"Carved at the meal  
In gauntlets of steel,  
And drank the red wine  
Through the helmet barred."

Another error into which Mr. Alison falls, seems to have arisen from his confounding the two separate styles in sculpture—the Natural and the Ideal. Flaxman defines the Natural style to be "peculiar to humanity," and "the Ideal to spirituality and divinity;" otherwise, it seems difficult to guess at what may be Mr. Alison's meaning in the following passage: "The great desideratum," says the Sheriff, "is to procure a statue which shall combine a faithful likeness of the Duke, as he rode on horseback, with *all the details of dress*, with such *ideal* excellence of design, as may render it an object of interest to future ages, and calculated to elevate the character of British art; many consider these objects as incompatible (amongst others no less an authority than Flaxman, as we shall show); and that the former, as the more important object, requires the selection of a British artist. There never was a more mistaken idea than that *ideal* beauty cannot be combined with historical and individual fidelity of likeness." We shall here omit Mr. Alison's illustrations deduced from painting, and recur to them where more in place, and proceed to what follows: "Marochetti's statue of 'Philibert Emanuel' is admitted by Mr. M'Lellan to exhibit the most accurate and punctilious accuracy in the dress of the knight and war-horse of the olden time" (as already appears; we, however, do not admit that this is the case); "yet is it a noble piece of heroic sculpture, which will be admired as long as it exists, as the embodying of an ideal conception," &c., &c. Mr. Alison then avers that, "the English artists give us reality; but it is the reality of still life frozen into marble!" In answer to all this, we again refer to Flaxman (vide Lecture 7th, page 232): "Busts and statues, portraits of individual persons, were not generally permitted until near the time of the death of Socrates; and as this

practice, once introduced, became popular and extensive under the successors of Alexander the Great, it was an additional stimulus to the study of the human figure in detail, and thus, as the art departed from ideal sublimity, it partook in the peculiarities of nature. It descended to the intelligible, and became a stronger resemblance of the human race." It of course follows, that the farther the departure from the intelligible into the walks of the ideal, the less chance is there of obtaining an accurate portrait—which is precisely what the Sheriff's opponents contend for. How far the adoption of the first resolution, at the meeting of the 20th of November at Glasgow,—viz. "that an absolute identification of the person, features, and expression of the Duke of Wellington, in the prime of his life, in the statue to be erected of his Grace in this city, is expected by the subscribers; and will form its chief value in the eyes of posterity,"—may stand in the way of the employment of a foreign artist, it is now the duty of the sub-committee to determine. Reverting to the cruel assertion of the Sheriff, that the English sculptors give us in their works *the reality of still life frozen into marble*, we must again be permitted to quote Mr. Flaxman in reply. In Lecture 6th, page 178, is the following: "An attention to the materials of sculpture will naturally lead to the description of its legitimate subjects. The grey solemn tints of stone, the beautiful semi-transparent purity of marble, the golden splendour or corroding green of bronze, reject as incongruous all subjects and characters which have not some dignity and elevation. *The awful simplicity of those forms, whose eyes have neither colour nor brilliancy, and whose limbs have not the glow of circulation, strikes the first view of the beholders as beings of a different order from himself.* Angels, spiritual ministers, embodied virtues, departed worthies, the patriot, a general benefactor shining in the splendour of his deeds, or gloomy and consuming memorials of the great in former ages—such subjects distinguish temples, palaces, courts of justice, and the open squares of cities." In short, the Sheriff would appear to misapprehend both the nature of the subjects legitimately fitted for sculpture, and the qualities of the materials out of which the objects of sculpture are necessarily formed; and the only conclusion at which we can arrive is, that the public must be satisfied to hold by Mr. Flaxman's opinion, or defer to that of Mr. Sheriff Alison in preference to it.

In the same lecture, page 190, Flaxman acquaints us, "that the sculptor must not forget that his art is limited, in comparison with painting: colours and their effects are beyond his bound: whether the act he represents was performed in the bright mid-day sunshine, or the darkness of midnight, concerns him not, his forms must be equally perfect. Even in basso-relief, a tree or two, some rude stone, or a wall slightly marked in the back-ground, must indicate a forest, a mountain, or a palace, without detailing a portrait of their component parts." What, on the other hand, are the objects and province of painting? Colour, the evanescent effects of light and shade, even motion and the fleeting tints, imprinted by time past and passing. What have the poets told us in regard to this part of our subject?

"Sometimes the pencil, in cool, airy halls,  
Bids the gay bloom of vernal landscapes rise,  
Or Autumn's varied shades imbrown the walls:  
Now the black tempest strikes the astonished eyes;  
Now down the steep the flashing torrent flies;  
The trembling sun now plays o'er ocean blue,  
And now rude mountains frown amid the skies;  
Whate'er Lorrain light touched, with softening hue,  
Or savage Rosa dashed, or learned Poussin drew!"

Such is the scope and province of painting. In short, till the moment that this Glasgow committee bamboozled themselves into the whim of sending for a foreigner to make a statue, upon the principles of painting, no one in the slightest degree cognizant of art, ever dreamed of doubting the truth of the foregoing precepts. If the people of Glasgow do not approve of the principles on which excellence in the art of sculpture are founded, they ought not to have subscribed for a statue of the Duke; but this may, perhaps, here be *hors de question*.

Such must also be our answer to Mr. Alison's remarks on the excellence and perfection with

which "every wrinkle, every ruffle, every ribbon, every fold of the dresses of Titian's Doges of Venice, Velasquez's Spanish Cardinals, Rembrandt's Burgomasters of Amsterdam, and Vandyke's Courtiers of Charles the First," are represented. Attempt these wrinkles, and ruffles, and folds, and curls in statuary, and you interrupt the forms of the bodies and limbs, worse even than does the mail and plate armour of the Romans and Goths; but the citizens of Glasgow have no bad specimen of this style of art presented for their study in one of the principal thoroughfares of their city. In the front of Hutchison's Hospital, in Ingram Street, there are two very tolerable costume statues of the brothers Hutchison; let them compare these productions with Flaxman's Sir John Moore, and Chantry's James Watt, in George's Square, and they will arrive at a pretty exact conclusion in respect to the comparative merits of Greek art, and that advocated by Mr. Alison. In short, let the committee follow out Mr. Alison's advice in this instance, and they will infallibly produce something which might do honour to Mrs. Jarley's wax-work, or answer for the figure-head of the good ship St. George; but which will be a most sorry memorial of his grace the Duke of Wellington.

In conceding the merit of research to Mr. Alison we do him no more than justice. His array of names is indeed very extensive; and his remarks on the works of many of the artists of former times, evince no mean acquaintance with their style, and an accurate appreciation of their merits. There is one artist, however, to whose works Mr. Alison never once alludes, nor does he even mention his name throughout the whole course of his letter. This omission in an essay on sculpture strikes us as somewhat remarkable, as it will no doubt appear to the greater number of readers, when we mention that the individual thus overlooked by Mr. Alison, is no other than the late John Flaxman, the most eminent and excellent professor of sculpture in the Royal Academy of Great Britain, for whom the chair in the said academy was expressly instituted. Mr. Alison could not, moreover, have been ignorant of his merits, seeing that in the city in which he resides, there is, in the statue of Sir John Moore, a work of Flaxman's, which combines all the beauty of Greek art with the breadth and majesty of the style of Michael Angelo, without any of the exaggeration or extravagance of the latter.

Mr. Alison contends that modern Italian art is superior to British art; and Mr. M'Lellan, on the other hand, shows that at the present day art in Italy is in the lowest state of degradation. Mr. Alison avers that his assumed superiority of modern Italian art, is due to "a more constant opportunity of the examination of ancient art." There are, to be sure, individuals who would prefer the contents of the show-board of an itinerant Italian image vender to the frieze of the Parthenon; but such a circumstance will not prove the inferiority of the one description of art, and the superiority of the other. Mr. Alison asks, if the works of Sir Joshua Reynolds can be compared with those of Corregio and Raffaele; but we reply, that this is in no way to the purpose; and ask in our turn, if the works of Cuytel and Gravelot can be compared with those of Reynolds? Mr. Alison again demands, if we would compare Lawrence with Vandyke, Titian, or Velasquez? We reply, that we should not hesitate to do so! But we inquire of the Sheriff, if he would compare David, or the modern French school of portrait painters, with Lawrence, Raeburn, Graham, Shee, or Pickersgill? We perhaps might not compare West with Corregio; but would Mr. Alison seriously compare West with the detestable troop of modern French historical painters? Mr. Alison sarcastically demands, what would be the result of putting the best of our modern landscapes beside those of Claude, Salvator, or Poussin? In reply, we affirm that the works of Gainsborough, the Wilsons, Ibbetson, the two Naysmiths, Williams, Thomson of Duddingstone, Fielding, Stark, Stanfield, Turner, and others may challenge comparison with the productions of any age or country; and that there is not at present a landscape painter on the Continent whose works will bear the most distant comparison with them.

The remoteness of our situation, Mr. Alison

avers, is the grand difficulty with which the inhabitants of Britain have to contend in attaining improvement in the fine arts:

"*Penitus devotos orbe Britannos.*"

And what does the reader think is the expedient by which he proposes to bring Glasgow nearer the rest of the world? Why, to put up a statue of the Duke of Wellington by Marochetti, at the trifling cost of ten thousand pounds! He says, "It is true that it is the want of the monuments of ancient genius to form the habitual contemplation of our people, which is the real cause of our inferiority in art." But in the name of common sense, is this modern gothic *fantasia* of Signor Marochetti's, which would do equally well for a memorial of the Knight of La Mancha as for the Duke of Wellington, a monument of ancient genius? or is Marochetti an ancient genius? Shade of Cervantes, where art thou? In short, if Mr. Alison can call back his favourites, Titian, Corregio, Raffaele, Rembrandt, Velasquez, Vandyke, Claude, Poussin, or Salvator, to compete with the artists of the present day; or if he can resuscitate Michael Angelo, we should at once admit the validity of his challenge: but if he is to supply the place of the first by Cuyper, Gravelot, and David, and of the other by the Baron Marochetti, we must denounce the attempt as at variance not only with the interests of art, but the dictates of common sense.

Mr. Alison admits, however, after all his arguments against British art, that the painters of Britain are superior to those of the Continent; but gets rid of his difficulty by asking, where are our statues to put beside those of Phidias and Praxiteles? We answer, in your own city. Look to those of Moore, Watt, and Pitt, and you will find *chefs-d'œuvre* which may challenge comparison with the works of the artists of any age or country! The learned Sheriff may rest assured that his expedient of sending for a statue of Marochetti's to place beside one of Phidias, or even Flaxman's Sir John Moore, would be like putting Jim Crow beside Taglioni!

"Newton may have benefited by Grecian geometry, Milton by studying the classics, and Gibbon by meditating Tacitus;" but as the Glasgow subscriber asks, "What would have happened had Newton, in his attempts to demonstrate the movements of the heavenly bodies, called in the aid of the Esquimaux Indians; had Milton studied ballad singing; or Gibbon meditated Tim Bobbins?" But really such arguments—and that also of the lesson which Charles the Twelfth read to the Czar Peter at Narva, and the march to Moscow of Napoleon, and of the advantage of classical subjects in forming literary taste—do not bear upon, and cannot be made to bear upon, a question of practical art. In the same way it is quite true, that both the Romans and the modern Italians benefited unspeakably in their attempts of art by the study of Greek models; so have our own artists: but it surely is contradictory in the highest degree, to tell British artists that the way in which they may benefit still more, is to throw away those Greek models, and have recourse to the study of the works of Bernini and Baron Marochetti! Finally, with regard to Marochetti's horse; it is a portrait of the rider, and not of the horse, which the Glasgow subscribers want. The ludicrousness of the argument of the praises bestowed upon Marochetti's horse by veterinary surgeons, may safely be passed over. In every equestrian statue, the horse will be found an embarrassment to the sculptor. It is in the way, and detracts from the dignity and effect of the work; and the artist will best show his powers by subduing it, and rendering it as little marked and conspicuous as possible. Marochetti has, it seems, promised to finish the statue in eighteen months!—*this is quite enough!*

In conclusion, it appears, that at the committee meeting of the 20th of November, at Glasgow, twenty-five gentlemen voted for the competition being left open to foreign artists, twelve of these gentlemen being already committed to Marochetti. Nineteen voted for the employment of a British artist. Four new members were added to the select sub-committee, to whom the final decision in respect to an artist was assigned, with the reservation, that the artist whom they should select should furnish them with a model, their final de-

termination to be contingent on their approval of the said model! Now this appears to be virtually a competition of artists: the sub-committee have the power to reject the models one after another, till they get one to their taste. But is it probable that British artists will consent to this mode of competition, the more particularly as a majority of the sub-committee have already declared their preference of a foreigner! Finally, we would inquire if a single one of the noblemen, members of parliament, dignitaries of the church, and influential gentlemen of this sub-committee, be practically acquainted with art? Is there one of them who could engage accurately to copy the simplest drawing, or piece of sculpture? If it be, as we suspect, that none of them are artists (*amateur artists*), then do we protest even as to their being wholly unfit to fulfil the duties assigned to them at the last meeting of the general committee.

Since the foregoing was in type, we believe the committee have only proceeded to define the parties whom they are to invite to compete; adding to their former list the names of Kiess of Berlin, Gibson of Rome, Pistrucci, and Macdonald.

There is something in the present constitution of the Glasgow sub-committee, and in the powers confided to it, as well as the manner in which the powers have been acquired, so singularly anomalous, as to render the pressing of the same upon public notice an act of paramount and imperative duty on our part. Thus, at the general meeting, on the 20th of November, the motion, leaving the choice of an artist to the sub-committee, was carried by twelve members of the said sub-committee, and who had previously recommended Marochetti, voting for this power of selection being confided to themselves; twelve members of the general committee joining them in the vote, the Lord Provost, who made the motion, being himself a member of the sub-committee; these votes were in all twenty-five. Seventeen members of the general committee voted against the sub-committee having the power of selection, together with two members of the sub-committee; in all nineteen. Now, from this it is obvious that, had the sub-committee-men, as in duty bound, abstained from voting for themselves, that there would have been seventeen votes against the power of selection being confided to the Marochetti committee, and only twelve in favour of the measure; giving a majority of five votes against the power being intrusted to the sub-committee.

These particulars being considered, it will be apparent that, in this transaction, the British maxim, of "a fair field and no favour," has been woefully departed from, as regards the interests of British artists; and if the artists of the Continent take advantage of this circumstance, and enter the lists against their brethren of this country, they may consider themselves entitled to the denomination of sculptors, but sure we are they can lay no claim to being free-masons! And we feel equally certain, that had British artists found themselves placed in a similar predicament, they would have disdained, in consequence of such a *ruse*, by their interference to attempt to rob their brothers of their fair share of professional encouragement. Such is the view taken by Rauch and Schwanthaler, who have in the handsomest manner possible withdrawn their names from the list of competitors. If it be contended that the sub-committee are in no way pledged to Marochetti, we ask, is their recommendation of him erased from their minute-book? If not, they stand as yet fully pledged to him; and their inviting other artists, whether British or foreigners, to compete, is an unworthy farce!

As conservators of British art, and the interests of British artists, are not the Council of the Royal Academy, and the directors of the various British Institutions for the encouragement of art, bound to warn the Duke of Wellington of the evil tendencies in relation to the arts of his country, which his in any way acquiescing in the proceedings of the Glasgow committee, in favour of the selection of a foreign artist, cannot fail to lead to?

[We hope the Royal Academy, and other societies, will take the hint.]

## THE ARTIST:

### A SERIES OF SKETCHES FROM THE LIFE.

By MRS. S. C. HALL.

"Ah! who can tell how hard it is to climb  
The steep where Fame's proud Temple shines afar!  
Ah! who can tell how many a soul sublime  
Has felt the influence of malignant star!"

BRATTLE.

## CHAPTER I.

It was the early morning of one of those autumnal days, that promise, unlike the world, less than they perform: the atmosphere was sharp and misty; a damp fog was clinging to the hills and hanging over the vallies, affording but small hope of the day's brightening into sunshine.

A young man—so slight of form and delicate of feature, as to seem no more than fifteen or sixteen years old, although a closer look might have led to the conviction that he had numbered twenty—was leaning, with a thoughtful, half-meditative, half-impatient, expression, over one of those beautifully situated rocks, that hallow the troubled current of the muddy Severn, at Clifton. He had a sketch-book open in his hand; sometimes he would turn over its leaves, and peer out to see if the shadowy fog was mingling with the clouds, or still creeping amid the opposite woods, so as to prevent his being able to catch their exact outline. More than once, he closed his book with a gesture of disappointment, and bit his pencil; then removed his hat, and ran his fingers through the rich nut-brown hair, that clustered, with the luxuriance of youth, around his small distinguished looking head: there was no affectation about him; his lip did not curl either with or without a moustache, but was compressed, as if accustomed to control emotions and feelings—almost too powerful for youth to manage.

His dress was a frock-coat of some undefinable colour; his throat was conveniently, not studiously, exposed; and his attitude and manner were so easy and natural, as to oblige those who met him, but for a moment, to feel that he was superior, in some way or other, to the generality of young men. Despite the reserve of his closed lips, there was a generosity of intellect in his wide, pale, forehead, and an earnest, yet energetic expression of human love and goodness in his finely set and open eyes, that compelled the old to bless him, the child to trust him, and the dog to lick his hand.

Though quite a youth, he had, in the profession he adopted—from necessity, added to an irresistible desire to impress the beauties of nature upon his canvass, so that he might come them over by day, and meditate upon them by night—encountered many scenes, persons, and adventures, at which sometimes he sighed, sometimes he smiled. He had landed the previous evening, after a prolonged tour in Ireland; and as he proposed continuing his wanderings throughout England, he counted on having ample opportunity for observing, not only landscape but character—for studying the huge lesson-book of life. He had, at times, imaginings of being on the road to earthly immortality, and making for himself an undying name; but his spirit would sink, when he remembered the hundreds of his brethren, who, with keen susceptibilities, fine perceptions, and a refined taste (curses to the many and blessings to the few), wanting, perhaps, only that little more of what constitutes greatness; and so continuing to the end, feeling and suffering, struggling and labouring, and dying! happy in finding a grave, a green grass grave, in some lone country churchyard, where the village bell summoned humble and devout worshippers; where the breeze laughed, or sighed, or wailed, according to its season; where the sun shone in summer, and the rain rained in winter, warming and garnishing even a stranger's grave—and the Artist would sigh, and think that such must be his fate.

It may be pleasant and profitable to trace him through his wanderings, and learn whether, in the end, he achieved the laurel crown—the object of his young ambition.

At the moment, the atmosphere seemed part of his fate; it was misty and obscure as his own fortunes; he was without friends, without even associates. The stream—for though it floats the huge

ships that convey wealth to England, the Severn, looked down upon from the Clifton rocks, seems little better than a muddy stream—was thickened to the eye by the intervening mist; more than once the young man raised his arm to fling a stone into the abyss, as if to fathom it; but the loud call of the steersman, or the halloo of the sailor, of some passing vessel, broke the silence, and made him fearful of doing mischief. He almost despaired of the sunlight coming. "It is always thus," he murmured to himself; "always, whenever I anticipate a pleasure—and the pleasures of the perpetual wanderer are few—the clouds gather over what is most beautiful. I marvel, am I so to remain—unknown, unloved, unsympathizing with life, making acquaintance with trees and rocks, and having no friendship but with mountain and river? Perhaps so best. Man alone, is at least independent. The tinkling of a sheep-bell, and the sharp-earnest bark of a dog, attracted his attention. The sounds came from the opposite cliff, and, by looking intently across the chasm, he saw a sheep on the highest promontory, and a dog in active motion along its edge; the sheep was in distress, and uttered one or two mournful bleats; the dog kept up its bark, now here, now there, until suddenly it disappeared, leaving the poor sheep alone; its plaintive cry was now responded to by another, which arose from a spot some two or three yards down the cliff. The young man heard it, and became at once interested in the distress of the gentle creature: presently the dog returned, followed by the shepherd, who, upon looking over the cliff, comprehended the case at once. One of his flock had fallen over the ledge, and only been preserved from destruction by some projecting crag, which the poor dog, with all his anxiety and sagacity, could not reach; even the shepherd seemed to consider it a difficult case, and called another; and the artist had grown so anxious about the preservation of an animal he could not even see, that he lost the consciousness of his own sorrows and loneliness, and longed to bound over and assist. At length, a lad was lowered by means of a rope, and he would have given much to have been enabled to note how they managed; but the crag stood out between them; the poor patient sheep stretched over its face, and seemed the model of innocent stupidity; but the dog, still on the summit, looked carefully over, and only uttered a low bark, by way of encouragement, until the overgrown lamb was placed by the shepherd-boy at its mother's side. The artist found himself refreshed and enlivened—his sympathies with the living world had returned!

The morning advanced; a fresh breeze swept the ravine and carried the mists away: he felt its sturdy breath upon his brow; it was climbing the opposite rocks, and making the trees tremble; the sun shone forth, illumining point after point of the landscape, exactly as he would have desired; now throwing a mass of light upon the rocks, then flinging a full burst of radiance into the valley; the hues and tints of autumn came out, as if created expressly for his delight by the touch of a magician's wand: he became absorbed, and sketched boldly and rapidly with a steady hand and a firm pencil; he did not even feel that the sun—which, like a fond parent, was kissing the cheek the breeze had cooled—had mingled a glow of heat with the air, and the chilly morning at once burst into the cheerful day. The clouds, too—our most wrongfully abused English clouds—were so clear and fleecy, as only to soften, not shadow the scene; and he sketched until the continued pleasure and excitement created pain: he suffered the sketch-book to close upon his hand, and drawing his small graceful figure to its full height, folded one arm over the other, and with a deep, long-drawn sigh, continued to observe, what he seemed to have hardly strength to depict; even his pale forehead was flushed, and his fine expressive eyes had gathered increased beauty from this commune with Nature. Who, either with pen or pencil,

"The melodies of morn can tell?"

It is impossible to visit England after a sojourn in Ireland, without being greatly struck by the different character of the scenery of the two countries. There is a closeness, richness, abundance of beauty in English sylvan scenery, that

we look for in vain elsewhere; true the green of Irish meadowing is the greenest in the world:

"The tears, and the smiles of its own dewy skies," render it this miracle of colour, having the hue and brightness of an emerald, and the close, rich thickness of velvet; but strangely enough, the foliage of the forest-trees do not partake of this peculiarity; here and there, they may be met with, as in England, crowded rather than clothed with leaves; but it is impossible to avoid contrasting the fulness of the one with (if permitted the expression) the thinness of the other.

The young artist was struck by this the more, as the latest sketches he had made were of the harshest Alpine scenery, where not a stunted tree or a creeping plant were to be seen.

It is a PRINCIPLE in England to plant trees; in Ireland it is only a NECESSITY: there, you look out for trees; here, you peep through them for the landscape. The Clifton scenery seemed to his searching gaze almost breathless—so compact, so intense, so silent—he closed his eyes, endeavouring to recall the daring outlines he had so lately contemplated with wonder and delight; yet nothing but visions of gentle English beauty came at his command—pastures, dotted with trees and alive with cattle, from the tottering lamb to the noble horse; golden sunsets, reflected in broad shining rivers; whispers of rustling leaves above the moonlit brooks; the happy homesteads of Old England—the—the—but his dream was dispelled—a hand, the pressure of which was neither small nor gentle, was laid upon his arm, and a voice keen and cutting, as the voices of inquisitive people generally are, inquired—

"Did you do that, eh! eh! did you make that sketch?—here, just now, this moment, what—eh?" And before the youth had time to reply, an active, abrupt, little old gentleman, with sharp, clear eyes, had possessed himself of his treasured sketch-book, and was seated on the rock upon which the young man had been sketching, investigating its contents. The youth, though his cheek flushed at the liberty, could hardly avoid smiling at the quaintness of the inquisitor. He was fitted into a suit of quakerish looking drab, with the utmost nicety; the pink point of a long chin was buried in the plaitings of a deep shirt-frill of the finest cambric; and the features, sufficiently commonplace, were garnished by his own grey hair, a little blown out of curl by the breeze. That he might pursue his investigation with greater comfort, he had placed his cane with its abundant tassels across his knees; and after having declared that the sketch was "like—very like—uncommonly like," he turned over page after page, exclaiming—"Ah, nice! very wild scenery; fine! eh—bright bit of colour; oh! I see, Irish! and you—you come from Ireland, eh?" The young man bowed. "Yes, picturesque, dangerous country; picturesque countries generally are. Italy and the brigands, eh? Came in the packet last night; saw you disembark; thought I knew you again. Why, young man, you'll be surprised when I tell you, that I've seen every human being that came by the packets to Bristol for the last thirteen years. I sit up all night sooner than miss that sight; keeps me alive. Do you know many in Bristol?"

"None," was the brief reply.

"Well, now, that is extraordinary; I know every body. Poor lad, poor lad," he added, in a tone of deep commiseration, "to know no body in Bristol! I know every body; keeps me alive. Poor, poor, lad! and your name is—but here it is," he continued, turning to the first page, "Hamilton! Oh! Hamilton! There's something scratched out! Hamilton, what—or what Hamilton?"

"My name is Hamilton, Sir," said the artist, in a voice of cold constraint.

"Well, Sir, I see that," answered the old man, pettishly rubbing his fore-finger over and over the spot where a second name had evidently been erased; "but every man has two names at the least. Why, bless you, boy, I know the name of every body in Bristol; keeps me alive. What is your name?"

"Hamilton, Sir!"

"But you must have a Christian name?"

"And is there anything opposed to Christianity in mine?"

"Oh, no! I hope not!" said the old man, in apparent alarm. "But you have a surname also?"

"And will not Hamilton serve for that?" demanded the youth, with a bland smile; his annoyance having yielded to the amusement he derived from the old gentleman's curiosity.

"What Hamilton Hamilton! Well, that's strange; though there are some good families who adopt that plan: there's Sir Patterson Patterson, of Patthill Patterson—but write it twice, young man; it looks so foolish! Stop, I want to inspect that view again! Ah! very, very like!"

"I beg your pardon, Sir!" said Hamilton, "but that is not the one, exactly—here it is!"

"Yes, I see!" observed the old gentleman, carefully raising his chin from its repose; "I see; but, to tell you the truth, one landscape is so exceedingly like another, all about Bristol, that I think landscape painting a sad waste of time!"

"Sir!" exclaimed the youth, shutting his book, and half turning away.

"Yes, I do, indeed! Faces! ah! they are the things to paint! But you take likenesses, do you not? If you can take off a landscape, you can surely take off a head!"

"Very badly. Good morning, Sir!" said Hamilton, lifting his hat, and turning quite away.

The old gentleman placed his cane firmly on the ground, and, leaning forward upon it, rose and looked after the artist.

"Ah!" he muttered to himself, "Hamilton, Hamilton—from Ireland—no brogue—high blood—empty purse. Poor lad! knows nobody in Bristol." Then raising his voice, "Mr. Hamilton?" The youth looked back, and bowed. "Here, Sir!"—then again, *sotto voce*—"There's something extraordinary about him—clever too—get him home to breakfast—poor lad—proud—ah!" The object of the old gentleman's curiosity, or sympathy, or whatever it may be called, was now by his side; and he looked into his face with an expression of good-nature, which obliterated every thought of displeasure.

"Young man, the lumbago is a bad companion for an old man to be alone with: will you give me your arm down the hill?"

Youth and age trudged off cheerfully together. "We will go down this little passage," said the old gentleman; "it is so pleasant to meet all one's friends and their servants coming from the Bristol market. I know everybody; keeps me alive. Ah, Betty!" he continued to a staid, *cookey* looking woman, "been to market, eh? What have you got in your clean basket, honest Bet? Such a white chicken.—Ah, the young lady not well—any bacon or sausages? No, only cauliflower.—Poor thing, I fear she's very *peeking*, indeed—my love to her, Betty. Ah, Sally, my dear! what, going to have company to-day, pretty Sally? Sweet herbs for stuffing—*real* stuffing, I suppose? Ah! why what a nice thick little turbot and a pea lobster. Some one of consequence? Ah, Sally, Sally! you may soon have a master again. My compliments to the widow—she's a charming lady. Stop, Sally. How many did you order soup for from the confectioner's?" "Three."

"—Thank ye, Sally. I knew" (to himself), "I knew she'd have another before the second year was half out. Here comes Mr. Scragg's maid of all work—no time to waste with her, she only markets mutton-chops. Ah, Jessie, mutton-chops again? Good by, Jessie." A little girl, pale and delicate-looking, came toiling up the hill with a basket of sundries, that required the arm of a strong man to carry: the old gentleman looked uneasily about. "I wish," he said, "I could see a boy, I'd give him two-pence to carry that basket; the poor child is an orphan, and Miss Crutch at the boarding-house works her to death."

The artist seized the basket from the astonished child, and flew with it up the ascent. "Here, Katey, catch it!" exclaimed the old gentleman, flinging her sixpence; "and, hark ye, the next time you have such a load as that knock at my door—everybody knows my door—and Bob shall carry it for you. Thank ye, my young friend, we shall soon be at home now, and have some breakfast together. I like to know what's going on. There's my house—pleasant window,—you could sketch it—looks up the hill, and down the hill—everybody passes it—keeps me alive."

## ART IN THE PROVINCES.

**LIVERPOOL EXHIBITION.**—Sir,—It is gratifying to be able to state, that the season has been a successful one; there is one feature which is highly satisfactory, it is that the amount of sales by private parties is considerably larger than the former year. This is pleasing, as it tends to prove the great and wholesome influence the exhibition of the finest works of art has on the public taste; for whilst societies for the encouragement of art, on the plan of the Art-Union, are most praiseworthy in their operations, valuable in their results, and worthy of our most active exertions, it is gratifying to know that individual patronage is on the increase, and taking the lead.

I subjoin a list of pictures sold both by private sales and Art-Union. Private sales upwards of £1500; Art-Union, and sums added to the prizes for pictures of a high value, £910. Total, £2410.

SAMUEL EGLINGTON,  
Secretary to the Liverpool Academy.

'The Stolen Horse,' Thomas Sidney Cooper. 'Resting on a Journey,' J. Graham. 'The Thames, near Henley,' W. Havell. 'Neapolitana,' J. Inskip. 'Fruit,' G. Lance. 'Sketch from Nature,' F. R. Lee, R.A. Patten, A.R.A. 'Marble Bust of the Rev. T. Raffles, LL.D.,' W. Spence. 'Bust of J. Bostock, Esq., M.D. F.R.S. LL.D.,' J. Jackson.

**MANCHESTER.**—We have been unable to procure "Returns" promised us from the Manchester Exhibition; the secretary has been either too busy or too careless to enlighten us on the subject; an evil we shall take care to provide against next year. The sales were greater than last year; about fifty pictures having been disposed of. Among them are works by Shayer, Hurlstone, Creswick, Von Holst, Priest, Pyne, Allen, Miss Naysmith, Tomkins, Childie, Tennant, Colman, Crome, Bouton, Latilla, Stanley, Baker, Vickers, Jutsum, Fuller, Clint, Hancock, Frith, &c. &c. To the Art-Union there were about 700 subscribers; so that, although a considerable sum will be deducted for the engraving, a very large increase in "purchases"

was the natural consequence. The "prize" was, we understand, adjudged to Mr. Hurlstone, for which of his pictures we cannot say; but really it was a difficult matter to determine on whom the distinction ought to be conferred—certainly not because there were so many good contributions to the collection.

**MANCHESTER ARCHITECTURAL SOCIETY.**—At the Thirty-ninth General Meeting of this Society, held on the 2nd Dec., a testimonial of merit was presented to Mr. R. W. McCall, author of the best design for an edifice in honour of British Artists. The award of the adjudicators, referred to in our last number, was read, and gave general satisfaction. Mr. J. W. Hance, the indefatigable Honorary Secretary of the Society, and to whom it is mainly indebted for its present position, read a paper on various subjects connected with the Fine Arts; and commented especially on the necessity which existed for spreading a knowledge of the general principles of architecture, the study of which was greatly neglected, even amongst the higher classes. We cordially agree with him on this point, and strongly re-urge the necessity.

[We have received a letter complaining that, in a notice of the adjudicators' report in our last number, we gave our readers to understand the testimonial was awarded Mr. McCall merely because he sent two sets of drawings. This seems to have been a strong inducement in the minds of the adjudicators; but Mr. McCall was evidently rewarded as the superior candidate, and for one particular set of designs. Mr. McCall is wrong in considering we trust correspondents in matters of this sort.—Ed.]

**BRISTOL EXHIBITION.**—The tenth exhibition of the Bristol Society of Artists terminated on the 21st of November, having continued open about ten weeks. The collection included two hundred and seventy-seven works of art; a greater number than at any former period, the artists having had this year the advantage of a separate and well-lighted room for the exhibition of water-colour paintings. On analysing the Catalogue, we find that 132 works were contributed by Bristol artists; the remainder, chiefly by residents in the metropolis. The exhibition, as a whole, was an attractive one; for, although we missed such pictures as MacLise's Bohemian Gipsies, or the Inauguration of Captain Rock; Patten's Cymon and Iphigenia, or his Illustration of Collins's Ode, all of which we remember to have seen in Bristol; and, although we could not help regretting the absence of the works of Müller, whose contributions used on former occasions so conspicuously to adorn the exhibitions in his native city, there were yet talent and variety enough to gratify the most fastidious taste; especially when we take into account the evidence the exhibition afforded of solid improvement amongst the resident professors of the art. This advance was particularly observable in the portraiture department. As far as pecuniary matters are concerned, we regret to say, the exhibition did not pay its expenses, which was also the case in the two previous seasons; this we are unwilling to attribute to apathy, or want of interest, on the part of the inhabitants of Bristol, in reference to the fine arts; on the contrary, we firmly believe that a feeling in their favour does exist in that city, in spite of the stigma which it has been the fashion to cast upon her, of allowing genius and talent of every kind to wither in poverty and neglect. Upwards of sixty pictures were sold in the rooms, and we believe the paucity of visitors on this and on the two former occasions is to be ascribed to the time of year chosen for the Exhibition, when the days are short, and, usually, the intervals of fair weather few and far between. We think the society have been in error, in holding their exhibitions so late, an error they would do well to rectify when they next appear before the public in a commercial city, where the merchant or trader does not leave his counting-house before the short November day has closed.

The Art-Union, which had been instituted in 1839, was renewed, and was productive, as had been anticipated, of increased interest and excitement; two hundred and forty-six guineas were subscribed, enabling the committee, after deducting all expenses, to devote two hundred and twenty pounds to the prizes. We conclude this notice with a list of the pictures sold in the exhibition rooms, and the names of their purchasers—

'Swansea Pier,' G. A. Fripp; J. N. Sanders, Esq. 'Near Ilfracombe,' H. Willis; T. Jacques, Esq. 'At Whitechurch,' E. G. Müller; A. E. Acraman, Esq. 'Redcliff Church, Bristol,' W. B. Surzey. 'Gil Bias and Estella,' T. M. Joy; W. Player, Esq. 'Derwent-water,' R. Tucker; W. Player, Esq. 'Near St. Just, Cornwall,' R. Tucker; Q. Kennedy, Esq. 'Composition,' H. Willis; J. Martin, Esq. 'Loch Katrine,' S. C. Jones; R. Adams, Esq. 'At Killarney,' H.

Willis; C. Morgan, Esq. 'Gap of Dunloe,' S. C. Jones; C. Morgan, Esq. 'Wunnenburg on the Moselle,' R. Tucker; R. Boley, Esq. 'Rhuddlan, Denbighshire,' A. Vickers; R. Boley, Esq. 'From Leigh Woods,' S. C. Jones; P. George, Esq. 'Conway Castle,' E. Childie; — Langley, Esq. 'At Bettws-y-Coed,' A. Vickers; W. Bevan, Esq. 'The Mouth of the Avon,' S. Jackson; Rev. W. Phillips. 'The Dairy,' M. H. Holmes. 'At Rouen,' C. F. Tomkins; Mrs. Puxley. 'At Antwerp,' S. C. Jones; J. G. Smith, Esq. 'Coast Scene,' E. Jones; C. H. Hewitt, Esq. 'Composition,' H. Willis; C. Conway, Esq. 'Ben Venue,' S. Jackson; — Procter, Esq. 'At Portishead,' H. Willis; J. Barrow, Esq. 'On the Moselle,' H. Willis; Rev. J. Emra. 'Composition,' H. Willis; Rev. J. Emra. 'Coblence,' R. Tucker; H. Stedder, Esq. 'Mumbles Light-house, Swansea,' G. A. Fripp; Mr. Alderman Gibbs. 'Study of a Head,' J. Curnock. 'Near Ilfracombe,' H. Willis; — Cousins, Esq. 'Men of War in the Midway,' J. Walter; J. Baker, Esq. 'Eudora,' T. Von Holst; J. B. Powell, Esq. 'Marine View,' C. Armit; Capt. Armstrong. 'Shipping,' C. Armit; Captain Armstrong. 'View from Nature,' A. Vickers; W. Bevan, Esq. 'Peter Boats,' J. Stark; C. H. Hewitt, Esq. 'Interior, with Dead Game,' G. Stevens; T. Carlisle, Esq. 'Mill Scene,' C. Branwhite; J. N. Franklyn, Esq. 'Lane at Stapleton,' C. Branwhite. 'Near Festiniog,' C. Branwhite. 'Brig in Chase,' C. Armit; Captain Armstrong. 'Line of Battle Ship,' C. Armit; Captain Armstrong. 'Marine Piece,' J. Walter; J. B. Powell, Esq. 'Watermouth Castle, Ilfracombe,' H. Willis. 'Tewkesbury Abbey, — Interior,' S. G. Tovey; — Harris, Esq. 'View near Coal-pit Heath,' H. Willis. 'At Stapleton,' C. Branwhite. 'Red Grouse,' G. Stevens; J. B. Powell, Esq. 'Woodcocks,' G. Stevens; J. B. Powell, Esq. 'Brecon Van,' E. G. Müller. 'Snowdon and Llanberis,' S. Jackson. 'Near Killarney,' S. C. Jones. 'Tower at Andernach,' S. C. Jones. 'At Portishead,' H. Willis. 'A Gipsy Girl,' H. Richter; G. Robson, Esq. 'Gipsies,' H. Richter; G. Robson, Esq. 'Near Aghadoe, Killarney,' H. Willis. 'Venetian Boat Scene,' C. Branwhite. 'Falls of Loch Katrine,' S. C. Jones. 'Cook's Folly, near Bristol,' S. Jackson. 'Moonlight,' S. Jackson. 'Landscape,' E. Müller; J. Harwood, Esq. 'Cattle,' H. Willis; — Bennet, Esq. 'Temple of Theseus,' W. Müller; F. Williams, Esq.

**BIRMINGHAM.**—There was an addition of £150 to the amount ballotted for since last year, and the total sales have amounted to £1800 (the list of pictures sold we published in our December number). We must attribute a great part of this success to the indefatigable exertions and excellent management of the Hon. Sec. the Rev. Hugh Hutton, aided by a most respectable and efficient committee. His active zeal in behalf of the institution has continued to increase since he, almost alone, adopted the plan of the 'Art-Union' for the promotion of the sale of works of art.

**SCOTLAND.**—The Royal Scottish Academy have issued their "Nineteenth Annual Report." It is a sensible, concise, and satisfactory document, and their example might be advantageously followed by all similar institutions throughout the kingdom. We extract two or three passages; they evidence a degree of advancement and prosperity, on which we warmly congratulate the Academy:—

"The Council experience deep gratification in being able to congratulate their constituents on the increase during the past season of that prosperity, which of late years has rewarded the exertions of the Academy and of other kindred institutions, whose common object is the promotion of the Fine Arts in Scotland."

"The number of visitors, which of late years has steadily increased, exceeded by several thousands that of any previous season; and the fund thence derived was, of course, proportionably greater."

"The aggregate extent of sales greatly exceeded those of any former year; and, there can be no doubt, must have contributed to stimulate, as well as reward, that professional ardour, which, in union with right views of the objects of art and of the means of their attainment, constitutes the true basis of professional success."

"A provision for the aged and decayed, and for the widows of deceased members, having been secured by the institution of the Pension Fund, and the ordinary expenditure being defrayed, it appears to the Council that a considerable portion of the residue of its funds should be devoted to the increase and improvement of the Library—one of the chief objects contemplated at the formation of the Academy, and one to which its attention has since been repeatedly called."

Three vacancies among the Associates have been filled up by the election of Alexander Fraser, Esq., Painter; William Calder Marshall, Esq., Sculptor; and William Johnstone, Esq., Painter.

**ASSOCIATION FOR THE PURCHASE OF BRITISH ENGRAVINGS.**—We have just had a report of the proceedings of this Association put into our hands, and recommend it to the attention of our readers; it is well written, temperate and judicious in its views; and the object for which the association has been instituted, cannot fail to meet with the approbation of all

lovers of Art throughout the kingdom. It proposes, by the small subscription of five shillings per annum from each of the members, to purchase as many of the best engravings by British Artists as the funds realized, after deducting the necessary expenses of management, &c., will permit, and distributing them by ballot among the subscribers. The Association has now been two years in operation; and, judging from the list of prizes appended to the report, many of which are the very gems of the engraving of the present day, its progress seems to have been marked by that success which judicious arrangements alone can command. Of the benefits to be derived by an extensive circulation of good engravings from good pictures, in promoting the cause of art, there can be but one opinion; and as this institution offers an easy and wide-spreading method of effecting that object it has our best wishes for its prosperity.

**IRELAND.**—The Irish "Art-Union" is progressing very favourably; but it is expected that the funds will materially increase, when the committee are enabled to exhibit etchings of the plate, now engraving by Mr. Ryall, from the beautiful picture of 'The Blind Girl at a Holy Well.' It is nearly ready for issue. Having had an opportunity to examine it, we may report that a more admirable print than it will prove, in all respects, has rarely been published in this country. The subject is deeply interesting; it tells a touching story that will come home to the hearts of all—more especially of those who know Ireland. The print is, indeed, one that no British publisher would hesitate to undertake, with the certainty that its popularity would justify the large sum its production will cost; this is more than can be said for any other plate issued by an Art-Union Society. Indeed, we know that a very large number of impressions might now be sold to "the trade," and that applications for copies have been refused; the design being to limit them strictly to subscribers. Mr. Ryall is evidently labouring at it, *con amore*; he will render it one of the finest examples of art in the stipple style that any British burin has yet produced. In former numbers, we objected to the committee expending so large a proportion of their funds in obtaining an engraving; but an inspection of the etching has induced us, in this instance, to alter our opinion; for a specimen so excellent cannot but improve the taste for the Fine Arts in Ireland, and so prove a benefit to the country.

**DUBLIN.**—The monument about to be erected in Dublin to the memory of the late Irish under-Secretary, Mr. Drummond, is to be executed by Mr. Hogan—an artist of whom Ireland, and, in especial, his native city Cork, may be justly proud. He has for many years resided in Rome, where his reputation is only second to that of Gibson. He returned to his country a few months ago, chiefly for the purpose of superintending the erection of his statue of the Roman Catholic Bishop Doyle; but we understand he has been induced by the large number of commissions entrusted to him to settle "at home." We have not seen the work of which the Irish papers speak in terms of the highest praise; but, if it be as we presume it is, an advance upon a 'Dead Christ,' executed by him about six years ago, we do not wonder at its exciting such enthusiastic commendation as it appears to have received from all quarters.

[The "Returns" above presented supply gratifying proofs that the interests of art are gradually but surely advancing throughout the provinces. We have one important suggestion to make to the Committees of "Art Union Societies." A large proportion of the pictures exhibited in the several cities and towns are supplied by dealers, who consider, and rightly, that they afford favourable opportunities for effecting sales. Perhaps this is necessary; inasmuch as the exhibitions may by this means be considerably improved: without the aid of dealers, indeed, it might be difficult to get up an exhibition that would prove attractive. To their thus disposing of their property there can be, consequently, no just objection; but we have to object strongly and decidedly against the "prizes" allotted by "Art Unions" being obtained from any persons *except the artists who painted them*. The leading object of such institutions is to benefit the artist and advance the art; this can only be really and effectually done by giving to the artist all the aid that can be given to him, and not by enabling the dealer to make his bargain with the producer as a preliminary to his bargain with the consumer. We need not point out instances—they are as notorious as they are numerous—where the painter has received scarcely half what his work has sold for in country exhibitions. This principle is at once *quo just* and so politic, that we trust it will be a *sine qua non* with the Societies, to limit the choice of prizes to pictures *bonâ fide* the property of the artist.]

### THE ELECTROTYPE.

This is the name given to the operation of voltaic electricity in the production of metal fac-similes of surfaces commonly engraved, of relief or intaglio, or presenting other varieties. We have hitherto expressly abstained from noticing this invention; not from any unfavourable estimation of its real value, but rather from a wish to be enabled to augur more accurately of its fate; and, standing, among the utilities tributary to the imitative arts, after having witnessed the effects of its first applications. In contemplating this invention, the first consideration we are led to, is its actual and immediate utility in high art; for this is the ground we at once take. The invention will be—*is*, undoubtedly—useful where the object is to duplicate and re-duplicate a plate for the production of tens of thousands of circulars. It would, in its increased ratio, be equally valuable in the production of multiplied thousands of impressions of a fine engraving, if art were so universally estimated that the demand was equivalent; but, instead of duplicates being necessary, there exist plates whence celebrated works have been struck, and in a condition still perfectly equal to the production of thousands of impressions, if such were called for. The effect of this invention must in high art be remote; for with it goes the conviction that it can only be called into operation by a general diffusion of taste for art. We would be understood as viewing this invention merely in its prospects of *immediate* utility to the highest walk of art. The labour of the artist is undiminished; consequently, the price of his labours is yet the same; but, if even any artificial aid were preferred, like all other of the same kind, it would depreciate the value of the work; for nothing has yet been discovered to equal manual application in engraving. The invention is a valuable one, as promotive of knowledge and science where its aid can be applied; and would that the ingenious discoverer might reap the reward of his labours; but we fear that, like those of most valuable inventions, its benefits will go to enrich others.

It is Mr. Spencer, of Liverpool, who has given this new direction to the power of the voltaic current; in this process equally simple and beautiful. The apparatus necessary for taking copies of medals or engraved surfaces, consists of an open wooden box, made water-tight at the joinings by a coat of pitch. Within this another box, or vessel, is made to fit, so as to be suspended by a projecting upper edge, leaving a space of an inch and a half between the two. The bottom of the inner frame must be covered by pouring over it plaster of Paris, to the depth of a quarter of an inch.\* The liquids to be employed are constituted of one part of sulphuric acid, diluted with forty parts of water, and a saturated solution of the sulphate of copper (blue vitriol), which is obtained by dissolving the crystals in hot water, which must be stirred from time to time while cooling; and the solution is known to be saturated if any of the crystals remain undissolved.

#### To copy a coin or medal.

Upon that side of the coin on which the deposition of copper is not required to take place, lay a coating of wax, or of some resinous matter; and, in order to prevent cohesion between the deposited metal and the conducting surface, warm the latter, and pass over it a piece of white wax, and, while yet warm, remove the liquified wax with a piece of fine cotton. When thus prepared, the coin must be placed in a frame, constructed of wire, to which must now be soldered a piece of sheet or cast zinc. The next step is to charge the apparatus with the liquids. The cuprous solution must be poured into the outer or larger vessel, in quantity sufficient to rise about an inch above the coin, and the smaller vessel of wood, glass, porous earthenware, or other material, will receive the acid diluted to an equal height. It is necessary here to observe, that the solution must be kept thoroughly saturated with the sulphate of copper, otherwise a brown substance, the protoxide of copper, will be deposited instead of the pure metal. The process commences immediately, by introduction of the zinc into the acid and the coin into the solution. As much of the success of the operation depends on maintaining the solution in a state of saturation, the progressive attenuation of the liquid should be met by a constant supply. As the thickness of the mould, or impression, will depend upon the length of time that the action is suffered to proceed, its substance can be regulated at discretion, although it may be remarked that the rapidity of the deposition goes on in a ratio proportionable to the prevalent temperature. During the course of long operations, it would be advisable to change the acid every twelve hours. To separate the copper impress from the medal, it is only necessary to remove the superfluous cupreous deposition on the rim of the coin, and immediate separation takes place.

#### To form impressions from non-conductors.

Impressions may be taken from any engraved, carved, or imprinted surfaces, by the electrotype process; but, when such surfaces consist of wood, wax, plaster, and other non-conducting substances, it will be necessary to provide a coat of some conducting

\* We suppose an experimentalist to be already familiar with galvanic operations, for a detailed description *ab initio* could not be given without numerous diagrams.

metal, such as gold or silver leaf. We need scarcely observe, that the result of the first process will furnish only the impress, or mould, which, in its turn, by being exposed to the voltaic action, will supply the exact copy of the original surface.

No sooner is an invention of any merit at all announced, than the palm is disputed with the genuine finder by a hundred pretenders. This discovery has been already known to a dozen *pseudo*-doctors of various scientific schools. The art, however, is but yet in its infancy, and will receive many improvements. Indeed, while we write, an application of the power in another style comes to our knowledge, which we describe in another part of our journal. It will at once be a source of pleasure and of pain to all numismatical virtuosi; who, while they rejoice in copies of rare medals, will also be deluged with spurious coins from—

"The copper otho to the Scotch bawbee."

### SOCIETIES IN CONNEXION WITH ART.

**ROYAL INSTITUTE OF BRITISH ARCHITECTS.**—At a meeting, held on the 25th of December, Charles Barry, Esq., in the chair, Monsieur Duban, of Paris, architect of the new *Ecole des Beaux Arts*, and Signor Raffaele Politi, of Sicily, known by his work on the Antiquities of Agrigentum, were elected honorary and corresponding members. Two fine engravings of the spire of Antwerp Cathedral, on a very large scale, measured and drawn by Monsieur Serrure, were exhibited by Mr. T. L. Donaldson, and illustrated by some remarks on the foundation and date of this building. It appears to have been commenced in 1420 or 1423, and was not completed until 1518. In 1833, the works were resumed, and have been continued to this time at an expense of £4000. The height of the spire is 404 feet, a height, by the way, which seems to have been a favourite with church builders.

A paper was read containing some observations on vaulting, by Mr. B. Ferrey, and having especial reference to a very curious chapel at Abbotsbury, in Dorsetshire, dedicated to St. Katharine. This edifice seems to have been founded during the reign of Edward IV., and displays in a peculiar manner the care with which the early architects adapted their buildings, both in design and construction, to the situation they occupied.

On the 11th inst., J. B. Papworth, Esq. in the chair, Mr. E. l'Anson, jun., read a paper on Norman and Italian Campanili, wherein he pointed out the striking analogy perceivable in them, instancing various towers at Lincoln on the one side, and those of Ravenna and Rome on the other.

**ART-UNION OF LONDON.**—It will not be long before the subscription lists are closed, and we therefore strenuously urge such of our readers as are not already subscribers, to enroll their names without further delay. An excellent alteration has lately been made by the committee in their law touching the purchase of pictures. Originally it was stipulated that the purchase-money should include the copyright of all the pictures, which copyright was to remain vested in the society. An increased price in some cases was thus uselessly paid, and the committee have therefore determined to abandon this point, intending as it would seem, to pay for the copyright, if it should chance to be required, simply of such one picture as may be selected for engraving. Whether or not they still propose to confine themselves in this selection to pictures bought by prize-holders, we are not quite certain: we sincerely hope not, as when there is no good subject amongst the prizes, such a course clearly entails a waste of money and an injury to art. Furthermore, a great delay in the publication of the print is caused under the present arrangement, inasmuch as nothing can be done by the engraver until the close of the exhibition, which contains the selected picture. If, on the contrary, the committee were not confined in this respect, and could either purchase an unsold good picture, or order one for the express purpose, excellence might be insured, and regularity in the delivery of the engraving at the most convenient period each year be attained. We have, however, very great confidence in the judgment of the committee; and again urge all who are interested in the prosperity of the Fine Arts, to subscribe to the Art-Union of London, whereby they will have the satisfaction to a certainty, not merely of aiding merit and assisting to cultivate the general taste; but of obtaining a good guinea's worth for their guinea.

## ARCHITECTURE OF THE STREETS.

## No. 1.—OXFORD STREET.

The prime characteristic of the age we live in, both as regards intellectual and physical subjects, is, not the production of isolated great minds, or the furtherance of the views and fortunes of particular families, but the *improvement and elevation of the multitude*, the general advancement of whole communities in domestic comforts and moral training. Such individuals as Dunstan, Chaucer, Shakspeare, Raleigh, and Bacon (to quote scantily and at random), still retain in reputation, the eminence on which their superior abilities placed them in their own times; they are not hidden, or even obscured by the number of the men who have, in like manner, raised themselves above their fellows in our days; but then this eminence—the distance between them and the masses—has been lessened universally by the general upraising of all classes of society which has taken place, and is still going on.

The millions can no longer be considered as existing solely for the advantage of the units: states, not rulers, must now be the objects of consideration: and so too in other matters than government. Instead of a few large-sized and costly books, prepared simply for the rich and the powerful, we have them multiplied a thousand-fold of a less expensive character, to serve the altered and increased demand. Discoveries in physical science, at one time used by their possessors, but as means for further enslaving the minds of those within their influence, are now deemed of value only in the ratio of their probable usefulness to the public; and a hundred other illustrations, of what we mean to convey, might be found readily, were they necessary to our purpose. We shall, however, content ourselves with one, and that is, in ARCHITECTURE, where the characteristic pointed out is especially observable, and has worked singular results.

Fortresses, palatial edifices, ecclesiastical structures, and the residences of the nobility of by-gone days, may vie in many points with like structures of modern date, if, indeed, they are not superior; but if we look to the dwelling-places of the great body of the people, the arrangement of our towns, and the habitations of the rural population, we shall be struck by the vast improvement which they exhibit, and feel at once (if it were never felt before) the change which has taken place.

Were an inhabitant of one of the unpaved, undrained, unlighted streets of London, as it used to be, to revisit his former haunts, he would consider the alterations could have been the result of little short of enchantment. Some few ranges of mean and ill-contrived tenements, with their gable-ends towards the road, overhanging in many places fearfully, and with open sheds beneath pent-houses for the traders, have given place to interminable streets of large dimensions, lined with residences and shops, in all cases compact and commodious, in many actually magnificent and costly, forming, when combined,

“—a whole which, irregular in parts,  
Yet leaves a grand impression on the mind,  
At least, of those whose eyes are in their hearts.”

There is room, it is true, for important changes, even yet; in fact, we can speak of the great recent improvement only as having been commenced. Use legitimizes everything in the eyes of the multitude, and renders even deformity charming; so that all alterations in the taste and habits of a people, are necessarily slow and gradual when dependant on themselves.

Again, it is greatly to be regretted, that the materials employed in London for external decoration, are not usually of an enduring nature.

Stone, on account of its expense, is seldom used in ordinary street architecture; and Roman cement and other compositions, from the ease and comparatively trifling cost with which by their means a showy effect may be produced, have become its insubstantial substitute. Mr. Cooper, in his work on “England,” remarks, “Were London to fall into ruins, there would probably be fewer of its remains left in a century than are now found in Rome. All the stuccoed palaces and Grecian façades of Regent-street and Regent’s-park, would dissolve under a few changes of the season. The noble bridges, St. Paul’s, the Abbey, and a few other edifices, would remain for the curious; but I think few European capitals would relatively leave so little behind them of a physical nature for the admiration of posterity.” Unfortunately, too, under the system pursued in England, of building on land held only for a short term of years, no material alteration in this respect can be looked for. Our intention, however, in the present series of papers, is to review generally the streets of London *on their face*, and to point out from time to time such improvements as have been, or might be made in them.

Oxford-street, which, when connected with Holborn by the proposed new street through St. Giles’s, will form one of the most extraordinary thoroughfares in the world, presented until very recently few exceptions in its houses to the brick band-box style followed during the reigns of the Georges. Lenses, however, are now falling in, and houses falling down; and it is gratifying to observe, that wherever they have been rebuilt or altered, an attempt has been made to achieve something like architectural effect. Beginning at the western end, but omitting for the present the enormous piles of buildings which have high upraised themselves in connexion with it on the road to Bayswater, we meet a small front (No. 250), in the French style, wherein, to a certain extent, polychromatic decoration has been attempted, and not unsuccessfully. The shop front, with its entablature formed of small scrolls and foliage (less objectionable in such a position than usual), takes the appearance of a large looking-glass. The general colour is green, and the ornamental portions and the mouldings are heightened with blue and red.

The most striking elevation in Oxford-street, both from its size and appearance, is that of Messrs. Gillow’s premises (No. 176), now being erected under the direction of Mr. Thomas Little. It has a frontage of about forty-five feet, and presents three ranges of windows above the ground-floor, five in each, surmounted by a very large cornice. The details are Italian. The ground story is faced with stone, rusticated, and the upper part, with the exception of the window dressings, which are also of stone, is of Suffolk brick. The mouldings of the windows in the one pair floor, it may be observed, including the consoles and caps, are very carefully designed. The effect of this elevation is much injured by the appearance of the bare party-wall on either side, showing the adornments to be a mere facing stuck on, and not integral portions of the structure.

The public-house at the corner of Gilbert-street (No. 287), with Corinthian columns and entablature to include the ground-floor and mezzanine story, and with the windows of the two upper floors, formed into long single openings with arched heads, has great claims to praise on the score of originality, and produces a good effect. Messrs. Newman and Hallett were the architects.

Nos. 133, 134, and 135, have been rebuilt, *en suite*, and form a very excellent façade, highly creditable to its designers, Messrs. Pink and Erlam. The materials employed are red brick and compo dressings, in imitation of stone, an union,

the excellence of which was duly understood by our ancestors, and is beginning to be again appreciated by ourselves. The frieze of bulls’ heads and garlands from the Temple of Vesta, at Tivoli, is introduced above the windows of the two pair with good effect, although contrary to sound principle touching ornament. Mr. Erlam, it appears, was till lately an officer of engineers in the service of King Leopold, and has given up his commission for the profession of architecture.

It is satisfactory to notice, although not strictly within our present object, that the use of iron bresssumers and story-posts is now almost universal in building new shops. Where wood is employed, as was formerly always the case, a fire is pretty nearly certain to involve the destruction of the front wall.

At No. 82, the shop-front and dwarf-railing before it are deserving of observation, especially the latter.

Nos. 61 and 62, forming one house, occupied by Williams and Sowerby, present a very excellent front. The dressings of the one-pair windows are peculiar and elegant: but the principal cornice and consoles are somewhat too heavy.

No. 56 is a repetition of the same details.

Messrs. Battam, Craske, and Coleby’s shop, at the corner of Berners-street (No. 52), is an elaborate specimen in the Elizabethan manner, displaying especially eight large projecting figures, bearing a broken entablature and the decorations of a mezzanine story. The architect was Mr. Frederick Illing, who has displayed much skill in all the details. We should be sorry, however, to find this style generally adopted, as it is deficient in all just principles, and more likely to vitiate public taste than improve it. The contrast between the upper part of the house, which is perfectly plain, and the shop front we have been speaking of is so great, that they seem to have no connexion: a circumstance which sadly mars the effect in the eyes of the “judicious.”

The house, No. 392, a tobacconist’s, displays much cleverness in a small space. The Vanbrugh-like character of the details is striking.

In concluding this brief notice of some portions of Oxford-street, we cannot avoid remarking, that in the Circus at the junction with Regent-street, an excellent locality for a public monument,—an instructor in the mystery of the beautiful,—has been thrown away as at Hyde Park corner; a paltry lamp-post having been recently set up on one side of the open area, to afford protection to foot-passengers in crossing. If we had in London a body of men, whose province should be the improvement of the appearance of the town, a “commission of adornment,” in fact, appointed by authority, such positions as this, it is probable, would speedily be occupied in another way,—at all events *they ought to be so*.

## OBITUARY.

MR. CHARLES BEHNES.—In our last number appeared a letter written from Rome, by a friend of the late Mr. Burlowe, with some account of the death of that rising sculptor, which occurred in August 1837. We have this month to record the decease of the brother of Mr. Burlowe, Mr. Charles Behnes, which took place at the house of Mr. William Behnes, on the 15th of December.

To account for the difference in the name, it is necessary to observe, that Mr. Burlowe altered his name, to prevent any confusion that might arise.

Although not himself a sculptor, Mr. Charles Behnes possessed a refined and classic taste in sculpture, and materially aided in the furtherance of that education in art, which would have rendered his brother, had he lived, a distinguished member of his profession. He was much devoted in early life to the study of mathematics and natural philosophy, but ill-health had of late years disinclined him to application, although his mental vigour remained unimpaired.

## REVIEWS.

**ILLUSTRATIONS OF CAIRO.** By ROBERT HAY, Esq., of Linplum. Drawn on stone by J. C. BOURNE, under the superintendence of O. B. CARTER. Publishers, Tilt and Bogue.

The author of this work has, we understand, filled a high diplomatic situation, during several years, in Egypt; and has turned to valuable account his opportunities for obtaining information concerning the habits and character of its people, and procuring accurate copies of the wonders of art with which it abounds. It is fortunate for a country when the persons intrusted with the management of its affairs abroad, are disposed and able to study the capabilities of those among whom they dwell; and, still more so, when they have the power to report not only to their immediate employers, but to the public at large, the result of their knowledge, observations, and experience. If all our employes in foreign states had been enlightened men, and especially, if they had been educated artists, what a store of wealth might have been gathered for the nation! Mr. Hay has dedicated his book—not to one of his aristocratic friends, but to a brother labourer in the extended field—Edward William Lane, the accomplished translator of the "Arabian Nights," and author of "The Manners and Customs of the Modern Egyptians," to whose literary attainments and moral worth he offers a gratifying tribute.

The work contains thirty prints, accompanied by thirty-three pages of explanatory letter-press. The prints are of a large size—the volume corresponding with those of Mr. Haghe, Mr. Nash, &c.: they are executed in the very best style of lithography; and have been placed on the stone by one of the most skilful of our artists in this department of the art. [Mr. Bourne has already made a reputation by his published series, describing the leading objects on the line of the Birmingham and London Railway.] The subjects comprise the more striking and characteristic objects to be encountered in Cairo; they are principally of mosques, ancient buildings, and views on the Nile; but they derive considerable interest from the introduction of groups, illustrative of the habits and customs of the Egyptians: for example, in plate 16, 'A Street,' we have "the harem of a grandee;" an eunuch precedes the party, who are always mounted upon asses, and as a mark of distinction, elevated upon very high saddles, covered with carpets, upon which the ladies ride astride, having very short stirrups. In plate 25, 'The Slave-market,' we have a complete picture of the melancholy scene; groups of young girls exposed for sale, beside whom their masters are making bargains; several "gellahs" (slave dealers) are represented in different parts of the court; a Syrian-Turk is in treaty with one of them; two girls have just been sold in another group. The scanty dresses of the slaves are seen exposed to the sun upon the walls; and some small chambers in front have hanging cloths to conceal the inmates. Plates 13 and 14, represent the Bazaar, with the assembled traders, the auctioneers, water-carriers, and priests. In plate 9, 'The Palace of Shereef Bey,' an excellent group of camels has been introduced from the sketches of M. Bonomi, by Mr. Warren, whose co-operation has been on other occasions very useful to Mr. Hay. Indeed, every plate is rendered effective by the judicious introduction of objects, that while they add considerably to our information, greatly enhance the pictorial value of the collection. As a work of art, the book may vie with the best of the age, and country; and now that public attention is necessarily directed so continually to the country it describes, its publication is peculiarly well-timed.

**PICTURESQUE VIEWS ON THE RIVER NIGER.** Sketched during Lander's last visit in 1832-3. By COMMANDER WILLIAM ALLEN, R.N. Publisher, John Murray.

This publication possesses considerable merit as a work of art; and the subject of which it treats is one of vast interest and importance. The work supplies another instance of the profit to be derived by the nation, from the employment abroad of persons who have a knowledge of art; and the power, therefore, to communicate valuable information to the country—an additional proof, if one be required, of the wisdom and policy of a government patronage of the arts. Captain Allen is about to embark, as commander of H. M. steam vessel "Wilberforce," once more for Africa; an expedition having been fitted out, composed of three iron men-of-war steam vessels, to proceed up the Niger, with commissioners charged by Her Majesty to make treaties with the native chiefs for the suppression of the horrible traffic in slaves; and to point out to them the advantages they will derive, if, instead of the wars and aggressions to which it gives rise, they will substitute an innocent and a legitimate commerce. We earnestly hope that the merciful mission of the gallant officer will be successful. The work commences with a map of the Rivers Niger and Chadda, as surveyed by Captain Allen in 1832-3; and is followed by a series of views, which afford a very clear idea of the adjacent country and its inhabitants; accompanied by explanatory letter-press. They are beautiful as well as interesting.

**CATTERMOL'S HISTORICAL ANNUAL. THE GREAT CIVIL WAR OF CHARLES THE FIRST AND HIS PARLIAMENT.** By the Rev. RICHARD CATTERMOLE, B.D. Illustrated by GEORGE CATTERMOLE. Vol. 1. Publishers, Longman and Co.

This Annual is "under the superintendence of Mr. Charles Heath;" who has at length produced a volume, liable to none of the taunts that have been aimed lavishly, but often thoughtlessly, at the class to which it belongs. Here are no prettinesses of pen and pencil, to invite merely a casual glance, and to be laid aside as worthless; no contributions of small wits, that never produced a thought or excited one: the book is no "Olla Podrida" of designs, engravings, tales, poems, and epistles, "by various hands," mixed up into an unpalatable hodge-podge; but a veritable history, written with much ability and remarkable conciseness, in a style at once graphic and eloquent, and conveying much valuable information as well as rational enjoyment. The letter-press is from the pen of an accomplished writer; he has, perhaps, allowed to his fancy less scope than might have been permitted, and has laboured rather to check enthusiasm than to give it the reins; but his book is sound and sensible; his facts are skilfully arranged, and his reasonings just and impartial. It is, in fact, a contribution to history, and one that will invite many readers to a more intimate knowledge and attentive consideration of the most frightful era of England. The illustrations (fifteen in number) are from the pencil of the author's brother, George Cattermole. Our readers will be prepared to believe they are of high excellence as works of art; the subject could not have fallen into better hands; no artist is better qualified to pourtray the stirring scenes and characters incident to the eventful period. They are, for the most part, landscape-historical; although, in some, the figures have considerable prominence; as in the frontispiece, for example, 'The Raising of the Standard' at Nottingham—the memorable prelude to actual war; accompanied by melancholy forebodings of its terrible termination. The group around the monarch is arranged with

considerable skill and effect. The vignette, an exceedingly graceful design, is 'the King's Camp' at night, before Donnington Castle. The two or three episodes in the life of Strafford are well told: his "farewell," on receiving the blessing of Laud on the way to execution, is less touching, perhaps, than the picture of the same subject by De la Roche. We have then 'The Death of the brave Earl of Lindsay,' after the battle of Edge-hill; next 'The Slaughter of Lord Northampton,' under the walls of Lichfield (the memorable defence of which is admirably described by the author); 'The Queen on the Strand at Burlington, about to embark for France,' follows; one of the best of the scenes is 'The noble Defence of Wardour Castle, by the heroic Lady of the Lord Arundel,' and another equally good is 'The Defence of Lathom Castle,' by another high-hearted woman, the Countess of Derby. The series is, indeed, altogether excellent—valuable as a work, and interesting as a pictorial contribution to a full page of British history. The plates, too, have been, without an exception, ably engraved; although the greater part of them have been entrusted to landscape-engravers. This volume reaches only to the fatal fight on Marston Moor; the next will continue the unhappy king's career—exhibiting him as the prisoner, and ultimately as the victim of his subjects. We hope it will be pre-eminently successful; we cannot doubt that it will be appreciated by all persons of sound judgment; and that Mr. Heath will be thus induced to render annual publications the medium of communicating matters that are not created to be forgotten—"the sooner the better."

**PORTRAIT OF HIS GRACE THE DUKE OF WELLINGTON.** Painter, JOHN LUCAS. Engraver, SAMUEL COUSINS, A.R.A. Publisher, F. G. Moon.

Another Portrait of his Grace—they come "in thick battalions." The artists of Great Britain have supplied the most unquestionable evidence of the Duke's popularity; for we believe no individual, since William III., has had his countenance so often copied. Fortunately for them, he fills so many stations that, though the face may be the same, the draperies can be varied "infinitely," so as to suit all tastes and fancies. The one at present under notice represents him as Chancellor of the University of Oxford; a standing figure, with the staid and sober air of the scholar, rather than the fire and energy of the soldier: the composition is simple, but dignified, and the artist has manifested judgment as well as good taste.

"In peace there's nothing so becomes a man  
As modest stillness and humility;  
But when the blast of war blows in our ears—"

Although in his rich official robes, they are so managed as in no degree to deduct from the interest of "the Portrait;" the lofty pillars of the hall, and painted window, "richly dight," in the back-ground, by no means attract attention from "the object," and the necessary draperies are introduced with considerable skill. The likeness is unquestionably good; it is exactly his Grace in his more thoughtful mood. The figure does not so well please us; the lower limbs appear ungracefully bent. Of the merit of the engraving, it will be sufficient to say, that it is from the burin of Samuel Cousins. The picture was painted for, and presented by the Duke to, the University of Oxford—where it will remain for ages, to stimulate British youth to activity and glory, and no less to industry and integrity.

**MERCURY AND ARGUS.** Painter, J. M. W. TURNER, R.A. Engraver, T. WILLMORE. Publisher, F. G. Moon.

This is a splendid print—one of the most perfect examples of the English burin; at once delicate

and forcible, producing a brilliant effect, and yet carried to the highest degree of finish. In the engraving we cannot perceive the defect so generally attributed to the picture, when exhibited two years ago at the British Institution; where it had the appearance of being broken into bits, was full of red and yellow spots, while the figures introduced were altogether incomprehensible. The good qualities of the work have been preserved, while the wilful follies of the great painter have been entirely abrogated. It is here a delicious composition; full of grace, truth, and beauty; and may take its stand among the finest examples of art this country has produced.

**THE EXAMINATION OF A VILLAGE SCHOOL.**  
Painter, GEORGE HARVEY, R.S.A. Engraver,  
F. BROMLEY. Publishers, Hodgson and Graves.

A most interesting and agreeable print; full of incident and character; and appealing to the home-feelings of mankind. It is worthy the high reputation of the accomplished Scottish painter, who has done honour to his country by picturing its leading characteristics with true and laudable national pride. He has here quitted the more difficult path of history to preserve a record of every day, and humble, life,—the village schoolmaster is examining his young pupils in the presence of the minister and his wife, and the anxious parents of the candidates for scholastic honours. A group of four stand upon a table; they are undergoing "the question;" while round them congregate a set of urchins, among whom it is easy to distinguish those who have passed the ordeal, from those by whom it is yet to be endured. The old and young are equally full of character; strange contrast! those who are barely on the threshold of existence with those who are soon to resign their places to their successors. The composition is happily managed; although crowded, it is by no means confused; all the accessories are made to "tell;" the light is introduced very judiciously through the window and half open door of the schoolmaster's cottage. There are thousands to whom the print will be valuable; for it speaks a language that all may understand. The print has been cleverly engraved by Mr. F. Bromley.

**THE ART OF ENGRAVING, WITH THE VARIOUS MODES OF OPERATION.** BY T. H. FIELDING.  
Publishers, Ackerman and Co.

The object of this little work is to make the art of engraving in all its different branches, easy of access to the more unscientific. The amateur will find it a very useful guide; every tool necessary for the process is described in the plainest and simplest manner; receipts for making the varnishes used are given; in short, it is a regular manual of the art. The style in which it is written is so intelligible, that any reader may understand it without trouble. Engraving is now becoming so popular, that a book like the present must be very acceptable; a more interesting study could not be found. Wood engraving is particularly fitted for ladies, as this branch does not require the use of acids, and is a very clean and "ladylike" labour; we hope to see it supersede the eternal tapestry work of slippers, reticules, and music seats—sad inventions for spending time to little purpose, and depriving of recompense those to whom such employments give the means of existence.

Mr. Fielding's work enters sufficiently into the various branches of the process of engraving; commencing with etching, and explaining the new modes of electrography and pholography, as well as the recent improvements in lithography. The book is beautifully got up; the several departments of the art being illustrated by a tastefully executed print.

**MONUMENT TO BE ERECTED AT EDINBURGH TO THE MEMORY OF SIR WALTER SCOTT.**  
Publishers, Adam and Charles Black, Edinburgh.

This is the best view of the elegant Gothic Cross, selected by the Committee appointed in 1833, to erect a monument to the memory of Scott, that has yet been published; and will, doubtless, be sought for by all lovers of that great man's genius, and admirers of works of fine art. So much has been already written of the extraordinary circumstances which characterized the early life of Mr. Kemp, by whom this structure was designed, of the two competitions wherefrom it was selected, and of the opposition since on the part of two or three individuals, which has served to delay the execution of it, that it is unnecessary now to enter upon these points.

The appropriateness of a Gothic Cross for the purpose, was first suggested to the Committee by Mr. John Britton (although it seems never to have been publicly acknowledged), and it becomes still more apparent, when we remember the regard which Sir Walter Scott entertained for the architecture of the middle ages, in preference to that of the classic period, as well as the whole bent of his pursuits and investigations. Monumental crosses have been numerous in England: those erected by King Edward I., at the various places where rested the corpse of his Queen, Eleanor, in its progress from the place of her death to Westminster Abbey, were the most important, and yet remain in some few instances, as at Northampton, Geddington, and Waltham. The one now designed, however, if properly carried out, will be superior, we hardly hesitate to say, to any of these its prototypes in arrangement and effect, and will confer honour alike upon its designer and the committee.

**VIEWS IN THE INTERIOR OF GUIANA; from Drawings executed by Mr. CHARLES BENTLEY, after Sketches taken during the Expedition. With descriptive Letter-press, by ROBERT H. SCHOMBURGH, Esq. Publishers, Ackerman and Co.**

This very beautiful and highly interesting volume introduces us to a country, with the natural wonders of which we are almost entirely unacquainted. Few travellers have dared to penetrate far into the interior; the difficulties to be surmounted are too appalling to be encountered by any but men of great activity and enterprise, and who are content to hazard a thousand chances against their ever returning alive to the haunts of civilization. Yet few parts of the New World will more richly recompense the venturesome traveller: it is full of grandeur and beauty; nature exists there untouched and uninfluenced by art, and flourishes in rude magnificence.

M. Schomburgh wandered—we can scarcely say travelled—through Guiana, between the years 1835 and 1839; an expedition to explore it having been fitted out under the direction of the Royal Geographical Society, and being partly aided by the British Government. The results of his experience he has communicated to the public. His statements are clear and comprehensive; he describes the natives and the scenery of Guiana in a most satisfactory manner, not going very deeply into his subject, but giving us a vast deal of information in a limited space; and he has illustrated his tour by a series of explanatory prints, clever as works of art, and admirable for the insight they afford into the character of the scenery and the habits of the people. The book is a valuable contribution to our already rich store of travels in the New World.

**TO READERS AND CORRESPONDENTS.**

*With the present number, we commence a third volume of "THE ART-UNION;" it is necessary for us to occupy but a small space in addressing our readers; we cannot, however, omit the opportunity for expressing our strong and grateful sense of the support we have received from the Artists and the Public.*

*That we shall continue to merit this support, we can have no doubt; for circumstances now empower us to obtain increased facilities for the improvement of our journal; so as to give additional interest and value to every department of it.*

*We have studiously and continually striven to maintain a character for entire independence; and believe we have not been unsuccessful in establishing it; we have felt it, however, to be absolutely necessary that we should be placed beyond the suspicion of being swayed by any individual interest; and we therefore, announce that*

**"THE ART-UNION" IS UNCONNECTED WITH ANY ESTABLISHMENT INTERESTED IN THE PUBLICATION OF PRINTS; and we pledge ourselves that no person or party shall ever be, either directly or indirectly, associated with it, who may be supposed to have an undue influence upon its opinions.**

Correspondents will be pleased to bear in mind that, for the future, their letters must be addressed to us, to the care of

MESSRS. HOW AND PARSONS,  
BOOKSELLERS,  
132, FLEET STREET.

**ADMISSION OF ACADEMICIANS TO THE THEATRE.**—Having received the following letter, we thought it our duty to communicate with Mr. Webster on the subject; we publish his answer, and leave the matter in the hands of our correspondent.

"SIR,—Your intimate connexion with art, as well as with literature, will enable you probably to inform us why the *Isaacites* of the Royal Academy are refused a free admission to the Haymarket Theatre, whilst at Covent-garden, both Associates and Academicians are free. The actors of the Patent Theatres are admitted gratis to the exhibition of the Royal Academy, why should not the compliment be returned to painters? or why should any invidious distinctions be shown?—I am, &c.,

"MASTIC."

"T. R. H., Jan. 5, 1841."

"MY DEAR SIR,—The only members of the Royal Academy on the Free List of this theatre are my personal friends, and not because they are R.A.'s. With regard to Covent-garden, I should very much doubt any such rule existing as stated in your letter. In fact, it is the first time I ever heard of such a thing. I have been an actor at the Patent Theatres for many years, and never heard of such a privilege as being admitted to the Royal Academy free. I have asked several the question, and they all agree with me. At all events this is not a *Patent* Theatre. If such a privilege is granted to my actors, I should be most happy to reciprocate.—I am, &c.,

B. WEBSTER."

A Correspondent complains that the Birmingham judges awarded the prize to Mr. Sydney Cooper, alleging, with some show of reason, that this is not encouraging high art. Mr. Cooper has now received four prizes—one at Liverpool in 1833; one at Manchester in 1835; another at Liverpool in 1838; and now, in 1840, one at Birmingham. He is certainly the master in the department of the art he pursues; and it is admitted that the judgment which rewarded him can be questioned on no other ground than that a high class of art should be encouraged by a public body.

We regret that we cannot assist "A Subscriber at Worcester," in procuring a copy of the memoir of the late Mr. Chambers, from which we made some extracts. It was printed in his native town, but to a very limited extent, and we understand is not now to be had.

An "Amateur" requests answers to the following queries, which, perhaps, some competent person will be good enough to give him:—1st, What is the cause of the flocculent precipitate which takes place in washing in skies in water-colours, of cobalt, or, even worse, in French blue, which frequently entirely mars the effect? and, 2nd, How is it to be prevented?

A Correspondent complains that we say nothing concerning the Society of British Artists, its plans, or its movements. We shall be happy to render it any aid in our power, if we obtain such aid as will enable us to communicate information.

*The Title and Index must be cut from the other 4 pages; and these 4 pages introduced according to the paging.*

JUST PUBLISHED,

*In Two Volumes, handsomely bound, price £2 12s. 6d.***THE LAND OF BURNS;**

A SERIES OF LANDSCAPES, RENDERED CLASSICAL BY THE WRITINGS OF THE SCOTTISH POET,

This most interesting Picture is considered by the whole Court as the most perfect Portrait of Her Majesty Queen Adelaide ever painted.

Price to Subscribers, Prints . . . £1 1s. Proofs . . . £2 2s. India Proofs . . . £3 3s. Proofs, before letters . . . £4 4s.

SIZE OF THE PLATE, EIGHTEEN INCHES BY FOURTEEN.

LONDON: PUBLISHED BY THOMAS M'LEAN, 26, HAYMARKET.

NOW READY,

## LUCAS'S CELEBRATED PORTRAIT OF

## THE DUKE OF WELLINGTON, K.G., &amp;c. &amp;c.,

AS MASTER OF THE TRINITY HOUSE.

"IN THIS PORTRAIT (as Master of the Trinity House) WHAT WAS SAID OF THE PAINTING MAY BE REPEATED OF THE PRINT: HIS GRACE IS REPRESENTED AS HE ACTUALLY IS; EVERY PART DEPICTS HIS LIVING ATTITUDE, MANNER, AND APPEARANCE."—*Times*.

"AN ADMIRABLE MEZZOTINT OF LUCAS'S FIRST AND FINEST PORTRAIT OF THE DUKE. WE MAY SAY OF THE PRINT AS OF THE PICTURE, THAT IT IS THE BEST, IF NOT THE ONLY TRUE AND CHARACTERISTIC LIKENESS OF WELLINGTON."

"At last we have got a good and true likeness of Wellington. Lucas has given us the man and soldier as he is; others are more or less like, but this is THE Portrait."  
—*Spectator*.

PRICE TO SUBSCRIBERS,—SIZE 21 INCHES BY 32 INCHES HIGH.

India First Proofs, before Letters	ALL SOLD.
Proofs, with Letters ( <i>a few left</i> )	4 Guineas.
Prints	4 Guineas.

PREPARING FOR PUBLICATION,

## LONDON AS IT IS.

A selection of Twenty-six Views in this great Metropolis, representing its principal Streets and characteristic accessories, Public Buildings in connexion with the leading thoroughfares, &amp;c., &amp;c. Drawn from Nature expressly for this work, and Lithographed by THOMAS SHOTTER BOYS.

THE WORK WILL CORRESPOND IN SIZE WITH "BOYS'S PARIS, GHENT," ETC., AND "ROBERTS'S SPAIN," ETC.

Price, Printed with Sepia Tints, 4 Guineas, bound. A few copies coloured by hand and mounted in a folio, 10 Guineas.

AS A COMPANION TO THE "TRIAL OF WILLIAM LORD RUSSELL;" NOW ENGRAVING,

## THE TRIAL OF THOMAS, EARL OF STRAFFORD,

IN WESTMINSTER HALL, APRIL 1641.

From the Original and interesting Picture, painted expressly for the purpose, by WILLIAM FISK, Esq. Engraving in the most highly-finished manner, of a corresponding size and style to the "Trial of William Lord Russell," painted by GEORGE HAYTER, Esq., to which it is confidently anticipated this will prove in no point in the least degree inferior. It comprises a considerable number of Portraits of the celebrated men who lived in that eventful period. As in the "Trial of Lord Russell," so also in the "Trial of Lord Strafford," does the female character shine pre-eminent; to which is added, that deep interest which attaches to young and noble children who are on the point of being rendered fatherless orphans, and for whose welfare Strafford so deeply feels, when in his defence he exclaims—

"My Lords, I have now troubled you longer than I should have done, were it not for the interest of those dear pledges a saint in heaven hath left me; I should be loath, my Lords—(here he pointed to his children, and his weeping stopped him).—What I forfeit for myself, it is nothing; but that my indiscretion should forfeit for my child, it even woundeth me deep to the very soul."

PRICE TO SUBSCRIBERS.

First Proofs, before Letters, on India Paper (of which a very limited number will be printed)	8 Guineas.
Plain Proofs, before Letters	6 Guineas.
Lettered Proofs	3 Guineas.
Prints	2 Guineas.

LONDON: PUBLISHED BY THOMAS BOYS, PRINTSELLER TO THE ROYAL FAMILY, 11, GOLDEN SQUARE, REGENT STREET.

## STANDARD POETICAL WORKS.

I.  
**BYRON'S POETICAL WORKS**, with his LETTERS, JOURNALS, and a LIFE, by THOMAS MOORE, Esq. With Notes and Illustrations. 17 vols., fcap. 8vo., 5s. each, in cloth.

II.  
**CRABBE'S POETICAL WORKS**, with his LETTERS, JOURNALS, and a LIFE, by his SON. With Illustrations. 8 vols., fcap. 8vo., 5s. each, in cloth.

III.  
**MILLMAN'S POETICAL WORKS**, with PREFACE and NOTES, by the AUTHOR, and Illustrations. 3 vols., fcap. 8vo., 18s., in cloth.

IV.  
**HEBER'S POETICAL WORKS**. A new and complete edition. 1 vol., fcp. 8vo., cloth. (In a few days.)

V.  
**SELECTED BEAUTIES of the BRITISH POETS**, with Biographical and Critical Notices, and an Essay on English Poetry. By THOMAS CAMPBELL. A new edition. 1 vol., royal 8vo., cloth. (In a few days.)

John Murray, Albemarle-street.

The following Works will be published in January.

I.  
**LOCKHART'S ANCIENT SPANISH BALLADS**, Historical and Romantic. A new edition, revised, with numerous Original Illustrations and Illuminations. 4to.

II.  
**THE HAND-BOOK OF PAINTING**, translated from the German of Kugler. By A LADY. Edited, with Notes, by CHARLES LOCK EASTLAKE, R.A. Post 8vo. Part I. Painting in Italy from the Time of Constantine the Great.—Part 2. Painting in Germany, the Netherlands, Spain, France, and England.

III.  
**COMPANION to the PRINCIPAL PUBLIC and PRIVATE GALLERIES of SCULPTURE and PAINTINGS**, in and near LONDON. By Mrs. JAMESON. Post 8vo.

IV.  
**THE MANNERS and CUSTOMS of the JAPANESE in the 19th CENTURY**. Described from recent Dutch Visitors. Post 8vo. John Murray, Albemarle-street.

**CHEAP PLATE-GLASS, CALLED SHEET PLATE-GLASS**.—The Sheet Plate-Glass made by a newly-invented Patent process, is an article quite as good in quality as the British Plate-glass, with the important advantage of being considerably cheaper; affording the facility of glazing dwelling-houses and public buildings with plate-glass at a moderate cost. It is also particularly well suited for Drawings and Engravings. Sold, Wholesale and Retail, by CLAUDET and HOUGHTON, at their Glass Warehouse, 89, HIGH HOLBORN, where printed lists of prices may be had.

## AN ELEGANT GIFT-BOOK.

Just published, illustrated by Frontispiece from Design by GILBERT, and Vignette by HARVEY, price 10s. 6d. 8vo., cloth elegant, gilt edges.

**THE PARLOUR TABLE BOOK.**

Written and selected by R. A. WILLMOTT, Esq., Author of "Lives of the English Poets."

"A more valuable present to the world has not been made for many years, and we from our hearts wish that it may find a welcome to every ParLOUR Table in the empire."—*The Age*.

"The work is one of the most meritorious of its kind, the taste displayed in selection being admirable. The pieces written by Mr. Willmott all bear marks of a richly-cultivated mind. Its exterior is almost as elegant as its contents."—*Britannia*.

Joseph Rickerby, Sherbourn-lane, King William-street, City; and to be had, by order, of all Booksellers.

Published this day, to be completed in Twenty-four to Thirty Monthly Parts, each embellished with Four highly-finished Engravings. Part I., price 2s., of

**THE RHINE, ITALY, and GREECE**, Illustrated. In a Series of Drawings from Nature. By Colonel Cockburn, Major Irton, W. L. Leitch, and W. H. Bartlett. With Descriptions by the Rev. G. N. WRIGHT, M.A.

Published this day, price 2s., Part I. of **SYRIA and PALESTINE**. Illustrated. From Original Drawings by Bartlett and Allom. With Descriptions by JOHN CARR.

Contents of Part I.:—Mehemet Ali—Beirut and Mount Lebanon—Damascus—Ruins of Balbec—Orontes.

Contents of Part II.:—Palace of Emir Beshier.—St. Jean d'Acre—Tarsus—Divan at Damascus—River Cydnus.

A Part, containing Four Engravings (Part I. and II. Five each), price 2s., will be published on the 1st and 15th of each month, and the whole be completed in Thirty Parts.

In Numbers, each containing Three Engravings, Price 1s.

**ILLUSTRATIONS of SIR WALTER SCOTT'S NOVELS**. From Original Designs by Turner, MacIise, George Cruikshank, &c., &c. Designed to serve as embellishments to the various editions, or as a separate work.

Fisher, Son, and Co., Newgate-street, London.

## ANTI-TURE BLADDERS of OIL-COLOUR.

**WARING and DIMES** beg to inform Artists and Amateurs, that by a very simple adaptation to their colours, they have obviated the inconveniences hitherto complained of. By their plan the necessity of puncturing the Bladder is avoided, its liability of bursting prevented; and as the colour is secured from the air, it will keep to the very last in good condition. The action is so simple it cannot be disarranged or broken. Sold at the trifling advance of 2d. each colour, by the Inventor.

Waring and Dimes, 91, Great Russell-street, Bloomsbury, Artists' Colourmen.

## SPLENDID AND SUPERIOR GILT FRAMES.

**CHARLES McLEAN**, 78, Fleet-street (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET OF DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All goods taken back, not approved of in three months.

## NEW METHOD OF PRESERVING OIL COLOURS.

**G. ROWNEY and Co.'s PATENT PRESERVING ENVELOPE for OIL COLOURS**, to supersede the use of the Bladder. Invented by Mr. TEMPLETON. The peculiar advantages of this Invention are as follows:—1st. The Colours being hermetically sealed, can, with very little trouble, be always kept so; by which means they will remain good for any length of time in any climate; nor is there any dirt or smell from them, and they may be carried loose amongst the finest linen, or in the waistcoat pocket, without any danger of soiling anything. 2ndly. They are more economical than the Bladders, in the use of which one-third or more of the Colour is usually wasted, from bursting, drying up, &c.; whereas in this the whole can be kept good, and used to the last particle. 3rdly. They are more portable from being flat, and on that account are particularly desirable for persons on a sketching tour, where portability is a great desideratum. 4thly. This combination of requisites render them extremely serviceable to officers, &c., going abroad, and also to ladies and amateurs who only paint occasionally; since they can be put by for any length of time, without the slightest injury to the Colours, as the packet is impervious to light and air, and does not permit any oil to leak from it.

CAUTION.—Be pleased to procure the Preserving Envelope manufactured by G. R. and Co., as the outer covering may be easily imitated; but the great advantage is derived from the preparation of the inner one.

NEW COLOURS for OIL PAINTING.—G. ROWNEY and Co. beg to call the attention of Gentlemen interested in the improvement of the Fine Arts to a new and beautiful Colour which they have discovered, called PALLADIUM RED. It possesses a similar tone to, and greater brilliancy than, Vermilion: it is very permanent, and has a semi-transparent body, but having neither Mercury nor Sulphur in its composition, it is not liable to form a Black Sulphuret of Lead, when used in combination with white or any other colour having that metal for its base. It is presumed that it will be of great importance to the Fine Arts as a substitute for Vermilion. To be had only at their Establishment.

Also, a new and permanent BLUE, price 4s. per oz., equal in tone and colour to Ultramarine at 6s. per oz.

## MESSRS. HODGSON AND GRAVES,

Her Majesty's Printsellers and Publishers, have the honour to announce that they are preparing for Publication

## THE STATE PORTRAIT OF

## HIS ROYAL HIGHNESS PRINCE ALBERT,

IN THE ROBES AND JEWELS OF THE ORDER OF THE GARTER.

Beautifully engraved in Mezzotinto from the original Picture painted in Buckingham Palace, by GEORGE PATTEN, Esq., A.R.A.,

Portrait Painter to His Royal Highness.

This magnificent Portrait is engraving on the same grand scale as the Portrait of Her Most Gracious Majesty in the Robes of State, by SAMUEL COUSINS, Esq., A.R.A.

Price, Prints . . . £3 3s.

Proofs . . . £5 5s.

Proofs, before Letters . . . £8 8s.

NEARLY READY, A NEW WORK BY MR. BURNET,

## THE TRIAL OF CHARLES THE FIRST IN WESTMINSTER HALL.

Engraving in Mezzotinto by JOHN BURNET, Esq., F.R.S., from the original Picture painted by himself.

"No event in the English annals is of equal interest to the Trial and Condemnation of Charles the First; and it is very remarkable that no painter has, before Mr. Burnet, treated it in a manner worthy of the dignity of history or of the arts; its importance is much heightened by the introduction of authentic portraits of the leading personages of the Commonwealth—men whose exploits occupy so important a space in the pages of English history."

Price to Subscribers, Prints . . . £3 3s.

Proofs . . . £5 5s.

Proofs, before Letters . . . £8 8s.

## THE HIGHLAND DROVERS DEPARTING FOR THE SOUTH.

Exquisitely engraved by J. H. WATT, Esq., from the original picture by EDWIN LANDSEER, Esq. R.A.

Present price to Subscribers, Prints, £3 3s.; Proofs, £6 6s.; India Proofs, £10 10s.; Before Letters, £12 12s.; to be increased on publication to—Prints, £4 4s.; Proofs, £8 8s.; India Proofs, £12 12s.; Before Letters, £16 16s.

LONDON: HODGSON & GRAVES, PRINTSELLERS AND PUBLISHERS, BY SPECIAL APPOINTMENT, TO HER MAJESTY AND HIS ROYAL HIGHNESS PRINCE ALBERT, 6, PALL-MALL.

# THE WATERLOO BANQUET

AT APSLEY HOUSE,

BY WILLIAM SALTER, ESQ., M.F.A., &c. &c.

MR. MOON has the honour to announce the completion of this most interesting picture by Mr. SALTER. The occasions have been many in which Mr. MOON has had the distinguished honour of publishing works of high character, works of great attraction, either as the production of some eminent artist, or as a work of transcendent excellence and great popular interest. But in no instance has he been enabled to offer to public attention a work of such unusual and engrossing interest as "THE WATERLOO BANQUET;" a picture painted expressly to record, by a faithful representation of the persons and the scene, those who met to commemorate the greatest event in the military history of the world.

It has been the annual custom of HIS GRACE THE DUKE OF WELLINGTON, to rally around him, on the 18th of June, the distinguished officers who were his brothers in arms, to celebrate the glorious victory in 1815, when they aided to crush a revolutionary and military tyranny that had long subdued all Europe, except our own happy land, which, under Providence, was saved by these heroes, who defeated an army and a general, the bravest and the best, except those who conquered them.

It is impossible to imagine a subject of greater and more general interest than this picture, which represents the actual portraiture of more than seventy of those warriors, who, having won fame and rank under their gallant host, thus assemble on the anniversary of the crowning act of all their heroism—to recall the events of that stirring time—to offer a tribute to the memory of those who fell—to rejoice with those who are spared—to offer their congratulations to their veteran leader—and to receive his hospitality beneath his roof, protected during twenty-five years of a peace, which was won, and has been guarded by their valour.

The painter of this scene has had the distinguished honour to receive from HIS GRACE the especial permission to paint it; and every facility which this privilege could command has been afforded to Mr. SALTER—a consideration of the last importance in such an undertaking; for the chief value of the work arises from the interest that every Englishman feels in this commemorative Banquet. It is not a fanciful representation, not an imaginary mingling of likenesses in a scene which might possibly have occurred; but these are portraits, for which every individual in the picture actually sat to the painter for the situation which he occupies, according to the sketch made and studied at the Banquet, which Mr. SALTER was permitted, for several successive years, to witness and study during the festival, where he was allowed to remain, for the express object of this work. Thus the representation of the scene is actual, and of the personages, real! The only liberty taken by the painter was the choice of the moment, and in this he has been most happy; for, choosing that which followed the removal of the dinner, he has availed himself of a warranted licence so to place his figures around the table, that the faces of all can be seen, which could not have been the case at an earlier moment. The period represented is when the company, after dinner, has been broken into groups, and just as the DUKE has risen to address them.

Thus this remarkable commemoration of the greatest military event in the annals of our country is adopted as the subject of a picture, which, by means of the engraving, will be made known throughout the world; what the interest and enjoyment of this subject is, to those who were cotemporary with the battle of Waterloo, is proved by the recollections of every man who remembers that great event and its immediate effects. Our enthusiasm as Englishmen, and gratitude to the heroes of that day, have already been caught by our children, born since that period: and when all those who are represented on Mr. SALTER's canvass shall have passed away, and their memories, instead of their brows, are wreathed with laurel, another and another generation will look upon the print, which will contain the portraits of those great men who saved the country which their descendants will enjoy. It will be looked upon with inexpressible interest, and the commemorative engraving will be appealed to as the most faithful record of an event which has an undying fame.

## PRICES TO SUBSCRIBERS.

Proofs, before Letters . . .	£15 15s.	Proofs . . .	£12 12s.	Prints . . .	£10 10s.
------------------------------	----------	--------------	----------	--------------	----------

*Shortly will be Published,*

## THE LAST WHOLE-LENGTH MILITARY PORTRAIT OF HIS GRACE THE DUKE OF WELLINGTON, K.G. IN HIS UNIFORM AS FIELD MARSHAL.

PAINTED by J. LUCAS, Esq., at WALMER CASTLE, in November last.

The Noble Duke, in expressing his approbation of this work, addressed the Artist in nearly the following words: "Mr. LUCAS, I have been torn to death by repeated sittings, and I will never sit for my Portrait again. Those who wish to have my likeness must have a copy from this."

As a proof of the estimation in which this Portrait is held, 200 Copies have been ordered by the County of Hampshire of the Engraving.

ALSO,

## THE PORTRAIT PAINTED FOR THE UNIVERSITY OF OXFORD, By the same celebrated Artist. Engraved by S. COUSINS, Esq., A.R.A.

### PRESENT PRICES TO SUBSCRIBERS.

Earl of Bandon, Hon. Judge Torrens,  
Viscount Massareene, Hon. Judge Burton,  
Viscount Harberton, Rt. Hon. F. Blackburne,  
Viscount Powerscourt, Colonel D'Aguilar, C.B.,  
Lord Farnham, David Charles Latouche,  
Lord Downes, Henry Kemmis, Q.C.,  
Lord Bishop of Meath.

By the Report of this Society just published, it appears, that, during the past year (the first of its existence), £1235 were collected from above One Thousand Subscribers. An admirable Exhibition was afforded to the public; thirty Works of Art of merit were purchased, at prices varying from 90 guineas to £2, amounting in the entire to £440. These were distributed by lot among the members at a public meeting, held in the Theatre of the Royal Dublin Society, on the 8th of July, 1840, and an equivalent sum was reserved for the purpose of engraving the beautiful and national picture of the 'Blind Girl at the Holy Well, a scene in the West of Ireland,' by W. F. Burton, Esq., R.H.A., then first produced. This engraving is in active progress in the hands of H. T. RYALL, Esq., and will shortly be ready for distribution. In addition to these advantages, so considerable an impetus has been given to private patronage in favour of the arts, as to leave no doubt that, however deficient in this respect heretofore, it will in future keep pace proportionably with the public exertions of this Society.

Subscription—One Pound per Share.  
N.B.—Post Office orders, for remitting the Price of One or Two Shares, may be obtained of any Postmaster in the United Kingdom, for Three Pence, and up to Five Shares for Six Pence.

Ladies and Gentlemen desirous to become Subscribers, will please to send whatever amount they wish to contribute, without delay, to STEWART BLACHER, Esq., Honorary Secretary, 20, Gardeners'-place, Dublin; and the proper vouchers, entitling them to share in the next Distribution of Prizes, will be forwarded to them immediately. — Impressions of the engravings issued strictly in the order that Subscriptions are paid in.

Subscriptions in London will be received by Messrs. Hodgson and Graves, 6, Pall Mall; by Mr. Roberson, 51, Long Acre; or the London and Westminster Bank. STEWART BLACHER, Hon. Sec.  
20, Gardeners'-place, Dublin.

ASSOCIATION FOR THE PURCHASE OF BRITISH ENGRAVINGS.

THE COMMITTEE beg to intimate that the SUBSCRIPTION LISTS for 1841 are now OPEN, and request intending Subscribers to insert their names as soon as possible.

The object of this Association is to cultivate a taste for the Fine Arts, and to encourage native talent, by the distribution among its Members of Engravings of standard reputation, the productions of British Artists.

A Subscription of Five Shillings constitutes Membership; but a Member may subscribe for any number of Shares. The whole of the Funds are expended each year in purchasing Engravings, selected by a Committee of the Members, and distributed by Ballot at a General Meeting of the Association, called by public advertisement. Mr. Newlands, Architect, 12, Argyle-square, Edinburgh, Secretary; Mr. Robert Selater, Die-cutter, 11, South Bridge-street, Treasurer.

ART-UNION OF LONDON.

THE Subscribers and the Public are informed that, in consequence of the extension of this Society's operations, an OFFICE for the transaction of all business connected with it has been OPENED at No. 72, GREAT RUSSELL-STREET, corner of Bloomsbury-square, where the Clerk attends daily, from Twelve till five o'clock, to furnish Prospectuses, and afford any additional information that may be required.

As the Subscription Lists will be closed on the 31st of March, to afford Prizeholders an opportunity of selecting from all the Public Exhibitions of Works of Art, an early subscription is earnestly requested.

Every Subscriber of the past year will receive, for each Guinea subscribed, an impression of a Line Engraving, by Mr. H. C. Shenton, from Mr. Landseer's picture, 'The Tired Huntsman.'

C. P. DIMOND, Esq., Treasurer.  
GEORGE GODWIN, Esq., F.R.S., F.S.A., Hon.  
LEWIS POCOCK, Esq., } Secretaries.  
By Order, T. E. JONES, Clerk to the Committee.

Now Publishing, and respectfully Dedicated to Her Royal Highness the DUCHESS OF KENT.

**THE GRAND NATIONAL PICTURE OF THE BRIDAL MORN,**  
Engraved in the finest style of Mezzotint, by Mr. W. REYNOLDS, after a drawing by F. LOCK. This picture, which has been the admiration of all who have seen it, is acknowledged to be the most pleasing composition which has been produced of our

MOST GRACIOUS MAJESTY, and her beloved Consort,

PRINCE ALBERT OF SAXE GOTHA.

The subject is taken on the return of the Royal Pair from the Altar immediately after the

SACRED CEREMONY, at which interesting moment the mind of the nation

was drawn towards its YOUNG AND PROMISING QUEEN, and her admirable choice. The picture conveys a just

and correct representation of the ROYAL PAIR IN FULL LENGTH, an attempt which has not been made by any other

artist; it is a well conceived subject, and carried out in a masterly style.

Size ..... 25 inches by 17  
Frame inside ..... 29 ditto by 21  
Therefore forming a handsome coup-d'œil.

Proofs on India Paper ..... £4 0 0

Ditto after Letters ..... 2 2 0  
Print ..... 1 11 6

Published by her Majesty's devoted Subject, G. S. Tregear, 96, Cheapside.

**AT A MEETING** of some friends and admirers of the Works of GEORGE CHAMBERS, Marine Painter, lately deceased, held on the 14th January, 1841, at the house of THOMAS SIDNEY COOPER, Esq., No. 16, Wellington Terrace, St. John's Wood, Mr. Cooper in the Chair.

It was stated that Mr. Chambers, for many years previous to his death, which happened on the 28th October last, had been afflicted with severe indisposition, which frequently, and for upwards of twelve months before his death, wholly prevented him from exertion in his profession.

That Mr. Chambers was graciously honoured with the personal notice of his Sovereign, the late King William the Fourth, for whom he painted several pictures.

That Mr. Chambers' talent as a Marine Painter (surpassed by few or none), was too well known to require observation, and whilst it was anticipated, with every reasonable expectation, that the commissions he received would have enabled him to make provision for the future, had his life been spared, it is greatly to be regretted that a declining state of health, occasioned by lingering disease, prevented his doing so; the little he had saved was but barely sufficient to meet the expenses of living and medical aid, during the latter portion of his life; and by his death, his widow and three young children (the eldest of whom is under twelve years of age), have been left without the means of future support, save what may be derived by a sale of his sketches.

To consider the best means to be adopted for the relief of the widow and her fatherless children, as well as for their future subsistence, the present meeting has been convened, at which the following resolutions have been proposed, and carried unanimously.

Resolved:—That a Subscription be entered into for the benefit of the Widow and Children of the late Mr. George Chambers, and that the Patrons of Art and Artists and the Public be respectfully solicited to join therein.

Resolved:—That a Committee be appointed to carry into effect the objects of the Meeting, and to promote and manage the Subscription, and to apply or invest the same as they may deem expedient, and that they be requested personally to exert their influence with their friends in aiding the same.

Resolved:—That the following gentlemen be appointed the Committee for the above purpose, with power to add to their number:—

Thomas Sidney Cooper, Esq., 16, Wellington Terrace, St. John's Wood; Samuel Cousins, Esq., A.R.A., 15, Osnaburgh-street; Henry Graves, Esq., 6, Pall Mall; Robert Graves, Esq., A.R.A., 19, Grove Terrace, Kentish Town; S. C. Hall, Esq., Rosery, Old Brompton; Charles Lewis, Esq., 53, Charlotte-street, Portland-place; Richard Lloyd, Esq., Pear Tree Cottage, Holloway; J. B. Pyne, Esq., 7, Earl's Court Terrace, Old Brompton; Alfred Vickers, Esq., 7, Islington Green; John Whichelo, Esq., 26, Charles-street, St. James's.

Resolved:—That Thomas Sidney Cooper, Esq., be requested to act as Treasurer, and Mr. Robert Cole as Honorary Secretary.

Resolved:—That an account be opened with the London and Westminster Bank (in the name of the Treasurer), where Subscriptions may be paid.

(Signed) THOS. SIDNEY COOPER.

Subscriptions also received by the several Members of the Committee; by Messrs. Hodgson and Graves, 6, Pall Mall; Mr. Fuller, 35, Rathbone Place; Mr. T. McLean, Haymarket; Messrs. Ackermann, 96, Strand; Messrs. Tilt and Bogue, Fleet-street; Mr. Moon, Threadneedle-street; and by the Honorary Secretary, 57, Upper Norton-street, Portland-place.

 United Kingdom.

NEW EDITION OF ROSCOE'S WALES.

This day is published, in demy 8vo., containing six  
 beautiful steel plates and thirty-two pages of letter-  
 press, Part I., price Half a Crown, to be completed  
 in nine monthly parts, including a correct and  
 finely engraved Map.

**WANDERINGS AND EXCURSIONS IN**  
**NORTH WALES.** BY THOMAS ROSCOE, Esq.  
 The high celebrity this work has obtained, has in-  
 duced the publishers to issue an edition of it rather  
 smaller in size than that already known to the public,  
 and at such a price as will enable them to pronounce  
 it one of the cheapest, as well as most richly illustrated  
 works ever published.

\* \* Part I. will contain plates of Conway—Bettws-y-  
 Cood—Pont Aberglaslyn—Menai Bridge—Vale of  
 Llangollen—and Penmaen Mawr.

Tilt and Bogue, Simpkin and Co., and Orr and Co.,  
 London; Wrightson and Webb, Birmingham; Wareing  
 Webb, Liverpool; and Simms and Dinham, Man-  
 chester. Sold by all Booksellers in the kingdom.

Now ready, Price Half-a-Guinea,

**THE NEW TALE OF A TUB; an Adventure**  
 in verse. By F. W. N. BAYLEY. With Designs  
 by Capt. J. S. CORROX, Madras Cavalry; Lithographed  
 by ACHRY.

"As pleasant to read as though Dean Swift himself  
 had written it. The illustrations are perfectly impay-  
 able. The drawing is admirable—the truth and hu-  
 mour of the conception perfect."—Morning Herald.

"A capital story, admirably well told."—Spectator.

"The events are discovered in a very witty and hu-  
 morous style. Honour to the poet who can so plea-  
 santly record such reminiscences."—Courier.

"Having once got into the story, it is impossible to  
 refrain from continuous laughter at its conduct, inci-  
 dents, and denouement."—Globe.

"One of the cleverest productions in comic verse  
 we have seen. The illustrations are capital."—Court  
 Gazette.

"A brochure that reflects credit on both author and  
 artist."—Britannia.

"An elegant appendage to the drawing-room table,  
 running over with fun and humour. The plates no  
 description can pretend to realize."—Era.

Colnaghi and Puckle, 23, Cockspur-street.

On the 2nd of January, 1841, was issued the First Num-  
 ber, and on the 1st of February was published the  
 First Part, of

**THE PENNY MAGAZINE. NEW SERIES.**

The object which is proposed in thus commencing  
 a New Series is to place the PENNY MAGAZINE  
 still more completely at the head of Publications of  
 large circulation and universal interest. It has had the  
 distinction of diffusing throughout the community a  
 source of enjoyment formerly inaccessible except to the  
 rich;—it has made the productions of Art cheap. A  
 sum not less than Twenty Thousand Pounds has been  
 expended upon its Wood-engravings; and it has been  
 mainly instrumental in creating the desire for Illus-  
 trated Works, and consequently in forming the School  
 of English Artists, now unrivalled in the world, who  
 have supplied the demand which has grown up during  
 the last nine years. The improvements in Wood-en-  
 graving during that period are most remarkable, and  
 in this New Series it is proposed that these improve-  
 ments should be available in their full extent. To  
 effect this, the paper upon which the PENNY MAGA-  
 ZINE is now printed will be slightly reduced in size;  
 but in thickness and fineness of quality a larger ex-  
 pense will be incurred by the Publishers. With this  
 advantage the quality of the printing will be greatly  
 advanced, and justice will be done to the eminent  
 Artists, both as Designers and Engravers, who have  
 been engaged for the New Series. Other improvements  
 are also contemplated, of which the work itself will pre-  
 sent the best evidence. Whilst its general character  
 of utility will be strictly preserved, it will aspire to a  
 beauty of illustration which has never before been com-  
 bined with extraordinary cheapness.

The Part for February will contain the following  
 Illustrations:—

1. Canton, and the Local Associations of his Life,  
 Designed by Dicks, and Engraved by Nicholls and  
 Jewitt.

2. The Cid: "I'm Rodrigo of Bivar," d. by Harvey,  
 and e. by Jackson.

3. Dogs, Group of, d. by T. Landseer, and e. by Hol-  
 loway.

4. The St. John of Murillo, d. by Fussell, and e. by  
 Jackson.

5. William the Conqueror and Harold, and the Local  
 Associations of the Battle of Hastings, d. by Anelay,  
 and e. by Smyth.

6. The Dutch Housewife—Maes, d. by Fussell, and e.  
 by Jackson.

7. The Cid: "Son of my soul!" d. by Harvey, and e.  
 by Jackson.

8. The Cid: "Troth! no honour do I count it," d.  
 by Harvey, and e. by Jackson.

9. Camels, d. by Jarvis, and e. by Nugent.

10. Louis XIV. and his Bedchamber; from Laborde's  
 "Versailles," d. by Dicks, and e. by Andrew.

11. Dunbarton Castle, d. by Melville, and e. by Slader.

HAT MANUFACTURE.

12. Machine for cutting hair from Felts, d. by B. Sly,  
 and e. by Welch.

13. Blowing-engine, d. by B. Sly, and e. by Welch.

14. Bowing the Materials for the Body, d. by Anelay,  
 and e. by Welch.

15. Felt Body, d. by B. Sly, and e. by Welch.

16. Kettle and Plank, with Men at Work, d. by Anelay,  
 and e. by Bastin.

17. Microscopic View of Beaver's Hair, d. by B. Sly,  
 and e. by Bastin.

18. Stretching the Body over Block, d. by Anelay,  
 and e. by Bastin.

19. Stages of Blocking, d. by B. Sly, and e. by Bas-  
 tin.

20. Cage and Vat for Dyeing, d. by B. Sly, and e. by  
 Bastin.

21. Body on block for Hat, d. by B. Sly, and e. by  
 Bastin.

22. Ditto for Bonnet, d. by B. Sly, and e. by Bastin.

Nos. 1, 3, 5, 10 to 22, drawn and engraved under the  
 superintendence of Mr. Stephen Sly.

London: Charles Knight and Co., 22, Ludgate-street.

Dedicated, by command, to her Majesty.

Now ready, Parts I. and II.,

**THE BEST PICTURES OF THE GREAT  
 MASTERS.**—London: Colnaghi and Puckle, and  
 Ackermann and Co.

Each Part contains three large Plates, after Paint-  
 ings by Raffaele, Claude, Rubens, and Rembrandt;  
 and the Work is intended to include the most cele-  
 brated Pictures that have ever been painted.

Prints, 18s.; with portfolio, £1 3s. Proofs, £1 11s. 6d.  
 and £2 2s.

CRITICAL NOTICES.

"One of the most magnificent productions of our  
 literary and scientific age."—Bristol Journal.

"To the admirers of the truly great in art a more  
 acceptable offering could not have been made."—  
 Edinburgh Advertiser.

"Both in design and execution one of the most  
 splendid works of art ever produced in this or any  
 country."—Art-Union.

"The engravings are executed in the first style of  
 art, and are within reach of almost every one in  
 point of price."—Liverpool Standard.

"A publication of high pretension. The landscape  
 engraved by William Miller is most beautiful."—  
 Spectator.

## THE ART-UNION.

LONDON, FEBRUARY 15, 1841.

## THE BRITISH INSTITUTION.

## THE EXHIBITION—1841.

THE Exhibition of the Works of British Artists in the Gallery of the British Institution was opened to the public on Monday, the 1st February. It contains 397 works (of which four only are in sculpture), contributed by 229 artists. Of these, 157 have sent but one picture, or, rather, have but one picture placed. Very few have more than two; and there are but two painters who have more than five. It would seem, therefore, that the Directors have adopted the plan we anticipated they would adopt—by giving to every applicant some portion of the gallery; whether they have given to each his due is another question, and one upon which we cannot comment with equal satisfaction. If we do not entirely agree with some of our correspondents in considering that "ignorance" and "favouritism" have disqualified the "hangers" from a just discharge of the important duty they have voluntarily undertaken, we cannot but admit that many mistakes have occurred—both as to the prominence given to inferior works, and the pushing pictures of a high class out of sight—which we can account for on no other principle than that some men always perceive excellence where they wish to perceive it; and can see nothing good, except where the judgment has been previously—not warped, but forestalled. It is by no means pleasant to quote examples—they too often excite angry feelings, and perhaps needlessly annoy, if they do not injure. We shall not, therefore, go deeply into this branch of the subject; but who can note the place given to No. 229, 'Gipsies,' by J. J. Chalon, A.R.A., and that accorded to No. 248, 'A Blacksmith's Shop,' by T. Creswick, without suspecting something wrong? Something wrong there undoubtedly is, in the arrangements for placing pictures exhibited at the British Institution; and be it what it may, it is inexcusable. The artists generally have no confidence in it; many of them more than suspect that the system pursued is simply this—first place on the line, and in the best situations, the pictures of Mr. X, Mr. Y, and Mr. Z, no matter how many of them there may be; and then let the rest be hung as they chance to come: where a picture four feet by two is required, let a picture four feet by two stand, and where a small bit is wanted to fill up a space, let the said small bit be thrust in—

Something after Mr. O'Flanagan's receipt for making punch—"first put plenty of whiskey into the jug, then hapes of sugar; and—ye must have water to be sure—in coarse—but every drop of water ye put in spoils the punch."

Now this evil is capable of being remedied only in one way. Let the directors appoint as "hangers," certain persons who shall be known to the artists and the public, and be responsible to them for integrity of purpose, soundness of judgment, and entire impartiality. It signifies little, as far as the effects produced, whether an error which injures another, originate in corrupt motive or proceed from ignorance;

there may be a great distinction as regards the moral guilt, but the consequences may be equally ruinous. There can be no possible objection to a nobleman or gentleman following his own fancy in his own house; hanging the veriest daub—it pleases him—where his eye is continually upon it, and marrying to his carpet or his ceiling the frame that contains a rich gem of art:

"Affection,  
Master of passion, sways it to the mood  
Of what it likes or loathes."

But we must enter our protest against permitting any gentleman to consider the British Institution in the light of his own mansion; and arranging in the one place just as he would arrange in the other. He has, to a considerable extent, the fortunes, nay, the lives of many meritorious persons in his keeping; and is bound, not only to lay aside prejudice and partiality, but to decide entirely and exclusively according to the merits of a case. It is his duty to act as independently of persons as a judge upon the bench; to decide as apart from pre-impressions as a jurymen in the box—to give his verdict only according to evidence. Can any witness be summoned to record his belief that this has been done within the walls of the British Institution?

It is certainly not for the interests of our constituents—the British Artists—that we should comment offensively upon the conduct of the directors; nor are we, for our own parts, inclined to do so; but it is notorious that they delegate to two or three of their members the most important of their duties—if it be not indeed their sole duty—to the arts of their country, to foster, strengthen, and encourage which they formed themselves into a body, so far back as the year 1805. To one gentleman, in particular, almost the whole of the responsibility has been confided; and of him it is notorious, that he can see excellence only through a particular medium, and therefore his judgment has been invariably forestalled.

This, after all, is the great evil; and until it is remedied there will be no fair play for competitors; and what is of far greater consequence, the Arts will not progress under the guardianship of the Directors of the British Institution.

That these remarks are not made without data is evidenced by the fact, that the present Exhibition has produced general disappointment; notwithstanding that expectations were highly raised, and apparently upon good and solid ground, it is not a step in advance, and cannot be described as an improvement on its predecessors. It was assumed, that the offer of four prizes, of £50 each, would have induced the best artists to exert their best powers; and the experiment has been a failure: that it is so cannot be denied, although we may not be able very distinctly to account for it. It must, however, be in some degree attributed to the vagueness of the terms in which the proposal

\* From several letters, for the non-publication of which we hope the writers will hold us excused, we select one, from which we extract the following passage:

"Of what avail is it that the artist, sitting at his easel, builds up the hope that the mental labour and anxiety of so many months, shall be crowned with the success they deserve, when the imprudence and the want of feeling displayed by these too wealthy to think, can in a moment crush it when it dawns the fairest. Of what avail is it, that, depending on his profession for his daily bread, he exerts himself to the utmost of his powers, when his situation is unheeded, and his toil shamefully requited? Of what avail are the brightest hopes and the pleasures he felt while anticipating his success, when, looking round the walls of the exhibition, he finds the work of his labour either rejected, or placed so high that its merits are not conspicuous? Alas! they who cause his mortification, know not what his feelings are, when, turning slowly away, he leaves the place with a sickened heart, and a mind too crushed to resume its labour, with utter poverty, perchance, staring him in the face; and, lastly, with the bitter consciousness that twelve slow months must elapse before he can again build up those hopes, possibly again to be alike destroyed.

was announced; and to other circumstances, in explanation of which we refer the reader to an exceedingly sensible and conciliatory letter, signed "Vigilans," and published in our January number. It would seem, indeed, as if the projected "Prizes" had worked injuriously instead of beneficially; for while they have not tempted the more eminent of our artists, who are not members of the Royal Academy, to enter the field of contest, they have not had the anticipated effect of inducing the members who compose that body to send their works for exhibition at the Institution. Upon this fact we ought, perhaps, to comment. Some alarm was expressed—needlessly, if not unwisely—at the prospect of a struggle with masters in the arts. It was said, "if the academicians paint for the prizes, of what use is it for junior artists, their pupils, to contend?" the consequence has been, that the members of the Royal Academy have nearly all of them—with generous delicacy—abstained from entering into the competition. The exhibition has consequently suffered; and to the artists probably, and to the public certainly, the banquet is deprived of half its lustre, and more than half its value. With the exception of Mr. Lee—and he, be it remembered, has always been an extensive exhibitor here—no member of the Royal Academy has made any attempt to compete for the prizes; for although the catalogue contains the names of Sir Martin Archer Shee, Mr. Turner, Mr. Uwins, and Mr. Etty, the pictures they have contributed are of a nature to prevent the chance of their being considered as competitors; and were, we have no doubt, selected by these accomplished painters with that express view. We must conclude, therefore, that the academicians, as a body, withdrew from the contest; and we regret that they have done so, for the four artists who will hold the four honours will have no very great reason to be proud of the distinction conferred upon them by the decision of the umpires.

Although—and we notice the fact with much pleasure—there are, this year in the gallery, fewer than usual of works that have been seen elsewhere, it seems that "the directors have been under the necessity of returning more than THREE HUNDRED pictures from want of room"—that is to say, they have been compelled to reject nearly as many as they have accepted. We confess, we should like to see the rejected. If the selection has been a just one, and the excluded are of inferior order to the admitted, they must form a very odd collection, and one that cannot be very creditable to the country. We may, however, very fairly conclude that, among them, there are many which might be substituted with advantage for several that occupy conspicuous places on the walls.

Still, there are several pictures—some of them of great size, though of great merit—that have had the fullest opportunities for courting acquaintance with the public at large; and if there be any artists, even of comparatively small ability, who have been excluded altogether to make room for these "old friends," they will have just reason to complain—and more, they will have been encouraged to complain by the Directors themselves; for it is their avowed object to give a preference to such works as have not been previously exhibited.

It is unnecessary to occupy further space in discussing these important matters: as one of the public organs we have discharged our duty, an irksome and a painful duty; we have, indeed, but had to repeat observations, such as we have again and again submitted, firmly but respectfully, to the consideration of the Directors. We have produced little or no effect; and it will now remain for the artists to act for themselves. We have before us several letters on the subject—some angry, some desponding, some despairing,

and one or two calling upon us to aid in promoting a project for "a new Exhibition."\* This step we cannot advise. It is surrounded, we humbly think, with difficulties almost insurmountable; and no plan, that we can conceive, will be free from the evils that at present exist. Our counsel is this—let the artists address a letter on the subject to each of the directors; pointing out the grounds of complaint, supporting their views by references to facts, and entreating that they may be no longer left to the tender mercies of two or three gentlemen; who have hitherto so acted as certainly to subject themselves to one of two charges—either gross partiality or great ignorance. Let them request the interference of such Directors as have established reputations for taste and judgment—for example, Sir Robert Peel: let them call upon him to act for the welfare of his country, the prosperity of the Arts, and the interests of so many members of an arduous and honourable profession. The call will be one to which he cannot, and we are sure will not, turn a deaf ear.

No. 1. 'The Raising of Jairus' Daughter,' THEODOR VON HOLST. On the whole this, perhaps, is the most satisfactory picture in the exhibition; not so much because of its intrinsic merit—although it is of the highest order—as because it supplies proof that judgment has at length been induced to co-operate with genius. Of the great ability of Mr. Holst, we have had frequent occasion to speak; but always with regret, that he had misapplied it to the production of works which the mass of mankind could neither feel, comprehend, or appreciate. He seemed to have created an imaginary standard of excellence; and all his efforts were directed to achieving it. His German diableries were not understood; and although they afforded unquestionable proof of power in conception and skill in execution, his popularity was confined to the few who saw in them promise of better things hereafter. This promise he has redeemed. The work referred to is, in all respects, admirable; it is a grand composition; an effort in the school about which we talk so much, and for which we do so little. The figure of the Redeemer is happily portrayed, and the whole group is arranged with consummate skill and delicacy; there is no straining after dramatic effect; the touching incident has been illustrated with the purest truth. We earnestly hope that Mr. Holst will continue to pursue a course that must inevitably lead both to fame and fortune. No. 255. 'The Wish,' by the same artist, is also a production of rare excellence; a little too much, perhaps, in his former style, and therefore less pleasing. Its execution is, however, absolutely faultless.

No. 5. 'Irish Hospitality.' No. 15. 'The Dutch Breakfast Party.' J. ZEITZ. The first illustrates a passage in one of the stories of Mrs.

\* We copy a passage from one letter, although it be somewhat intemperate.—"The fact that there is ample room for another Exhibition is now too evident to meet with any denial, on the part of either the press or the mass of artists. The disgraceful conduct yearly shown by the directors of the British Institution is again renewed, and in a more deplorable manner. In spite of the opinions uttered by several members of the press, and by none so boldly and so openly as by yourself, they still turn a deaf ear to truth and justice; and, taking a few by the hand, think they can with impunity insult and injure the rest of the profession. They deem us, what I am ashamed to say we have hitherto proved ourselves, cowards; afraid of asserting our own rights, and who, though conscious how vain it is to depend on others, have, nevertheless, no courage to depend on ourselves. They who place their reliance on a broken reed must not grumble that the wind blows from a different quarter than they would wish. The remedy was in our own power, and it was our own fault that we did not use it. I hope that this sad state of things will not continue much longer, but that, true to ourselves, we may throw aside the petty, inactive character we possess; and, exerting ourselves to the utmost, show the world that we are not such fools in our profession as the directors of the British Institution would lead the public to suppose."

S. C. Hall; and describes the hut of a fisherman who has saved a lady and her babe from a wreck. It is a touching story, told with good effect; not altogether Irish, perhaps, although the subject has been very carefully studied. The second represents the interior of a cottage in North Holland. Both are of an excellent order.

No. 7. 'Waiting for an Answer.' J. CALCOTT HORSLEY. A sweet composition; very highly, perhaps too highly, wrought. Mr. Horsley shows no disposition to remove a work from the easel in haste; he will feel the full benefit of this when greater practice has given him greater freedom. His taste is correct, and in his selection of subjects he is never common-place.

No. 9. 'Removing the Park-wall, Old Windsor.' No. 216. 'The Ford Farm.' J. STARK. Two fine examples of the good and true style, in which this admirable artist remains unrivalled—a style essentially English, and which modern "taste" has failed to force out of fashion. There are none who can better picture the peculiar scenery of England, its thick hedge-rows, its fresh glades, its simple and picturesque lanes, and the banks of its pleasant and fertilizing rivers. We rejoice to find that such works are still appreciated; that they are so sufficiently proved by the fact, that in each of the "returns of sales" at provincial institutions, we find the name of the admirable painter.

No. 10. 'Cattle Reposing.' No. 31. 'Morning on the Meadows of Sturry,' G. SIDNEY COOPER. The first a finely painted cabinet picture, a cattle-group resting; the second, cattle moving onwards along a meadow with a mounted guide. Both are admirably painted; indeed, in this department of the arts, Mr. Cooper is without a rival—almost without a competitor. We cannot but regret, however, that his cows seem to be endowed with immortality.

No. 11. 'Dutch Draining Mill at Nieuwer-sluis.' No. 41. 'Mount St. Michael, Peasants returning to Pontorson, on the approach of the Tide.' E. W. COOKE. The merit of this artist has been universally acknowledged; we rejoice that his works are placed where they may be seen to advantage, and be, as they undoubtedly are "the observed of all observers." He is fortunate in having been put forward instead of pushed back. We do not hold the doctrine that genius can be crushed, save for a time; but there is no great difficulty in postponing its triumph. Mr. Cooke would have succeeded in overcoming any obstacles; happily they have not been either placed or left in his way. Yet this is not always a benefit; on the contrary, it is a serious injury if it induce satisfaction with the progress that *has been* made. In no profession is there any "standing still;" we must advance or we must retrograde. There will be but one opinion as to the works of Mr. Cooke; they are all gracefully composed and admirably executed; but he has manifested less originality than we are justified in expecting from an artist of his high ability: nor do we think he exhibits greater vigour than heretofore.. No. 185. 'Burning Vraic, Jersey,' is, however, a step out of the ordinary route; and therefore, in our view, a better work than his larger and more attractive picture of 'Mount St. Michael.'

No. 16. 'The Trout Stream.' F. R. LEE, R.A. A rich landscape; true to nature, and honourable to art; it is painted with much freedom and yet with manifest care. No. 159. 'Eagle and Black Cock in a Highland Glen,' is highly wrought and very effective; but it at once suggests an idea of the impossibility of painting so accurately—we may count the smaller feathers of his wing—the kingly bird wild among his native mountains. A most delicious bit is No. 296, 'Sketch from Nature'—one of the sweetest and truest copies of natural grace and beauty to be found in the exhibition. Mr. Lee is a valuable contributor to the gallery;

his works have a free, bold, and manly tone, yet are never slovenly or thrown off with an air of "it 'ill do." They are good and sound studies for junior artists; and may satisfy the masters in art, while they cannot fail to please and gratify the mere amateur.

No. 36, 'From the Romance of Philip Van Artevelde.' F. STONE. This is one of the most prominent as well as the most attractive pictures in the collection; a happy illustration of a fine passage in one of the most remarkable poems of the age—a poem that, twenty years ago, would have procured an immense reputation for its author; but of the existence of which ninety-nine out of every hundred are entirely ignorant. It abounds in subjects for the artist, yet it can scarcely be recommended to them to select from works of which the world know nothing. It will be necessary to pause before this picture, and examine it closely ere its full value can be ascertained; its merits as a work of art will be at once evident, for it is painted with a master hand, and will contribute largely to establish the high character which Mr. Stone has been slowly, though gradually, obtaining. But he has entered completely into the design of the poet; and appears to have thought with him, felt with him, and worked with him. Yet the task was not an easy one; and the subject, at a first glance, is not agreeable. A boy-husband is playing with his hawk; while his neglected wife stands moodily by.

"The well-spring of his love was poor  
Compared to hers; his gifts were fewer;  
Too high, too grave, too large, too deep,  
Her love could neither laugh nor sleep;  
And thus it tired him."

The drawing is, in some parts, defective; but the *feeling* of the picture is very near perfection.

No. 49. 'The Fight into Egypt,' J. LINNELL. A fine composition; a richly arranged landscape; but in a tone of colour that savours strongly of affectation. The artist so catches the prevailing favourite, a gay green, that he goes to the other extreme, and clothes nature in a deep russet, altogether rejecting the aid of that powerful auxiliary, contrast.

No. 50. 'The Temptation of St. Anthony,' W. SIMSON. The old subject—the temptation of the fair woman; cleverly and delicately treated. No. 87. 'The Chateau of Reubens,' manifests as little originality of thought; both, however, are painted with considerable skill and power. No. 188. 'Columbus and his son Diego receiving relief from the Monks of La Rebida,' is of a better order in design, and of equal merit in execution. It illustrates a striking incident in the life of the immortal voyager; and the story is told very touchingly.

No. 59. 'Don Quixote giving advice to Sancho Panza upon entering on his Government,' J. GILBERT. We are not familiar with the name of this artist; but that we shall be so, hereafter, is very certain. We should select it from out of the collection as one of the works of the greatest promise; if, indeed, we are so to limit our praise. Is it conceived in a right spirit; the character of the Don is capably preserved; and so is that of the exquisite Sancho. In no way is it overstrained; there is nothing bordering upon caricature; there is just enough of serious and comic humour in the countenances of both, to realize the portraits of the great author, without marring the effect, either by exaggeration or falling short of his design. The work moreover is very ably painted; and manifests a familiar acquaintance with the capabilities of the pencil.\*

No. 66. 'The Banshee; the Warning; the Death;' N. J. CROWLEY, R. H. A. Although this picture is ruinously placed, we can see

\* It is singular that last year a young artist, Mr. Philip, made his debut with the same subject. We lament to learn that this young gentleman is dangerously ill.

enough of it to ascertain that it renders, in a very forcible and effective manner, the most striking and poetical of the Irish superstitions; and from the specimens we have already had of Mr. Crowley's abilities, we have no doubt of its being painted with considerable ability. The Banshee is a spirit which is said to attend upon the ancient families of Ireland, to give warning when any of their members are about to join the departed.

No. 80. 'The Plain Gold Ring,' No. 256. 'News of the Princess Royal,' T. CLATER. Two capital pictures of the class for which Mr. Clater has obtained no inconsiderable reputation. The first represents the finale of village courtship; the second, a set of village gossips assembled in a barber's shop to hear the contents of a newspaper, which one, more learned than the rest, is reading to eager listeners. The works are ably and soundly painted; effective as compositions; and very pleasant to look upon. Indeed, Mr. Clater is almost invariably happy in his choice of subjects—he composes for the understandings of many and the hearts of all.

No. 104. 'Snow-storm, Avalanche, and Inundation in the Alps,' No. 112. 'Blue Lights (close at hand) to warn Steam-boats of Shoal Water,' J. M. W. TURNER, R.A. Wonderful, as examples of colour—prodigious as eccentric flights of genius. They would be equally effective, equally pleasing, and equally comprehensible if turned upside-down; indeed, we are not quite sure that one of them has not actually been reversed. All may examine them with wonder, some with admiration, but none with pleasure. This is "apart from the purpose" of painting—the art should always have an elevated and improving object. Few can venerate more than we do the amazing powers of Mr. Turner; we are, therefore, the less disposed to pardon him for thus vainly and uselessly wasting his strength. We do not require proof that he can make a marvel out of nothing; he has worked miracles of the kind often enough to convince the most sceptical.

No. 105. 'Il Figurista Italiano,' MRS. SOYER. A well painted and interesting picture of an Italian Image-seller—the production of an accomplished lady.

No. 107. 'Music,' R. S. LAUDER. One of the most perfect works in the Exhibition: placed, unhappily, far too high; while a much inferior work by the same artist—'The Gleec Maiden'—is placed on the line. 'Music' is the portrait of a lovely lady; exquisite in design, drawing, and colour.

No. 108. 'Street in Cairo,' D. ROBERTS, A.R.A.: a fine composition; and painted with considerable ability; but bearing evident marks of haste, and too unfinished for exhibition.

No. 117. 'The Long Walk, Windsor,' No. 250. 'A day in the Woods—scene from Nature,' J. B. PYNE. The English School has produced few better landscapes than those of Mr. Pyne. They are exquisitely true to nature; but it is to nature in her pleasantest and most inviting garb; "sketches on the spot," wrought almost to the perfection of art by the hand of industry under the influence of genius.

No. 119. 'The Victory of Mrs. Deborah Debitch over Major Bridgnorth's Scruples against Dancing,' S. WEST. A capital picture of one of the most striking incidents in the novel of "Peveril of the Peak." Mr. West has accurately conveyed to canvass the design of the great author—the Puritan Major, the Gouvernante, and the Fair Maiden. There are few better painted works in the gallery; it is highly wrought; the colouring is firm and vigorous; and the whole composition is arranged with judgment and taste.

No. 125. 'Mountain Streams,' No. 248. 'A Blacksmith's Shop,' T. CRESWICK. Mr. Creswick exhibits five pictures—and all of high

merit, much interest, and great beauty. The delicacy of touch for which this artist is distinguished, has been universally appreciated; and, as it is natural to continue a course that experience shows to be successful, some alarm has been expressed least this pleasing quality should degenerate into prettiness; he has this year largely contributed to remove such an apprehension from the minds of his admirers; and has, indeed, boldly ventured into a new path. His road scene, into which he has introduced a blacksmith's shop, is more than usually vigorous in composition and execution; the dim light of evening is very happily managed; and the effect of fire on the adjacent trees is so skilfully managed, as to manifest deep thought and close observation.

No. 130. 'The Cup-bearer,' W. CARPENTER, JUN. The artist is, we believe, a son of the accomplished lady, whose pencil has long delighted all who appreciate the higher qualities of art. He has studied in a good school, and with evident profit; there are few productions in the gallery that give surer promise of future eminence.

No. 131. 'Head of a Polish Jew,' A. GEDDES, A.R.A., a fine and finely-painted picture; wrought with a bold hand, and exhibiting complete mastery over the pencil.

No. 132. 'Gil Blas entertained by the Valets of the Beaux, who sup at their Master's cost,' T. M. JOY. A carefully composed and ably painted work, with "infinite humour" well developed, yet in no degree bordering on caricature.

No. 133. 'Vico, with the Island of Ischia in the distance,' No. 163. 'Sorrento, with the House of Tasso to the right,' T. C. HOPLAND. We have here the first fruits of Mr. Hopland's voyage to Italy; and they are interesting, as showing the extent of change that has been wrought by a visit to other climes upon the mind of a painter essentially English. They have much of his old style and character; and would be recognised anywhere as his productions; but his pencil has been influenced by the clear Italian skies; and the incidents in nature and in art that were at least new to him. The pictures are highly finished, carefully wrought in every part, and have the air of undoubted truth, for which the artist has long been celebrated. The scenes, too, have been judiciously selected, so as to preserve the peculiarities of the rich country he has visited.

No. 134. 'Marie,' MRS. MC IAN. A sweet and graceful composition, accurately drawn, and coloured with considerable power. It is the touching portrait of a deserted maiden, lingering near a stone cross by the way-side:

"With none to smile and none to cheer."

No. 180. 'Baptism—Interior of the Church of St. Gilles, Caen, Normandy,' F. GOODALL. Mr. Goodall exhibits three pictures; they possess much merit, but do not, we think, exhibit the progressive improvement we were justified in expecting from the earlier examples of his ability. They appear to be wrought with greater labour, but with less freedom.

No. 187. 'A Steamer taking Passengers on board off Portsmouth,' J. WILSON. Our old acquaintance maintains his position—foremost among those who pursue a class of art we shall always hope to see patronised in England; we have no artists—and perhaps are never likely to have any—who have more thoroughly studied the sea and the objects associated with it.

No. 195. 'Narcissus,' G. LANCE. A huge peacock that cannot well escape the notice of the visitors; with its gay and glaring feathers, radiant with all the hues of the rainbow. It is elaborately finished; but gives little of either pleasure or satisfaction. A stuffed bird would be quite as true and equally agreeable. We

cannot avoid feeling that much time and talent have been idly wasted upon an unworthy subject.

No. 198. 'The Account-day,' C. BROCKY. A very vigorously painted picture—every part of which is carefully and finely finished. The expression of "the Lady" we do not like; she seems rather gloating over the pages of some forbidden book, than arranging her accounts.

No. 199. 'St. Georgio Maggiore, J. HOLLAND. An exquisite picture—full of interest; and manifesting both care and vigour of touch and finish.

No. 200. 'A Surrey Commoner,' J. INSKIPP. This is a picture that all classes will covet—the connoisseur as an almost perfect example of art; and the uninitiated for its pure truth and beauty of character. It is one of the sweetest compositions in the gallery; finished with a bold and free pencil—at once easy and graceful, in no degree overstrained; bearing marks of thought and study, and at the same time a full consciousness, that in following nature accurately, an artist cannot do wrong.

No. 206. 'Sir Toby, Sir Andrew Ague-Cheek, and the Clown, carousing in the House of Olivia,' F. P. STEPHANOFF. A capital illustration of Shakespeare; full of point and character, and very true to the text.

No. 210. 'Avenue of Sphinxes—Moonlight, Thebes,' W. J. MULLER. One of the chief glories of ancient Egypt. The picture is evidently unfinished; and it is placed out of the way of minute observation. Enough may be seen, however, to supply proof that it is not unworthy one of the ablest and most rising artists of the country.

No. 225. 'Amalfi, Coast of Salerno,' G. E. HERING. There are few pictures in the Exhibition that please us more than this; the production of an artist with whose name we are not familiar. He has caught the very spirit of the Italian landscape; its bright and cloudless skies; its gracefully grown trees; its striking foreground; and that air of listless luxuriance that pervades the character of the people, as well as the scenery, of Italy. The composition is very beautiful; and though not highly or elaborately wrought, the painting exhibits proof of careful study and matured thought. The picture is one that no person can contemplate without pleasure; either as a true transcript of nature, a fine work of art, or an agreeable object to be placed continually within sight. If the artist be only commencing his career; or if he have advanced but a short way on "the steep and thorny path," we promise him a high and honourable post ere he has had many years of labour.

No. 234. 'Heidelberg, on the Neckar,' H. GRITTEN, JUN. This, although very disadvantageously placed, fully sustains the reputation the artist has acquired; and to increase which he is evidently labouring, not alone by thought and study but by travel. It is very skilfully composed; the various characteristics incident to the scene are judiciously introduced; and it is brilliantly—perhaps too brilliantly—coloured.

No. 243. 'Christ bearing his Cross,' W. H. DARLEY. We are not acquainted with the name of this artist; he has made a bold attempt, and a successful one. The picture supplies proof of matured intimacy with the works of the older masters—even to a fault, it may be; but it is evident that he has studied in the best school; and if he will dare to be original, we have no doubt he will produce works of a high and great class.

No. 245. 'Arming for Battle,' F. NEWENHAM. This, although flat and hard, has qualities of no ordinary value. It is also the production of a new artist.

No. 247. 'Little Red Riding Hood,' No. 239. 'The Broken Pitcher,' C. STONHOUSE.

Two small and delicately painted pictures, the works of an artist who is never without some claim to attention. They are placed so close to the ground, that one must literally go on one's knees to examine them.

No. 260. 'Bellringers and Cavaliers celebrating the Entrance of Charles the Second into London, on his Restoration.' W. B. SCORR. This picture, although somewhat whimsical and not very intelligible, possesses much merit. It is divided into three compartments: 1st, the church tower; 2nd, the bell-loft; 3rd, the ringers.

No. 262. 'The Christian Yoke,' W. DYCE. A very noble work, of the highest possible merit; we are first struck with the novelty of the conception—a conception at which some, however, may cavil; and there are many who can neither comprehend nor appreciate allegories in art. It manifests, nevertheless, a vigorous and imaginative mind; and one deeply imbued with the truest spirit of the old masters. Perhaps, it has this spirit even to a fault; for the painter in his worship of the great men who have preceded him, sacrifices something of his own original power. Mr. Dyce may be in advance of the age; but the age is progressing rapidly after him. We should rejoice to examine some production of his pencil in which he had followed wholly and solely the impulses of his own strong mind, refined taste, and sound judgment.

No. 291. 'Evening,' H. BRIGHT. A small and very sweet picture, with the true tones of nature.

No. 297. 'The Young Goatherd,' PENNY WILLIAMS. A small work also; highly wrought—too highly, for it bears the character of enamel; a fault against which our English artists in Rome will do well to guard. It is, however, a delicately graceful composition; and although unimportant in size, sufficiently upholds the reputation of the painter.

No. 298. 'Snowdown, from Capel Câr,' No. 282. 'View of Ben More, Isle of Mull,' COPLEY FIELDING. Two of the most striking scenes in Wales and Scotland, from the pencil of one of the most accomplished of our artists in water-colours; and who has complete mastery also over the less manageable material of the painter.

No. 304. 'Bay of Naples,' T. UWINS, R.A. A long and narrow picture, representing 'Peasants going to Villa Reale to enjoy the Festa of Pie di Grotta.' It is a most delicious composition; coloured with great delicacy and freedom; and a work that, from its happy arrangement, cannot fail to gratify all who may look upon it.

No. 310. 'A Frolic,' J. P. KNIGHT, A.R.A. A huge picture, of very small value, except to the mama, it may be, who is watching her imitation cupids dabbling about their bath. The attempt to mingle the classic with the commonplace is invariably a failure.

No. 321. 'Moon Rising,' J. B. CROME. A capital example, in a style of art in which Mr. Crome remains unrivalled.

No. 327. 'The Penitent's Return Home,' C. W. COPE. Although possessing considerable merit, this picture will not sustain Mr. Cope's very high reputation. The story is not sufficiently told; it is given in a style of commonplace; the drawing is in parts defective, and he has not resorted to nature for the accessories he has introduced. The flower-pots which adorn the cottage entrance, and the rustic verandawork, appear to have been cleaned, garnished, and set in order, for the artist's especial purpose: there is nothing of that graceful confusion incident to such a scene. It is highly wrought, and bears evidence of industry; but far less proof of original power. It is not easy, indeed, to keep pace with expectation; Mr.

Cope has already produced great things; he must not risk the suspicion that he is retrograding.

No. 329. 'Four Shooting Seasons,' H. B. CHALON. Mr. Chalon is a veteran of the good old school of animal painting, when truth and accuracy were preferred to display and effect. Mr. Chalon had high fame many years ago; he has lived to see some better, but many worse artists give him "the go-by." Few, however, exhibit a more sound knowledge of a peculiar branch of the profession, or paint "portraits" of the horse more to the life. This work is divided into four "compartments," representing the sports of the four seasons. It is well and firmly painted, very cleverly arranged, and possesses considerable interest, as well as much merit as a production of art.

No. 341. 'Napoleon Buonaparte in the Prison of Nice, in 1794,' E. M. WARD. One of the best works in the collection; the result of study and labour; but with evidence of original thought and earnest consideration of the subject. It relates an incident in the life of Napoleon—the young soldier in prison poring over a map of Lombardy, and planning the after-conquests he was destined to achieve. We have seldom seen a more striking portraiture of the emperor; it gives a fine idea of his bold, energetic, and high intellectual character, without being in the least exaggerated. All the accessories of the picture are good; and it is coloured with consummate skill. The merits of the work are, indeed, altogether "first rate;" and it cannot fail to obtain a very prominent station for the artist. He exhibits another painting—'The last Interview between Sir Thomas More and his Daughter,' of which we cannot judge, for it is placed out of sight; if it approach in excellence the one under notice, a more worthy station ought to have been assigned it.

No. 342. 'Terrace of the Capuchin Convent at Sorrento, Bay of Naples,' J. UWINS. This young artist is manifestly improving; not so rapidly as to produce danger—but surely and safely; evidently making good his footing as he advances. He has studied in an excellent school. This is a finely arranged and well painted work, and may rank foremost among the transcripts of Italian beauties.

No. 376. 'Boar Hunters and Pilgrims of the 15th Century receiving Refreshment at the Gate of a Convent,' J. R. HERBERT. Although this picture was exhibited at the Royal Academy, it may be classed among the new works. The artist, in consequence of ill-health, was compelled to send it to the Exhibition in a very unfinished state; it was consequently insufficient to uphold his very high reputation, although it supplied ample proof of taste and judgment in composition, and matured skill in arrangement. He has now completed it; and it will be universally classed, not only among the best pictures in the gallery, but among the most meritorious productions of the British school.

In closing our remarks—at least for the present—we must apologize for omitting to notice the works of many artists who are entitled to commendation. Our space is necessarily limited, and it is difficult for us to enlarge it. There are, however, not a few for whose names we looked in the catalogue, to ascertain if they had realized the promises they held out in former years—we found them there; but when we sought for their pictures they were so placed as to deprive us of the means of forming any opinion of their merits. We may, however, visit again, on some early morning, when we can "bend low" and stretch high without observation; and be thus enabled to ascertain something more as to their value.

[The list of "pictures sold," up to the 13th of February, is, unfortunately, so very limited, that we prefer holding it over until next month.]

## FOREIGN ART.

ITALY.—ROME.—Tenerani, the sculptor of two much admired statues, 'Innocence' and 'Psyche,' has just completed a splendid group representing 'Faith,' 'Hope,' and 'Charity.' It is destined for St. Petersburg; and the sublimity of the conception and pure style of the execution make it worthy of the Imperial Museum. Tenerani is a great sculptor; but his power is most seen in subjects of a sweet and beautiful character. He is fitted to represent an angel of light, but never an angel of darkness.

MILAN.—Marchesi has finished the pendant for his famous statue of 'Flora'; the subject is 'Zephyrus.' The success of the artist is complete. There is in it the same correctness of design, ideal beauty in the forms, and elegance in the details, as in the 'Flora.' Both are for the Prince Belgiojoso.

BOLOGNA.—A great sensation has pervaded the artistic world, by the resurrection of a number of works by Guercino. We say resurrection, because the pictures have been long lost to the world, being painted on the walls of the Chiarelli palace, in the small town of Cento, of which Guercino was a native. Malvasia, in his well-known work '*Felsina Pittrice*,' gives an account of those pictures, which represent a series of tableaux from the 'Eneid,' and from the 'Jerusalem Delivered' of Tasso. Besides these are many pictures of hunting scenes, dead game, and animals; among the latter a very old horse, so true to nature, that Carlo Cignani copied it. These works are now transported from the walls to canvas, by a new and ingenious method, invented by a young artist, called Rizzoli, and which he had previously exercised with great success in removing the splendid work of Guido, 'Night and Day,' painted on a wall of the palace of Prince Pallavicini, celebrated by Algarotti and Tiraboschi.

These pictures form a true page in the history of art, and being now transportable will become known. Probably they may be so in England, as it is said they will form an addition to the collection of *chef-d'œuvres* belonging to Signor Galvani, director of the Lucca gallery. If it be so, we may hereafter return to the subject.

The work which the Marquis Amorini, president of the Academy of Fine Arts, has just published, excites much interest; it contains the lives of Guido, Albani, Dominichino, Guercino, A. Tiarini, and G. Cavedoni. The details of the individual lives of these great masters, all of the same school and epoch, furnish materials most interesting for the history of art, and are in themselves anecdotal tales full of charm. The ease and elegance with which the work is arranged, are worthy of the author of the life of the architect SERLIO, also the production of the Bolognese President. There is one defect in these lives—they are too short; it is so pleasant to travel slowly with the mind through the lives of great artists. The learned professor, Vaccolini, has published the lives of F. Ramenghi, called 'Bagnacavallo,' and of Innocenzo Francucci, called 'Da Imola.' They were the greatest of the imitators of Raffaele. These lives are admirably written, full of just and critical observation. Vaccolini is the author of various other works, 'The Perfect Artist,' 'Essays on the Beau Ideal,' &c.

The history of the Umbrian painters, published by the Marchese A. Ricci, under the title '*Memorie Storiche delle Arti e degli Artisti della Marca d'Ancona*,' is elegantly written; but that is not its most remarkable merit; it is a rare example of laborious research. The Marquis Ricci is a man of fortune, and has devoted both time and much expense to perfect this work; he has visited every town, every church, every convent in Italy, where the least work of the Umbrian artists was supposed to exist; and he has sought to verify every fact almost geometrically. He has been known to pass months in one town, to ascertain by inquiries or records, some fact of which there were doubts. Would that such patient research were applied to yet more important branches of history! how much more valuable one page so verified than volumes of slighter evidence! but this patient labour is often little rewarded by the reading world, and a certain degree of ease in the worldly circumstances of the author is requisite, not always the lot of literary labourers.

**SPAIN.—MADRID.**—The Chevalier Solà, an able sculptor, who was president of the Royal Spanish Academy, at Rome, is appointed to the same situation at Madrid.

Alvarez, the sculptor of the far famed group of the 'Two Cannoneers,' has received an order from the Spanish government, to execute an equestrian statue of Espartero.

**FRANCE.—PARIS.**—M. Alaux, the distinguished artist, whose success was so astonishing in restoring the pictures of Primaticcio in the hall of Henry IV., at Fontainebleau, has finished for exhibition this year three great pictures, of 12 feet each, representing the assembly of the States-General, as held by Philip the Fair, by Henry IV., and by Louis XIII. These works are said to be as true and vigorous in execution, as the 'Taking of Valenciennes,' and the 'Siege of Denain,' by the same artist; if so, none superior will be seen in the Louvre. M. Couder labours at his great picture of 'The Federation,' but far from being completed for this year; it is even doubtful if it will be finished for 1842. M. Simon Fort, the clever landscape painter and learned topographer, who has given us all the battles of the empire, represented under the severe constraint of official bulletins and maps—will exhibit this year a general view of the part of Africa, situated between Algiers and Constantine. It is an immense and difficult work; the spectator must imagine himself on the summit of Mount Atlas, the whole coast of Africa, from Algiers to Bona, extending before him, and embracing at one coup d'œil, the immense chains of mountains which extend themselves from Constantine to Setif.—M. Granet, director of the Museum at Versailles, exhibits a charming little work, 'Tasso listening to a Poem read by a Monk,' an image of the conventual good cheer of that period, and surrounded by other monks, some pretending to listen, others asleep.—M. Horace Vernet completes 'The Hall of the Battles around Constantine;' but we shall surely see at the Louvre some little pictures by him, of which we have heard enchanting details.

It would seem the Arts are gliding even into the temple of Themis, and appear to strengthen the hands of the king's attorney-general. It is said that a number of portraits have been shown to Darnès, and that by watching his countenance as each was unexpectedly presented to him, important discoveries as to the other conspirators have been made.

**GERMANY.—MUNICH.**—A banquet has been given in honour of Peter Cornelius, to commemorate the completion of his labours in the Ludwigs-kirche, particularly of his fresco of the 'Last Judgment.' About three hundred students and friends were present; nothing could exceed the enthusiasm testified towards the great artist during the evening. We extract from his reply to some of the honours paid to him, the following passage:—"When a noble-minded prince resolved to arouse the spirit of art in his fatherland from the dust of the schools, it was my lot to be permitted to assist in the great work. Whatever man honours, whatever elevates him, his relations to God—his deeds the evidences of his love, his devotion to prince and fatherland—poetic elevation, deep thoughts, the clear Grecian mythos—the variegated play of fancy. These were to exist in temple, palace, museum, hall; and they do exist. Could art desire a nobler field? That I have felt the extent, the importance of the undertaking; that I have laboured unweariedly for twice ten years to attain in some degree its accomplishment; that I have faithfully tried to serve my noble king—of these, I am conscious. To this earnest will, gentlemen, not to my small and inadequate works, I owe your favour and your indulgence."

The whole speech of Cornelius excited tumults of applause. In the course of the evening a crown of laurel was presented to him; and a youth attired as the Genius of Beauty, recited a poem, which was illustrated by arabesques, containing designs of some of Cornelius' works—his 'Illustrations of Dante,' 'The Nibelungen,' &c.

**RUSSIA.—ST. PETERSBURGH.**—We mentioned in our last number that all the pictures in the imperial residence of Peterhoff were to be transported to the "New Hermitage." The celebrated cottage in the garden, the favourite retreat of Peter the Great, is, however, happily held sacred. It was

called by him sometimes *Maison Hollandaise*, or "*Mon-Plaisir*." The trees around it were planted by Peter's hand; here are the articles of furniture he used; his dress as a common sailor, and its walls are adorned by many masterpieces of the Dutch school. Among these pictures is the 'Portrait of Peter,' dressed as a carpenter, and that of his fair mistress 'La belle Hollandaise.' It is said that the Emperor Nicholas has commissioned, from a German artist, a picture of which the subject is taken from the following incident:—The whole affections and hopes of Peter the Great were centered on the son whom Catherine had given him. When this boy died, Peter gave himself up to grief. He went to Peterhoff, and shut himself up in the "*Maison Hollandaise*," forbidding all to approach him on pain of death; for three days and three nights he took no food; perhaps remorse for his conduct to his other son, Alexis, had its share in these great sufferings. All the affairs of the state were at a stand, none daring to act for the Czar; and none daring, knowing his violent character, to present themselves before him. Even Catherine, whose voice was usually so powerful over Peter, Catherine had in vain knocked and called upon him to admit her. At last she turned to the old senator Dolgorouki, the only one among the courtiers who had never debased himself by flattering the caprices of the Czar, and at the same time the man he most truly loved. "I will go Madame, and he will yield," replied Dolgorouki. He went to the chamber of the Czar, and knocked twice, receiving no reply. "Open the door, I command, or I break it open."—Peter replied, "I open the door, but it is to cut off your head." The door opens, the Czar appears with his sword drawn, but he suddenly stops, struck by the calm and venerable appearance of Dolgorouki, attired in his senatorial robes. "I come," said he, "to request of your Majesty to name your successor, because it is said you have ceased to be Emperor." This simple sentence struck to the heart of the Czar; he threw himself into the arms of Dolgorouki and of Catherine, and from that moment was awake to the duties of the Empire. The moment selected for the picture is that in which Peter opens the door of his apartment.

#### ART IN THE PROVINCES.

**EDINBURGH SOCIETY OF ARTISTS.**—This Society, which opened its fourth annual exhibition on Saturday, the 16th of January last, gives evidence of a most praiseworthy perseverance, joined to a high degree of artistic talent among its members; some of whom, during the past year, have made great progress in art; while, we are compelled to add, there are others, whose progress, if any, has been decidedly retrograde. It is an invidious as well as a distressing task, to draw comparisons among the members of a body whose exertions are directed to a cultivation of art, and whose constitution of mind renders them peculiarly sensitive to the expression of praise or censure; yet, valuing art more than individual artists, as we do, it becomes a duty to mention the progress, and to cheer on the exertions of those who are evidently on the right road. Of the gentlemen whose works give indications of this in the highest degree, we cannot resist pointing out A. Ritchie, D. Mackenzie, W. Macewan, H. G. Duguid, and R. Innes; all of whom show in their works that they are inspired with the true feeling of their profession; their productions this year, in many instances, are such as any exhibition would truly be adorned by.

In the department of portraiture, Innes is in himself a host; while Ritchie, in that of domestic scenes, gives fair promise of attaining a very high standing in this difficult and delightful branch of art; among landscape painters, Mackenzie, Macewan, and Duguid, occupy very respectable places, and are vigorously pushing on to better. It is now, however, time to give up generalities, and take a more particular glance of the works as they appear in the catalogue.

J. Scott has no fewer than nine pictures, of various dimensions, in the exhibition, many of which would certainly have been better at home. No. 2, 'Portrait of an Artist,' is decidedly his best; the head is well and cleanly painted, and there is a good effect of light and shadow on the picture. D. Mackenzie has several fine landscapes, the best of which is No. 14, 'Macnab's Burying Ground;' it is a capital moonlight, to which the sentiment of deep and interesting solemnity

is finely imparted; in fact, there is more poetry and feeling in this than in any landscape in the exhibition. Nearly as good is his No. 4, 'Castle Douglas, in Dumfriesshire,' and his No. 81, 'View on Strath Tay,' is almost, if not altogether, as good as those mentioned; the chief beauty of this artist's works is, that they show indications that intellect has quite as much to do in their production as mere manipulation. 'Norham Castle,' No. 12, by W. Macewan, is a capital landscape, with a beautiful tone of colour, a fine breadth of light and shadow, with great freedom of touch; the water is particularly fine and transparent; there is a quiet beauty and repose in this picture which renders it very attractive. No. 54, 'A Brisk Gale, Pilot Boat and Coasting Smack,' by the same, is an excellent marine picture; the water is swelling, fresh, liquid, and in motion; the figure who hails the smack from the pilot boat is all that could be wished; indeed, you almost involuntarily listen for the sound of his "Ship a-hoy!" the steersman of the boat is almost of equal merit; the drawing and painting of the smack are of the best kind, true, vigorous, and manly. Some of our marine painters had better look to their laurels, or Macewan will astonish them; this will be made still further apparent by his No. 129, 'Old Pier and Lime Kiln,' the sea of which is most admirably painted, the general effect excellent, and the handling touchy and masterly. No. 161, 'Edinburgh Castle,' by the same, is also a capital picture; this rising artist has made great and gratifying progress during the past year. No. 15, 'The Advice,' by R. Innes, is a fine picture of a simple rustic maiden about to take her departure from her father's house for service, and is receiving a parting admonition from her mother; it is unaffected and pleasing in its composition, and the colouring sweet, rich, and beautiful; his 'Prescription,' No. 43, is another of those sweet domestic scenes which find a kindred echo in every bosom; the subject, in every respect, has been treated in a very felicitous manner, and makes a capital picture. It is in portrait, however, that Mr. Innes excels, and in that field of art he is not only unrivalled, but actually unapproached in this exhibition; his No. 113, 'Portrait of a Lady,' may safely challenge competition with portraits of a similar kind by any living artist; it is, indeed, a gem, which one would wish to possess as a picture, altogether irrespective of its merits as a likeness; there is in it the most artist-like and vigorous ease, boldness yet delicacy of painting, combined with a subdued tone of colour and a simplicity of accessories, which render it quite delightful: he also exhibits a very striking 'Portrait of a Gentleman,' No. 158, which shows great power and certainty of execution, added to a nice discrimination of character; besides these, he has a number of other portraits here, all of rare excellence. J. Craig has made considerable progress this year, and has contributed several very good landscapes and marine views; among the best of which is No. 50, 'Fast Castle—a Calm,' there is both good feeling and good painting in this, although, upon the whole, it is rather a little hard. No. 65, 'Heath Scene, with Cattle,' F. W. Watta: the cattle are well grouped, and carefully painted; there is also a fine coolness about the landscape, albeit a little inclined to spottiness, the besetting sin of this clever artist. No. 21, 'Landscape with Cattle,' by Thomas Baker: a most elaborately finished picture; the most distinguishing characteristic of this excellent artist's style is the minute beauty of touch, which is so managed, that, although it would bear the most searching scrutiny, never intrudes itself on the eye, nor interferes with the truth of atmospheric effect, for which his pictures are always to be admired, and in this one these peculiarities exist in perfection; nearly the same may be said of his 'Lane Scene—Stoneleigh,' No. 101; one of the sweetest little bits which can by possibility delight the eye. He has, besides these, a number of other exquisite little morceaux. No. 26, 'Kind Robin lo'es Me,' by A. Ritchie, is indeed a gem; the simple beauty and grace of the rustic maiden as she listens deeply attentive to her lover's tale, are exquisite; the colouring and painting are in every way worthy of the subject, being pure, rich, and pulpy; and the air of bashfully innocent, yet confident reliance on the earnest pleading of her moorland swain, is of the happiest class of art. His No. 69, 'The Wee Raggit Laddie,' is another gem of a pure water; there he stands, the little rascal, whip in hand, truly an "Urchin elin, bare and duddy," with a look of independent roguery which bespeaks him an adept in mischief, a terror and a pest to the testy old apple-women of both sexes, with whom he may come in contact; the very dog at his feet is casting such a fur-

tive glance at him as plainly says, it is time to remove beyond reach of that suspicious looking whip, which he is flourishing in evident self-satisfaction; nevertheless, there is an expression in his face which at once removes him from the charge of any thing villainous in his composition, and renders him just such a "laddie," as every father would be proud to cherish in his bosom. With a feeling of high admiration for these pictures, it is painful to direct the artist's attention to several instances of carelessness in the drawing and painting of details, which in future he must avoid: he has, besides, several other good pictures, but not equal to the two above-named, which are, indeed, the best pictures of their class in the exhibition. No. 42, 'Melrose Abbey,—the Eildon Hills in the Distance,' by H. G. Duguid,—a very good picture, but not by any means his best. This artist has made great improvement this year. In the picture before us, however, the hills come far too close upon the abbey for either picturesque effect or truth to nature. No. 75, 'Noon,' by the same, is a very clever and artist-like sketch. His 124, 'Nidpath Castle, on the Tweed,' is an excellent subject, well and cleverly treated; there is a beautiful effect of atmospheric distance thrown in with much skill between the foreground trees and the hill on the right hand side of the picture; the whole is firm, crisp, and touchy: but his No. 132, 'Newark Castle, on the Yarrow,' is, upon the whole, his best, and is a remarkably good picture; there is a great deal of the freshness and reality of nature in it, rendered with a truth and vigour which never fail to please. If we might hint a fault, we would say he is rather too prismatic in the arrangement of his colours; this, however, he can easily remedy in future. No. 29, 'A small Landscape with Figure,' by J. Pairman; under this modest title we have a sweet little rustic road scene, with an interesting and well painted peasant girl; the whole subject is well and pleasingly treated with a good deal more than the artist's usual firmness of pencil. No. 55, 'A Covenanter,' by D. Gibson, is a tolerably well painted, although rather common-place sort of head; besides, we have surely had more than an abundance of these "covenanters," and require something a little beyond "ordinary" to make them palatable. No. 148, by the same, is a picture of a little girl under the somewhat attractive title of 'A Flower of the Forest,' truly if this be a specimen of the 'Flowers of the Forest,' the sooner they are "a weede aw" the better for all concerned. No. 105, 'Moon Rising—composition,' by J. B. Crome, a very cleverly treated moonlight, with a good feeling of nature. No. 89, 'A Scottish Dell,' by W. Mason, a picture of great power and feeling, somewhat in the manner of the late Mr. Thomson, of Duddington, much better in conception than in execution; there is a heavy solidity in the distance which requires to be broken up; as it has been, however, and still continues to be, in what geologists would term the transition state, it is not quite so safe to pass a judgment on its merits: if it had been finished when sent it, we could have at least tried to understand it. No. 110, 'The Bride's Blessing,' by A. Morris, a clearly painted and well coloured picture; the best part of it is the old domestic, who is entering the apartment: his other picture of 'The Washed Ashore,' is not nearly so good, and is altogether a repulsive subject. No. 111, 'Turf Cutting on Wellstone Moor,' by W. H. Townsend, a capital picture, the colour and general treatment true to nature; this clever artist has other two landscapes of a very pleasing kind, but they are rather deficient in force, particularly in the foreground.

Besides the works above named, there are numerous others of considerable merit; and the collection, although less numerous than last year, is unquestionably improved in general character; a truth which, we trust, will be duly appreciated by the public, and that those who have laboured so assiduously in the vineyard of art will not go unrewarded, but that they will receive such countenance and encouragement, as will stimulate them to still further exertions in the honourable career in which they have begun.

**EXHIBITION OF THE ROYAL SCOTTISH ACADEMY.**—The fifteenth annual exhibition by this body opened on the 10th of February. The crowd present at once made two things plain—the one, that the Academy is, as it ought to be, highly prized; the second, and the one more immediately to our purpose, that, to attempt any remarks on the works of Art exhibited, by a visitor on the first look, would be as impertinent, as it ought to be unlooked for. We will, therefore, content ourselves with saying that, while we have here specimens of the productions of the best men in the kingdom,

such men as Wilkie, Etty, and MacIse, their works have not fallen into bad company, but are successfully kept in countenance by the best names of the Scottish School, who are also well borne out by their junior competitors for artistic fame. We must, however, for the present, and from the short period elapsing between the opening of this Exhibition, and the time of publishing, delay our notice of it till the next number, at which time we shall be able to do it more justice.

**MANCHESTER.**—The results of the Manchester Exhibition have been satisfactory. The prize of £50 was adjudged to Mr. F. Y. Hurlstone, for his picture of 'Olympia Colonna seeking Refuge at an Altar in St. Peter's, at the time of the Sacking of Rome by the Duke of Bourbon'—exhibited (in 1839, we believe) at the Society of British Artists. The gold medal was gained by Mr. W. C. Marshall, for a group in sculpture, 'Bacchus and Ino'; and the silver medal by Mr. A. Chisholm, for a water colour drawing, 'Leonardo da Vinci expiring in the arms of Francis the First.' Sixty-five pictures were sold, to the value of £1433 14s.; and the sum subscribed for by the Art-Union was £283; total £2256, being an increase over last year to the extent of £714.

The following is a list of pictures disposed of:—

'Evening,' W. Cranbrook; 'A Fisherman Mending his Net,' J. A. Puller; 'Forester in Search of Game,' C. Hancock; 'Palmyra,' W. Bowness; 'Distant View of Loch Rannoch,' M. Macleay; 'Near Henley,' A. Priest; 'The Unhappy Hounds,' T. Woodward; 'Fishing Boats, off Broadstairs,' F. W. Watts; 'Beach Scene, with Figures,' W. Shayer; 'Study from Nature,' W. P. Frith; 'Distant View of the Mountains of Morven, Argyleshire, so often mentioned in the Poems of Ossian, with the Ruins of Stalker Castle and Island of Shuna,' M. Macleay; 'Buying Fish,' W. Shayer; 'Cocheim, on the Moselle,' C. R. Stanley; 'The Young Student,' J. Linnell; 'Fish Boats on the Sands,' H. Jutsum; 'Water Carrier,' J. G. Pollitt; 'Market Day,' T. Creswick; 'On the Thames,' J. Tennant; 'Scene in the Neighbourhood of Ipswich—Moonlight,' J. B. Crome; 'Girl and Flowers,' J. G. Pollitt; 'The Town of Wicklow, Dunran, Ireland,' C. Calvert; 'Dairyman's Cottage,' W. Shayer; 'A German Tea Garden at Dresden,' T. Von Holst; 'Hawes Water, Westmoreland,' C. Calvert; 'Corn Field, on the Medway,' W. Fowler; 'A View of Somerset, and Village of Cheddar, from the Hills,' J. B. Pine; 'Calais, from the Sands,' F. A. Durnford; 'The City of Mayence, on the Rhine,' A. Clint; 'Portrait of Miss Ellen Latilla,' E. Latilla; 'Cottage Scene, on the Coast of Devon, bargaining for Fish,' W. Shayer; 'Montalban's Tower, a relic of the Spaniards at Amsterdam,' R. J. Hamerton; 'River Scene—Moonlight,' E. Cuiide; 'A Street in Rouen,' C. F. Tomkins; 'Distant View of Warwick,' T. Baker; 'Cottage Scene, near Wirksworth, Derbyshire,' A. Vickers; 'View on the River Tay, Perthshire—Elcho Castle in the distance,' Miss C. Nasmyth; 'Temples of Concord and Peace—Arch of Septimius Severus and Coliseum—Rome,' F. H. Henshaw; 'At Lynmouth, North Devon,' C. R. Stanley; 'View in Ocheltire, Perthshire,' Miss J. Nasmyth; 'On the Road from Ashford to Maney Ash, Derbyshire,' A. Vickers; 'On Tooting Common,' E. Childe; 'Dead Game,' G. Stevens; 'Fruit,' G. Stevens; 'Fisherman's Cottage at Herne Bay,' J. Tennant; 'Sea View,' M. E. Cotman; 'View of the Chapel of the Convent of San Mignato, Florence,' Le Chevalier Bouton; 'Peg Mill, at Preevall, near Fleetwood,' F. English; 'Mount Claret, looking towards Ben Lomond and Stirling,' Miss C. Nasmyth; 'Sketch of a Monument to the Memory of Mrs. John Wallis, to be erected in Blackley Church-yard,' T. W. Atkinson; 'Composition,' C. Calvert; 'Scene in Scotland—Solitude,' C. Calvert; 'Grape Gathering, Mont Morency in the distance,' E. Duncan; 'Worms,' S. Prout; 'Winter Flowers,' Mrs. R. Lee; 'Military Sketch,' H. Martins; 'Drawing,' S. Prout; 'The Knight and the Maid of the Hostellerie,' W. P. Frith; 'Glass Cutter,' J. Zeitter; 'A Bacchante,' H. O'Neil; 'Italian Boy,' F. Y. Hurlstone; 'Beach Scene—Morning,' W. Shayer; 'Heath Scene,' F. W. Watts; 'Still Life,' J. Absolon; 'Fishing Boats on the Sands,' H. Jutsum; 'The Gipsy Mother,' P. F. Pool; 'Storm clearing off, near Dorking, Surrey,' J. W. Allen.

The engraving distributed to the subscribers to the Art-Union is from Constable's painting of the 'Vale of Dedham,' engraved by Mr. Lucas. It was not produced expressly for the Society; but the committee, in selecting, evinced far better taste and sounder judgment than they would have done if they had selected one of their own purchases.

## THE GLASGOW STATUE.\*

Pursuant to our pledge, we again resume this subject, with the assurance that the peculiarities of the case are, as yet, by no means exhausted.

To proceed, then. Since the sub-committee have voted themselves competent to decide that a foreign artist should be imported to execute the work, we must here insist upon remarking, in relation to the system of competition in the case of works of art in general, that the disadvantages which attend it are numerous and obvious. We do not mean to affirm that it may not have its advantages, but these are by no means without a counterpoise of characteristics of an opposite kind. Thus, artists of eminence are justly, for the most part, so much opposed to the system, as to be deterred from engaging in such competition at all, leaving the field open in such cases, and limiting the selection to those of inferior note. The evils inherent in the very principle of this mode of selection are equally apparent, as are the bad effects which are found to attend its practical working. In such cases the committee, or judges, instead of forming their decision by reference to the finished and perfected works of the artists, or by their reputation, founded upon such works in the aggregate, must confine themselves to the consideration of an isolated, and probably imperfect, model, or plan on a small scale, which can afford no adequate idea of the artist's ability; and the chance may even be, that such a model of an inferior artist may excel that of one in all respects his superior; or an inferior artist may make a model which he is utterly incapable of carrying out on the large scale. Again, artists know full well, that, from mere ignorance, a committee may very probably prefer an inferior model; and such a knowledge deters superior artists, and encourages inferior ones to compete. So perverse and incomprehensible do the proceedings of the Glasgow committee continue to be, that they would appear to be resolved to deny themselves even the chance of coming to a fair and rational decision, in respect to the subject of their deliberation; for, at their last meeting, when a motion was made to the effect that they should instruct those artists invited to compete, to supply a model of the size of life of the bust, or portrait part of the statue, so as to enable the committee to judge of the artist's ability in maintaining the likeness of the Duke's features in the proposed statue—as required by the general committee—this motion was at once negatived; ten gentlemen voting in opposition to its adoption, and only five for the motion. The artists are, therefore, left at liberty to furnish their models of whatever size or dimensions they think fit—as large as life, or so minute as to be conveyed from the Continent in a nutshell; or as a load fit for the sagacious fleas! All this may appear incredible; true, however, it nevertheless is!

In cases where the work to be made choice of consists of manufactured articles, such as cloths, cordage, or iron, or other wares, competition may be all right, indeed, it no doubt is so, for there any handicraftsman may with accuracy judge of the work; but even in this case it requires a person familiar with the species of work to judge and select. Thus, no one would depute a blacksmith to judge of the quality of a piece of canvas, or a rope-spinner to judge of the properties of a steam boiler; yet, nevertheless, in the infinitely more difficult task of determining upon the merits of a work of art, this is precisely what occurs: artists are studiously excluded from acting in all such cases, but we have peers, provosts, and parliament men, out of all number. The infallible result may at once be predicted; and we almost invariably find, that the most utterly worthless plans and models are those which are preferred. But it is our duty again to become particular in the matter of the Glasgow Statue; and, in so doing, we shall studiously avoid personalities, in which, indeed, were we disposed to indulge, it would only be to express the most unqualified, individual, and personal respect for every member of this sub-committee, whose proceedings have of so much attracted the attention of the world

\* From a Correspondent.

art. In our last number we censured the mode in which, on the 20th of November of the preceding year, the members of the sub-committee had invested themselves with the power of selecting the artist to execute the statue. We should now like to be informed, if even the general committee were invested with any authority by the subscribers to devolve upon any sub-committee this power of selection. They (the general committee) may have had the power of selecting the artist entrusted to them by the general body of subscribers; but we greatly question if they were authorized to devolve the power of selection upon any sub-committee whatever. This point demands explanation; and, if the state of the case be as we suspect, the sub-committee stand deprived of any vestige or semblance of the authority which they have in this instance assumed. There are additional circumstances, which seem to countenance the position, that the whole of these extraordinary proceedings at Glasgow should undergo the scrutiny of the general body of subscribers, before any satisfactory conclusion can be arrived at in the matter to which they relate. The sub-committee, it has been seen, elected themselves: and, we now ask, *who are this sub-committee?* The subscription, amounting to somewhere about £10,000, is designated as "of Glasgow and the west of Scotland;" but it is sufficiently notorious, that nearly the whole amount is the subscription of the citizens of Glasgow! Now, we would inquire, in what way or to what extent does this sub-committee represent the general body of subscribers? The sub-committee consists of about twenty-three gentlemen; the general committee consisting of about ninety, of whom two-thirds are citizens of Glasgow; but, of the twenty-three sub-committee-men, not one-half are citizens or natives of Glasgow, or in any way connected with the place; the others are noble peers, members of parliament, and officials, whose connexion with the city is wholly of a temporary nature. Many of these members of sub-committee studiously avoid ever entering the city, save upon the occurrence of something like compulsion; and when outside of its walls would not even deign to recognise or notice a "Glasgow bodie." The connexion of the learned sheriff himself with the city is only as of yesterday, and may terminate to-morrow, or any day, on occasion of that promotion to which he is so well entitled, and to which he must so naturally look forward. We maintain, therefore, that such members of committee have no right in this instance, on the ground either of equity or common sense, to lord it over the Glasgow subscribers in the manner in which they seem disposed to do! The subscribers on their side will prove themselves but sorry representatives of "their fathers, the deacons before them," the Campbells, Millars, Ingrams, Cochrans, Macdowalls, Boggles, Hamiltons, and Monteiths, if they submit to any such domination. They ought to call to mind how differently of old the citizens of Glasgow were wont to comport themselves: thus, when Anderson of Dowhill, at the time provost of the city, received in Glasgow, Oliver Cromwell, as sovereign of these realms, he rode on the left hand of the Protector from Tollcross, till such time as the cavalcade entered the *Gallowgate port*, where the Provost, "douce man," ("praise, and bless his memory," as Nicol Jarvie would have said,) reining up his steed, mayhap with all the grace of Philibert Emanuel, and placing himself on the right hand of "Old Noll," coolly told the lion-hearted usurper, that he now considered himself the greater man of the two; an indignity which his guest quietly pocketed, togging on in silence to the lodgings prepared for him at the foot of the Salt-market. "Ma conscience!" to see his successors playing the part of courtiers, in relation to the affairs of their own city, is enough to rouse the sturdy old covenant from his tomb in the "Hie Kirk" yard!

The ignorance of a committee, of the merits of the works in general of different artists, or with their character and reputation, may be urged as a valid cause for the resignation of committee men, but is no argument whatever in favour of the system of competition.

## VARIETIES.

MM. HORACE VERNET and GUDIN have been lately honoured with a dinner given by the surviving officers of the old Imperial Guard. The object of the feast was to mark the consideration entertained by the veteran officers for the talents of those eminent painters, displayed in so many pictorial commemorations of the glories of the French arms. It is said, that at this interesting repast were present remnants of the foot and horse Grenadiers, Dragoons, and Chasseurs, of this celebrated corps; if so, the *reunion* itself, with all its bursts of enthusiasm, its interesting associations, and the doubtless characteristic *personnel* of the members of the party, must have presented fruitful "studies" to the minds of the observant painters. Among the ceremonies of the evening, the memory of the great Emperor was toasted on bended knee! We were much interested on the first receipt of this account of such an honourable testimony to the powers of men of genius, like Vernet and Gudin. The battle-pieces of the former are familiar to Englishmen, but his versatility is equal to his vigour. The reputation of Gudin is also too well known to need remark. They "order these things well in France." Let us not be anxious that Art should be dedicated to the celebration of scenes of wholesale carnage: it seems quite enough that the "necessities" of nations should require the reality, without throwing over such passages of war the brilliant glow of a painter's imagination. Art should have nobler aims; and, in hailing the prospects of British Art, we look forward to an influential dissemination of the humanizing virtues. But we will ask, when may we expect, *here*, anything approaching to a public testimonial to the state-worthiness of art? It is the special distinctions of this sort that give such an impulse to the mind of youth, as leads to the development of future genius—they are the sparks which slumber among the raw materials of ambition, kindling sooner or later into a brilliant flame. The veteran, it is true, after difficulties overcome, may rest content with his laurels, his easy circumstances, and the consciousness of that never-failing delight which his profession yields to the enthusiastic artist. But imagine, for instance, a dinner given in honour of Wilkie, by some portion of that public who have snatched his happy ideas from so many a print and picture! To say nothing of the rest, what a fund of pure domestic sentiment is every day enjoyed by hundreds who visit the National Gallery, and gaze with delight at the 'Blind Fiddler' and the 'Village Festival.' In England, however, the respect for artistic talent, though widely entertained by individuals, seldom manifests any public development beyond attendance at the posthumous "sale," or the congregation of carriages at the funeral! Whilst wealth and dignity descend upon other professions, the barren boundaries of an artist's distinction are an R.A.-ship or a knighthood. And yet how wide is the operation of Art through Painting, Sculpture, and Engraving. What feeling, high or low, can it not evoke! There is no mind, however noble, no soul, however debased, that is unaffected by the lessons derived from the open books of this universal language. With the transmission of light passes the thought, and the spectator at once receives

"The silent story of the mind;" the impression being at the same time the more vivid, in consequence of the apparent reality of the images. We much mistake, if there be not a misconception respecting the national *utility* of Art; and think that the education of the eye might be made the most important instrument in the hands of the "Schoolmaster abroad." Too much public honour cannot, therefore, be bestowed on those who from time to time contribute an important share to this portion of public enlightenment. Our piece of news bears a long postscript, but it was a text inviting a commentary.

ROYAL ACADEMY—ELECTION OF MEMBERS.—On Wednesday, the 10th of February, the Royal Academy elected three new members—PHILIP HARDWICKE, Esq. (architect), DAVID ROBERTS, Esq. (painter), and J. J. CHALON, Esq. (painter). It was, we believe, necessary to elect one architect, in the room of Sir Jeffrey Wyattville, and the difficulty was, to determine whether the distinc-

tion should be conferred on Mr. Hardwicke or Mr. Barry. The Academy considered that Mr. Barry could better afford to wait, and elected Mr. Hardwicke. His most recent works, Goldsmiths' Hall (behind the New Post-office), and the Birmingham Railway Terminus, at Euston-square, are those best known to the public. The question as to whether or not Mr. Hardwicke, on being elected an associate, would be called on to resign his connexion with the Institute of Architects may be deemed settled in the negative—a proof that the Academy intend to move with the "times." The election of Mr. David Roberts was expected, and will give general satisfaction to the public as well as to the artists; while that of Mr. J. J. Chalon will excite universal discontent. In or out of the Royal Academy there are few landscape painters so entirely and altogether bad as Mr. J. J. Chalon: let those who desire proof look at the picture, 'Gipsies,' now in the British Institution. He has had no pretension whatever to occupy a prominent or elevated professional station; his works are so infinitely below mediocrity that we have never seen or heard of one of them that attracted the smallest attention; and believe that no one of his productions in any exhibition, metropolitan or provincial, was ever marked with the word "sold." We are therefore compelled to inquire as to the cause of his election, in preference to men infinitely his superiors, although we readily admit, that the associates' list is a poor list, and, at present, greatly limits the power of selection.—We cannot hesitate to express our conviction, that Mr. J. J. Chalon was elected by private interest, and not upon public grounds; indeed, it is utterly impossible to arrive at any other conclusion. He is, we believe, a pleasant member of a club called "The Sketching Club," consisting chiefly of leading members of the Royal Academy, and who differ widely from the public and all other artists on the subject of Mr. J. J. Chalon's genius. They have long resolved that he should be a member of the Royal Academy—and they have at length succeeded, to the great joy of the enemies of that Institution, and the deep grief and utter astonishment of its friends. There must be something very rotten in a system liable to so humiliating and injurious a procedure, which permits a few individuals, by acting in concert, to betray the interests and prejudice the character of a Society. The evil is done. Many years must pass over before the Royal Academy will be able to erase the blot.

ROYAL ACADEMY.—The "Hangers" at the forthcoming exhibition are H. P. Briggs, Esq., D. Maclise, Esq., and S. A. Hart, Esq.

SOCIETY OF BRITISH ARTISTS.—Three new members have lately been elected into the Society of British Artists:—A. Woolmer, E. Hassell, and H. Lancaster, Esqrs. The Officers for 1841 are F. Y. Hurlstone, Esq., President; E. Latilla, Esq., Vice-President; T. Allen, Esq., Treasurer; D. Egerton and E. Hassell, Esqrs., Secretaries. The Society proposes, after the close of the annual exhibition, to open one of the rooms with a collection of pictures, *free* to the public; and will be composed principally of works presented by the members, or donations to the Society, to be disposed of, either by sale or lottery, at moderate sums; the proceeds to go to the fund for completing the purchase of the galleries, the greater part of the debt having been liquidated. The works of art intended for exhibition will be received on Monday and Tuesday, the 1st and 2nd of March, under the usual regulations. The conversazioni will be held in the gallery as last season, a very general feeling of satisfaction having been, it is said, expressed at their adoption.

MR. COCKERELL'S LECTURES AT THE ROYAL ACADEMY.—Second Lecture, Jan. 14. This lecture commenced with general reflections on the progress of architecture from the earliest periods, passing from an interesting account of Egyptian architecture to that of the Jewish; Mr. Cockerell, in speaking of the latter, gave some very ingenious speculations on the Temple of Solomon, and commented on the fanciful representations given of it by several architects which he seemed to think were much exaggerated, deducing as one of his reasons, that the comparatively short time of its construction (twelve years), could not allow of its being of that extent which is generally imagined. He concluded his

lecture with an account of Grecian temples, theatres, stadium, gymnasium, &c., and with a disquisition on the antiquity of the arch.—Third Lecture. Perhaps the most interesting portion of this valuable lecture, consisted in a description of the Thermæ or Baths of Ancient Rome, which the professor illustrated by several large drawings, models, and prints. He attributed the great magnificence and luxury of these places to the love of pleasure and self-indulgence of the Romans, which he contrasted with the innate feeling for the arts and the patriotism of the Greeks. He concluded with a detailed account of the Basilica, more especially touching upon the church of St. Maria Degli Angeli, at Rome, formed by Michael Angelo, from the Baths of Dioclesian.—Fourth Lecture. Mr. Cockerell began by commenting on Roman architecture from the period of Augustus, to the removal of the seat of empire to Constantinople. He then proceeded to describe the architecture of the Christian era, A.D. 330, to A.D. 527, and went on describing the different styles of the art during the middle ages down to the present era. He spoke with the greatest enthusiasm of the works of Sir Christopher Wren, whom he looked upon as one of the greatest architects since the high period of Grecian art.—Fifth Lecture. Of this lecture, though excellent in parts, we regret we cannot speak in such high terms as of the preceding ones. The professor, in speaking of the theory of architecture, had perhaps not classed his ideas with that degree of perspicuity and clearness which are so desirable in a lecture; and in his desire for entering too profoundly into certain theories, he at times degenerated into obscurity and apparent self-contradiction. His remarks, however, with regard to the want of consistency in the application of ornaments and style in modern architecture, were remarkably just, as well as much of his advice to the students of architecture in the pursuit of their studies, the great purport of which was to combine originality of thought with a study of the best works of the Greeks.

**THE DUKE OF WELLINGTON.**—The Duke—whose state of health has, within the last few days, created alarm throughout the whole population of Great Britain, but who, we rejoice to add, is rapidly recovering—was present at the private view of the British Institution, where he purchased the picture, by Mr. E. M. Ward, of 'Napoleon Bonaparte in the Prison of Nice' (No. 341 in the catalogue). The circumstance must be peculiarly gratifying to the accomplished artist—to have contributed in any way to the collection of his Grace cannot fail to be an advantage; it is especially so, to have added to it a work that has especial interest for the "Great Captain of the age"—the more, that it represents his great opponent at the time of his earlier triumph, and not when adversity had trampled him into the dust. The picture is, as we have elsewhere said, worthy of the honour conferred upon it.

**THE LATE GEORGE CHAMBERS.**—We direct attention to an advertisement in the 'ART-UNION,' calling upon artists, the patrons of art, and its friends and admirers, as well as those who are ever ready with aid to afflicted merit and integrity, to join in a subscription for relieving the wants of the widow and children of this excellent artist. We earnestly hope the call will be liberally responded to. In reporting progress, next month, we may offer some further remarks on the subject.

**THE ART-UNION OF LONDON.**—The time for appearing in the subscription list of this Society will soon terminate. We understand it will present a very large accession of strength. The etching of the plate (to be presented to the members), from Mr. C. Landseer's picture of 'The Tired Huntsman,' has just been completed. It is the production of the engraver, Mr. H. C. Shenton, and does him great credit; it is clear, fine, and forcible, and the drawing is perfectly accurate. We have no doubt of his producing a print that will materially enhance his reputation.

**THE COPYRIGHT OF DESIGNS.**—This subject—although for the present limited to a most important branch of our manufactures, "printed fabrics"—has occupied the attention of the House of Commons, having been brought before it by Emerson Tennent, Esq., the able and indefatigable Member for Belfast. The House has looked very coldly on the subject, as, unhappily, it too generally does, where protection is sought for the pro-

ductions of the mind—the results of hard intellectual labour; and it is very probable that Mr. Tennent will, for a time, be able to do little more than direct to the subject the attention and consideration of the country. This will, however, be doing a great deal; for the remedy will be sure to follow, sooner or later. The matter is one of no ordinary moment to professors of the Fine Arts; for their cause must be heard in turn. At present they have not, in the designs they create, even the small interest possessed over his by the cotton-printer who invents a gown-piece. Such a state of things cannot last long. If the artists would rally and combine, the produce of their easels might be property for their descendants; at present, the most atrocious robberies are committed with impunity. We shall soon consider, at some length, the case which Mr. Emerson Tennent has brought before Parliament: we thank him, in the name of all intellectual inventors, for his continual exertions and unwearied industry.

**SIR ROBERT PEEL.**—We have seen an exceedingly clever and highly-wrought drawing of this eminent statesman, from the pencil of Mr. Francis, which is to be immediately placed in the hands of a competent engraver. It is full-length: the Right Hon. Baronet is represented standing close to the Speaker's table, and in the act of addressing the House of Commons. The face and figure bear exact resemblance to the original: it is, indeed, by far, the best likeness we have seen of one of the most accomplished men of the age and country; not excepting even that by Sir Thomas Lawrence, painted some fifteen or sixteen years ago. But, with this exception, artists have singularly failed in copying him—one or two, professing to be portraits, have given him more the air and look of Mr. Hume, than his own peculiarly winning smile and insinuating manner. Mr. Francis has pictured Sir Robert in the attitude he so generally adopts in the House; persuasive rather than energetic; as if too conscious of his own high powers to render enforcement of them necessary, either by gesture or action. The portrait is therefore quiet; but the character of his expressive countenance is very happily preserved. The print will be a valuable acquisition to thousands who admire his public conduct, and respect the baronet for the great and good example he has given by his career in public life.

**THE TEMPLE CHURCH.**—The restorations at this most interesting specimen of our forefathers' architectural skill are coming fast to completion. When finished, we shall make a careful survey of it for our readers' information. Polychromatic embellishment has been adopted to a large extent. Whether or not the effect produced will be of the satisfactory nature hoped for, can hardly yet be said: for our own part, it must be confessed, we view it with some degree of nervousness.

**STAINED-GLASS IN WESTMINSTER ABBEY.**—We mentioned in a previous number of this journal, that the Dean and Chapter of Westminster, had invited certain artists, whose names were stated, to send drawings and specimens in competition, for the honour of executing the proposed stained-glass windows. The parties who really competed were as follows: Mr. Willement, Mr. Miller, Messrs. Ward and Nixon, Mr. Collins, and Messrs. Hancock and Co.; and from the drawings sent by them, those from Messrs. Ward and Nixon have been selected as the best, and certainly very excellent they are. With the view, however, as it would seem, to endeavour to their utmost to obtain a result satisfactory to the public, one or two fresh candidates, Mr. Wales of Newcastle among the number, have been admitted to compete with the last-named artists. The ultimate selection will probably be made at the next meeting of the chapter, fixed for the first week in March.

**BEQUEST OF PICTURES, &c. TO THE KING OF FRANCE.**—To account for the following singular bequest, a curious story is circulated in Paris. It is there said that the testator, Mr. Frank Standish, applied to the present English government for the recovery of a dormant title which had descended in his family; and as a consideration for the restored honours, he proposed making a presentation or bequest, for the behoof of the British public, of certain pictures, books, &c. of much value. Mr. Standish's proposition was rejected; in consequence of which, it is said, the bequest has been made in favour of the French King. Among

the pictures are several valuable Murillos, and works by Zurbaran and other masters of the Spanish school, besides many pictures of the Italian, Flemish, and French schools. Most of the books are valuable, and they are upwards of 4000 in number. The passage in the will, which bears date, July 11th, 1838, runs thus:—"I give and bequeath to his Majesty the King of the French, all my books, manuscripts, engravings, paintings, and drawings, at my mansion at Duxbury Hall, in the county of Lancashire, and elsewhere in Great Britain, or in any foreign country, either for the sole and particular use of his said Majesty, or to be placed in any public establishment he may think fit, as a testimony of my esteem for a generous and polite nation, which is always ready to welcome travellers, and which I have always visited with pleasure and quitted with regret."

**NELSON'S MONUMENT.**—Two twenty-four pounder brass guns, which have been recovered from the wreck of the Royal George, have been contributed by Government to be recast in the statue of Nelson, with which the column will be surmounted. The donation is not decidedly inappropriate, but it would have been in better taste to have given two of the guns of the Victory. The association had been more perfect, and a memento of his ship had been left when after-ages had swept every other away.

**WELLINGTON MONUMENT.**—The subscription for this memorial has received most liberal additions in India. The lists received from Bombay by the honorary secretary, contain the names of most of the principal native bankers and merchants resident in that Presidency. The sum of the subscriptions on these lists, amounts to 2550 rupees, which have, through Mr. Jardine, been remitted to Messrs. Drummond, the treasurers. It is hoped that the spirited example set by the inhabitants of the Bombay Presidency, will be imitated by those of Calcutta and Madras.

**MR. HARDING** is busily occupied in the production of certain improvements in lithography, which are most favourably spoken of. We believe the object is to cast off coloured impressions from the stone; but in whatever shape the result of this gentleman's labours comes before the world it cannot be less than successful.

## OBITUARY.

**MR. JOHN HAVELL.**—We have to record the decease of Mr. John Havell, the engraver, who has been long a respected and distinguished member of his profession. The circumstances attending his illness and death derive a painful and melancholy interest from an enthusiasm so intense as to unsettle his reason. On the first announcement of Daguerre's discovery, Mr. Havell was so forcibly struck by the photogenic effects, that he applied himself with much assiduity to effect improvements on the discovery. With a view, therefore, of exhibiting some successful experiments he invited to his house a limited circle of friends, even in the midst of whom he was surprised by the fearful visitation of the loss of his reason, which he never fully recovered.

**MR. JAMES O'CONNOR.**—We have also to announce the death, in the 49th year of his age, of Mr. O'Connor, the well-known landscape painter. He was a native of Dublin, in which city his father was established as a chemist and druggist, and claimed descent from one of the oldest families in Ireland. At the early age of eight years, the young O'Connor evinced an inclination for drawing, which amounted almost to a passion, inasmuch that nothing could induce him to devote himself to any other pursuit. He distinguished himself early, and in his native country he met with much success; and he likewise, for a length of time, was eminently successful in London. His works are known in France and Belgium, where they have obtained very high prices. The present King of France possesses many of O'Connor's works; and so highly did he esteem them, he conveyed to him a commission, which was never executed. We fear that his widow is left in circumstances of embarrassment and difficulty.

## FRAUDS ON ARTISTS.

It becomes with us a duty to the profession to notice certain facts which have come to our knowledge, and which involve even the future reputation of those whose names are now mixed up with them, if the system of imposition which we here expose were suffered to progress with impunity. We allude to the vending of spurious ultramarine for the genuine article; and such is the perfection with which this valuable colour is now imitated in foreign preparations, that it is a matter of impossibility for the artist to distinguish the real from the factitious, save by test; and this is so simple, that the manner of effecting it shall be described, as a security against one of the most impudent frauds that has ever been attempted. A case is selected:—An Edinburgh artist\* of eminence, who had exhibited a picture in London, received a letter containing a proposal to purchase it, provided he would receive in payment a great proportion of the price in genuine ultramarine. He agreed eventually to receive ten guineas in money, and ultramarine to the value of sixty guineas; but as he declared himself unable, residing at a distance, to form a judgment of the genuineness of the colour, or of its value, he referred his correspondent to a friend, an artist living in Mornington-place, whom he authorized to conclude the negotiation, should he be satisfied of the value of the colour offered. The person who proposed thus to purchase the picture represented himself as an American, and an artist, and told a plausible story, describing the manner in which he became possessed of a very large quantity of ultramarine. Mr. L., the person interested for his absent friend, proposed having the colour tested; to this the American replied that no further test was necessary than what he himself could exhibit. He did test it in Mr. L.'s presence, and the result was such as to establish the fact of its being spurious, but unfortunately the latter was not aware of this. It is sufficient to say that this adventurer succeeded in obtaining the picture, and the friend of the artist discovered, when too late, that the colour was worth about three shillings per ounce. As this system of robbery has been in successful operation for some time, and having been without doubt assiduously and industriously followed, the injury already done must be very extensive; but we trust that this notice does not appear too late to stop the further progress of an imposition so infamous. Amongst those who have been very seriously duped is Mr. A., of Osnaburgh-street, who was induced to take this pretended ultra-marine to the value of £80, which was paid for in money, and which he afterwards discovered was comparatively worthless. A late marine painter also purchased a quantity of this composition, which his widow having been desirous, since his decease, of disposing of, was informed that it was worth but a few shillings an ounce. This is a case of extreme cruelty, as this unfortunate person has been left in circumstances of much difficulty. It will be by no means difficult, with a little caution, to avoid being plundered by such pretences as these; for if an artist be diffident of his own judgment, or method of testing, scarcely any chemist would hesitate to exhibit to him the purity or impurity of a small sample of a colour in which he may be interested, or which is offered to him as genuine ultra-marine. With a view to secure artists against this kind of imposition, we have applied to Messrs. Winsor and Newton, who have kindly afforded us an opportunity of enabling our readers to distinguish the genuine from the spurious ultramarine. There has been lately introduced into England, from Germany, a very beautiful chemical manufacture, the compound tints of which are nearly as brilliant as those of the real ultramarine. The only difference is, that all the tints produced by mixing the German blue with white-lead have a lilac hue, which those produced by the real have not. In a matter of such nice distinctions as exist between the real and the factitious ultra-marines, and where the great price of the former offers strong temptation to adulteration, or the substitution of a spurious article, it now very nearly concerns the artist to be able to determine the quality of the colour he employs.

\* We are in possession of the names of all parties, but do not deem the publication of them necessary.

Real ultra-marine, when exposed to a dull red heat, changes its colour but very little; while the factitious becomes much more grey; and if then ground, it will be found to have lost its lively and beautiful colour, giving only a dull blue, or a grey tint with a tinge of purple. If a small portion of real ultra-marine be placed in an earthenware vessel, and a little nitric acid be poured over it, it gradually loses its blue tint, and a dirty white gelatinous residuum only remains.

If the German ultra-marines be treated in the same way, the blue colour disappears in a similar manner; but after awhile, there appears on the residuum a pinky or flesh-coloured stain. The French ultra-marine, although much more permanent than the German, is more readily distinguishable from the real. In its dry state it is considerably darker, and heavier in its appearance. On the application of nitric acid, the same result is not observable as in similarly treating genuine ultra-marine; but a very remarkable effervescence takes place, evolving red fumes in abundance. These appearances particularly distinguish the French factitious ultra-marines from the genuine extract of lapis lazuli. When mixed with white-lead, the French composition affords tints nearer in hue to the real ultra-marine than those of the German, and with less of the lilac tint; but as it has not the luminous quality of the latter, the artist is in less danger of being deceived. The French blue does not change on being exposed to a red heat so much as the German; but it loses its fine tint and assumes that of Prussian blue, but without its strength or intensity. The factitious ultra-marines work and wash well in water colour; and although in this respect they have an advantage over the real, which can never be divested of its granulous quality; yet this serves to distinguish the real of so many guineas per ounce from the factitious, which ought only to be of so many shillings.

#### PROPOSED ASSOCIATION FOR THE ADVANCEMENT OF THE FINE ARTS.

TO THE EDITOR OF THE ART-UNION.

SIR,—As my suggestion for the establishment of an association for the encouragement of the arts, on the plan of the "British Association for the advancement of Science," first appeared in your pages, I will adopt them, with your permission, as the medium through which to acknowledge the courtesy shown to me by the periodical press generally, and the various letters received on the subject from individuals, all more or less influential. The "Literary Gazette," the "Athenæum," the "Atlas," the "Midland Counties Herald," the "Morning Advertiser," the "Mechanics' Magazine," the "Polytechnic Journal," the "Civil Engineers' Journal," and some others, have all strenuously assisted to give publicity to the suggestion: thus showing, as it seems to me, a very general feeling that such an association as was proposed would have a beneficial effect, and that the plan was feasible. The "Athenæum," however, although it considers "the scheme is plausible, and that much good might arise from the local interest which such an association is capable of awakening, and the knowledge it might diffuse," fears that the objections to it are insurmountable. It goes on to say, "We heartily wish Mr. Godwin's project success, so far as he deserves it; and if he can show us that the association is not likely, indeed certain, to degenerate into a mere picture-dealers' and printers' exhibition room—that it can be so conducted as to diffuse a knowledge of Art, and not a vicious and corrupt taste for the profitable trash which these people call Art—in brief, that it will not be another form of that incessant appeal to the breeches-pocket of a confiding public,—he shall have our support." Now, that difficulties of the sort referred to would arise without care on the part of the committee, there can be no doubt; but it appears to me even more certain, that with due care they might altogether be prevented or overcome. It would, perhaps, be a little premature, however, just now to venture any opinions on the mode of government to be adopted. I simply state the objections, in order that persons who feel disposed to give the subject consideration, may see at once more than one side

of the question. The diffusion of a knowledge and love of art is the object of the suggestion; unless it is likely to effect that, it ought not to be carried out; my own opinion, I need hardly repeat, is strongly that it would.

With regard to the letters which I have received, I can hardly avoid considering it strange, that none have been written by artists. Unfortunately, the artists of England, as a body, cannot be brought to comprehend the advantages which *must* result to them personally from spreading a love of art throughout society (at least it seems so), nor will they exert themselves to further it. Show them a means of selling a single picture, and they will probably not hesitate to adopt it; but point out ever so powerfully the possibility of doubling the number of the lovers of art (by doing which they would unquestionably more than double the number of purchasers of their productions), and the great chance is they would deem it quite unnecessary to bestir themselves. There are many admirable individual exceptions to this statement; but I would appeal to these exceptions to confirm the opinion here advanced, so far as regards the general body. Without the active co-operation of the artists, however, in the present case, certain it is that little could be done; and it is therefore to be hoped, that such of them as consider the proposition advisable (and that many of them do think so, I have been verbally assured), will interest themselves actively in carrying it out.

Some kind and influential correspondents have thought they discovered in the proposal, as printed, hostility to the Royal Academy; perhaps because they *wished* to find it. Nothing can be more erroneous. Such an association as is projected, could hardly be *made* to interfere with the Academy in the slightest degree; nor, indeed, could complete success be hoped for, unless it had the aid of the academicians, not imperatively as academicians, but as artists and expounders of art. Their urbane president especially, Sir Martin Archer Shee, could ill be spared from the direction.

Touching the suggestion, that literature in union with art should come equally under the consideration of the association, I may remark, that such was always the intention; the members would, therefore, be separated into artists, authors, and amateurs; and of these, probably, in certain proportions would the general committee be composed.

When the proposal was first printed, there was little intention on my part of proceeding further, my time being somewhat occupied; greater goodwill towards it, however, than might have been looked for at first has been shown; and I, therefore, willingly become, *pro tempore*, a centre for any communication on the subject that may be thought desirable.

GEORGE GODWIN, JUN.

Pelham Crescent, Brompton.

#### ROYAL INSTITUTE OF BRITISH ARCHITECTS.

—On Monday the 8th, Mr. Edward Blore in the chair, Mr. Hay's work on Cairo was presented by Mr. Greenhough, and led to some interesting remarks by Mr. Alexander, on the various styles of architecture which are to be found in that city. Mr. Scoles exhibited a very accurate sectional drawing of St. Paul's cathedral—within St. Peter's at Rome, showing their relative size; and commented on the different construction of the two domes. This drawing was made by Mr. Bonomi nearly forty years ago, and has been in the engraver's hands ever since. Mr. George Godwin drew attention to the present state of the model of Wren's original design for the cathedral, now kept (we must not say *preserved*) in a room over the morning chapel in St. Paul's. Unless some means be taken to repair it, it will speedily become a mere ruin. Mr. Scoles suggested that Mr. Cockerell should be applied to on the subject. Some remarks, by Mr. Nicholson, on the curious stone arch or beam, as it is popularly termed, in Lincoln cathedral, were laid before the meeting. This arch is over the groining of the nave, and abuts against the two western towers: its use is unknown. Mr. Poynter then read a paper on the construction of observations, which contained much practical information.

THE ARTIST:  
A SERIES OF SKETCHES FROM THE LIFE.  
By MRS. S. C. HALL.

## CHAPTER II.

The breakfast room, in which the bay-window was of so much importance to the actively minded little gentleman I have endeavoured to describe, was painted of a cheerful green, and papered with a bright lively pink; he said he liked cheerful colours—and cheerful objects; and everything in the house, with one exception—which we shall come to, by and by—was of a cheerful character. The pictures—such as they were, bore out the old man's criticism—"That one landscape was very like the other—at least in the neighbourhood of Bristol." There were two of 'Country Weddings'—smirking bridegrooms in blue coats and white waistcoats—and blushing brides in fine streaky chalky lines, intimating white satin. One wedding party were just getting into a carriage; while the other were moving out of the church. There were two Christenings—such jovial ones: pale mammas—dignified and important grandmamas, important as if they were the real original mothers of the whole human race—such "jolly old grandfathers," and ruby-coloured nurses—and, above all, such sweet babies, looking as babies never do at a ceremony, calm and good natured, personifications of inanity and placidity, a most hypocritical portraiture; while little foolish flirting episodes between juvenile aunts and gentlemanly godfathers, squinting most bewitchingly at each other, completed the pictures. There were several brightly coloured landscapes: some gay in all the hues that are supposed to belong to legitimate sunsets; two in particular, both with gaudy skies, and dewdrops cut out upon the long grass, and trees, looking cold and damp enough to give one the ague; while a very glowing portion of the circle of a red sun was getting up as fast as ever it could from behind a sand bank in the foreground. These formed the back grounds of both pictures—in one, an innocent, unsuspicious-looking milkmaid was approaching a very dead-looking cow (not Sydney Cooper's, for his are alive), while a pail stood, with wonderful composure, where it could not stand, upon a head bent forward after the fashion of a tortoise. The companion picture to this production had, as I have said, the same heavens and the same earth, but in the foreground lay the difference. A sharp fellow, looking as though he came into the world to jingle jackstones amongst tombs and cheat thereat, was stepping over a stile, bearing the implements of industry about him, which it was evident he never would use if he could help it; his eyes were cast upon them with a sinister expression of dislike; a horse collar was slung over one arm, and he carried a halter in his hand; and a singularly docile horse, neither of whose legs matched the other, was walking towards him, as if anxious to be harnessed, and go to work immediately. These two pictures were called 'Morning.' There were others, mere masses of bright colour, which the sun was rendering more bright. A book full of caricatures lay open in an arm-chair; two large cats—Tom and Tit—reposed on the hearth-rug; and a very active, able-bodied terrier, with a scratched face, lay between them, keeping an eye on each, and apparently ready for a combat with either. A yellow canary-bird was singing with all its might in a very fine cage, that hung from the ceiling; and a parrot, rich in the gaudy feathers of its eastern nature, was chattering and screaming, evidently to the enjoyment of half-a-dozen urchins, whose faces were pressed against the glass of the bay-window. There was a particular air of industrious cleanliness everywhere—a sort of perpetual presence of observation and activity, that, within its circle, renders repose almost impossible. All things were bright and new; even the hearth-broom seemed, from its very position, to be ready to start off in a moment, and sweep away whatever dust fell from the fire.

When the little active gentleman entered with his guests, the parrot exclaimed—"Ah, old boy!—breakfast for Polly!" and the terrier, after welcoming his master with sundry noises and gestures of the most animated description—such as jumping off his hind legs until he

touched his master's nose—walked deliberately up to the stranger, smelt him all round, retreated a pace, looked him steadily in the face, and then was so well satisfied with the scrutiny, that he walked up to him, and began licking his hand.

"Well, I declare!" exclaimed the fussy old gentleman; "well, that is extraordinary! I never knew Bob do anything like that before, Sir; he is the most surly brute to strangers. Ah, you fellow! you know you are. He daren't bite, but he'll sulk, Sir; so that I seldom bring home a stranger without telling him of it beforehand, or explaining the why and wherefore afterwards. Ah, Bob! sulky rogue! Good dog, Bob! Don't mind his nibbling the tops of your fingers, Mr. Hamilton: it's all love, poor thing! He bites my nails off to the quick; but I never mind it. He's a wonderful dog, Sir. Ah, Bob! Bob!—a lively fellow: I like things lively. A pleasant, cheerful room, Sir—everything cheerful and new in it: I like new things—"

"And new faces?" inquired Hamilton, with a half-serious, half-pleasant smile, as if he thought "how strange that an old man should like new things!"

"Well, I confess, I like new faces," he replied; "I certainly like new faces. I read people quickly; and those who do, very often tire of their books. Some, Sir, are as easy as the Roman alphabet, and yet better worth the liking than your crabbed black letter.—Poor Poll! Scratch yer' poll, Poll!" and the ill-conditioned pet returned his caress gently. "Mr. Hamilton, you see how I love the Fine Arts. I never yet bought a picture out of vain-glory, or because it was painted by an R.A., but because of the sentiment; that's the thing. Dear me! I wonder breakfast is not ready. Why, bless me! the new clock is ten minutes slow!—how very odd!"—and he rang the bell with the rapidity that characterized all his movements, and then looked out of the window, talking all the time. "Ah, there's Sally Tomlins! Why, surely she can't be taking Mrs. Tibbs home another new turban! Queer fancy, for a woman with a face like a full moon to wear nothing but turbans.—Now, Sir, you are, of course, a good judge of colours—how do you like my contrasts?—the rose, and its leaf?—eh? I like everything fresh, and green, and gay, and blooming. Oh, Mr. Hamilton! my sister—Miss Flora."

"Flora!" the name is so pretty, that even before Hamilton could turn round to bow, visions of lilies and roses, of sylphs and sunny ringlets, and a red-lipped, white-froaked maiden rose before him. The sound, "My sister," was lost in the music of "Flora;" the delusion, however, was soon at an end.

"Flora" was a tall, thin, palid woman, whose whole countenance bore the expression of unsettled discontent: there was no "silent sorrow" stamped upon her sharp features; no fixed wrinkle, intimating a decided pain or annoyance; the very flesh seemed anxious to creep off her bones, from sheer discomfort; her eyes had the keen, unwearied aspect of perpetual fault-finding, and it was impossible not to wonder how she looked when she smiled. She was dressed in a tight-fitting, black cachmere, unrelieved by an atom of white, and a plain mob-cap, composed of fine lace, was placed over a fringe of faded yellow hair.

"Flora! Mr. Hamilton," exclaimed her rapid brother, impatient of her tardy civility—"an artist—a young friend of mine."

"Ah! Oh! bad weather for your *trade*, young gentleman!" was the reply, in a voice cold and piercing as the north wind.

Now, it so happened that young Hamilton had a theory of his own touching voices; his ear was finely tempered,—not educated, except by nature, who, when she pleases, is the truest of all true teachers; and she had given him an ear for intonations—an ear tender and susceptible. He fancied he could read a character from the tone of the voice, and would cherish a sentence musically spoken, as a remembrance of the speaker. He held a harsh voice in woman as the sure index to a masculine appearance, or, what is almost as bad, a masculine mind; besides, she had called his occupation—his art, the out-pouring of his imagination, the spirit which animated his existence—a *trade*! Let any bounding spirit who has communed with nature, learned her by heart, dreamed of her by night, and felt a whole midsummer day too short for his sweet commune with her scenes

and solitudes; let it call to mind what it felt when first it was insulted by a sound so ignoble.

"It is not a *trade*, sister Flora," said the little gentleman. "Sit down, Mr. Hamilton: nor is it bad weather, my dear."

"Perhaps not, brother, but I felt it so."

"What! ain't you well?" this was said in anything but a soothing tone.

"Oh, no matter!" replied the lady.

"But it is matter!" he observed, petulently: "I insist upon knowing whether you are well or ill?"

"Then, since you must have it—(do you take cream and sugar, Mr. Hamilton? though both, I believe, are bilious)—I am very ill."

"Indeed! then we'll send for a doctor."

The lady tittered a laugh—such a laugh!

"A doctor! Oh, no; I do not want to die just yet! though I care not for the world. Pray, pray, Mr. Hamilton, do not eat hot bread; it is so unwholesome."

"Then why do you take it, sister?"

"Ah, brother! it matters not what I eat! heigh ho! there, brother, you may give Tom anything you please, he is your cat; but I beg you will not spoil Tit. Puss, puss! Poor animal! she can't live long."

"Well, she certainly is awfully fat. Did you, Mr. Hamilton, ever see so fat a cat?"

"Fat!" screamed Flora. "Fat! Why the poor animal is dropsical! There's honey, Mr. Hamilton, and marmalade—that is, if you like; but I am too ill to eat either, though certainly for myself, I set little value on my life."

"Then why do you want to preserve it?" enquired the fussy gentleman, while he shook a large quantity of salt over his toast.

"Only for your sake, brother. Heigh ho! there now, you are picking your stomach again. Well, it is miserable."

"Ay, so it is," interrupted her brother; "miserable, to be perpetually turning everything into misery. Sister Flora, you are your own misery."

"Thank you, brother, you have told me so every morning for the last twenty years."

"And, therefore, as long as you carry yourself about the world, you carry your own misery. Can't you look at the canary-bird, the parrot, the animals.—Can't you look out of that window!—Sir, I had that window constructed on purpose to keep her alive. God help me! Why, sister, look—where those sunbeams sport among those flowers; direct from the great sun; set by the will of the Almighty in the heavens to cheer—to warm hundreds of worlds. Can you look on them, without benefiting by their influence?"

"Dear me! how you do run on. I do all I can to keep those sun-beams out—they take all the colour out of the carpet."

The old gentleman looked at his sister, sighed, and shook his head, slowly and sadly; but the mood passed quickly away. It was evident no two persons could be more unfit companions; and yet, according to what has been said, they had scratched through life together for the last twenty years: for every smile her brother gave, Miss Flora had a sigh. She seemed a living extinguisher on all happy things; and when, after the breakfast equipage was removed, she left the room, the little old gentleman fetched a very deep breath, as if the removal was a great relief to him, then hurried to draw up the blinds she had drawn down; desired Bob to make himself comfortable, which the beast immediately did by curling himself round in the great chair, close to the caricatures; keeping only his nose out, and taking every possible opportunity of showing his teeth to Tom; for Tit had followed her mistress.

"A good creature, my sister, in her way—a very good creature. She, Sir—she would extract bitters from the purest honey, and yet she means no harm. I call her my *black draught*; but she don't know it. Well, I might have a worse after all, than poor Flo; for we must all have our crosses—we must, indeed; and you know she is my sister—my own flesh and blood; and *that* is something—is it not?"

"A great deal!" exclaimed Hamilton, "a very great deal. God knows, it is a lonely world enough, sometimes even for families; but for those who have neither kith nor kin, nor home, what is it?"

"A wilderness: where we are forced to create affections," was the abrupt answer.

"They will not be forced: affections are not hot-house plants," replied the artist.

There was a mournful cadence in his voice, that touched the old man's heart; he had been drawn towards the youth by an impulse far stronger than his usual curiosity; he was one of those persons of quick and abundant sympathies, which, suffered to run at large, branch out into *useless* channels, and become weak from their very extension; he had nothing in his home absolutely to love; and so between activity and good-nature, he went abroad with those superabundant, kindly feelings, which, from the oddity of his manner, and a peculiar way he had of muttering forth his thoughts, rendered him a subject of amusement, rather than reflection, amongst his neighbours.

"Well, I dare say you are right; though matters of that kind are too deep for me," he said at last. "People perplex themselves a great deal with thinking: believe me, feeling and acting keep one more alive." The youth turning away with a wan smile, took up his hat and portfolio.

"Well," observed the old man, kindly laying his hand on his arm. "You need not be in a hurry; have you any engagement?" Hamilton pointed to the sky. "We catch the weather when we can; and see how fine the day is now."

"True; but you know nobody in Bristol. Come back to dinner; we dine at five; and there is a little sunny room, just facing the south; it is so sunny, that my sister never enters it—it makes her low-spirited, she says; the sunshine is so very bright there. I will send to the inn for your traps; and you can stay with me as long as ever you like. Besides, I want one or two more cheerful pictures, family groups—Bob after a Rat, and the Cats and Parrot. The little chamber would be dull but for the aspect; the warm sun would do you good; Inns are nasty places; and bless you, boy! don't go into a lodging. I knew a poor lad once, who got into a Bristol lodging—dark back-room, looking out upon a square yard interlaced with clothes-lines, variegated by forked pegs. The house was so far back, that no noise ever came up to him but the clatter of the maid's pattens on the flags, with a running accompaniment of the mistress's tongue—one of those everlasting tongues that never cease. Nothing ever visited him in that lone back-room but a hungry rat, which found its way through a hole in the cupboard, whose door would not shut; and its lean eyes would gleam upon him as he lay on his wretched bed; and he was so weak, that he had not power even to say, hush—away! to the starved creature—"

"Of course, he died, Sir?" interrupted the artist, passing his hand across his brow.

"He did no such thing, Sir: he would, if I had not found him out. Nothing dies that I take in hand. Why, Bob is fourteen, and no one thinks him more than four. I found the young man out; I frightened away the rat; got him into the sun; used to seat him at that window; saw up the street—down the street—over the way; calves-foot jelly; mutton chops; sent my sister on a visit; kept him alive. Sound as a roach in two months!"

"I am sure, Sir, you are very kind!" said Hamilton.

The little old gentlemen put his head on one side, as if considering for a moment. "No!" he replied. "No! I do not think I have an atom of disinterested kindness about me; that sort of thing does myself good; it's a motive—an object—an occupation; circulates my blood; makes me feel I have a heart, lad, which some folk only discover when the doctor tells them it's diseased; but you'll inhabit the little room, young man?"

The artist at first refused; but the old gentleman had taken it into his head to have his own way; and within two hours, Hamilton, his portfolio, a small circular valise, and a camp-stool, which constituted all the property he had in the world, were in the chamber facing the sweet south.

Young as he was, fortune had played him many pranks. When he landed in Bristol, his funds were reduced to a few thin shillings; he had felt them one by one within the netting of his purse, knew their exact number, and yet feared to take them out and count them, they were so very few; without relatives, friends, or patronage; he had nothing to trust to for subsistence, but his merits in an art, which, strong as he felt them to be within himself (and I believe there is never power with-

out the knowledge thereof), he knew he lacked the skill to express: his painted thoughts were but as water to the strength of his conceptions.

For one so young he had been sorely tried; he had lost the only friend he ever felt within his heart—his mother; but this unexpected kindness had refreshed him: it was opportune as unexpected—a spring opened in the desert—a city of refuge. He did not trouble himself with thoughts of its continuance—he only felt enjoyment; and set about arranging the implements of his art with a cheerfulness and pleasure superior to any thing he had felt for a long time. It suddenly occurred to him that he had absolutely become domesticated in a house, without knowing even the name of its master; and as his eye rested upon a large Bible and Prayer-book, probably too large for general use, and therefore put into the spare room, yet placed as they should be, reverently, and apart from other books, on a small table; he opened first one, and then the other. The young man's colour changed when he read the name inscribed in the Prayer-book; and yet it was a common name enough—Henry Myles, Berbice, 1782.

He closed the prayer-book, and laid it on one side, while he opened the Bible.

The edges of the holy book were brown and haggled, and the paper of the crackling page stiff, yellow, and eaten into little holes by the writhing maggot, or those thin, whirling, silvery insects that seem formed of the finest particles of the material whose destruction is their life. On the corner of the first large leaf was written, in staring black ink, the name "Henry Myles, Berbice, 1782;" and on the same was a long string of family names, closely written—an unintentioned evidence of how rapidly one generation presses upon another in the great race of time—a long record of the births, deaths, and marriages of the Myles' family, with notes and comments thereupon. At the top the ink had grown pale, and the writing was stiff and cramped, such as is seen in very old books or upon tombs; growing more modern and more distinct as it descended; the name "Henry Myles" appeared nearly at the bottom; and it was to be supposed that the book had become his property at last by virtue of inheritance. The Artist, while he bent over the old Bible, passed his finger rapidly down the page until it paused on the last name; his colour flushed brightly and quickly to his brow, and then he became faint and ashy pale; he leaned against the window without raising his eyes from the volume, then, suddenly falling on his knees, he pressed his face upon it, and burst into a passion of tears. The agony was soon over. The young man arose, gathered the things he had arranged hastily together, then turned again to the list of names, and paused irresolute; at last he rung the bell—it was speedily answered.

"Your master's name is Myles, I believe?"—

"Yes, Sir," said the cheerful looking servant; "but he's not in now, Sir; he's just gone down to see the packet off, and said if you wanted anything it was to be attended to immediately."

"His name is Henry Myles," continued the young man, without hearing her explanation. "All Bristol knows that, Sir: 'Henry Myles' is on the street-door, though Missis always will call him Harry."

"Perhaps," added the young man eagerly, "Perhaps he has a brother living?"

"No, Sir, that he aint I know; for I got a bombazine and a fine merino, for mourning, for him, though Missus said the one would have been enough—but, Lor' Sir! you aint going away? Why, Master said he hoped you'd never go."

The Artist did not heed her words, but seized his folio and valise, muttering to himself—"And that I should have eaten his bread." "Any message, please Sir?" said the astonished girl, when she overtook him as he was endeavouring to escape from Bob's caresses, without hurting the dog.

"Tell your master," he exclaimed, "that if he had known who I was, he would have left me to—"

She did not hear the end of the sentence, though she looked after him until he turned into the next street; but exclaimed when she regained his room, "Well! he has been reading the old Bible, and forgotten his camp chair."

## CORRESPONDENCE.

### PREPARATION OF GROUNDS FOR OIL-PAINTING, &c.

SIR,—I am happy to find in the letter addressed to you in the ART-UNION for October, by a person signing himself "A CORRESPONDENT," such information as I stood greatly in need of, having experienced that canvas as prepared in the colour-shops, is neither of that kind which is pleasant to work upon, or that facilitates execution, though it greatly impoverishes the quality of pigments laid on it. I have, therefore, gladly tried his plan; and, as I think, made a considerable improvement in it; which effectually prevents the *bagging* of the canvas, that according to him rendered re-stretching after the picture was painted a necessary operation, and thereby constituted its only defect. I think it will meet with the approval of every practical artist. I will describe it.

Having tacked the unprepared canvass to the frame on which it is to remain, I pour over it in succession two or three couches of thin starch-jelly—in order to give it the requisite degree of stiffness—allowing the first coat to dry before a second is applied. When the canvass has acquired by these coats sufficient stiffness, to bear rubbing with pumice-stone without its tearing up the surface, I grind down every knot and high thread, and, when done to my satisfaction, I apply a couch of priming, composed of

Thin starch-jelly;

Purified Linseed-oil, of each by measure one ounce.

I unite them intimately by exposing them in a bottle to the action of boiling-water, which does not discolour the oil. This done, I take as much common ceruse as will be sufficient to cover the work, and mix it up to the proper consistency with the above mixture; I then add one drachm of good fluid copal varnish, and stir the whole well together with the spatula. With a large tool or a spatula, I spread the priming rapidly over the canvass, by which means the copal will penetrate and carry the colour completely into the fabric, stopping up every pore, and leaving the surface as smooth as for *landscapes* can be desired. For *portraits*, it may be necessary to scrub down the first couch of priming with finely-sifted kitchen-sand, using a pumice-stone. A second couch of priming is then to be applied, and the operation repeated if necessary. I now place the canvas before the fire, or in the sun, as your correspondent directs, and in about a quarter of an hour I begin to paint.

The design may be sketched in with a lead pencil, or pen and ink, and as much of the subject washed in with water-colours as may be wished. It may be *even finished in oils or water-colours*, or be varnished or not, as suits the taste of the artist; and if left unvarnished, it may be washed with a sponge and warm water whenever the surface becomes soiled by dirt, smoke, &c.

This system offers great advantages to the water-colour painter and architectural drawer; nor is it necessary to go to the expense of glass to preserve the picture-surface from injury. It is to be observed, however, that if water-colours alone are used, the *powdered colours* must be rubbed up in starch-jelly, and a *very little oil* worked up in it. This will render the colours laid on *immoveable*, and give so soft and charming an effect as is quite enchanting. This system is equally applicable to paper as canvass. But the paper must first have a wash of starch-jelly; and in taking out lights, the colour will come off clear and sharp, and leave the paper white and unsoiled.

If I begin and intend to finish my picture in oils, I first make my *medium* by rubbing together *thin starch-jelly one part, purified linseed-oil two parts*. With this medium I work up all my tints, using *bladder-colours*. Your correspondent seems to consider dry powder colours absolutely necessary; but I have tried both ways, and find it quite immaterial which sort is employed; nothing more being necessary than, if the bladder-colours rub up *cloggy* with the medium, to add a little pure oil to them. I make my colours as fluid as I please, and work boldly, employing none but common pigments, such as the reds, yellows, umbers, and black and burnt sienna. When I have got in my subject sufficiently, I set my picture before a hot fire, or in the sun and air, and when dry I go to work again.

The last process to be described is that of *glazing*, and this must be performed when the picture is next day quite dry. For this purpose, I make a change in my medium: I take

Starch-jelly, one part;

Linseed-oil, two or three parts;

Finely pulverized glass of borax, one tenth part, more or less, according to circumstances. Mix all well together, and like the former it will form a rich-looking cream. With this *improved medium*, I mix my tints according to nature, or if copying, to the original, and apply them at pleasure. Where necessary, I make my tints more washes, rendering them as fluid as if working in water-colours. Every colour will remain perfectly steady, without spreading or running into each other, and one touch will not obliterate another; so that the rapidity of this style of painting is quite incredible. It is the addition of the *borax* which imparts this *steadiness* to the colours; and it would be unjust not to acknowledge that I received the hint from

an able writer in *Blackwood's Magazine* for June, 1839; article 'Merimée.' In fact, the colours in this way, bear out and look as if worked in varnish; presenting precisely that peculiar appearance which characterizes the works of the old masters; and which can be imitated in no other way that I am acquainted with. Of course both the dead colouring and the glazings become as hard as glass itself, and will, no doubt, bear the "scrubbing bush" of the cleaner.

In conclusion, I beg to add, that if any artist or amateur think it too much trouble to prepare his own canvas in the manner herein described, I would say to him, though I would not commend his lack of ambition, "use the best canvas that you can procure in the colour-shops; and wash it well with the starch-jelly before you begin. I will not promise you the same brilliancy of effect as in canvas prepared after the new way; but it will surpass anything you can obtain by the old method, provided you paint with the medium."

A STUDENT.

#### THE GLASGOW STATUE.

SIR,—In your last paper, the article relative to the statue of the Duke of Wellington, proposed to be erected at Glasgow, contains so much good matter with respect to art, its interests in the country, and the duties requisite for its support, that but little can be added to augment the importance or increase the force of the argument. Whether I can judge well of art, or the merits of artists, may be a question; but every man can judge of the duty of patriotism.

"— Vero rec locus tibi ullus

Dulcor esse debet patria."

Of this there can be no doubt; and it is the duty of every Briton to aid and protect his brother, to foster the interests of every one of his native land, and to seek opportunities of distinguishing the able, and of elevating the aspiring; therefore, if this be a moral duty, how shamefully it is neglected in seeking to employ foreigners on the statue of the Duke of Wellington for Glasgow; and in the present instance the project is as degrading to the intelligence as it is disgraceful to the feelings of the proposers; and foreigners are much too noble, not to feel aversion and disdain for such betrayers of their land; for without disparaging other countries, the United Kingdom is competent to challenge the talents of any state; and should it be found to be deficient, the fault is with those by whom its talents are neglected.—I have the honour to be, &c.,

M. M.

#### STAINED GLASS.

MR. EDITOR,—In treating the subject of Stained Glass, you say that encouragement for it is reviving. I hope you will be an advocate for the lead forming the outline, instead of the subject being cut through, as it often is, by perpendicular and horizontal lines.

The 'Battle of Neville's Cross,' at Branspeth, near Durham, was designed with the view of reviving this disregarded, but beautiful, art; and there will be seen its superiority to those introduced in large squares of glass, as it is requisite to prevent flimsiness in effect; in proportion to fullness of colour, shadows of the darkest hue become the most valuable; hence the lead, forming the outline, is substantially of service. Shadow to colour is what judgment is to imagination. We imagine many things, but if they be impracticable they are merely ideas, and from being so, not worth further consideration.

Your obedt. humble servant,  
ROBERT T. STOTHARD.

#### HONORARY PRIVILEGES.

36, University-street.

SIR,—Will you permit me through the medium of the 'ART-UNION,' to inform Mr. Webster, and your other correspondent, that they are both misinformed on the matter of the free admission of R.A.'s and A.R.A.'s?

At Covent-garden Theatre every academician and associate is on the "free list." I had the pleasure to instigate the management to do this during Mr. Osbaldiston's first season: whether he sent cards to all of them I do not know, but to some I am *sure* he did. When Mr. Macready took the theatre, all were made free, and Madame Vestris has done so likewise. But in reply to your other correspondent, I assure him he is wrong; no actor is admitted gratis into the exhibition of the Royal Academy. It would be a novelty, indeed, to hear that a theatrical person was made free of any place of either amusement or instruction; managers and actors are invariably liberal towards all other professions, but seldom or never meet with any return.—I am, &c.,

R. R. Mc IAN.

#### REVIEW.

ENGRAVINGS AFTER THE BEST PICTURES OF THE GREAT MASTERS. Part II. London, Colnaghi and Puckle; and Ackermann and Co. Edinburgh, Alexander Hill.

The second part of this valuable and interesting work, which is now before us, in no degree belies the promise held out by its predecessor; on the contrary, its excellence seems rather on the increase. The present part contains 'Thomyris with the Head of Cyrus,' engraved by Thomas Dick, after the celebrated picture by Rubens; 'Landscape—Roman Edifices in Ruins,' by W. Miller, after Claude; and the 'Daughter of Jairus Restored to Life,' by Robert Bell, after Rembrandt. It cannot be necessary at this time of day to offer any eulogium on the great and peculiar excellences wherewith those celebrated masters imbued their works; to descant on the beauty of composition, richness of fancy, and gorgeous splendour of colouring displayed by Rubens; the poetized reality and natural loveliness of Claude; or the powerful chiaro oscuro and breadth and harmony of effect of Rembrandt, would be "to gild refined gold, or paint the lily," a task by no means to our present taste; we shall, therefore, content ourselves by briefly pointing attention to the very high merits of the publication.

The style of engraving by Dick of his difficult and complicated subject from Rubens, is remarkable for great force of execution, combined with the utmost delicacy of handling, sparkling variety, and richness of texture; beautiful tone, and fine harmony of general effect: the drawing is well pronounced and accurately representative of Rubens, not harsh and cutting in the lines, but graceful and flowing, and indicating in the engraver a fine feeling for his subject, and for his art. Miller has been labouring with his usual felicity in conveying the glowing warmth and atmospheric purity of Claude's Italian skies and sunny landscapes: the transparent, yet warm and liquid beauty shown in his treatment of the water, and the exquisite delicacy and softened tenderness of the distance, are all in Miller's best manner, and could hardly be surpassed; while his masterly toning is such as would almost redeem a bad picture, instead of, as in this case, rendering justice to an excellent one. Mr. Bell has shown, in the 'Restoration of Jairus' Daughter,' that he can both feel and appreciate the characteristics and the beauties of Rembrandt; he has succeeded most admirably in keeping up the great breadth and power, the impressive light and shadow, the firmness of parts, and the beautiful transparency for which this master was so pre-eminently remarkable, and which in inferior hands is so apt to degenerate into a sooty solidity and heaviness; he has also been highly successful in that most difficult branch of the engraver's art—variety and characteristic truth of texture, without appearing mechanical and spiritless.

The historical and descriptive letter-press is well written and beautifully printed; it combines much of interest and instruction, and cannot fail to convey valuable and satisfactory information to the lovers of art.

PORTRAIT OF THE BARON CUVIER. Painted by W. H. PICKERSGILL, R.A. Engraved by GEORGE DOO. Published by the Engraver.

It is scarcely necessary for us to say, that this engraving may compete with any production of the British school. The delicate and vigorous burin of Mr. Doo has been employed on a worthy subject—the Portrait of one of the most remarkable men of the 19th century; to whose clear mind and laborious industry mankind is indebted for expelling much of the

darkness that lay over the paths of science—hiding knowledge from their forefathers. A man of the highest genius, the simplest manners, and of the most indomitable perseverance was the Baron Cuvier! Of the fidelity of this likeness we can speak with confidence; it brings the high-souled philosopher before us—with his fine capacious brow—the most intellectual forehead we ever saw, for Shakspeare and Byron both died before our time—overtopped with hair in abundance, but of pure and unmixed white; the earnest seeking, though kindly eyes; the expressive mouth; the whole air and character of the noble head of the great man are forcibly recalled by this most pleasing and very accurate copy of it. We are reminded of many agreeable and profitable hours spent in his society—a privilege, an advantage, and an enjoyment, for which we can never cease to be thankful.

#### TO CORRESPONDENTS.

The volume of the 'ART-UNION' for 1840, is now bound; and may be obtained at the office, 132, Fleet-street.

We are unable to supply perfect sets of the year 1839; Nos. 1 and 2 being out of print; but either of the other numbers may be procured.

Correspondents will be pleased to bear in mind, that all communications for the Editor must be addressed to Messrs. How and Parsons, 132, Fleet-street.

We have received several gratifying and encouraging letters from artists; to each of which, it is possible, we may be expected to reply. We hope, however, our friends will take, through this channel, our expression of sincere thanks: to answer all our correspondents privately, would occupy more time than we can possibly afford.

If any mistake occurs in the delivery of the 'ART-UNION,' at any time, we hope to be informed of it.

We are glad to hear that "a drawing class" has been added to the Literary and Scientific Institution at Workson.

It would be scarcely fair to publish the letter concerning "Patent Metallic Relief Engraving."

We beg to thank our correspondent at Ludlow; but he is not aware of the difficulties in the way of adopting his suggestion. We have complete copies for 1840; but not for 1839.

We shall next month answer the question of our correspondent at Edinburgh, respecting "Forgeries of Pictures." It is one that requires consideration.

The observations on "The union of Painting and Music" are sensible; but we really cannot find space to insert them.

Grey eyes—surely; what man of energy and genius ever had brown eyes?

A Subscriber wishes to know "where the picture painted by Rubens of 'The Grecian Daughter,' engraved by Cornave Caukercher, is to be seen?"

Our Edinburgh correspondent is quite misinformed. We have in no instance required or received the assistance of an artist—an exhibiting artist would be obviously the very worst auxiliary we could have. Our correspondent will perceive, we think, that his suspicions were groundless; he should either have been more explicit or less communicative; as it is, we are not likely, upon evidence so very vague and inconclusive, to withdraw our confidence from a person who has long possessed it.

"The Association for the Purchase of British Engravings," referred to in our last number, and concerning which we have received at least fifty letters, is established in Edinburgh. We have forwarded the letters to the secretary. An advertisement of the Society will be found elsewhere.

#### TO THE EDITOR OF THE ART-UNION.

SIR,—All who feel the kindly influence of the fine arts, and desire to see the range of that influence extended, must wish anxiously that Mr. Godwin's excellent proposed Art-association should be carried out. If, through your pages, it could be suggested, that the committees of the various societies of art scattered over the country, as well as of Provincial Art-unions, might call meetings of their body in the different towns to consider the subject, and, if thought advisable, to open a correspondence with parties in the metropolis who may be willing to assist the scheme, some good, I think, would be effected.

A MANCHESTER MAN.

\* \* I send my name and address; and will lend any aid in my power.

MESSRS. WELCH AND GWYNNE, 24, ST. JAMES'S STREET, LONDON,

Have the honour to announce, that they are preparing for immediate publication, a highly finished

## WHOLE-LENGTH PORTRAIT OF THE RIGHT HON. SIR ROBERT PEEL, BART., M.P.,

Prints . . . £1 1s.

Proofs . . . £2 2s.

Proofs with Autograph . . . £3 3s.

SIZE OF THE PLATE, SEVENTEEN AND A HALF BY TWENTY-SEVEN AND A HALF HIGH.

Early application must be made for Proofs, as the number will be limited.

**THE DAGUERRETYPE**, 89, High Holborn.  
VIEWS OF LONDON, PARIS, ROME, NAPLES,  
VENICE, FLORENCE, MOSCOW, &c.

FIGURES FROM THE LIVING MODELS, POR-  
TRAITS FROM NATURE, AND MICROSCOPIC  
OBJECTS.

Small Daguerreotype Views from 10s. 6d. and upwards.  
Prepared Plates, &c. for the operation.

**DAGUERRIAN EXCURSIONS**, or a Col-  
lection of Views obtained by the Daguerreotype,  
of remarkable Monuments and Places, beautifully  
engraved. The work will consist of Twelve Numbers,  
each containing Four Views, accompanied with text in  
French. Price 10s. 6d. each Number. The Sixth  
Number now published.

Sold by Claudet and Houghton, at their Warehouses  
for French Glass Shade, Sheet, Crown, and Painted  
Window Glass, 89, High-holborn.

**POPULAR LIBRARY OF MODERN  
AUTHORS**—Copyright Editions.

Now ready, large 8vo., uniform with Byron's Works,  
&c., in neat wrappers.

**INGLIS'S TALES OF ARDENNES.** New Edition.

Just published,

**THIERRY'S HISTORY OF THE CONQUEST OF EN-  
GLAND** by the NORMANS. Translated from the last  
Paris edition, with a copious Index. Price 7s.

\*.\* This edition may almost be considered as a new  
work, M. Thierry having greatly modified it in conse-  
quence of the acquirement of additional antiquarian  
information.

"A writer equally admirable for eloquence and re-  
search."—Sir James Macintosh.

"It behoves every one who desires to be properly ac-  
quainted with the greatest event in our history to study  
Thierry's work."—Monthly Review.

Just published, s. d.  
**KOCH'S HISTORY OF EUROPE** . . . 6 0  
**BROWNING'S HISTORY OF THE HUGUENOTS** . . . 6 0  
**CARRICK'S LIFE OF WALLACE** . . . 3 0  
**BELL'S LIFE OF MARY QUEEN OF SCOTS** . . . 3 6  
**THE FAVORITE OF NATURE, A Tale.** 4th edit. 3 6  
**INGLIS'S SWITZERLAND, SOUTH OF**  
**FRANCE, &c.** . . . 3 0

\*.\* Elegantly bound in cloth and lettered, One Shil-  
ling extra each.

The First Volume of the Library, comprising Koch's  
Europe and Browning's Huguenots, bound in cloth and  
lettered, price 13s., is ready.  
Whittaker and Co., Ave Maria-lane, London.

**ANTI-TUBE BLADDERS OF OIL CO-  
LOUR.**—Simplicity and Economy.—**WARING  
and DIMES'** new method of tying their Bladder Co-  
lours having been generally approved of, they beg to  
call the attention of Amateurs and Artists to the fol-  
lowing advantage possessed over the old method:—  
The colour is ejected through the neck of the Bladder,  
and the orifice secured from the air by a cap screwing  
over it. Puncturing the Bladder is avoided, and its  
liability of bursting prevented. A saving of both time  
and Colour is effected, as it is not necessary to lay the  
palette down when more colour is required, which can  
be used to the very last, and will keep any length of  
time.

**PREPARED CANVASS WITH INDIA-RUBBER  
GROUND.** This article having now stood the test of  
some years, and daily increasing in reputation, is  
worthy the consideration of those who would preserve  
their Pictures from the effects of time. The ground  
used in preparing this Canvass, renders it perfectly  
secure from cracking or peeling.

Prepared of any texture and size, up to 15 feet by  
10 feet, only by Waring and Dimes, 91, Great Russell-  
street, Bloomsbury.

**VESPER TINT Madder Lake.**—W. and D. have  
succeeded in making this splendid Colour up in Water  
Colours, to rub and work as free as the Cochineal  
Lakes, the great hindrance to the use of Madders in  
Water Colours being the difficulty of working them on  
account of their aluminous base; this is now remedied  
by their mode of preparation.

An extensive assortment of Crayons, White and  
Tinted Drawing Papers, and every material in the Arts.

SHAKESPEARE.

Preparing for publication,

**LANDSCAPE, HISTORICAL-LANDSCAPE,  
AND ARCHITECTURAL ILLUSTRATIONS** to  
the WORKS OF SHAKESPEARE. A Series of Line  
Engravings from Original Designs by G. F. SARGENT.  
London: How and Parsons, 132, Fleet-street.

In 2 vols. post 8vo., price 21s. in cloth,

**THE NATURAL HISTORY OF SOCIETY**  
in the Barbarous and Civilized State: an essay  
towards discovering the Origin and Progress of Human  
Improvement. By W. COOKE TAYLOR, LL.D.

EXTRACT FROM PREFACE.—"This work was sug-  
gested by the Archbishop of Dublin, and it has had  
throughout the benefit of his Grace's assistance and su-  
perintendence. It is necessary that this should be em-  
phatically stated, in order that the author may escape the  
imputation of presumption in discussing a subject to  
which his Grace had already directed his attention, in  
his Lectures on Political Economy. He would not have  
attempted 'to bend the bow of Ulysses,' had he not  
been invited to the task by its legitimate owner, and  
taught by him how to draw the string and aim the  
shaft. His Grace, however, is not responsible for more  
than general directions; he has strong claims on the  
merits of the work, but all its imperfections rest on its  
author's head."

"It is a very able work; embracing an extensive  
view of the history of man, both in a savage and civil-  
ized state, with sometimes an analysis of his social,  
and sometimes an examination of his political, condi-  
tion. It displays very extensive reading, guided by a  
sound knowledge of moral and economical science;  
each being rendered available to the writer's purpose  
by his possession of a searching acumen. The facts  
collected are interesting in themselves, and the style  
of the author is sometimes quietly humorous and  
frequently eloquent. In short, the 'Natural History of  
Society' will not only present the reader with an inter-  
esting description of the varying characteristics of  
mankind, as they develop themselves under the vary-  
ing circumstances of physical condition, but may serve  
as an able and useful comment on universal history."—  
Spectator.

London: Longman, Orme, and Co.; and How and  
Parsons.

**LOVERS OF THE FINE ARTS** are apprised.  
that the means of Hanging Pictures safely and  
with facility, are afforded by **POTTS' PATENT PIC-  
TURE-RAIL MOULDINGS.** The great merits of  
this unique invention are acknowledged by the highest  
authorities. Specimens, showing its enormous strength,  
can be seen at the Polytechnic Institution. Supplied  
by all respectable Upholsterers, Decorators, Brass-  
founders, Ironmongers, &c.

**ELECTROTYPE.**—**JOHN KNOX RE-  
PRODUCING MARY QUEEN OF SCOTS**, by J.  
BURNETT. E. PALMER having electrotyped the above  
splendid and highly interesting engraving, Prints, both  
of the original and electrotyped plates may now be had,  
price 21s. each, at his Optical and Philosophical man-  
ufacture, 103, Newgate-street, London.—Engravers and  
Publishers furnished with copper duplicates of their  
engraved plates.

**ELEGANT AND ORNAMENTED PICTURE  
FRAMES OF A SUPERIOR DESCRIPTION,  
WARRANTED TO CLEAN.**

**C. J. ECKFORD, 45, FLEET-STREET,**  
corner of Mitre-court, Temple, opposite Fetter-  
lane, begs leave to inform Artists, the Trade, and  
Public, that they can obtain A LARGE AND CLEAR  
EXPLANATORY SHEET OF DRAWINGS, with  
numerous elegant Patterns, the Size and Prices attached  
to the various Frames, sent gratis and free of postage to  
any part of the United Kingdom.

Old Frames re-gilt; large and small Miniature Frames  
at proportionate prices. Fancy-wood frames of every  
description. Orders from the country punctually at-  
tended to.

ESTABLISHED 1792.

Prints in the Portfolio.—By Messrs. CHRISTIE and  
MANSON, at their Great Room, King-street, St.  
James's-square, on Wednesday, Feb. 17, at One  
precisely,

**THE valuable and extensive assemblage  
of ENGRAVINGS and ETCHINGS**, collected  
by Mr. Holloway, the celebrated engraver of the Car-  
toons of Raffaele. They comprise engravings by and  
after the Italian and Flemish Masters: Dutch etchings,  
and numerous works of the English School, and some  
unpublished works; also drawings by old masters, and  
a fine copy of Hunter's Lavater.—May be viewed two  
days preceding, and catalogues had.

Pictures from the Continent.—By Messrs. CHRISTIE  
and MANSON, at their Great Room, King-street,  
St. James's-square, on Saturday, February 20, at  
One precisely,

**THE small COLLECTION of Italian,  
Flemish, and Dutch PICTURES**, collected by a  
gentleman on the Continent, comprising chiefly cabinet  
specimens of the following great Masters:—

Procaccini	Morales	Palamedes
Poussin	Carracci	Rubens
Honthorst	Millé	Caravaggio
Diepenbech	Artois	Coyell

May be viewed two days preceding, and catalogues  
had.

Buhl and Marqueterie Furniture, China, &c.—By  
Messrs. CHRISTIE and MANSON, at their Great  
Room, King-street, St. James's-square, on Thursday,  
February 25, at One precisely,

**AN Assemblage of superb FURNITURE**,  
the property of a gentleman; consisting of cabinets  
and commodos of fine old buhl and marqueterie, rose-  
wood pier tables and pier glasses, and too tables, a  
capital set of mahogany dining room chairs, bronzes,  
oriental and Sèvres porcelain; dejeuner, dinner, and  
dessert services of French and Derby porcelain; a  
book-case and cabinets of carved oak, pianofortes,  
some pieces of fine old Japan and other oriental porce-  
lain.—May be viewed two days preceding, and cata-  
logues had.

SECURITY AGAINST LOSS OR MISTAKE.

**BOND'S PERMANENT MARKING INK**  
(the original invention, requiring no preparation)  
for Writing upon Linen, Silk, or Cotton.

Sold by the preparer, John Bond, Chemist, 28,  
Long-lane, West Smithfield, London; also by John  
Sutherland, 12, Calton-street, Edinburgh; and most  
Stationers, &c. in the United Kingdom.

One Shilling a Bottle.

**CHEAP PLATE-GLASS, CALLED SHEET  
PLATE-GLASS.**—The Sheet Plate-Glass made  
by a newly-invented Patent process, is an article quite  
as good in quality as the British Plate-glass, with the  
important advantage of being considerably cheaper;  
affording the facility of glazing dwelling-houses and  
public buildings with plate-glass at a moderate cost.  
It is also particularly well suited for Drawings and En-  
gravings. Sold, Wholesale and Retail, by CLAUDET  
and HOUGHTON, at their Glass Warehouse, 89,  
HIGH HOLBORN, where printed lists of prices may  
be had.

SPLENDID AND SUPERIOR GILT FRAMES.

**CHARLES M'LEAN, 78, Fleet-street**  
(opposite THE DISPATCH Newspaper-office),  
respectfully informs the Public, Artists, and the Trade,  
that they can be supplied with PICTURE FRAMES,  
of the very best manufacture, at prices never hitherto  
attempted.

A LARGE SHEET OF DRAWINGS, representing  
the exact patterns and prices of one hundred different  
sized frames, ornamented with designs, made ex-  
pressly for this Manufactory, may be had gratis, and  
sent free of postage to any part of the kingdom. The  
Trade supplied with Frames in the Compo. Fancy-  
wood Frames and Mouldings. Old Frames repaired  
and re-gilt.

An extensive Stock kept seasoned for immediate  
delivery.—All goods taken back, not approved of in  
three months.

# SPLENDID ENGRAVINGS

FROM

## GRAND HISTORICAL PAINTINGS, ILLUSTRATING THE MOST GLORIOUS EVENTS IN BRITISH HISTORY.

PUBLISHED BY MRS. PARKES, 22, GOLDEN SQUARE.

### ABOUT TO BE ISSUED.

A beautiful Mezzotinto Engraving, from a Painting by JOHN BRIDGES, Esq., now in the possession of JOHN STOCKDALE, Esq., Liverpool, representing

### CHARLES THE FIRST AFTER PARTING WITH HIS CHILDREN.

Containing Portraits of the King, the Princess Elizabeth, the Duke of Gloucester, Bishop Juxon, &c. &c.

"In the last pathetic interview between the Monarch and his children, Charles said to the Princess Elizabeth, his death was glorious; for he should die to uphold the laws and liberties of the land: he should die a martyr."

*Size of the Work, Eighteen and a Half Inches by Twenty-four.*

Prints . . . £1 1s.      Proofs . . . £1 11s. 6d.      Before Letters . . . £3 3s.

### WORKS PUBLISHED.

### MR. HAYTER'S GRAND PICTURE

OF THE

### INTERIOR OF THE HOUSE OF LORDS,

*During the Important Discussions in the Year 1820.*

Painted for the Hon. GEORGE AGAR ELLIS, M.P., containing upwards of Three Hundred Figures, nearly Two Hundred of which are Portraits of the most distinguished Personages, of the highest rank and talent in this Country, (a larger number than it is presumed have ever been introduced into any picture of acknowledged celebrity) and for which they did Mr. Hayter the favour to sit. Among which are those of—

His Majesty King William IV.; their Royal Highnesses the Dukes of York and Clarence; his Grace the Archbishop of Canterbury; the Right Hon. Lord Eldon, then Lord High Chancellor; their Graces the Archbishops of York and Tuam; their Graces the Dukes of Somerset, Richmond, Grafton, Beaufort, St. Albans, Bedford, Devonshire, Rutland, Hamilton, Argyll, Athol, Portland, Northumberland (Lord Lieutenant of Ireland), Leinster, Wellington, Buckingham; the Most Noble the Marquesses of Winchester, Lothian, Lansdown, Stafford, Bath, Cornwallis, Downshire, Exeter, Camden, Anglesey, Ailesbury, Huntley, &c. &c.; the Right Rev. the Lord Bishop of London, now Archbishop of Canterbury; the Right Rev. the Lords Bishops of Durham, Worcester, Bangor, Ely, St. Asaph, &c. &c.; Lord John Russell, Sir F. Burdett, Bart., Viscount Melbourne, Samuel Whitbread, Esq., &c. &c.; the late Right Hon. Sir Robert Gifford, afterward Lord Gifford, Attorney General; the Right Hon. Sir J. S. Copley, Solicitor General, now Lord Lyndhurst; Lords Brougham, Denman, &c. &c.

Proofs . . . . . £10 10s.      Prints . . . . . £6 6s.

### MR. DEVIS'S GRAND PICTURE

OF

### MAGNA CHARTA,

Engraved by MR. J. G. MURRAY; representing Stephen Langton, Archbishop of Canterbury, showing to the Barons of England, in the Abbey Church of Bury St. Edmund's, the Charter of Liberties that had been granted by Henry I., and on which the Great Charter of King John was founded.

The utmost exertion has been made, and every authentic document procured from the Heralds' Office and other national deposits of the public records, in order to obtain the most correct information respecting the descendants of the Barons who were present on this momentous occasion, in the Abbey of Bury St. Edmund's. The picture, therefore, independently of its exceeding beauty as a work of art, derives the greatest interest and value from the fact, that a large proportion of the persons introduced into the scene are the existing Representatives of the "bold Barons" who gained the Great Charter of English Liberty. These representatives all sat to the artist; and they are habited in the proper costume of the period.

Proofs . . . . . £10 10s.      Prints . . . . . £6 6s.

*Dedicated to the British Officers of the Peninsular War.*

### AN ENGRAVING OF THE

### TRIUMPHAL ENTRY OF HIS GRACE THE DUKE OF WELLINGTON INTO MADRID,

*August 12, 1812.*

From the celebrated Picture by the late W. HILTON, Esq., R.A.

The Duke was attended by the flower of the British Army and by the Generals of the Allied Army. He was met by the Spanish nobility, the dignitaries of the church, the magistrates, and all the principal inhabitants, who presented him with the keys of the city. The scene was brilliant and exciting to a degree; and its interest and importance have been happily preserved by the accomplished painter.

Proofs . . . . . £1 11s. 6d.      Prints . . . . . £1 1s.

### MR. LESLIE'S CELEBRATED PICTURE

OF

### THE RELUCTANCE OF LADY JANE GRAY TO ACCEPT THE CROWN OF ENGLAND.

This beautiful and highly interesting Historical Picture, which commemorates one of the most remarkable events in the records of Great Britain, was painted for his Grace the Duke of Bedford, by C. R. LESLIE, Esq., R.A.; Engraved by J. BROMLEY.

Proofs . . . . . £3 3s.      Prints £3 3s.

### THE TRIAL OF LORD WILLIAM RUSSELL,

*At the Old Bailey in 1683.*

From the justly famous Picture of GEORGE HAYTER, Esq., painted for his Grace the Duke of Bedford; Engraved by J. BROMLEY.

This is universally deemed the *chef-d'œuvre* of Mr. George Hayter. It has been very properly observed, that it is truly an Historical Picture, and exhibits one of the most interesting and affecting national events which can occupy the recollections of Englishmen. The point of time represented is when the examination of Lord Howard of Esrick was about to commence. The admirable lady of the accused lord acts as his secretary. The expression of conjugal solicitude and mental alertness on the part of Lady Rachael Russell, who, ready with her pen, has just turned to listen to some legal exceptions which his lordship took in this stage of the business, form a very fascinating feature in this interesting Picture.

Proofs . . . . . £3 3s.      Prints . . . . . £3 3s.

### THE DEBARKATION IN HER OWN DOMINIONS,

*In the Year 1561, of*

### MARY QUEEN OF SCOTS,

From the justly celebrated Picture, by WILLIAM ALLAN, Esq., R.A.; Engraved by J. G. MURRAY. Painted for the Most Noble the Marquis of Bute.

The landing at Leith of Queen Mary of Scotland, in the bloom of youthful beauty, was an event, picturesque in itself, historically important, and of intense interest; as being fraught with the impending fate of one of the most ancient, learned, and valorous of the nations of Europe; and with the destiny of the most lovely, most accomplished, and most unfortunate of her sovereigns.

Proofs . . . . . £4 4s.      Prints . . . . . £3 3s.

### THE SURRENDER OF QUEEN MARY OF SCOTLAND

TO THE CONFEDERATE LORDS, AT CARBERRY HILL,

*In the Year 1567.*

From the Painting by Mr. CHISHOLM; Engraved by J. G. MURRAY.

This most critical moment in the eventful life of Mary is the proper subject of this Engraving.

Proofs . . . . . £5 5s.      Prints . . . . . £3 3s.

### MR. DEVIS'S PICTURE

OF

### BABINGTON'S CONSPIRACY AGAINST THE LIFE OF QUEEN ELIZABETH.

Engraved by MR. JOHN BROMLEY.

This fine historical picture commemorates one of the most remarkable incidents in the life of the great Queen of England.

Proofs . . . . . £3 3s.      Prints . . . . . £2 2s.

### PORTRAIT OF HIS GRACE THE DUKE OF WELLINGTON,

By MR. W. BROMLEY, A.R.A. and MR. J. G. MURRAY, taken from a picture, painted by SIR THOMAS LAWRENCE, late President of the Royal Academy, and allowed to exhibit the most accurate likeness which has ever been painted of his Grace the Duke of Wellington.

Proofs . . . . . £2 2s.      Prints . . . . . £1 11s. 6d.

LONDON: MARCH 15, 1841.

PRICE 8d.

THIS JOURNAL BEING STAMPED, CIRCULATES, POSTAGE FREE TO ALL PARTS OF THE UNITED KINGDOM.

**BRITISH INSTITUTION, PALL-MALL.**—The Gallery for the EXHIBITION and SALE of the WORKS of BRITISH ARTISTS, is OPEN daily, from Ten in the Morning until Five in the Evening. Admission, 1s. Catalogue, 1s. WILLIAM BARNARD, Keeper.

**EXHIBITION of the SOCIETY of BRITISH ARTISTS, SUFFOLK-STREET, PALL-MALL EAST,** will OPEN to the Public on MONDAY, the 22nd inst., from ten till dusk. Admittance, One Shilling. Catalogue, One Shilling. Subscription to the Con- versazione, One Guinea.

By order,  
EDWARD HASSELL, Secretary.

**KINEORAMA.**—New and Interesting Pictorial Exhibition, 121, Pall-mall.—On THURSDAY, March 18th, 1841, will be opened, Mr. Charles Marshall's (of the Theatres Royal Covent Garden and Drury Lane) KINEORAMA, being a combination of the Panorama and the Diorama; effects painted in conjunction with distinguished artists, on a surface of upwards of 10,000 square feet. Delineations of the most interesting portions of landscape and architecture of the associated geographical districts of Turkey, Syria, and Egypt, from Constantinople to Grand Cairo.—Admission, One Shilling.—Open from Ten in the Morning until Ten in the Evening.

**ART-UNION OF LONDON.**—This Society was established in 1836, for the purpose of affording to persons of moderate income, the opportunity of gratifying a love of Art, by means of a small annual subscription.

The Funds are divided into sums of various amounts, for the purchase of Pictures, Drawings, &c., from the London Exhibitions, a sum being annually set aside for the purpose of Engraving an approved Picture. Every Subscriber of One Guinea has one chance, by lot, for the sums so appropriated, and one impression of the Engraving.

Mr. C. Landseer's Picture, 'The Tired Huntsman,' is now engraving, in line, by Mr. H. C. Thenton, for the Subscribers of the past year.

THE SUBSCRIPTION LISTS FOR 1841, WILL CLOSE ON WEDNESDAY, THE 31st INST.

Prospectuses may be obtained at the Society's Office, No. 73, Great Russell-street, Bloomsbury-square, where the Clerk attends daily from 12 till 5 o'clock, to receive Subscriptions, and afford any information that may be required.

C. P. DIMOND, Esq., Treasurer.  
G. GODWIN, Esq., F.R.S., F.S.A. } Hon. Secretaries.  
LEWIS POCOCK, Esq. }  
By Order, T. E. JONES, Clerk to the Committee.

**PAINTING AND THE FINE ARTS.**

By B. R. HAYDON and WILLIAM HAZLITT. Forming the Articles under those Heads in the Seventh Edition of the ENCYCLOPEDIA BRITANNICA.

"Mr Hazlitt's clever Treatise, written for the 'Encyclopædia Britannica,' has come under our notice. We have read no work of that author with anything approaching to the same gratification. We must add a similar testimony in favour of his fellow-labourer, Mr. Haydon. His Treatise seems to us the result of study and observation extensive and profound."—Quarterly Review.

Adam and Charles Black, Edinburgh. Longman and Co., Simpkin and Co., Whittaker and Co., and Hamilton and Co., London.

**THE DEWINT SKETCHES.**—If this advertisement should meet the eye of the Gentleman who addressed an Anonymous Letter to the supposed Purchaser of these Sketches, dated the 3rd August, 1839, he will confer a particular favour by communicating with Mr. Wormald, Solicitor, 7, Gray's-inn-square. The strictest confidence will be preserved.

**PORTRAIT of the Right Rev. Dr. COPLESTON,** Bishop of Llandaff, from the picture of Sir Martin Archer Shee, P.R.A. Print, 7s. 6d.; proof, 10s. 6d.; proof before letters, 15s.—Published for the benefit of the Diocesan Board of Education, Llandaff.

Paul and Dominic Colnaghi and Co., Publishers to the Queen, 14, Pall-mall East.

On the 1st of March, to be continued monthly, price 3s. 6d., the First Number of

**COLOURED ILLUSTRATIONS OF BRITISH BIRDS, WITH THEIR EGGS.** By H. L. MEYER. Each number will contain Four highly-finished coloured Plates, with Letter-press.

James Fraser, Regent-street.

In a few days, in 2 vols. post 8vo., with Wood-cuts, price 21s., cloth lettered,

**THE ORIGIN, PROGRESS, AND PRESENT CONDITION of the FINE ARTS in GREAT BRITAIN.** By W. B. SANSFIELD TAYLOR, Curator of the Living Model Academy; translator of M. Merimee's work on Oil Painting, &c.

Whittaker and Co., Ave Maria-lane.

**DODD'S PEERAGE, &c.**

Now ready, in one volume foolscap 8vo., price 9s., bound in cloth,

**A NEW PEERAGE, BARONETAGE, AND KNIGHTAGE,** including all the titled classes, alphabetically arranged. By CHARLES R. DODD, Esq., Compiler of the "Parliamentary Pocket Companion."

"The arrangement of this volume is complete; the care, diligence, and accuracy with which it has been executed, fully realize the original and judicious plan of the work, and it is in every respect likely to prove a successful undertaking."—The Times.

Whittaker and Co., Ave Maria-lane

**ELECTRO-METALLURGY.**—Apparatus and Materials for conducting, on a large or small scale, the varied applications of the above new and important art, particularly the Electrotype, in all its branches. Electro-gilding, Plating, &c., as described in "Snee's Elements of Electro-metallurgy." Manufactured and Sold by E. PALMER, 103, Newgate-street, London. N.B.—Engravers and Publishers furnished with Copper Duplicates of their Engraved Plates.

**CHEAP PLATE-GLASS, CALLED SHEET**

PLATE-GLASS.—The Sheet Plate-Glass made by a newly-invented Patent process, is an article quite as good in quality as the British Plate-glass, with the important advantage of being considerably cheaper; affording the facility of glazing dwelling-houses and public buildings with plate-glass at a moderate cost. It is also particularly well suited for Drawings and Engravings. Sold, Wholesale and Retail, by CLAUDET and HOUGHTON, at their Glass Warehouse, 89, HIGH HOLBORN, where printed lists of prices may be had.

**THE DAGUERREOTYPE,** 89, High Holborn, VIEWS OF LONDON, PARIS, ROME, NAPLES, VENICE, FLORENCE, MOSCOW, &c.

FIGURES FROM THE LIVING MODELS, PORTRAITS FROM NATURE, AND MICROSCOPIC OBJECTS.

Small Daguerreotype Views from 10s. 6d. and upwards. Prepared Plates, &c. for the operation.

**DAGUERRIAN EXCURSIONS,** or a Collection of Views obtained by the Daguerreotype, of remarkable Monuments and Places, beautifully engraved. The work will consist of Twelve Numbers, each containing Four Views, accompanied with text in French. Price 10s. 6d. each Number. The Sixth Number now published.

Sold by Claudet and Houghton, at their Warehouses for French Glass Shade, Sheet, Crown, and Painted Window Glass, 89, High-holborn.

Just published,

**RAILWAY MAP.**—DAVIES'S METROPOLITAN RAILWAY MAP, being the most accurate Map of London and its Environs, to the extent of Ten Miles, ever published; comprising all the Railways and Stations, New Cemeteries, Boundaries of the Metropolitan Boroughs, New Roads, Docks, Piers, and all Modern Improvements. Published by B. R. DAVIES, 16, George-street, Euston-square; and Lettis and Son, Cornhill; and may be had of all Booksellers and Stationers, &c.

Price on Atlas Sheet, 2s. 6d. plain; 4s. 6d. fully coloured; ditto, mounted on Canvass and bound, 7s. 6d.; ditto, on Rollers, and varnished, &c., 9s. 6d.

**SPLENDIDLY ILLUSTRATED WORK.**

Two vols. super royal 8vo., 73 Plates, price £2 14s., elegantly bound; India Proofs, 2 vols., imperial 8vo., half bound morocco, price £6 6s.

**CUNNINGHAM'S GALLERY OF PICTURES,** by the First Masters of English and Foreign Schools, forming a comprehensive display of the Works of—

Titian, Caracci, Claude, Correggio, Cuyp, Domenichino, Guido, Jan Steen, Murillo, Ostade, Paul Potter, G. Poussin, Raffaele, Leo Da Vinci, Rembrandt, Rubens, Ruysdael, Berghem, Hondecoeter, Teniers, Terburg, Vandewelde, Vandyke, Vangoel, Paul Veronese, Watteau, Wouvermans, Lawrence, Reynolds, West, Wilkie, Louthenbourg, Wilson, Beaumont, Gainsborough, Morland, Mortimer, Crome, Copley, &c. Nearly Fifty of them for the first time engraved (by Special permission) in the line manner, by Stothard, R.A., Warren, Chevalier, Richardson, Watt, Havell, Wedgwood, Robinson, Nicholson, Smith, W. R. Smith, Radcliffe, Heath, Raddon, Marr, Taylor, Worthington, Kernot, Shenton, Mansell, Duncan, Pine, and other eminent Artists. With Historical and Critical Dissertations and Biographical Notices, by ALLAN CUNNINGHAM.

"A magnificent work, and treasury of instructive criticism."—Dr. Dibdin's Reminiscences.

"The most extraordinary production of modern art."—Standard.

"A delightful table book for the family circle."—Suffolk Chronicle.

"The subjects are the first in art; the engravings most excellently executed."—Liverpool Journal.

"We refer to the brilliant clearness and softness, and to the powerful execution of the subjects, as a justification of their unequalled praise."—John Bull.

London: George and William Nicol, and Hodgson and Graves, Pall-mall; and sold by every Bookseller and Printseller in the empire.

## ROSS'S PORTRAIT OF HER MAJESTY QUEEN ADELAIDE.

DEDICATED TO HER MAJESTY QUEEN VICTORIA.

IMMEDIATELY WILL BE PUBLISHED,  
THE AUTHENTIC PORTRAIT OF  
HER MOST GRACIOUS MAJESTY QUEEN ADELAIDE,

Engraved in the Finest Style of Mezzotinto, by H. T. RYALL, Esq., Portrait and Historical Engraver to the Queen,  
From the Exquisite Original Picture, Painted, by command of her Majesty Queen Victoria, for the Royal Collection,  
By W. C. ROSS, Esa., A.R.A.

Popularity, in its purest sense, when accorded to any public individual for a long and unbroken series of years, may be regarded as the surest proof that can be adduced, both of public virtue and of private worth.

Her Majesty, Queen Adelaide, has enjoyed such popularity at the hands of the English people, in a higher degree, and to a more pervading extent, than perhaps any other individual who ever occupied so eminent a station among us; and she enjoys it more than ever now that she is called to exercise her virtues, and give evidence of her worth, in that truest "post of honour"—a comparatively "private station." Whether as the exemplary Wife of a Prince of the Royal Blood—as the illustrious Consort of a great Monarch—or in the dignified retirement of the First Subject of the Realm—Queen Adelaide has ever commanded the deep admiration, and won the fervent love, of the entire English people.

No apology, therefore, can be needed, for inviting public attention to a New Portrait of this illustrious Lady, especially when the original work has been executed by the command of that still more exalted Lady, who is at once her Sovereign, her Relative, and her Friend.

Mr. Ross's exquisite Painting, from which the Engraving has been executed, is destined to form part of the Royal Collection, and is esteemed by Her Majesty Queen Victoria, by her illustrious Family, and by all who have seen it, the most exact likeness of Queen Adelaide that has ever been produced. The Engraving, by Mr. H. T. RYALL, will be of corresponding truth and excellence.

Mr. M'LEAN, in being entrusted with the Publication of this distinguished Work, feels that he is giving to the world a production which will claim a lively interest in every nation to which the name and fame of Queen Adelaide of England have penetrated, but especially in the breasts of those with whom her Majesty's virtues and worth have become "household words."

## PRICE TO SUBSCRIBERS.

Prints . . . £1 1s.

Proofs . . . £2 2s.

India Proofs . . . £3 3s.

Proofs before Letters . . . £4 4s.

SIZE OF THE PLATE, EIGHTEEN INCHES BY FOURTEEN INCHES.

LONDON: PUBLISHED BY THOMAS M'LEAN, 26, HAYMARKET.

## SECURITY AGAINST LOSS OR MISTAKE.

**BOND'S PERMANENT MARKING INK**  
(the original invention, requiring no preparation)  
for Writing upon Linen, Silk, or Cotton.

Sold by the preparer, John Bond, Chemist, 28, Long-lane, West Smithfield, London; also by John Sutherland, 12, Calton-street, Edinburgh; and most Stationers, &c. in the United Kingdom.  
One Shilling a Bottle.

## ELEGANT AND ORNAMENTED PICTURE FRAMES OF A SUPERIOR DESCRIPTION, WARRANTED TO CLEAN.

**C. J. ECKFORD, 45, FLEET-STREET,**  
corner of Mitre-court, Temple, opposite Fetter-lane, begs leave to inform Artists, the Trade, and Public, that they can obtain A LARGE AND CLEAR EXPLANATORY SHEET OF DRAWINGS, with numerous elegant Patterns, the Size and Prices attached to the various Frames, sent gratis and free of postage to any part of the United Kingdom.

Old Frames re-gilt; large and small Miniature Frames at proportionate prices. Fancy-wood Frames of every description. Orders from the country punctually attended to.

ESTABLISHED 1792.

## VOLATILE FIXER.

A Preparation to fix and secure Coloured Crayons and Chalk Drawings to prevent their rubbing. Sold in bottles, price 2s. and 3s. 6d. each.

**S. and J. FULLER** particularly call the attention of Artists, Amateurs, and Drawing-Masters, to the above useful preparation, VOLATILE FIXER.

The facility of using Coloured Crayons and Chalks over every other description of colours, to produce effect in working together a variety of tints, has long since been well understood, both in Portrait and Landscape painting; but to fix and secure the same from injury by rubbing and being defaced, have always been difficulties that have prevented their general use. S. and J. F. offer the above to their consideration, certain that they will find this preparation a most desirable addition to use, either when sketching in the open fields, or in painting of portraits; they at the same time beg to recommend their superior Coloured Crayons for Portraits and Landscape painting. Specimens of the Drawings to be seen, and Portraits painted in Crayon. S. and J. F. have always on sale a splendid Collection of Water-coloured Drawing by esteemed Masters. Temple of Fancy, 34, Rathbone-place.

## CHEAPEST AND BEST MANUFACTURED PICTURE FRAMES IN THE WORLD.

**P. GARBANATI, WORKING CARVER**

and **GILDER, 19, St. Martin's-court, St. Martin's-lane,** respectfully informs Artists, &c., that as he Manufactures every description of ornamented, Gilt, and Fancy-wood Picture Frames entirely on his premises, he is enabled to offer them at such low prices, that he defies competition. A most extensive assortment of every description of Picture Frames kept ready. Re-gilding, in all its branches, done in a most superior manner, and cheaper than by any other Gilder in the kingdom. Estimates given free of charge.

P. S. A List of the Prices of PLATE GLASS, Gilt and Fancy-wood Picture Frames, Room Mouldings, &c., can be had at the Manufactory (gratis) or sent (pre-paid) to any part of the Kingdom.

P. G. respectfully solicits a Trial of his Work, for comparison of Quality and Price, with other Manufacturers.

**ANTI-TUBE BLADDERS OF OIL COLOUR.**—Simplicity and Economy.—**WARING and DIMES'** new method of tying their Bladder Colours having been generally approved of, they beg to call the attention of Amateurs and Artists to the following advantage possessed over the old method:—The colour is ejected through the neck of the Bladder, and the orifice secured from the air by a cap screwing over it. Puncturing the Bladder is avoided, and its liability of bursting prevented. A saving of both time and Colour is effected, as it is not necessary to lay the palette down when more colour is required, which can be used to the very last, and will keep any length of time.

**PREPARED CANVASS WITH INDIA-RUBBER GROUND.** This article having now stood the test of some years, and daily increasing in reputation, is worthy the consideration of those who would preserve their Pictures from the effects of time. The ground used in preparing this Canvaass, renders it perfectly secure from cracking or peeling.

Prepared of any texture and size, up to 51 feet by 10 feet, only by Waring and Dimes, 91, Great Russell-street, Bloomsbury.

**VESPER TINT MADDER LAKE.**—W. and D. have succeeded in making this splendid Colour up in Water Colours, to rub and work as free as the Cochineal Lakes, the great hindrance to the use of Madders in Water Colours being the difficulty of working them on account of their aluminous base; this is now remedied by their mode of preparation.

An extensive assortment of Crayons, White and Tinted Drawing Papers, and every material in the Arts.

## SIMES' ELEMENTS OF ELECTRO-METALLURGY; OR, THE ART OF WORKING IN METALS BY VOLTAIC ELECTRICITY. 10s.

"The volume contains many practical observations, and will be read with interest by all engaged in the practice of this very pretty art."—Times Paper.

"As a practically and extensively useful work, comprising everything that is yet known for the guidance of the operator in the new art, we highly commend and recommend the above production."—Literary Gazette.

"The experimenter in Electro-Metallurgy will find in this work full directions for his proceedings, and the apparatus to be employed."—Gentleman's Mag.

"This book is by far the best published on the management of metals by the agency of electricity."—Polytechnic Journal.

"In conclusion, we can only express our unqualified approbation of its contents, and our astonishment at the immensity of facts he has accumulated."—Chemist.

"A practically scientific treatise on the new and beautiful application of Electro-Metallurgy to the mechanical and fine-arts. The matter is condensed and well-arranged; the style is clear, and the directions are explicit."—Spectator.

Longman and Co., Paternoster-row; and Palmer, Newgate-street, London.

## BY HER MAJESTY'S ROYAL LETTERS PATENT.

**WINSOR AND NEWTON'S TUBES OF OIL COLOUR.**—This beautiful invention obviates the numerous imperfections attendant on the use of BLADDER COLOURS, as the bladder in which the paint is enclosed being porous, allows the oil to exude; and thus, by admitting air, the colour necessarily hardens, becomes contaminated with skins, and frequently more than half of it is rendered totally unserviceable.

The PATENT TUBES are formed of stout cylinders of glass, hermetically secured with an air-tight piston, traversing the tube, and ejecting the colour by a gentle pressure. The colour being visible through the glass, the artist immediately perceives the one he may require, and the air being excluded, no smell can proceed from them. They are also so perfectly clean to handle, that oil pictures may be executed without the least soil on the table, or on the hands of the artist.

To be had, wholesale and retail, at their Artists' Colour Manufactory, 38, Rathbone Place, London.

Newly invented Zinc Panels for Miniatures and other highly finished Paintings in Oil, and all the new manufactures of the trade.

## THE ART-UNION

LONDON, MARCH 15, 1841.

## PICTURE HANGING.

SIR,—As I have not yet seen, in your valuable publication, any article respecting the best method of hanging pictures, I take the liberty of offering a few remarks on a subject which seems to me of the more importance, as, in many cases, it only requires a little attention to produce the best results.

A picture, very different from the Daguerreotype, does not represent, with mathematical correctness and uniform effect of light, the view of which it is a copy; but is, in a great measure, a tasteful combination of the various perfections which nature presents in form and in effect, possessing besides, the variety of interest which is afforded by the diversity of talent, and the greater or less degree of skill, of each individual artist. Yet, however laudable it be to aim at improving upon nature, by bringing together her choicest beauties, no true production of art can depart so far from her, as not to make it very desirable, that the picture be presented to the spectator under such circumstances, as would give it the best resemblance to the scene of which it is to convey an idea.

The manner in which a picture should be presented to the spectator, in order that its perspective should appear perfectly true, would be, to have it so suspended that the horizon be on an exact level with the spectator's eye, which ought to be kept immovable precisely opposite the point of sight, and at a determinate distance from the picture; a degree of precision which cannot easily be attained, or rather preserved, without the aid of a small aperture in a fixed screen or partition, as in the Cosmorama. It, however, seldom happens that a picture can be placed so as to be seen at its exact perspective focus. Independently of the inequality of height in the observer, which renders it impossible to adjust the horizon to every eye, so many considerations usually attend the suspension of pictures, that it is less advisable to aim at perfection, than at obtaining such results as are least objectionable; for instance, if we have the choice of situation for a picture representing the calm surface of the sea, or of a river, the place best adapted for it would be rather below the common elevation of the spectator's eye, so that few persons, at least, would have to look up to the horizon. If buildings, vanishing to a well-defined perspective point, appear (for example, a picture of Canaletto) a few inches below the eye's level would, indeed, be as incorrect as a few inches above it; but when the perspective diminution of objects is illustrated with all the accuracy that regular architectural buildings allow of, the eye, satisfied with the mathematical correctness, so willingly makes allowances for such incoherences as arise from his relative position, and not from any perspective omission, that, whether the point of sight corresponds or not with the true horizon, it affects very little his impression of the correctness of the picture, in its ensemble. Any considerable deviation of a picture of this description from the level of the spectator, would, however, present a very unfavourable appearance, although the perspective of the buildings were evidently correct; but when a perfect level, like that of water, is represented, where no vanishing lines assist in marking the horizontality of the surface, unless the horizon be kept low, the water will seem not to have been painted flat, but will appear to incline so much the more towards the bottom of the picture, as this shall be hung higher, and the horizon become, consequently, more elevated. Neither can it be expected that a road will appear to descend, as it recedes, unless the artifices used by the painter, to that effect, be favoured by the

suitable situation of his work. In vain will he raise the horizon, and show the foreground to come very near to the feet of the spectator; if the picture be high, he cannot fancy that he is looking down upon the scene before him, and the road will appear rather to rise than to descend, although the coincidence of its perspective lines be below the horizon. It is when the artist has thus to contend with the difficulty of his science, that it becomes the possessor of the work judiciously to adopt every advantage calculated to give the picture the effect it is intended to produce. If the scene represented be hilly, unless the objects become indistinct from the effect of distance, it little matters at what elevation the picture is suspended; indeed, the elevated angle at which you have to look up to mountainous forms, may add to their apparent elevation and grandeur; and in such cases, the position of the horizon not being easily determined by the observer, perspective defects, resulting from the elevated situation of the picture, are unobserved.

When circumstances render it necessary to suspend a picture above its suitable situation, the bad effects resulting therefrom may be in a great measure obviated, by inclining the picture in a degree increasing with its elevation, so as to meet the eye of the observer at right angles, or thereabouts; by this means the lines tending towards the horizon, although they may seem to rise, will at least appear to be perpendicular to the surface of the picture, every part of which being equally out of its natural position, nothing will appear wrong. It is indeed remarkable what flatness is immediately given to water, or to any level surface, by slightly inclining a picture placed above the level of the eye; besides a fuller, and consequently a more accurate view is obtained of all the objects parallel to the plane of the canvass, a circumstance of great importance in portrait or historical paintings, when the fore-shortening, produced by an elevated situation, disturbs the beauty of proportion, and greatly lessens the pleasing effect of the work.

With respect to light, the best site for a picture in rooms, when the windows are at one end, is on one of the side walls; for the light being reflected from the polished surface of the painting, as from a mirror, in the same angle as that of incidence, is thrown beyond an observer standing immediately in front; and thus, from this most convenient situation, he sees the picture under the influence of such light only as conveys to him the best impression of its images and colouring. The difficulty experienced in getting a good view of a painting, hung opposite the windows, arises from the spectator being on a line with the light thrown upon it: if there be, however, only one opening to admit the light, he can generally see it distinctly in an oblique position; but if there be several windows, it is next to impossible to get a tolerable view of it from any point; and in such cases, a position on the wall between the windows is preferable. When the coating of varnish is very thick, and the colouring at the same time faded, the effect of cross lights, or lights reflected from other objects, will sometimes be sufficiently annoying to prove the disadvantage of high varnishing pictures, particularly old pictures wanting a colouring sufficiently vivid to counteract the effects of reflection.

A room lighted from above has this great advantage over those having side windows, that every wall is well adapted for the purpose of exhibiting pictures; for if the room be sufficiently lofty, it is only on the pictures which are suspended high that the reflection of the windows appears; and even this glare vanishes when the spectator recedes a few paces. Such a mode of lighting being, however, only adopted in rooms purposely built for paintings, on the principle best calculated for showing them off to advantage, I shall not enter into this subject, but merely refer to one more point respecting the placing of pictures in private rooms.

The question, I believe, rather commonly put, whether the side from which the light is represented to come in a picture, ought to correspond with that of the window, appears to me to be chiefly one of taste or fancy. This rule would be an advantage only to persons who feel themselves more at home with a landscape, in which the direction of the sun corresponds with that of the light in the room. The real effect of the picture

would, in most cases, be the same, whether the light were thrown upon it from the right or from the left; and, indeed, when a picture is very near the window, it most commonly happens that its furthest extremity is the most illuminated. When, however, the colour has been laid on in projecting masses, with the intention of producing more effect, by catching the light which falls upon them, care should be taken to procure the same light as that which the artist worked by, which, in the generality of cases, is from the left.

I will conclude by pointing out the plans I make use of for giving pictures a slanting position, without having recourse to nails for them to rest on.

One method, No. 1, is to insert in the back of the frame two rings or stair-eyes, AA, about a third from the top, to which may be attached two suspension cords; or, if one only be preferred, it may be fixed to the middle, B, of a string extending from one ring to the other across the back of the picture; more or less slant may be easily given to the picture by placing the rings AA higher or lower. The other plan, No. 2, is to have three rings, two of which, CC, at the two bottom corners of the picture, and the third, D, in the middle at the top; a cord, EE, is attached by its two extremities to the two lower rings, of sufficient length to come opposite to the top ring, to which another cord is attached to meet the cord, EE, at a distance of about six inches, for a middling-sized picture, when the knot, F, being made, it is carried to a nail under the cornice of the room, or to two nails, if a double cord be used, as in the diagram. The greater or less length of cord from D to the knot F, determines the degree of inclination of the picture.—I am, &c.,

## AN ORIGINAL SUBSCRIBER.

[The subject of our correspondent's letter ought to be, to the patrons of Art, one of much interest, and is, to the artist himself, of the gravest importance. The disposing of a numerous collection of paintings on the walls of a building constructed even expressly for their reception, is a work of such nice discrimination, that we are disposed to consider it an art not at all understood, rather than regard less charitably the ordinary methods of distributing pictures for exhibition. To public institutions we ought to look for perfection in hanging works of art; but it is to be feared that these will be the very last to adopt sufficient and salutary emendations; for until a severe economy of space shall be a consideration secondary to that of showing paintings in the light for which they have been painted, this cannot be hoped for. We shall probably next month follow up the subject; meanwhile we may notice an ingenious and elegant invention of Mr. Potts, of Birmingham, brought forward with a view to facilitate the suspension of paintings. One great object effected by his patent is the entire abolition of nails and cords; and it presents such facilities for the advantageous display of works of art, that this, or something similar, ought to be adopted in every exhibition. The plan is extremely simple and manageable; the main support consisting of a tube, with a groove running round the upper part of the wall, and having the appearance of a gilt moulding as an addition to the cornice. From this depend many rails, which traverse in the groove, so as to be paired and disposed in any way that the size of the works may require. To these depending rails are attached hooks, for the immediate support of the pictures, and these can be so placed as to give any degree of declination; although, with regard to large works placed high, there is a separate apparatus for effecting this. Horizontal bars, also, are attached, when necessary, to the rails; and these appendages have the sliding groove, like that of the upper rail, and may, in like manner, be fitted with hooks, so affording, by the simplest management, a support for paintings of all sizes, and with this advantage, that they may be ranged in every possible position that the light of a place, having such adaptation, may require.]

## PORTRAITS OF MILTON.

From the great number of portraits we see of Milton, it would appear that there could hardly be a moment's consideration required to ascertain what form or aspect the great republican exhibited when he walked the earth; yet upon a more close study of the various effigies that are called by his name, we have as much difficulty in determining the truth, as there can be as to the portrait of Shakspeare himself—a subject upon which folios of print have been expended. Nay, there is even more difficulty; for the resemblance of Shakspeare, prefixed to the first edition of his plays, has the sanction of Ben Jonson that it is his exact portraiture; while the first portrait of Milton published, has the affirmation of the poet himself beneath, that he was far from being pleased with it.

The consideration of this subject has been suggested to our minds, by the delight we have experienced on the inspection of a truly exquisite portrait of the great poet, painted by Cornelius Jansen, in 1627, when Milton was at the age of 19: a specimen of the painter's skill so perfect, so exquisitely true to nature, that we wonder not at the tradition which is reported by writers of the poet's life, that his father, no less impressed with the beauty of form which his son possessed, than "in an anticipation of his future celebrity, employed the most capital artist of his time to paint his portrait;"—and here before us stands this identical head, in as perfect a state as when from the painter's easel; and bearing all the marks which phrenology and physiology would give as qualities of the illustrious original.

This portrait was for many years in the possession of Lieut.-General Stibbert, of Portwood House, near Southampton; in 1811, it passed into other hands, who disposed of it to J. Marsland, Esq. of Manchester, from him to Messrs. Hodgson and Graves, of Pall Mall, who we are told have disposed of it to George Smith, Esq., an amateur of well-known taste.

The celebrated collector, Harley Earl of Oxford, who was a great admirer of Milton, being anxious to procure the best evidence he could as to the genuineness of the portraits of the poet, employed Vertue to call upon the youngest daughter of the poet, then living in very reduced circumstances. In the British Museum, are some very interesting letters, giving the results of the application: from them, she appears only to have recollected two which her father had; one when he was 10 years old, and the other when he was a Cambridge scholar—both painted by Cornelius Jansen.

The former, now in the Disney family, has been inherited from the late Thomas Hollis, who purchased it for 31 guineas, at the sale of Mr. Charles Stanhope's effects, who had purchased it of Milton's widow for 20 guineas. So valuable did Mr. Hollis consider this picture, that when his house was on fire, this was what he seized, being more anxious to preserve it than any other treasure he possessed. The other is no doubt the portrait which has suggested this article, but which was always supposed to have been in the family of the Speaker Onslow. It is well known by the engravings of Houbraken in "Birch's Lives," by Vertue, and by numerous copies: the etching of it by Cipriani, in "Hollis's Memoirs," was made from a drawing which Cipriani executed during a visit he paid Mr. Hollis.

When the picture passed from the Onslow family cannot now be discovered, as upon the accession of the present Earl Onslow to the property, he was much disappointed on finding only a very indifferent copy, which, upon his turning out the rubbish of the collection, at Christie's, was there purchased by Mr. Moore, of Bond Street. It has at present escaped research by what means the picture came into the hands of General Stibbert. Aubrey, in his "Memoirs" (edition 1813) mentions the picture as in his day in the possession of the poet's widow; his words are "His widow has his picture drawn very well, and like when a Cambridge scholar, which ought to be engraven, for the pictures before his books are not at all like him."

A few years after Jansen painted this picture, Milton made his journey into Italy; at that time he was about 30 years of age: this leads to the consideration of a bust of the poet, accounts of which have recently occupied some space in the literary journals of the day. We have ourselves minutely examined it, and as far as authenticity can be proved by likeness to other portraits, it has much to recommend it. That such a bust was executed in Italy during the period of his sojourn there, was known to Hollis, who made diligent search for it, but without success. It is of marble, considerably under the size of life; the hair flowing; the dress the fanciful Italian one of that day;

the upper part of the face extremely like all the genuine heads, the profile remarkably so; the only part which creates a doubt is the mouth and lips, which are much smaller and more feminine than in any of the engraved heads, bearing out the story, that when at the university, he bore the title of the "Lady of Christ's College."

More advanced in life, and painted when he was Latin Secretary to the Protector, is the beautiful miniature by Samuel Cooper; which came into the hands of Sir Joshua Reynolds; and is now in the possession of the Morrill family, of Rokeby. In Lockhart's "Life of Scott," is some interesting gossip regarding it. It has been charmingly engraved by Miss Caroline Watson: beneath it is the attestation of Sir Joshua, as to his belief in its genuineness, and its descent from the poet's family. The frequent visits which Cooper must have paid to the Protector, renders it almost certain that he would have had acquaintanceship with Milton; and, consequently, that he would have painted him. We esteem this miniature as highly valuable, exhibiting the poet in the prime of life.

The Restoration of Charles placed the author of the "Paradise Lost" in obscurity; and ten years passed after that event before the celebrated engraver Faithorne executed his plate, which he did from the life, the poet being then 62. From this print the greater number of portraits, beginning with those by Vertue, are taken. The bust, which has been made so common by wandering Italians, has the same origin. Rysbrach has followed Faithorne, as the best authority.

Having noticed the portraits which may be considered genuine, we might fill a much larger space were we to enumerate the many fictitious heads there are of him, too numerous by far to mention. Editors who should have known better, have, in several instances, committed the folly of engraving heads which have not the slightest genuineness. Du Roveray, in his beautifully-illustrated edition, has copied the well-known head of Noah Brydges, the writing master, as the veritable effigy. But if we find fault with editors, for thus misleading the public, with how much more justice may we complain of the trustees of the National Gallery allowing a head having no pretence to genuineness to be hung up, merely because some late enthusiastic possessor fancied it the true Simon Pure. Such is the fact; for upon what authority can the picture lately willed by Mr. Capel Loft be considered as representing the poet?—The painter's name, P. V. Plas is inscribed: upon what authority is it that this painter was ever known to have visited England? We have a recollection, that many years ago, this portrait was called "John Bunyan."

## FOREIGN ART.

FRANCE.—PARIS.—The artists of Paris are much displeased with the new ministerial law for the protection of literary property, as it regards the fine arts; especially the clause which renders a work sold by an artist so entirely the property of him who purchases it, that it may be engraved without the artist's consent, and that the artist is for ever prevented repeating his own work, even with alterations. Now it is permitted that this may be obviated by a special agreement with the purchaser. But let us consider the habits of artists—men of all others the least accustomed to the small details of business—and we shall perceive that the agreement will be rarely attended to, and the omission will be solely to the detriment of the artist: perhaps the more enthusiastic and devoted he is to his art, the more likely is he to forget the profitable part of the work he is to execute. In all times the greatest artists, their minds full of a beautiful idea, have reproduced that idea many times in its material form, even without an alteration: so they have willed, and such has hitherto been their right. 'The Portrait of Leo X.' by Raffaele, at Rome, is not less valued there because there is a replica of it at Florence, and even in other galleries; nor do we look with less delight at the exquisite landscape of Claude, called 'Il Molino' in the National Gallery of London, because the same bright, enchanting scene also gives splendour to the walls of the Doria palace at Rome. The great masters were constantly in the habit of repeating favourite subjects; and from these replicas it is often impossible to distinguish the original work. The replica is frequently the more perfect, and contains beauties not to be found in the original. It is alleged, on the other hand, that artists ought not to be permitted to repeat their works. The example of

Canova is cited, who, having received fifty thousand crowns for a statue, reproduced it at the entreaty of an enthusiastic lover of art, and to the deep mortification of the purchaser, who considered himself the possessor of an unique treasure. The friends of art in the Chamber of Deputies are rousing themselves, at the call of the artists, to modify the bill, and M. Lamartine will speak strongly against the objectionable clause.

EXHIBITION AT PARIS.—The 18th of February was the latest day for receiving works of art intended for exhibition at the Gallery of the Louvre; it is said above 1600 have been presented. The gallery opens on the 15th (this day). We have seen the greater part of the works intended for the exhibition of 1841, but our limits do not permit us to give at present, even a slight description: we may merely indicate as works of great merit, those of M. Robert Fleury; the subjects are historical, 'Benvenuto Cellini in his Studio,' with a cloudy brow as if he meditated some deed of vengeance; 'Michael Angelo in the decline of Life, calm and sad, soothing the Last Moments of an old Servant.' M. Jacquard has many works, the most important is 'The Death of Charles de la Tremouille'; the figures are larger than life: the moment chosen is when the young man is extended mortally wounded near a pallisade; a priest approaches to administer the sacrament, accompanied by a boy of the choir, and you can perceive the child hears with terror the explosions of artillery. M. Gué, author of the picture so admired last year, called 'The Last Sigh of Christ,' has various works, all sacred subjects; the most remarkable, 'A Last Judgment,' a picture the excellence of which places M. Gué in the first rank of living artists. The trumpet has sounded, and the dead are rising: the perspective is immense. The whole picture is in very quiet colouring, and of a low tint, excepting the upper part, from whence the most brilliant light proceeds. The figures of the angels of the apocalypse unite the upper and lower parts of the picture; a beautiful angel in the middle is half in the celestial light, and the effect of this gradation of colouring is very fine. We must close our brief notice: but the pleasure of the exhibition of the Louvre is not confined to Paris alone, thanks to the Album published by M. Challamel, in which the principal works exhibited are engraved, and a description given of every picture in the hall; it is published in sixteen numbers, which appear at intervals of five days, the price of each being 1 franc 50 cents.—In the course of 142 years, that is, from 1699 to 1841 inclusive, there have been 64 exhibitions of works of the fine arts in Paris thus divided:—in the reign of Louis XIV., 2; of Louis XV., 24; of Louis XVI., 9; during the Republic and Consulate, 9; during the Empire, 5; under Louis XVIII., 4; under Charles X., 1; and under Louis Philippe, 10.—Total, 64.

SCIENCE APPLIED TO THE FINE ARTS.—Without the anticipation of future discoveries, we may already confidently pronounce that the application of physical science to the arts, is a characteristic of our epoch. Our limits only admit of an imperfect index of some recent discoveries, which we may premise by deprecating that heresy to true artistic feeling which can imagine that such mechanical inventions can ever encroach on the real province of the fine arts. The mere imitation of an object may be given, but the taste to select, to combine, to idealize, to invent with the peculiar grace and interest which spring from the individual mind of the artist and imbue his works—these are beyond the reach of mere imitative inventions however perfect; they are the attributes of mind and belong to her empire alone: nor do we speak here of the yet higher powers of creative genius, passion and expression; the subject scarcely merits a serious reply. M. Daguerre is perfecting in the studious retirement which his well-merited pension enables him to enjoy, the discovery which bears his name. Some minutes are no longer required to transmit the impression of objects to the metal plate; a fraction of a second suffices; so that moving objects are, as it were, arrested in action. The application of galvanism to mezzotint engraving, which has rendered so celebrated the name of Professor Jacoby, of St. Petersburg, is followed out by other persons, with many extensions of its application to other branches of the arts. We have seen an apparatus intended for the cabinet of an amateur, for repro-

ducing medals, cameos, engraved stones, bas-reliefs, &c. The whole apparatus is in glass, so that the progress of the operation may, as it were, be observed, and the metal is seen to fix on the surfaces of which it is to take the impression.

M. de la Rive, of Geneva, has applied the electric fluid with success, accompanied by a moist process, as a substitute for the old method of using mercury in gilding. And an engraver of Geneva, M. Hammann, has extended the invention of M. de la Rive to aquafortis engraving—covering the copper-plate by gilding, instead of wax. The drawing is made on the gold; and wherever it is removed by the burin the aquafortis acts on the copper. The gilding being permanent, has the additional advantage of rendering after corrections or additions more easy. The name of Jaques Müller, the workman of Geneva, must not here be forgotten, to whose ingenuity we owe the invention of the portable forge, by which the fumes of mercury used in gilding are evaporated, and the process of gilding with mercury rendered perfectly safe. M. Fourmet's beautiful invention, by which all metals are rendered capable of uniting in a mass, after being pulverized by chemical precipitation, of which iron and platina have hitherto only been thought capable—the results of which are the most beautiful works, in arabesques, figures, &c. on plates of silver and gold reciprocally; and the blending of various colours in the other metals offering so many new resources to the goldsmith—cannot here be described as it deserves. M. Fournet is the Professor of Geology in the section of the sciences at Lyons; and with this short notice we must reluctantly leave this interesting subject.

**HISTORIC MONUMENTS.**—The demolition of the 'Hotel de la Tremouille,' in the Rue Bourbonnais—that ancient building, interesting from its architecture, and yet more from the historic recollections which connect it with so many pages of French history—causes much regret to the lovers of art and of historic monuments. It would appear the expense of the purchase exceeded the funds at the disposal of the Prefect of the Seine, for the preservation of national monuments. The proprietor has offered, as a gift, to the municipality, that singular and characteristic part of the building, which no artist who has seen it can forget, called 'La Tourelle.' The offer has been thankfully accepted.

**BELGIUM.—BRUSSELS.**—The period for receiving works for the exhibition established by the Royal Philanthropic Society, closed on the 25th of last month. This exhibition is open to the artists of all nations. The funds raised by subscription are devoted to the purchase of pictures exhibited, which are distributed by lot among the subscribers; the society reserving in aid of its own objects ten per cent. on the price of all pictures sold. The society forwards at its own expense the unsold pictures to the exhibitions of Ghent and Courtrai.

**ITALY.—ROME.**—The Queen Dowager Christina, ex-Regent of Spain, has always, it will be remembered, protected the arts, and is herself a pleasing paintress. She has been named an honorary member of the Academy of St. Luke.

**MILAN.**—A truly interesting work is at present publishing here—the whole works of Canova, drawn and lithographed with the greatest care by that admirable artist Fanelli.

**SPAIN.—SEVILLE.**—The wonderful rapidity of hand in painting possessed by Esquivel, the director of the Liceo here, and the most eminent living artist in Seville, is, we believe, unparalleled in the annals of art. Our informant saw Esquivel, by candlelight, paint a picture in the space of two hours, drawing included. The subject is 'Two Conspirators Conversing;' the size of life; kitcat; one wears a cap and long feather and velvet dress: the countenances are full of spirit and expression. Our friend examined the picture by daylight, and considered it a work of value, without reference to the time of the execution; every part is well made out; the feather and velvet dress especially well executed. We may observe that it is the custom at the Liceo of Seville for the students to paint by candlelight.

## ARCHITECTURE OF THE STREETS.

### NO. 2.—PALL-MALL.

Two hundred and fifty years ago the whole space between Charing-cross and St. James's Palace (originally an hospital for lepers, suppressed in 1532, by Henry VIII., who founded the present structure), was a tract of fields with no houses, excepting two or three straggling residences at the east end of that roadway which is now called Pall-Mall. A succession of changes, extraordinary for their rapidity even in this age of rapid changes, has rendered Pall-Mall one of the most striking assemblages of domestic structures that can be found in England, and formed a street of which any nation might be proud. It has been selected as the site of the greater number of the class of buildings erected and supported by the co-operation of many individuals, professing the same principles or holding some station in common, known as club-houses; peculiar to our own age, and a further exhibition of that characteristic of modern times which we alluded to in our first paper on the "Streets." Without going into their history, or pointing out the advantages they confer on their members, we would simply remark that it seems certain the less favoured classes of society, especially as regards single men, might, in like manner, secure to themselves improved comforts by judicious joint expenditure and co-operation; but as yet this has not been successfully attempted.

Passing down Pall-Mall, towards the National Gallery, we meet on the right-hand side of the way the Oxford and Cambridge University Club-house, recently erected by Sir Robert and Mr. Sydney Smirke. It presents an exceedingly interesting façade; and, although it is sufficiently dignified and monumental for its purpose, is greatly enlivened by judicious decoration. The style is a mixed Italian. The series of bas-reliefs over the windows of the principal floor form a peculiar feature, and serve to identify the building in some degree with the character of its occupants. They are intended to recall some of the supremest efforts of the human mind, progressing gradually from the Apollo of Mount Parnassus to Shakspeare, Milton, and Newton, of later times. If the piers between these windows had been plain instead of being rusticated, as at present, a degree of repose would have been gained, advantageous to the general effect. It is to be regretted that the material employed for this front, is nothing more endurable than Roman cement.

The Carlton, or Conservative Club-house, built by Sir Robert Smirke, is peculiar from its large centre window in both stories, and the fewness of openings which the Pall-Mall front displays. The latter circumstance gives it a dignified and monumental character at the expense of lightness and grace. The upper centre window is terminated by a pediment; and in order to afford room for this, the ornamental frieze of the entablature is discontinued in the centre of the front, considerably to the injury of the general effect. The balcony to the windows above the ground-floor, with its railings and consoles, is well managed.

The Reform Club house, hardly yet completed, and which is next to the last named edifice, is the Leviathan of its locality, and frowns down all the surrounding buildings heretofore eminent. It is as long as the "Athenæum" and the "Travellers" put together, and at least a third higher than either of them; moreover, it may be justly regarded as the most perfect and beautiful specimen of an Italian exterior that we possess, and therefore well merits attention. The design for this building some of our readers may not be aware, was selected in December, 1837, from four, submitted in competition (after invitation), by its author Mr. Barry, Mr. Blore, Mr. Cockerell, and Mr. S. Smirke. It can hardly be regarded as an effort of invention, inasmuch as it is but an adaptation of the exterior of the Farnese Palace, at Rome, designed by Antonio San Gallo, for Pope Paul III., at the commencement of the 16th century, and completed by Michael Angelo; but the manner in which the adaptation has been made, and the beauty of all the details, stamp their author as a profound master of his art. In the façade of the Farnese palace, nearly twice as long as the building under notice, the windows of both the upper stories, thirteen in number, have co-

lums and pediments, the pediments of the first-floor windows being alternately circular and pointed, instead of all pointed, as in the Reform Club-house. The division of the stories is also different,—increased importance being given to the principal floor in the London building, at the expense of that above. The entrance doorway is made less strikingly important than in the Italian palace. Leaving this latter, however, with the single additional remark, that the *cornicione*, which was the work of Michael Angelo, is in no way superior to that which terminates so beautifully the façade before us; we would point out the string-courses and the whole arrangement of the balconies of the principal floor as especially beautiful. Between these and the top of the dressings of the ground-floor windows, the space is somewhat too large, and is productive of a heaviness of effect not elsewhere observable. The candelabra along the front are purely antique.

Of the Travellers', closely adjoining the latter, and another admirable specimen of Mr. Barry's skill, we spoke at length in our review of Mr. Leed's excellent work on that building.

The Athenæum, which adjoins the Travellers', was built by Mr. Decimus Burton, and is a very elegant piece of domestic architecture, distinguished as most of Mr. Burton's buildings are, by correct and beautiful mouldings, as well as by its sculptured frieze, which is unique in England. The building was begun in 1828, and was completely finished in the early part of 1830. Bennett and Hunt were the contractors. Its total cost £29,382 13s. 5d. The facing of the outside is of Atkinson's blue lias cement, and is a good specimen of that material. The frieze, which is a restoration from the Parthenon, in Bath stone (the figures the same size as in the original), is the work of Mr. Henning, and is admirably executed. The artist received for it £1300, with £70 in addition for preparing it to resist the weather: he completed it by great effort in the short space of twelve months. The statue of Minerva over the entrance is of Portland stone, from the chisel of Mr. Bailey, who received for it five or six hundred pounds.

Of the shops opposite, the window dressings in the one pair of Nos. 18 and 19 may be noticed as peculiar and elegant. The front of Nos. 16 and 17 is faced with Ranger's patent stone (a mixture of Thames-ballast and lime, known as *concrete*, hardened in moulds,) some parts of which, such as the upper part of the balcony and the coping of the attic story, are becoming slightly dilapidated.

Regent Street, Waterloo Place, and Carlton Gardens, which follow the Athenæum, must be spoken of hereafter alone, we will simply remark, with regard to the Duke of York's column, one of the chief adornments of the locality, that the excess of *entasis* or swell, which is given to this column, militates greatly against its effect,—giving it the appearance of an attenuated water-butt, or overgrown nine-pin. It is to be hoped that the rival column now rising hard by, may be preserved from a similar defect.

The United Service Club-house, which stands at the opposite corner to the Athenæum, with its double portico of coupled columns (the lower Doric, the upper Corinthian,) is bald and insipid in the highest degree, an effect which is heightened by its painted surface. The mouldings of the pediment, the window-caps, indeed the details generally are poverty-stricken and mean.

The house, No. 6, nearly facing the last-named building, is a pleasing specimen of a street front. The Opera-house arcade, which adjoins, leads us to remark it is strange that, in a climate so variable as ours, we have not more covered ranges of shops than are to be found in London. The Opera-house façade it may be mentioned, as it now appears, is the work of Messrs. Nash and G. Repton—the building itself was erected by Novosielski. Sharpus's china shop, at the extreme end of Pall-Mall, properly so called, is one of the earliest fronts wherein the mezzanine story was made (as is general in Paris), to give height and effect to the elevation.

The bareness of the dome of the National Gallery, seen from Pall-Mall, forming the termination of the vista, is here strikingly apparent, and induces the hope that the alterations proposed by Mr. Barry, and which include the addition of a range of columns around the drum of the dome, may one day be carried into effect.

## EXHIBITION OF THE ROYAL SCOTTISH ACADEMY.

The fifteenth annual exhibition of this body, which, as we mentioned in our last, opened on the 10th ult., is one of very high merit, although it must be confessed the principal part of its excellence is not to be attributed in any very great degree to those of its members who have generally been looked on as its chief ornaments and supports; it is true all of them have works in the exhibition, but, generally speaking, they seem crude and hastily got up: these remarks, however, can hardly be applied to the works of Scott and Duncan, this latter gentleman's principal picture having been exhibited in most of the chief towns in the kingdom; but with these exceptions, all the works of the first class are contributions from London, which last are splendid works, and of incalculable value in the exhibition, by showing the relative power of the usual exhibitors as compared with that of their rivals for public estimation in other quarters; affording a criterion whereby the proficiency of the different schools may be tested and their merits appreciated. One remarkable feature in this exhibition, and certainly not its most pleasing one, is the extremely crowded state of its walls, which has caused the pictures in many instances to be placed so high as to defy the scrutiny of even the most zealous investigator; thus doing an injury to the exhibitor, who is deprived of the opportunity he has anxiously looked forward to, as one which was to enable him to place his works before the tribunal of public opinion; and what renders the case much worse, it happens too frequently that the merits of works are estimated by the situations they occupy on the walls of an exhibition room. It must not, however, for even an instant be presumed that the capricious arrangements of a hanging committee, cramped for want of room, are to decide the question of merit in such a case; the public must be allowed to judge for itself, by having the works placed within reach of observation. The only means by which such a state of things can be remedied is, either to increase the accommodation in the academy's galleries, a means at present not very likely to be adopted; in fact, all things considered of very questionable expediency; or to support a rival exhibition, a proceeding which, from the extreme apathy of the public and the worse than culpable neglect, the actual discouragement thrown in the way of such an institution by the committee of the Association for Promoting the Fine Arts, a body which may now be said to exercise nearly the whole patronage of art in Scotland, is seemingly an exceedingly doubtful speculation; this feeling on the part of the above-named body, is the more remarkable and the more discreditable, from the circumstance that some of the most inveterate partisans of the exclusive system, are notoriously, and, on their own confession, utterly incapable of forming any judgment upon works of art; some of the most ignorant and pertinacious of whom have fortified their incapacity of judgment, by resolutely abstaining from entering the rooms of a rival exhibition, although such an institution has been in existence four years. This subject is one which deeply affects the interests of artists, as it cannot be otherwise than desirable for them that their works should be submitted for public examination; and it is not a little singular that many of them should, year after year, persist in sending the fruits of their intellectual toil to a place where half of the works sent in cannot be seen, in preference to placing them where their qualities could be duly noted: the blame here attaches in no degree to the Academy, which does its best to find places on the walls for the works sent in; and in doing so, performs all the duties which can be required of it. Those artists who feel this treatment as a grievance, have the remedy in their own hands; and they must just consider whether their chance of public patronage is greater by having their works placed in a well attended exhibition, where, from the position they occupy, it is impossible to see them; or in one in which, although not so highly patronized, the labours of both head and hand can be duly appreciated.

No. 1. 'Mary, Queen of Scotland, receiving the Warrant for her Execution,' David Scott, R.S.A., is a grand picture, but by no means a perfect one; there is much good feeling and poetical conception in it; the dignity and queenly bearing of the ill-starred Mary are of the happiest quality, and completely overawe the gruff and hard-featured Earl of Shrewsbury, who seems to shrink within himself, and recoil like a guilty thing before her glance; the head and neck of the kneeling female are exquisitely drawn and painted, but the hand which she has placed upon the floor is monstrous; the

colouring of this, and of most of his other pictures, is hard and unnatural. 239, by the same, 'Love and Devotion,' is a sweet and tender picture, full of delicate sentiment and fine feeling; but his 'Queen Elizabeth Viewing the Performance of the Merry Wives of Windsor,' 249, is his greatest work this year; and, although a little outré in general effect, it is undoubtedly a rich one, full to overflowing, as it is of the nicest gradations of character; the minutest shades of expression, all so skillfully made to bear upon the main incident of the subject, as cannot fail to make it a most gratifying treat to those who will take the trouble to examine and understand it; in style and mode of treatment it is addressed more to the mind than to the eye, and so finds many more to look and wonder at it than to appreciate its real worth. No. 6. 'A Family Group,' James E. Lauder, A. The female and child are well introduced, and felicitously handled; but the male figure has nothing to do with the group; he is evidently an intruder. His 87. 'Portraits of Three Young Ladies,' is a good picture, containing good drawing and skilful grouping; the expression and painting of the heads well and cleverly executed. 187. 'A Lesson,' by the same, is a commonplace sort of subject, treated in an ordinary enough manner. No. 7. 'Faust and Margaret,' T. M. Joy, a clever little picture, well drawn and coloured, savouring a good deal of Retch. His 243. 'Portrait of a Lady,' is a very cleverly treated head, with a truly joyous countenance and a ladylike air; the colouring of the flesh, in particular, clear and juicy. No. 9. 'View on the Coast of Ayrshire,' Horatio Macculloch, R.S.A., a very chaste, though rather tame sea view: it is, however, a very natural and pleasing picture. 21. 'Glen Messen,' by the same, is a very so production; the water running through the glen seems studded with the heads of tinned tacks. His 'Cam-buskenneth Abbey—Moonlight,' is a very superior picture: it is a true and beautiful moonlight; there is a sweet air of calm repose, and a fine feeling of nature in it; and, although, not equal in this respect to his last year's 'Moonlight—Deer Startled,' it is, nevertheless, a fine picture; but his gem of this year is unquestionably his 272, 'Moor Scene—Sunset,' which is indeed a beauty; it contains the most fascinating truth to nature, imbued with a poetic and charming richness of colour, and an atmospheric serenity which cannot fail to captivate every lover of the wild heathy wolds, where the cry of the plover and the note of the curlew sound delicious music in his ears: in such scenes Macculloch seems to revel with delight; they are completely his own; and he carries the spectator with him in a kindred spirit of pure and unalloyed enjoyment. 410. 'Highland Loch—Morning,' by the same, is an excellent picture in many respects, and faulty in others; there are too many lines of cutting and unpicturesque appearance; in particular, the perpendicular reflection of the sun in the water is harsh and grating on the eye, and there seems a want of atmospheric effect in the rocky bank at the right hand side of the picture, but the work is otherwise an excellent one. No. 10. 'A Setting Sun and Freshening Breeze,' Montague Stanley, A., a most excellent and spirited sea view; there is great power of handling added to a fine perception of nature in this picture; the streaky clouds and torn aspect of the sky betoken plainly a night of coming storm; the tortured waves lash the scudding bark with fitful and threatening dash beneath the influence of the blast, the sure precursor of the approaching tempest: there is a beautiful tone and air of reality about this which is seldom to be met with in pictures, at least in this quarter. 114. 'An English Seaport,' by the same, is also a capital picture; it is spiritedly painted, firm and decided in the touch, with good feeling in the composition and arrangement. His 240, 'The Wreck—Moonlight,' another excellent picture, conceived and executed in a good manner; there are great breadth and power in the composition, and a fine sentiment pervades the whole: the figure on the rock is not by any means its happiest accessory, and it is surely a misnomer, even in defiance of the stars with which it is decorated, to call it a moonlight; there is not a bit of the effect of moonlight about it. Mr. Stanley has this year made great and decided improvement; he has a number of other pictures in the exhibition besides those mentioned, most of them good, and some of them of a high order in landscape; he must, however, beware of resting on his oars, and be satisfied that to stand still is to retrograde. No. 16. 'Sabbath Evening,' George Harvey, R.S.A., a picture quite unworthy of Harvey's reputation; it is a very ostentatious display of a few village children assembled for religious examination before the chair of a rustic, who is certainly by no means indebted to the artist for good looks or

intellectual expression: there are some bits of the picture beautifully painted, but it is totally destitute of elevating sentiment, and the pervading feeling is constrained and disagreeable; the position and bearing of the boy who, very inaptly for such a scene, seems masquerading in a white shirt thrown over his clothes, is awkward and ill drawn, and the whole subject appears little more than an attempt to show how little beyond the mere effect of light and shadow could be made to occupy a large piece of canvass. This is not what should be: Mr. Harvey has painted good pictures, and there is no doubt that, if he chooses to exert himself, he can do so again; it is not treating his *kind* friends, the public, well, to shove them off with material like this. No. 20. 'Night,' John Ballantyne, a highly-finished, well toned, half length portrait, with a "fancy" title; it has, however, the merit of being representative of a very pretty original. 71. 'The Toilet,' by the same, is a well-coloured little picture, not very interesting; the mouth of the lady seems frightfully large; but his 'Portrait of a Lady,' 394, is altogether a different sort of work; it is a graceful portrait of an elegant and beautiful young lady; the treatment is worthy the subject, being light and syphilike. Whether looked at with regard to drawing, colouring, or general effect, it is an agreeable picture, and one which places this young artist on a high pedestal in his peculiar walk of Art. No. 33. 'Squally Day at Queensferry,' J. F. Williams, R.S.A., a picture with a good deal of hard flurry in the water, and a very considerable density in the sky. 30. 'Culloden Moor,' by the same, a good picture, with a great deal more of the feeling of nature in it than generally falls to the lot of this artist's pictures; it is well toned, and is altogether a favourable specimen of the manner in which he treats his subjects. His 48. 'Doune Castle, from the North West,' is another good picture; there is a considerable breadth of effect in it, although the handling is not first rate. 382. 'Strathard, in the Isle of Skye,' by the same, is a very poor, yet rather an assuming sort of picture; if the name be Strathard, it has certainly been as hardly handled. His 403. 'Cottages on the Beach, at Buckhaven,' is a very superior picture, and is probably, on the whole, the best he has this year; the scene is picturesque, and the general treatment, although a little hard, is, nevertheless, very fair. No. 28. 'The Orphan and his Bird,' W. Allan, R.A., and P.R.S.A. This represents a scene from 'Nicholas Nickleby,' and is comparatively bad for the painter of 'The Circassian Captives,' 'The Slave Market,' &c. Mr. Allan has no fewer than five pictures in the exhibition—viz., the one above-named; 44. 'George Heriot relieving the Widow and the Fatherless;' 57. 'The Sentinel;' 123. 'The Regent Murray shot by Hamilton of Bothwell-haugh—a Finished Sketch;' and 188. 'The Fatal Skirmish;' from not one of which will he reap any fresh laurels. In the principal picture—the George Heriot, there is a most meagre show of feeling on the part of the benevolent jeweller; while in the widow he has fairly shirked all pretension to expression, by covering her face with her apron—certainly a very easy method of getting rid of a difficulty, but not just the way in which we should have expected to see it treated by Allan. All of these pictures are cleanly and neatly painted; but surely something more is to be looked for from the President of the Academy than mere dexterity of hand. It cannot be otherwise than painful to speak in such terms of any work of an old and respected favourite; but candour compels us to remark, that the very worthy President has this year, in common with several others, who, like himself, ought to have known better, seemingly had an eye to the Association's Committee as the most probable purchasers; and well knowing the facility with which that body can be pleased, has not overtaxed his faculties, but has at once, and fearlessly, stepped down from the elevation on which he has hitherto stood, to put himself on a level with the capacities of his contemplated patrons. If such were his intention, the result has turned out what might have been expected; the object for which the condescension has been made has seemingly been accomplished, and the public have been astonished, disappointed, and grieved. The foregoing remarks have been made with great reluctance; but there is an absolute necessity for their being made: the truth is, that such is the influence of the Association on the fate of Art here, that it is becoming obviously a trade among many of our artists to paint for the Association, by which means the wealth and influence of that body, instead of being, as they might and ought to be, beneficial to the cause of Art, are exercising a sway the most detrimental, and it is surely

time an effort were made for the arrest of such proceedings. No. 28. 'A Ferry on the Liffey—Early Autumn Morning,' R. M. Cooper. A very unpretending, but a very pleasing landscape, with a fine out-of-door look about it; the arrangement is simple and natural, and the whole a very promising production. No. 29. 'Edinburgh from the Furry Hills of Braid,' W. Nicholson, R.S.A. The distance of this picture is very good, but the foreground is far from being so well managed; indeed, the peculiarity of most of Mr. Nicholson's works is a certain agglomeration of large dotty-like spots in the foreground, which goes far to injure what would otherwise be very interesting works. No. 34. 'The Young Burns,' W. Bonnar, R.S.A. To say that Mr. Bonnar is not this year equal to the Mr. Bonnar of last year, is only saying what must be obvious to every one; he evidently has not put forth his strength on this occasion, but seems to have been reserving himself for the execution of his greater work, of which report speaks very favourably: he has three pictures here, viz., the one above named; 103. 'John Anderson,' and 321. 'Edie Ochiltree in the Prison at Fairport,' all of which are characterized by his usual harmony of colour, gentle pathos of feeling, and accuracy of composition. The last named is a very fine production, full of the most touching sentiment, and beautifully expressive of the forlorn and fortune-fallen old mendicant in the day of his tribulation. No. 39. 'Ruins of Dean Castle—Sunset,' D. O. Hill, R.S.A. A most delightful landscape, with a rich and real sunset effect; the solemn twilight in the deep glen is true to nature, and accords finely with, while it balances and contrasts to, the gleam of glowing sky which lingers on the horizon. There is a great deal of fine poetic feeling in the composition of this picture, and the elaboration is not behind the conception. 136. 'Palace of Scone,' by the same, is a beautiful and sparkling little view. The water is very transparent and flowing, albeit the picture is little smudgy in some parts. 184. 'Ruins of Melrose—Summer Evening,' by the same; the views of Melrose Abbey are now very plentiful, and would require something new to make them palatable, and this, if not new, is at least extraordinary. It is a most dexterous representation of an indifferent, coloured print, although it must be allowed that the sky is clearly and beautifully painted; his 349. 'King John's Castle of Ardfinnan,' is sufficient to make amends for the last named one. It is natural, artistic, and interesting, both as a relic of the olden time, and from the sentiment of departed grandeur wherewith the artist has imbued it. 381. 'Newark Castle,' by the same, is rather a dull affair, although there is some good painting in it; the figures intended, as the catalogue informs us, for the poets Scott, Wilson, Wordsworth, and Hogg, are very clumsily introduced, and are by no means complimentary to the illustrious men they are meant to represent. No. 38. 'Portrait of Sir John M'Niel, G.C.B.' Thomas Duncan, R.S.A. A clear and well painted portrait, but by no means one of Duncan's best; the drawing of the body seems distorted, giving the head the appearance of being set awry upon the shoulders. 77. 'Portrait of James Boyd, Esq., LL.D.,' by the same. A most excellent portrait; indeed, one of the best male portraits in the collection, and there are not a few. There is a fine breadth and massiveness in the parts, combined with a beautiful tone over all. This artist has a number of other portraits here, varying in quality from good to first rate; of his 158, 'Prince Charles Edward entering Edinburgh,' we have already spoken; see "Art-Union," No. 16. His 267, 'Bo Peep,' is a beauty; a portrait of a fine brisk boy, engaged in the gleesome gambols of healthy childhood. The fancy, spirit, and expression of the little madcap are fine indeed, and the rich depth of colouring is worthy of Duncan's well-earned reputation as a colourist. No. 42. 'Drygrange Bridge,' Miss J. Nasmyth. A sweet and pleasing little picture, clearly and cleverly handled, with a nice effect of colour; this lady has several other little subjects of great delicacy of touch and a fine perception of the beauties of nature. No. 41. 'Scene in the Neighbourhood of Borthwick,' Robert Kilgour. A picture with excellent colouring and a good eye to nature. 383. 'Braid Burn,' by the same, is well deserving of a similar character. This promising artist seems to have a stock of rather unfortunate tree-stems which he uses in his pictures; he ought to lay them aside, and procure a new and better assortment. No. 43. 'The Castle of Rhinefells,' M. Macleay, A. A clear and cleverly treated subject; well coloured. 56. 'Mountain Scenery on Loch Sheil,' by the same, is a most capital natural landscape, with the effect of a

summer cloud passing over it almost as true as nature itself; the colouring and handling is of a very masterly kind. His 167. 'Scene on Culloden Moor,' is another of this improving artist's best efforts; the truth to nature and the characteristic aspect of a highland shower are such as could hardly be surpassed; there is, however, rather an offensive formality in the sky, detracting to some extent from what would otherwise be a most excellent picture. Mr. Macleay has several other highly meritorious pictures, besides those named; his progress is very marked, and has kept pace with his industry; were he to give a little less distinctness to his distances, his pictures would assume a high place in his department of art. No. 45. 'Portrait of the Very Rev. Dr. Haldane,' J. W. Gordon, R.S.A. A very ably treated portrait; the head and accessories beautifully painted, with great force; the colouring varied, rich, and harmonious. No. 74. 'Portraits of Two Children,' by the same, is a most charming picture of two very fascinating children; they are painted with a masterly hand, sweetly coloured, and full of the freshness and innocent simplicity of nature. No. 51. 'A Ferry on the Thames,' J. Wilson, jun. A pleasing bit of nature, painted with much sweetness. 122. 'A Quiet Spot,' by the same, is an exceedingly cleverly treated little picture; the cattle are painted with great truth and delicacy. His 208. 'Noon Day, a composition,' is a picture of a high class in landscape; there is a reality and truthful beauty about it, delightful to the eye and gratifying to the judgment, although, upon the whole, there is rather more coolness in the picture than accords perfectly with the idea of a summer noon. No. 52. 'The Miseries of War,' W. Simson, R.S.A. A capital picture, with fine artistic feeling; the wounded man is excellently portrayed, as struggling with the feelings of physical pain and the desire of revenge: the subject is well conceived and happily executed. 107. 'The Temptation of St. Anthony, a sketch,' by the same, is really a gem of a petite sketch; there is great beauty and force of colour and rich expression in it. His 273. 'The Contrabandista,' is a forcible and well painted head. No. 53. 'Portrait of a Lady,' D. Macnee, R.S.A. A very clever portrait; well coloured, but not equal in point of character to his 95, 'Portrait of a Lady,' which is truly admirable in that respect; but his 117, 'Portrait of J. R. Macculloch, Esq.,' is, beyond question, one of the finest male portraits in the exhibition, for truth of expression and nice delineation of character; the head is forcibly and well painted, and the whole subject in fine keeping. 118. 'A Study from Nature,' by the same, is hardly worthy of Macnee; it is truthful but common-place, and bordering on the vulgar. His 139, 'The Favourite Pool,' is a beautiful sylvan nook by a clear mountain stream, with two healthy sturdy rustic children fishing in a pool, the water of which is painted with much skill and fidelity; and the accompanying landscape of a most inviting freshness: the whole of this picture is clean, clear, and in the true feeling of an artist. No. 59. 'View on the Tay—Moonlight,' Miss Stoddart. A clever and well painted moonlight. No. 313. 'View near the Pass of Killcrankie,' by the same; a very clever picture, painted with much freedom and truth. Her 352, 'Highland Landscape,' is another very clever and artist-like production; although small, it conveys a true feeling, and indicates a fine perception of mountain scenery; it is just a little too hard in the distance, otherwise it is a capital picture: this lady has improved to a great extent during the past year. No. 63. 'Watt Tinlin,' W. Johnstone, A. A tolerable subject not ill conceived, although indifferently executed; by some unaccountable method of treatment, it so happens that every article of which this subject is composed, whether horsehide, human skin, or woollen plaid, are all of one texture, and that texture seemingly a sort of ill-manufactured leather, while the drawing would advantageously endure a considerable improvement. No. 262. 'Portrait of a Child,' by the same, like the foregoing, has something good in the design, but is also very defective in the execution. His 398, 'A Border Watch,' is a much superior production to either of the above; there is a good deal more diversity of texture in the material, and the painting is cleaner. This young artist has yet a good deal to learn before he can maintain the ground in his profession, which he has assumed; but it is well to aim high, let him attend closely to what some may call the drudgery of his art, and he will get on. No. 75. 'Loch na Gar,' P. C. Auld. This seems a tolerably fair picture; and judging by what we have seen before by the same artist, we should say it is likely to be good; but as it is, we must take the whole on supposition, it being elevated to nearly the

seventh heaven. No. 78. 'Scene from Romeo and Juliet,' R. S. Lander, R.S.A. A most excellently treated subject; the conception and variety of character contained in it places this picture among the most talented works in the exhibition. There is much beauty and fine feeling, particularly in the females; the drawing is masterly and true; the composition rich and diversified: the whole subject forcibly reminding one of the fierce and vindictive broils which annihilated the hopes of both the Capulets and Montagues; the principal figures are beautifully and powerfully drawn, and the malignant expression of scornful hatred existing between the rival parties is made out with great felicity, except one, who seems to savour more of the boorish buffoon than of the fighting man. 369. 'Italian Goat-herds, entertaining a Brother of the Santissima Trinita,' by the same, is another very clever picture, well felt and well painted. No. 82. 'A Spanish Girl,' A. Geddes, A.R.A. A well painted and sweetly toned head with a good and appropriate expression. No. 86. 'Portrait of a Gentleman,' A. Fraser, A. A very poor affair for Mr. Fraser; there is, undoubtedly, some very fine colouring, and beautiful parts in the picture; but the head, that principal portion of a portrait, is totally destitute of dignity, and is soft and feeble in the handling. 135. 'A Wandering Piper,' by the same, is a sweet and charming little picture, just such a one as the talented artist seems to rejoice in; it is clear, firm, and natural in execution, and harmonious in tone. [We shall conclude our review of this exhibition next month.]

## ART IN THE PROVINCES.

IRELAND.—IRISH ART-UNION. — The Society is progressing very favourably; upwards of six hundred pounds having been already collected, a third of which had been subscribed within a fortnight of the meeting at which the statement was made. We have no doubt that it will be materially increased when an etching of the plate, engraving for subscribers, has been circulated throughout Ireland. It is now (although far from finished), in a state in which it may be seen by the uninitiated—those who, not being accustomed to unfinished engravings, are apt to be prejudiced against things that seem raw and incomplete. We have seldom seen an etching that promises better; it will be, indeed, a fine and beautiful work of art; very interesting in subject, admirably executed, and, taken altogether, worth the whole of the prints that have as yet been issued by the English and Scottish societies. We have been asked by several, whether, by becoming subscribers now, they will be entitled to an impression of this plate? We presume not; for the print will be worth much more than a guinea; and any printseller would gladly give a hundred guineas for a hundred impressions, but we hope that some mode will be devised by which the presentation will not be limited to the list of subscribers of 1840. There are plenty of persons who would subscribe two, three, or even four guineas to obtain it.

LIVERPOOL.—On Monday, the 1st March, Thomas H. Illidge, Esq., read to the members of the Literary and Philosophical Society of Liverpool, a paper "On Composition, and Light and Shade in Painting;" which he illustrated by references to numerous engravings and diagrams. This being the first instance of a lecture on the Principles of Art being delivered since the formation of the society, by William Roscoe, some thirty years since, the subject excited considerable attention. We rejoice to hear that an unusually large audience attended, and that the lecturer—who holds a distinguished rank as a portrait painter—was rewarded with enthusiastic applause.

BRISTOL AND WEST OF ENGLAND ARCHITECTURAL SOCIETY.—An association under this title has been formed in Bristol, for the purpose of promoting the study of Gothic architecture, and collecting information on the various remains of antiquity to be found in the immediate neighbourhood. Feeling strongly the importance of disseminating a knowledge of the principles which guided the architects of the middle ages, in the wonderful works they have left us,—desiring greatly that the public should learn it is not merely the professor who can find delight in the study of ancient remains; and furthermore impressed with the necessity of steps being taken all over the country to prevent the dismemberment and ultimate disappearance of the numerous old buildings scattered over England,—we cannot but hail with gratification the establishment of this new society. We trust that not merely will this be warmly supported by residents, and exert a beneficial influence, but that similar local associations will spring up in every county.

SCOTLAND.—THE GLASGOW STATUE.—(From a Correspondent.) The movements of the Committee seem to be for the moment paralysed; and since our last publication no overt act of hostility has been directed by them against the arts and artists of their country. This, however, is no reason why those who advocate British art should sleep at their posts; as, from the temper and disposition exhibited by the enemy, nothing could tend so much to secure them the ultimate victory.

It must afford pleasure to those who feel as they ought to do, in regard to the encouragement and protection due to the artists of Britain, to know that former governments have not been altogether indifferent upon this subject; and that, as the law at present stands, difficulties of a legal nature may defeat the machinations against which we have felt it to be our duty to contend. Thus, act 54 George III., c. 56, vests the property of sculptures, copies, models, and casts, in the proprietor for fourteen years, provided he causes his name, with the date, to be put on them before they are published; with the same term in addition, provided he should be living at the end of this period. In actions for piracy, double costs to be given.

Act 6 George IV., c. 109, prohibits the importation, on pain of forfeiture, of any sculptures, models, casts, &c., *first made in the United Kingdom*.

Now, it must be apparent that the first of these acts prevents any sculptural likeness of the Duke of Wellington, made within the last twenty-eight years, provided the artist be still living, being used as a copy by another sculptor, without the consent of the author. Act 6 George IV., c. 107, seems to apply still more stringently to our case; for it is obvious that the meaning and intent of this act cannot be to prevent the re-importation of works of British artists, originally made in Britain, but to prevent copies of the same, made abroad, from being imported. And as it is obviously and avowedly only by copying such works, that a foreign statue of the Duke, bearing any resemblance to him, can be obtained, it would appear that any such foreign statue is liable to seizure and forfeiture upon its being imported. Again, if a foreigner were brought to Britain, and to execute an original model of the Duke of Wellington, he must remain in this country, and here complete his large statue; otherwise, *his model having been made in Britain*, it would appear that by act 6 George IV., c. 107, his finished statue, if made abroad, is liable to seizure and forfeiture, if imported into Britain.

Should our views on this subject prove correct, and our impression is very strong that the law authorities would bear us out in them, it would appear that our artists have this case very much in their own hands; if they only display the degree of energy upon the occasion, of which it would be almost libellous upon them, as an intelligent and influential public body, to suppose them destitute.

#### ASSOCIATION FOR PROMOTION OF THE FINE ARTS IN SCOTLAND.

SIR,—Much and angry animadversion has been excited here among artists and the friends of art, by the manner in which the Committee of the Association for Promoting the Fine Arts in Scotland have conducted their purchases; and, certainly, the erratic way in which their dealings have been guided, is such as could hardly fail to produce discontent among both the classes alluded to. It is quite notorious, and has long been so, that there are a favoured few among the leading artists here, who through the influence of their friends on the committee, are so fortunate as to get whatever they are pleased to ask for whatever they choose to produce as pictures; and never was this more glaringly manifested than during the present season; while others less fortunate, although not therefore less deserving, are treated in the very unpleasant fashion of being offered sometimes two thirds, sometimes one half of their demands; in other instances, works of sterling merit are undervalued, or overlooked, and trumpery, with merit neither in prospective nor possession, purchased to their exclusion, without any apparent motive beyond personal bias or sheer caprice. On the other hand, however, it is not less notorious, that the prices expected and paid for pictures in the Royal Scottish Academy's Exhibition, since the establishment of the Association, have increased in the most extraordinary degree; pictures have been put into this exhibition with the sum of £250 attached to them as their prices, for which £100 in any other

place, or under any other circumstances, would be reckoned a most exorbitant demand; nay, more, that these prices, or very nearly these prices, have been paid; others, again, at £90 or £100, for which £20 in almost any other place would be considered more than a full remuneration. It is quite true, and I, for one, have no fault to find with its being true, that an artist, as well as any other member of the community, is perfectly at liberty to fix upon his work any price he pleases; but a discretion would be forced upon him, as well as upon every other person, who has anything to sell, were he subjected to the operation of competition. This most wholesome of all checks unfortunately is not allowed in the transactions of the Association, who confine their favours, as they say, to resident or native artists, although this, like many other of their regulations, would seem to be held under exceedingly capricious control; in fact, it is a principle which is made to yield or to resist, according to the will or humour of those who "pull the wires."

A remedy for the evil of exorbitant demands on the part of artists would be found in breaking down the monopoly of those funds for the promotion of Art, which are subscribed in every quarter of the British dominions; the only quality about the Association which is truly Scottish being the pertinacity and energy with which it has been pushed, unless, indeed, we include the joberry and venality which have followed in its train; vices which, as a Scotchman, I cannot name without blushing, so inveterately do they seem to cling to all our institutions, and not less to institutions for the cultivation of Art than to those for other purposes. I am at a loss to conjecture on what good grounds so exclusive and so invidious a privilege can be demanded for Scottish Art; are our artists such chicken-hearted poltroons as to fear competition? Their countrymen in every other walk of life, court it with eagerness, and, what is more to the purpose, with success. Are they conscious of the inferiority of their pretensions, and anxious to consume the bread of slothful inaction, rather than to inhale the wholesome stimulus of generous emulation? The real lovers of a truly noble profession like that of Art, which demands that the field shall be free as air, would scorn such an imputation. Is it then to be attributed merely to the degrading greed "o'siller" that they are tempted to lay claim to so dishonourable a monopoly? I would fondly hope for better things of my countrymen than a wish for the continuance of such a stigma upon their powers as artists, and their characters as gentlemen.

The other and much more deadly impropriety, is one for which it must be confessed it is greatly more difficult to devise a cure, and the only way in which it seems to me practicable to effect so desirable a change in the proceedings as to obliterate its influence, is to render the responsibility more immediately and more certainly applicable to the parties who are entrusted with dispensing that patronage which is meant to be equally distributed among all, according to their merits, and not to be exclusively directed in the channel of favouritism and individual partiality. As at present constituted, the committee consists of fifteen individuals, with, so far as the public know, equal powers; thus the responsibility attached to each member for any act is just one fifteenth—a degree of diminution, which cannot be otherwise than fatal to that individual responsibility which ought to pertain to the management of a public trust. My proposal to remedy this defect, then, would be to elect, besides the ordinary committee, a purchasing committee of three gentlemen of known and acknowledged taste and information upon the subject, and the true worth of works of Art, whose names should be made public as managing the whole funds allotted for the acquisition of works of Art, and who should also be eligible for re-election, so as to secure the services of competent judges, the responsibility of whose acts would not be frittered away, as at present, into an almost imperceptible fraction. I am aware that a situation of so much public importance, and liable, at times, to a not over-delicate scrutiny of both motives and actions, holds out few temptations to those most competent for the discharge of its duties; still, I doubt not that there would be a certainty of procuring the co-operation and assistance of gentlemen whose zeal and love for Art, and enlightened knowledge of its merits, would lead them to devote a portion of their time and talents to the fulfilment of an office, of the importance of which they must be highly sensible.

I am, &c.,

Scotus.

Edinburgh, March 12, 1841.

#### VARIETIES.

THE ROYAL ACADEMY ELECTION.—We have received several communications on this subject, and not one that in any degree condemns the view we have already taken of it; for the letter signed "An Artist" only makes the matter worse, inasmuch as the writer explains the mystery by asserting that Mr. Alfred Edward Chalton had threatened to "resign if Mr. John James Chalton were not this year elected." We are fully aware that a large majority of the members are heartily ashamed of the business; and have no hesitation in asserting, that if it were to be done over again, Mr. J. J. Chalton would have as little chance of success as the drawing-master at "Miss Womble's select seminary." But this fact will be unknown to the world; and if known will not be a satisfactory excuse. We have now before us a list of the members present on the occasion; and know how the votes were registered. We do not, however, consider ourselves called upon to publish it—the more especially as among those who voted for Mr. Chalton there are three or four who, as able artists and men of integrity, are unexcelled by any in the profession. We do most sincerely lament that their private feelings should have outweighed their public duty: we can account for the circumstance in no other way, without arraigning their judgment or their honour. The Royal Academy is well aware that it is closely watched by jealous and suspicious rivals, and also by envious and malignant enemies: what a powerful and effective weapon this "election" has placed in the hands of both! The friends of the Royal Academy will believe that we print this opinion far "more in sorrow than in anger." If the election startled the artists, who were in some degree prepared for it by a knowledge of the untiring zeal with which Mr. Chalton, sen., has laboured to procure the admission of Mr. Chalton, jun., it has absolutely astonished such of the public as take an interest in matters connected with the arts; and the foes of the Academy are already on the alert to make the most of so fortuitous an event. One writer, in the *Spectator* (it is not very difficult to discover the pen from which the epistle proceeds), suggests a comical remedy for the evil—"That the LANDSEERS might have an exhibition of their own, inviting, perhaps, all those artists, academicians and others, who have sufficient spirit and independence and liberality to join them;" this, as the editor remarks, "would oppose one clique to another—Landseers *versus* Chalons." The hint, however, whether it will tell or not, looks very much as if Mr. Edwin was resolved that Mr. Charles *should be* an R.A.; for the letter is certainly "after Chalton," and contains something exceedingly like a threat to resign. There is no doubt that Mr. Charles Landseer ought to have been elected; for though not an artist of first-rate power, he is, perhaps, the best of the associates, and as superior to Mr. J. J. Chalton as silver is to brass. He may not be popular among his brethren; but personal feeling on such occasions should be altogether put aside. Yet the competitor of Mr. J. J. Chalton was not Mr. Charles Landseer, but Mr. W. C. Ross, a gentleman of great ability in his own department of the arts, but whose elevation would have been taken as a proof of professional poverty in Great Britain; for that department must be described as the lowest in mind and the most mechanical. We greatly fear that the election turned upon this small fact; for it is notorious that Mr. Ross has been making his way into the highest and most illustrious circles, to which the visits of Mr. A. E. Chalton have been, of late, "few and far between." Be the matter as it may, the "wheels within wheels," have undoubtedly so acted as to force back the Academy on its way to that public confidence, which, altho' little dependant upon it, it dare not despise.

[Since the above was written, our observations on this subject have been strongly protested against, by an artist of the highest rank, and whose judgment and integrity are equally above suspicion. It is only just and fair that we give his opinion, although it has not induced us to change our own. "I consider," he says, "John Chalton to be (since the death of Constable) one of the most original geniuses in his walk that the age possesses. The Academy must have thought so, as the majority against his opponent was

thirteen to seven. This could be no party matter; but the clearly expressed opinion of a large body of his brethren. How four persons (the number of "members" in the sketching-club) could produce thirteen votes is a mystery it would be difficult to make out. Unpopularity, and not selling his pictures, is charged upon this artist as a crime. Alas! how much sin had poor Wilson to answer for in his life. Barrett could keep his carriage and his country-house: poor Wilson thought it well to get a beefsteak and a pint of porter, and often to go without a dinner, while his successful rival's equipage passed his door. Where are Barrett's pictures now? Wilson's works have become a school of art; and honour and glory accompany his name. John Chalon is, undoubtedly, a man of genius—all his brethren know and esteem him as such;\* but he is a modest and retiring man, and knows not the French art—*de se faire valoir*. He is just the man an academy ought to hold up, that the public may be taught what is right. The Academy did the same thing in the case of Mr. Wyon, the medalist: at the moment Mr. Hamilton's attacks on him were rife, and his ruin with the public was threatened, the Academy elected him, to mark their opinion of his merits." We have thus, on the principle of fair play, published the opinion of our correspondent: he is undoubtedly one, either as an artist or a gentleman, whose testimony is entitled to the highest consideration and respect; and we should be disposed to bow to it, but that we know he differs essentially, and in toto, from very many of his brother artists, who are entitled to consideration and respect also. In art, even to a proverb, fancy warps the judgment.]

SIR DAVID WILKIE is still at Constantinople. He has lately painted a portrait of the Sultan, from whom he received a present of a magnificent diamond snuff-box. We understand Sir David finds it exceedingly difficult to obtain sitters: this will in no degree surprise those who are at all acquainted with the habits and prejudices of the Turks; heretofore they have considered, that to copy the likeness of any living thing, was a crime of the darkest character. Their superstition must be, to a great extent, broken down if they can tolerate the picturing of their monarch's countenance. Sir David has been indefatigable in his studies, and will return with portfolios richly laden. The Sultan, though only eighteen years of age, is described as having a bearing and appearance somewhat older. His face is much marked with the small-pox; but his features are expressive of benevolence and good will. He was incessant in his inquiries about Europe; all information respecting which he received with avidity. [The papers, of a day or two back, inform us that Sir David sailed from Smyrna for Beyrout on the 7th of February; the account from Smyrna states, that during his short stay there he was suffering from ill health.]

MR. JOHN LEWIS is also at Constantinople, where it is probable he designs to remain for a considerable period, as he has recently ordered a supply of drawing materials from England. We regret to learn he has been suffering from illness; his latest letter stated that he had just recovered from a serious attack of fever. The ensuing exhibition of the Society of Painters in Water Colours will contain the large drawing that arrived too late for that of last year. It is a picture of a crowd waiting to receive the benediction of the Pope.

THE FIRST PROTESTANT SACRAMENT IN SCOTLAND, A.D. 1547.—At the eleventh hour, we were requested to examine a picture with the above title, about to be engraved by Messrs. Hodgson and Graves. It has been just finished by Mr. Bonnar, R.S.A., and will unquestionably rank with the best examples of historical painting of the British school; indeed, it is a long time since we examined any work of its class so entirely meritorious. There can be no doubt that it will at once place the name of the artist among the foremost members of the profession, who study and practise in the most arduous and honourable department of it. It is this month impossible for us to notice it at the length to which it is entitled;

\* This, which is not a matter of opinion, we must altogether and utterly deny; we believe, on the contrary, that nine out of ten of the good artists of Great Britain pronounce Mr. Chalon to be a botch.

and before we are again with our readers, it will have undergone the scrutiny of many: we anticipate a confirmation of our opinion from all. It commemorates the most important event that preceded the full glory of the Reformation in Scotland—the administration of the first Protestant Sacrament, at the hands of John Knox. The interesting scene takes place within the chapel of St. Andrews; the great reformer stands at the altar; his coadjutor, John Rough, immediately behind him; at his feet kneel two lovely women; and the sacred edifice is filled with the bold hearts who fought for the religious freedom of their country:—every one of whom has a niche in its Temple of History. The composition is exceedingly happy; though full, there is no confusion: it is painted with considerable power, and, at the same time, with delicacy and grace. A picture better calculated for engraving, indeed, whether as regards its execution as a work of art, or the interest and importance of the subject, has rarely been submitted to our notice.

MR. HALL STANDISH.—In our last number, we noticed a bequest of valuable works of art made by this gentleman in favour of the King of the French; repeating at the same time an *on dit*, current in Paris, as to the causes of a proceeding apparently so singular. We have on this subject received a letter from a Mr. W. H. Frood, of Bolton, inclosing a portion of a Bolton newspaper, which contains a letter from the solicitors to the executors of the late F. H. Standish, Esq., written expressly to contradict various reports which had been put into circulation after the decease of Mr. Standish. We extract one paragraph of the letter, bearing immediately on the subject of the bequest:—"Mr. Hall Standish bequeaths his valuable collection of pictures and library of books to his Majesty the King of the French; but, in justice to his memory, we feel called upon decidedly to contradict the assertion that he offered his pictures to the Government of this country, as an inducement for the revival, in his person, of the extinct baronetcy. Not only would his high sense of honour have prevented his entertaining such a design; but the fact is, that the bequest to the King of the French was contained not only in the present, but in the previous, will of Mr. Standish, made so long ago as the year 1831; and we have reason to know that he never contemplated its revocation."

THE ILLUSTRATED BIBLE.—An advertisement in the ART-UNION invites attention to a project for disposing, by a kind of lottery, of one of the most extraordinary "collections" of the age—a series consisting of about 7000 engravings and drawings, of every class and school, illustrative of the Holy Scriptures. A mere examination of this prodigious assemblage of prints is a rare treat; it comprises nearly all of merit that, for above a century past, have been published to adorn or explain the sacred volume;—the collecting which was a work of labour not likely to be again undertaken. The letter-press has, of course, expanded by the introduction of the prints—the Bible being divided into 45 volumes. The plan by which it is to be disposed of is fully explained in the advertisement; its most important feature being that those who obtain tickets have, in reality, the chance "for nothing;" as, at the time of subscribing, they select prints to the full value of the subscription, from those published by the late Mr. Bowyer, the interest and excellence of which are known to all collectors.

WINSOR AND NEWTON'S GLASS TUBES.—This is a most valuable invention, and well calculated to supersede every former method of putting up colour for the immediate use of the artist. The advantages of these tubes are important, and not the least so is the perfect cleanliness with which the colour is transferred to the palette. This is effected by means of a small air-tight screw, which acting at one end forces the colour out of a small orifice at the other end, and so perfectly under control, that any quantity can with ease be ejected from a very minute portion to the entire contents of the tube. The colour in these vessels does not thicken and become dry, as is usual in the ordinary bladder packets, but works well and freely to the last, after having been kept any length of time. It is a matter of surprise, that amid the many objections to the old method

of putting up colours, nothing has before been devised as an improved substitute. Comparatively few ladies have hitherto practised oil painting, from the inconveniences we have alluded to; but since these are removed by the glass tubes, it may be expected that oil painting will in future become a more general female accomplishment.

BLADDERS OF OIL COLOUR.—Among the many instances of the attention now paid by colourmen to the improvement of the various articles with which artists are supplied by them, we will introduce to notice another ingenious plan now adopted by Messrs. Waring and Dimes. This is a method of preserving for a longer time, and with greater efficacy, the oil colours in bladders. Many have been the expedients hit upon for this purpose, but it is at once manifest that this method has that superiority, which always goes hand in hand with simplicity in all practical matters. The "colour is ejected through the neck of the bladder, and the orifice secured from the air by a cap screwing over it." As the prices of these bladders are very little beyond those prepared in the ordinary way, we certainly can recommend them as most useful auxiliaries, deserving a welcome from artists and amateurs. To the former, indeed, matters of this sort are of less importance, inasmuch as they, by keeping their colours in constant use, preserve them thereby, in great measure, from the unpleasant state into which they generally get when not employed. It is, therefore, in sketching and amateur painting that this method of colour-preserving will be found peculiarly serviceable; as the colours can be kept uninjured for any length of time, and can be easily ejected from the bladder.

THE PICTURE OF AMALFI, by Mr. G. E. Herring, has, we understand, been purchased at the British Gallery, by his Royal Highness Prince Albert. We rejoice to record this instance of the Prince's judgment and taste. The work is a fine example of art; and an interesting subject is treated with considerable ability. The circumstance will, no doubt, have the effect of stimulating the artist to renewed exertions; we have no doubt that he is commencing an honourable and a successful career.

ROYAL POLYTECHNIC INSTITUTION.—Mr. Longbottom, the Secretary of this institution, has received from Dr. Berres, of Vienna, some proof-impressions from Daguerreotype plates, which had been engraved (so to speak) by chemical action only, no part of the surface having been touched by a tool. These impressions, which are framed and suspended in the gallery, have much the appearance of *aqua-tint*ing, and are certainly very curious and interesting specimens of recent progress in the science of metallurgy.

NAPOLEON'S MONUMENT.—Marochetti, whose name has been lately before our readers, in connection with the Glasgow Testimonial, has been appointed to execute the monument to Napoleon, about to be erected in the Hospital of the *Invalides*, at Paris. A model of his design, in plaster, seventy-three feet diameter, has been put up on the spot it is to occupy, and has excited universal displeasure. It consists of a colossal sphere on a square pedestal, surmounted by an equestrian statue of the Emperor, in his frock-coat and little hat: in fact, it is a copy of a design, by Mr. Goldcutt, for a monument to Nelson, which was exhibited in London during the competition for the honour of erecting that memorial. The fact of M. Marochetti being a foreigner has caused his appointment to be viewed with the greatest dissatisfaction in the French capital.

ART-UNION OF LONDON.—The time for closing the lists is now drawing near, and we trust such of our readers as are not already subscribers will not fail to add their names before it be too late. It appears singular that the Scotch Art-Unions should continue to increase the number of their members so much more rapidly than the London society.

We are glad to learn, that the Committee contemplate obtaining immediately a picture to be engraved for the subscribers of the present year, without waiting for the selection by the prize-holders. This would save much time—five or six months—and would enable the Committee in future to deliver their print annually.

## THE BRITISH INSTITUTION.

[We select from a mass of correspondence the two following letters. The writer of the first enclosed, as several others have done, the names of the artists he considers best entitled to the "prizes." We do not of course publish them; although, probably, when the matter is decided, we may have some remarks to offer upon the various speculations on the subject. With regard to the writer's hope that we "shall not reject his observations, because he differs from us and most of our correspondents," we have only to say that our columns will be at all times open to a fair opponent; it is only by discussion we can arrive at truth.]

SIR,—I take great interest in topics that come under your immediate cognizance; and, as your publication is constantly read in that part of the kingdom that I reside in, I will trust that you may have a corner in your journal vacant, and will accept a few lines in reply to some of the observations in your recent numbers.

Our establishment for the encouragement of art is founded much on the same principles that those in London are; such as the British Institution. We are liable precisely to the same attacks of favouritism in the selection of the pictures, ignorance in the hanging, &c. &c. I not only feel the injustice, but I well know the detriment these attacks occasion to our society. How many are deterred from subscribing by these unfair charges? They say, with truth, "Why shall we give our money to be abused?" and there are always artists who are ready to accuse the directors of partiality, unless the prize is awarded to themselves, or the best places selected for the exhibition of their own works.

Surely, Sir, we are all aware, how much more natural it is for an artist to come to the conclusion that he falls from want of patronage, rather than want of merit; and though, doubtless, it often happens that one picture is rejected, and another, of scarcely greater talent, is accepted, yet this may occur without any charge of undue partiality, or being ascribed to any cause but difference of opinion and judgment.

Business brings me every year to London at this season, and it is a great amusement to me to see the progress of Art; and one of the first places I visit is the British Institution; and I must be permitted to say, that I cannot think that the criticisms I have met with in your journal on the management of it are well founded. I find in the list of directors, names of individuals who are known not more from their love of art than their love of justice.

The directors have this year offered four premiums. The Royal Academicians have very properly not competed for them, feeling that the object was the encouragement of young artists, and have thus furthered the wish of the managers. I fear, however, that whatever selection is made, they will be assailed with charges of partiality; indeed, I observe in your journal the remark, that the successful candidates may be guessed at without much trouble; and the observation implies that their names rather than their works are the indications.

I have amused myself, as others have probably done, in adjudging them in my own mind, and I shall add the names of those I should select; and let me say, that two of these gentlemen I never saw, and the other two I never heard of.

I do not wish you to publish the names, but rather to invite others to communicate their opinions to you, and then see whether the result is not in unison with public opinion.

I will now conclude, confiding in your candour, that you will not reject my observations because I take a different view from most of your correspondents, and which you may be inclined to sanction and adopt.

I am, &c.,

March 3, 1841.

C. N. P.

SIR,—Had I been enabled to visit the British Institution on its opening, I should have offered some remarks for your last number relative to the exhibition, and the many disheartening matters connected with it; now it would be both ill-timed and unnecessary, seeing how manfully and judiciously the subject has been taken up by yourself; moreover, for this once, the mischief is done past undoing. I have, therefore, only to hope that your counsel, touching "old grievances," will be followed in due course; so that the wrongs to which artists have now been long

subjected at this gallery, will be truly and temperately set before each and every of the directors,—their apparent ignorance on this point cannot be bias; *ergo*, they will not deem it folly to be wise.

If, however, we are little indebted to the past, that need not prevent our expecting something better from the future; permit me, therefore, to trouble you again on one other important point, the distinguishing feature of this season, "The Prizes." The frequent consideration of this topic can scarcely lead to other than good; or, at least, a proper understanding of its merits; and may produce less bitter fruits than have fallen to our lot from the want of it.

It must be admitted that the directors have been most wofully disappointed; their good intentions have met with no corresponding result. It may be fairly presumed they had these three objects in view; a good exhibition—the encouragement of praiseworthy competition—and the rewarding of deserving talent. In the first two they have most signally failed; the cause of it will be found in their own late, meagre, and non-explanatory announcement; it induced the academicians (very properly) to hold back, but also deterred the younger students (very unwisely) from coming forward; in short, there has been no trial of strength; and this attempt to give an impetus to art took a wrong direction, so that the movement, instead of being onward, has proved rather of a retrograde nature.

This *mal succès*, let it be hoped, will not have an injurious effect beyond the production of the present feeble gallery. It surely will not, nor must not, damp the so recently rekindling of the bygone ardour of the noble directors; particularly if on the next occasion of prizes being offered, they may (through better management) reasonably expect the gratification of having a first rate and attractive exhibition, besides the choice of many fine pictures instead of but few (as in the present instance) upon which to bestow worthily their several prizes.

To err is human; but, unless I am greatly mistaken, the directors would be certain of obtaining an exhibition similar to those of "the days that are gone," by offering a suitable prize for the best new painting contributed; one worthy of being received by the greatest of the great men who would contend for such a distinction. At the same time, it must not be forgotten, that it will cost an artist at least £50 to contribute a picture which would entitle him to rank as a competitor amongst R.A.'s, and a labour of eight or ten months if he have many commissions in hand.

With regard to drawing out the rising talent of the day, I venture to suggest that the subject be given out by the directors—the size of the canvass be fixed—the names of the candidates be enrolled—members of the academy not being admissible—(I can quote their own bearing in the late contest as an authority for this being a proper restriction).

The only apparently great objection that can be made to the above regulations is, that a monotonous exhibition would be the result; to which I would reply, let these pictures form a separate exhibition for one week, or longer, before the opening of the regular one, the successful works only being admitted into that; the artist to whom honour is due having the word "prize" attached to his painting—an attention to the feelings of the sons of genius which appears to have hitherto been lost sight of.

I may appear too confident in my own untried scheme, but must beg leave to state, that no one would rejoice more in meeting with a better than

Yours, truly,

20th February, 1841.

VIGILANS.

The number of pictures marked as sold in the British Institution, is as follows:—No. 12. 'The Return from Christening—Exterior of the Church of St. Gilles. Caen, Normandy,' F. Goodall. No. 36. (no title), F. Stone. No. 40. 'A Subject from the Parable of the Ten Virgins,' W. Etty, R.A., 150 guineas. No. 41. 'Mount St. Michel—Peasants returning to Pontorson on the approach of the Tide,' E. W. Cooke, 160 guineas. No. 58. 'An Avenue of Willow Pollards,' J. Stark, 45 guineas. No. 59. 'Don Quixote giving advice to Sancho Panza, upon entering on his Government,' J. Gilbert. No. 63. 'Sketch of a Bazaar at Siout, Egypt,' W. J. Müller, £10. No. 72. 'Returning from Plough,' J. F. Herring, 50 guineas. No. 103. 'A View in Denbighshire N.W., from Castle Dinas Brun, with Dinbrin Hall in the Distance,' Mrs. Arnold. No. 108. 'Street in Cairo,' D. Roberts, A.R.A. No. 148. 'Cottage Scene in Sussex,' H. J. Boddington, 6 guineas. No. 180. 'Baptism—Interior of the Church of St. Gilles, Caen, Normandy,' F. Goodall, 100

guineas. No. 188. 'Columbus and his son Diego, receiving Relief from the Monks of La Rabida,' W. Simpson. No. 228. 'View in the Kingdom of Naples,' W. L. Leitch. No. 243. 'Christ bearing his Cross,' W. H. Darley, 50 guineas. No. 248. 'A Blacksmith's Shop,' T. Creswick. No. 288. 'Sketch for a Picture—Slave Market, Cairo,' W. J. Müller, £10. No. 296. 'Sketch from Nature,' F. R. Lee, R.A., 15 guineas. No. 297. 'The young Goatherd,' P. Williams. No. 304. 'Bay of Naples—The Morning of the 8th of September, Peasants going to the Villa Reale to enjoy the Festa of "Pied di Grotta,"' J. Uwins, R.A. No. 341. Napoleon Bonaparte in the Prison of Nice, 1794,' E. M. Ward. No. 7. 'Waiting for an Answer,' J. Calcot Horsley. No. 8. 'A Girl Reading,' J. W. King. No. 14. 'The Seven Mountains from the University Gardens, Bonn,' R. H. Hilditch, 15 guineas. No. 47. 'Falstaff throwing into the Thames,' F. Goodall. No. 100. 'Cattle returning—Evening,' J. Wilson, jun., 10 guineas. No. 121. 'La Maitresse,' C. Brocky, 35 guineas. No. 125. 'Mountain Streams,' T. Creswick, 80 guineas. No. 159. 'Eagle and Black Cock in a Highland Glen,' F. R. Lee, R.A. No. 162. 'Flash—a Study,' S. Pearce, 4 guineas. No. 175. 'French Herring-boat running into the Port of Havre de Grace,' E. W. Cooke, 160 guineas. No. 185. 'Burning Vraic, Jersey,' E. W. Cooke, 50 guineas. No. 195. 'Narcissus,' G. Lance, 200 guineas. 'A Dog with Bittern, Wild Duck, &c.,' F. R. Lee, R.A. No. 225. 'Amalfi, Coast of Salerno,' G. E. Hering, 46 guineas. No. 228. 'View in the Kingdom of Naples,' W. L. Leitch. No. 235. 'The Wish,' T. Von Holst, 50 guineas. No. 287. 'A Calm—Morning,' J. Wilson, 8 guineas. No. 289. 'A Sunset,' W. Welfert. No. 290. 'Head of a Mahomedan,' W. Etty, R.A. No. 291. 'Evening,' H. Bright. No. 312. 'Scene on the Sussex Coast—Morning,' W. Shayer, 45 guineas. No. 314. 'H. M. S. Howe at the Nore getting under weigh,' G. W. Butland, £30. No. 319. 'Evening,' J. Wilson, 15 guineas. No. 332. 'The Wreck,' G. W. Butland, £30. No. 342. 'Terrace of the Capuchin Convent, at Sorrento, Bay of Naples,' J. Uwins, 20 guineas. No. 351. 'An Interior,' G. Lance, 175 guineas. No. 362. 'Sloop shortening Sail off the Sherns Beacon,' G. W. Butland, £65. [This year there has been a departure from the system hitherto pursued—inasmuch as the book of sales does not contain the names of the purchasers of the pictures: this we cannot conceive an improvement.]

## SOCIETIES IN CONNEXION WITH ART.

## ROYAL INSTITUTE OF BRITISH ARCHITECTS.

At a meeting held on the 22d February, the honorary secretary reported, that the council having become acquainted through some of its members who had visited Boudroun, the ancient Halicarnassus, that many fine specimens of Greek sculpture were exposed there to probable destruction, addressed a letter to Lord Palmerston suggesting that Her Majesty's government should apply for an authority to search for and remove these remnants of ancient art; and that a reply had been received stating that, in compliance with the request, Her Majesty's ambassador at Constantinople had been instructed to obtain the permission of the Porte for the removal of the sculptures mentioned. A long and interesting letter from M. Vaudoyer, of Paris, was read by the foreign corresponding secretary touching on the present state of art in France, and on architectural competitions. Mr. J. J. Scoles read a paper on the pyramids of Gizeh, being an analysis of Colonel Howard Vyse's recent work on these stupendous memorials of former power. It is usually stated that the area of Lincoln's-inn-fields is equal to that of the great pyramid. It is found, however, that the latter measures 764 feet on each side, whereas Lincoln's-inn-fields, although 821 feet on one side, is only 625 feet six inches on the other. So that the area of the pyramid is greater by many thousand square feet. In the chambers, masses composed of small pieces of brick solidified by lime, &c. suffice to prove the use of *Concrete* at a very early day. The height of the great pyramid is 115 feet nine inches greater than that of St. Paul's.

On Monday, March 8th, Mr. George Godwin brought before the Institute the fact that several fires had lately been caused in Manchester by hot-water pipes used to heat the buildings. When water is heated in an open vessel no greater degree of heat than the boiling point can be obtained, but in a close vessel, and under pressure, water may be made almost red hot. The importance of the subject was fully felt by the meeting, and a determination was come to, to inquire further into it.

## WORKS IN PROGRESS.

**PICTURESQUE SKETCHES OF THE AGE OF FRANCIS THE FIRST.**—Under this title, a work of great beauty and deep interest is about to be produced, from the pencil of Mr. W. Müller—an artist who has obtained a high reputation; and established it by his recent travels in the East; from whence he returned with a rich and valuable collection—evidence of his industry no less than of his genius. The publication he is now preparing will be upon the plan of those to which we have on several occasions referred—and which the talents of Roberts, Lewis, Haghe, &c., have made popular—a series of views of remarkable scenes and structures, which illustrate the history, character, and customs of a nation. The country chosen by Mr. Müller is France; the age that of Francis the First; and his scheme includes “the most interesting specimens now existing, of the architecture and decorations of that eventful age, when the sumptuous taste of the monarch contributed so much towards the revival of the Arts—including the palaces of the Louvre, Fontainebleau, Chambord, Chenonceaux, and Amboise, the chateaux of Blois, Brissac, and Aizy le Rideau, and some of the most remarkable ecclesiastical edifices, with characteristic groups of figures illustrative of the court of France during the reign of Francis.” A few specimens of the work have been submitted to us; they are exceedingly beautiful in design, and of rare merit in execution; if the whole series be of corresponding value, the work will vie with anything of the kind that has been hitherto produced in Great Britain. The magnificent structures are, we believe, pictured as they now exist, the artist having recently visited them, and minutely studied their several details; but the persons introduced as figuring in the scene are in the habits of the time; and the incidents depicted are those which most strongly illustrate and explain the manners and customs of the period. We are sure that the work will do great credit to the skill, taste, and judgment of Mr. Müller; it is one that cannot be worthily executed without extensive reading and deep thinking; a graceful or a powerful pencil will not do all that is requisite; the task is indeed one of no ordinary difficulty; and the merit of him who discharges it worthily will be great in proportion. We shall look for its appearance with much anxiety.

**LONDON.**—By T. S. BOYS.—This also will be a collection of prints in the form of a volume. Mr. Boys has already secured a favourable reception with the public; the merits of his illustrations of ‘France,’ &c. have been universally acknowledged. We have seen several specimens of his ‘London,’ and can bear testimony to the exceeding accuracy of the views; while as works of art, they will justify the highest praise. The publication cannot fail to be popular; for, after all, though we may wander in search of the picturesque through every country in Europe, we shall find the objects that most deeply interest us close at home. And what nation of the world is so full as England, of scenes and structures associated with glories, or can give so abundant a supply of worthy subjects to the artist? Mr. Boys seems to have exercised sound judgment as well as good taste in his selection of themes for his pencil.

**HER MOST GRACIOUS MAJESTY; HIS ROYAL HIGHNESS PRINCE ALBERT.**—This is the “Pair”—from the pencil of Mr. Partridge—which Mr. Moon is about to have engraved in line; consigning the pictures to the burins of Messrs. Robinson and Doo. Mr. Partridge has succeeded in producing striking portraits; and, as works of art, they are entitled to hold very high places. The Prince is pictured in his regimental dress, as Colonel of the 11th Hussars; and the Queen merely as “the first lady” in her realm—a position which her natural grace and dignity, as well as personal beauty, call upon her to occupy. Mr. Partridge has represented her, perhaps, as somewhat more youthful than she really is; or, we should rather say, she looks younger here than in those pictures that describe her with the trappings of her state. It is, however, beyond doubt, the most pleasing portrait of her Majesty that has yet been produced.

THE ARTIST:  
A SERIES OF SKETCHES FROM THE LIFE.  
By Mrs. S. C. HALL.

## CHAPTER III.

“Every thing of this kind is a drug, a perfect drug, I assure you,” said a man, clad in a gay waistcoat, decorated with a gold chain, who was arranging the miscellaneous lumber of a shop, in a country village, that displayed stationery, coloured prints, patterns for lady’s work, and a gaudy array of showily bound books, in one window, and caps, bonnets, and all the nothings of woman’s gear, in the other. “Every thing of this kind, young man, is a perfect drug with us. We have no sale for unmounted drawings; if you like to buy any of the embossed screens or card-racks, and fill them up, why I’ll put them in the window for you, and give you what they fetch; and that without an allowance, if you buy your materials here; and you’ll not get them so good between Reading and Bristol, I can tell you.”

“I thank you,” was the meek reply; while the young man, who had offered his sketches for sale, replaced them with trembling fingers, and then hastily tied up the well-worn portfolio. “If I had a son of my own,” continued the shopkeeper, who liked to hear himself talk, and did so without desiring a reply, “I would much sooner bring him up to sell pictures or books, than to make them. Ah! we can live and grow fat upon one,” he added, pulling down his fine waistcoat, with the consciousness that it “fitted tightly;” and then running his fingers through his hair—“And we can’t do so upon the other. Without patronage—pa-tron-age!—that’s the thing; that’s the only sure card.”

“For sycophants to play with,” muttered the youth.

“You don’t agree with me,” said the shopkeeper. “Ah! but you will by’n-by: my wife and I have brought many young people for’ard by our patronage; and, if you do the drawings nicely, Mrs. S. can show them at the school, when she takes up the German patterns.” Poor Hamilton! how his fine taste rebelled against this assumption. “The screens,” said the man, “vary. These are only three-and-six to you; but you are going—you will not take my offer?”

“No, thank you; I wish to sell, and not to buy—good day.”

The shop-door had hardly closed; nor had the shop-keeper more than time to mutter to himself the opinion he had formed, that some people had so much nonsense about them, that they had better never have been born at all, when a shrill voice from within the little parlour, that was divided from the shop by a half glass door, screened by a red curtain, exclaimed—“Law, Simon, how could you send him away? I told you, as distinctly as I could speak, that the next time the young lamb’s-wool man came, I wanted most particular to see him: you know, very well, how anxious I am to match King David with the Queen of Sheba, in cross-stitch; and then I wanted to have the seven drabs and five blues in shades—they’re waiting for them at the school.”

“It was’n’t the lamb’s-wool man at all, my love,” replied the decorated Simon. “Do you think I could have sent him away so quickly?—No, this was only the ghost of an artist; with more sketches than wit.”

“Oh, Simon!” exclaimed the fair one, who was only a month married, opening the door, and coming forward in a halo of amber, white, and crimson, that eclipsed even her husband’s finery—“Oh, Simon! you are such a funny duck!”

It was almost evening, and Hamilton had walked that day without having tasted food; he had wandered from the high road to Reading, and plunged into the more remote country, hoping to be able to dispose of his drawings at some of the respectable houses, or in the villages, where he fancied such things might be thought uncommon. Hitherto he had been unsuccessful, and his frame, enfeebled as it was by a severe illness, from which he had suffered since he left Clifton, seemed quite exhausted. Still, it was only the animal portion that lagged and fainted; his spirit, and certainly his feelings, were sharpened by adversity. There was nothing really wrong; no intended insolence about “Simon;” but Hamilton was apt to be angry with people for not coming up to his standard of excel-

lence—just as if the sparrow had the power of achieving the swiftness and grace of the swallow, or the dove could rejoice in the strength of the eagle. Like most young people of genius he found it difficult to understand the doctrine of diversity of gifts, and the shopkeeper had chafed and irritated his temper; the few stragglers he met in the half street, half road, that passed through the village, regarded him with looks of interest or curiosity—he fancied they scanned his threadbare coat, and the cravings of his hungry eye—he passed as rapidly as he could, and found himself in the open country: wearied and foot-sore, he threw himself on the grass, and mused rather than thought of that future, which is always in the young man’s heart. The air was soft and balmy; the birds sung and rejoiced around him: occasionally the breeze bore upon its wings the sound of merry laughter, from schoolboys who were sporting in a neighbouring glen; and the joyous effect was heightened by an occasional shout and halloo.

Depressed as he had been, the influence of the gentle scene soothed and elevated; and he determined to return to the village and enquire of others what he might be able to do with his drawings—they were the only things he had left to dispose of; there was another reason—he was hungry; and all he had in the world of coin was a single shilling. He took out the treasured remnant of his wealth, and turned it over and over again, and at last, as the evening was closing, retraced his steps, and paused for a moment before the window of a baker’s shop. A pretty, chubby-faced child had seized upon a small loaf, which, despite her father, she appeared determined to make her own. She was laughing and struggling with all her strength, and at last made good her prize, and escaped with it to the street-door. Hamilton could not resist laying his hand on “the shining glories of her head” as he passed; he placed his wealth on the counter and asked for a twopenny roll. The man put it in paper and gave it him; then took up the shilling and attempted to ring it on the counter; the low, leady sound it emitted struck on Hamilton’s ear like a death-knell. The man shook his head; and applying his teeth to the edge of the coin, keeping at the same time his eyes fixed on the Artist, tested it in that way.

“It’s a bad one, Sir,” he said: “I must trouble you for another.”

“Are you sure it is bad?” answered the Artist; “I hope it is not.”

“Hoping won’t do—it’s as genuinely bad as anything of the kind I’ve seen for years. I must trouble you for another.”

“I have not another to give you,” said the Artist, replacing the roll suddenly on the counter. “Stay,” said the baker, “you’re forgetting your shilling.”

“God help me!” answered the youth: “what should I do with a bad shilling?”

He retraced his steps, yet not so rapidly but that he was overtaken by the swift feet of a kind-hearted child. She caught his hand, and looking in his haggard face with loving and gentle eyes, exclaimed “Please take my loaf, Sir: please do. It’s my own—own—do—please take it. Well, then,” she continued, “if you will not take all, take half. Nobody says ‘No’ to little Jane.” It was the baker’s daughter. He took the half roll she offered, but he could not speak. The child ran back, looking round several times; her open, joyous countenance beaming towards him, until she stood again at her father’s door.

Almost at the termination of the village there stood one of those fine old trees, around which many a May day sport has been celebrated—and in modern times the old wooden benches were worn by those of the rustics who enjoyed the summer evenings beneath its shadow.

Cottages were scattered in the distance, and close to the tree was a well, arched over with a quaint arch, and looking as if set there to be painted, for it was covered with wall flowers, and enwreathed with woodbine—so that it was only here and there, you could catch a glimpse of the structure. Pretty as it was, the artist’s heart was too heavy to notice it, as he sat beneath the shadow of the tree—while, bit by bit, morsel by morsel, as if grudgingly, he eat the bread, and then dipt the iron bowl that was chained to the edge of the well therein, and drank of the water. The evening by this time had quite closed; and listlessly the youth

resumed his seat, not however in the exact spot he had previously occupied—but where he caught a view of what roused his artistic self at once—a cottage window of more than the usual size was open, and at it a singularly beautiful young woman was seated, her feet evidently raised upon a stool, and the child's head that lay upon her lap was pillowed on her arm; her head bent over the sleeping infant, as a dove broods over its young; and her soft fair hair was gathered into a loose rich knot at the back of her head. A bright cheerful fire threw a warm glow over the interior; and the outline was lit up by the still nearer light of a candle, placed upon a small table close to where she sat. There was a repose—a feeling of calm and gentle love over the little scene, that compelled Hamilton to draw forth his pencil and paper; but he had hardly commenced, when a young man, crossing the open space, perceived his intention, and, after a moment's pause, came to his side. "I beg your pardon," he said, "but, if you are going to make a picture of that window, I will tell my wife, and she will make the cottage look much better than it does now, and sit more upright herself; shall I call to her?"

"Not for the world!" exclaimed the artist. "I hope nothing may disturb the composition until I have caught it—it is exquisite. Just keep quiet, while there is enough light left to do it."

The young man obeyed, with evident reluctance; and, in a very short space of time, by the magic of a few of those touches which evidence the power that is within, the effect of the interior was produced to the astonishment and delight of the simple countryman. "So soon!" he exclaimed, "her head, and hair too—I am glad her cap was off; but the baby has no nose here: eh! but his mother will hold him up, and show you his nose. Well, for so young a man, it is wonderful! Why, lad, I be twice your age, and could not do so much. Could not you put me standing somewhere there, and so make a family picture of it at once? Eh! dear; but it is very, very like—and my poor Beasy not to know it. Will you spare it to show it to her; or mayhap, if you are a stranger, you would step across and take share of a bit of supper—I can tell by the fire-light that it is all ready; do; and you'll have a bed—there's a poor clean one for you; and to-morrow I can show you such things to make pictures of, hereabouts,"—and holding the sketch carefully at arm's length; while each time he looked at it, he increased the warmth of his invitation, the rustic led the way to his cottage, followed by Hamilton, who reconciled himself to accepting the favour by believing that he was only in pursuit of a subject for his pencil.

## CORRESPONDENCE.

### THE PALETTE.

SIR,—I am very desirous that your artist readers should be acquainted with an entirely novel mode of holding the palette, which has such obvious advantages over the manner in general use, that I am quite sure it will be universally adopted. In the first place, the hole for the thumb is dispensed with, allowing the artist to place his colours on what is the most useful corner of the palette. The contrivance for holding it being placed beneath this, consists of a wooden ring, neatly shaped to the thumb, and fixed, by a sliding groove, into two small blocks, firmly fastened upon the underneath side. By this mode the disagreeable liability of colour running through upon the hand is avoided; the same firmness is obtained, and the brushes and mahl stick may be held in the same manner as heretofore.

It is a genuine Chinese invention, communicated to me in Paris; it has always been in use by the Chinese painters, which is, perhaps, sufficient test for its experience.

I have given the plan to Mr. Miller, 33, Rathbone-place, who has it in hand by his workmen, and where artists may inspect it. I shall have much pleasure in sending one to your office for your approval when they are perfected; but, at present, fearing I might be late with the communication, I venture to send you a description of it, trusting you will kindly notice the improvement.—I remain, &c. WELD TAYLOR.

3, Southampton-street, Fitzroy-square,  
March 7, 1841.

### PRINTING INK.

SIR,—As you have always shown a praiseworthy readiness to insert in your valuable journal any inquiry connected with the Fine Arts, I hope that in your forthcoming number you will allow this communication to appear, in order that some of your correspondents may have the goodness to impart the much desired information respectfully solicited. In an old and respectable engraving and copper-plate printing establishment here, great difficulty of late has been experienced in the perfect drying of the printing ink used; and, although increased care and vigilance in the boiling and purchase of the oil, and giving to it its drying qualities, and ridding it of every thing unctuous and greasy, have been used, yet the difficulty remains unabated. It seems to make little difference in the fault complained of, whether the pigments used may be one colour or another, which has given rise to the opinion that the fault is in the oil; but, although the oil obtained from some houses was a little better than that which has been had from others, yet the evil remains substantially the same, the face of one impression soiling and smearing the back of another; in fact, it may be said that the ink never fully and completely dries. Any information, through the medium of the ART-UNION, that may correct this serious evil, would be most thankfully and gratefully acknowledged by—Yours, &c., INQUIRER.

### ARTISTS AND ACTORS.

SIR,—Mr. Mc Ian, in his letter published in your last number, seems to charge the members of the Royal Academy with want of courtesy, if not want of gratitude, for receiving freedom from the managers of Covent Garden Theatre, and not, in return, making actors free of the exhibition. Now, Mr. Mc Ian is a good painter as well as a good actor, and it is a pity he should not have informed himself on the one art as well as the other. If the members of the Royal Academy divided amongst themselves the profits of the exhibition, as the managers of a theatre do the receipts at the door, then the charge of illiberality would be justly established; but Mr. Mc Ian ought to know, what has been sufficiently explained in the House of Commons and every where else, that the shillings received at the door of the exhibition are all given back to the public in the shape of schools of design of painting, sculpture, and architecture, to which every man's son is admissible provided he have talent to make good his title; and, as the Royal Academy does not receive from the sovereign or from the government anything in support of these schools, to grant free admission to the exhibition would be a public robbery. So entirely does the Royal Academy act on this conviction, that even the press—the reporters for which go every where else free—is excluded from the Exhibition of the Royal Academy. In one word, there are no free admissions but for members personally, and exhibitors personally, and students personally. Neither the President, nor Secretary, nor Keeper, nor any member of the council, and certainly not one of the general body, has the power to admit his wife, his daughter, or any person of his family, without paying the same shilling at the door that is paid by every one of the public visitors.

To this general law of exclusion the day of the private view is the only exception, and to this private view each member has two tickets and no more.

Yours, &c., COMMON INFORMATION.

### VEHICLES.

SIR,—I have tried the mixture of oil and starch, as described by your correspondents of September and February last, both with and without the addition of borax, but the result has been a total failure; the ground when dry, by rubbing your finger on the back of the canvas, peels off. Can either of your correspondents inform me how to obviate this difficulty; if not, can you inform me of the best way to make an absorbent ground. Yours, &c., A STUDENT.

SIR,—Allow me, through the medium of your valuable journal, to ask a few questions of a "Student." 1st. I have mixed and boiled together purified linseed oil and thin starch jelly, according to the recipe given in the ART-UNION of last month, which works very nicely, but does not dry well. Should it have been boiled or dried instead of raw linseed oil? 2nd. I find it impossible to use this medium with ultramarine in the powder state, for it curdles or precipitates the colour, even while mixing, and if used on the picture along with other colours, comes through, settling on the top in little globules; this is a great drawback, as ultramarine is invaluable. 3rd. I have made many inquiries of chemists, glass manufacturers, and others, to ascertain what "glass of borax" is, but without success. Borax, in the raw state, is used sometimes as an ingredient in the composition of glass. What is it? 4th. A "Student" will answer these few questions, he will much oblige a FELLOW STUDENT.

### REVIEW.

THE TRIAL OF CHARLES THE FIRST. Painted and Engraved by JOHN BURNET. Publishers, Hodgson and Graves.

It is singular that the most memorable event in the annals of our country should have been hitherto left almost untouched by the artist. Yet there are few subjects so peculiarly calculated for art—no matter how we may view the transactions out of which the "Trial" arose; whether we condemn it as a mockery of justice, and a formal, though atrocious, murder; or whether we consider it as a not only justifiable, but praiseworthy act on the part of a great people. The scene of the terrible drama, the actors therein, the costumes of the age, and the host of associations connected with it, all combine to render a picture, that shall represent the leading features of the solemn "occasion," a desirable acquisition to all classes; and Mr. Burnet has so happily composed his work, that the feelings or prejudices of neither party are outraged, or even annoyed. He has given to the sovereign that dignity of attitude and expression which he retained throughout his "trial," and kept even on the scaffold; and he has pictured the judges of the king as deliberate and thoughtful, rather than as thirsting for his blood. Mr. Burnet has indeed duly discharged the leading duty of an historian—whether he paints history or writes history—by striving to work impartially, without leaning unfairly to the one side or the other. The great obstacle in his way he has therefore overcome: moreover, he has produced a very interesting picture; excellent as a composition, and carefully finished in all its details. The moment selected is when Bradshaw, having passed sentence, refuses to hear the answer of the king, who has risen from his chair to address the assembly; but the president, waving his hand, commands the guards to "remove their prisoner." The Hall—Westminster Hall—is crowded; and among the judges or the spectators are many whose names have since become famous—such men as John Milton, Matthew Hale, Selden, Marvell, Evelyn; Oliver Cromwell, Ireton, Harrison, and half a score of other regicides; with the few friends, such as Richmond, Southampton, and Herbert—adversity had still left to the monarch. The whole of these are portraits. Mr. Burnet has added, by the completion of this work, to his already high reputation, both as a painter and an engraver. The engraving is bold and free; and exhibits that mastery over the burin which is to be obtained only by long study and matured experience.

PICTORIAL AND PRACTICAL ILLUSTRATIONS OF WINDSOR CASTLE. By Messrs. GANDY AND BAUD. Parts I., II., and III.. Publisher, Williams.

For some years previous to his death, as we well know, Sir Jeffry Wyatville had spared neither cost nor pains to complete illustrations of his great work, Windsor Castle, worthy of himself and the subject. Unhappily, however, as is often the case with poor humanity, he delayed the completion of his long-cherished intention until too late, and it therefore devolved to other hands to lay before the public the result of his care and munificence. Why the authors of the beautiful work now before us, who had been constantly employed by Sir Jeffry, the one during fourteen years, and the other during more than thirty years, in all his various works, and more especially in this his greatest, were not allowed to complete the publication, which it would seem was actually entrusted to them, the public is not yet properly informed: nor shall we at this time go into the merits of the case, although we may probably feel dis-

posed to do so hereafter. Suffice it to say at present, that the executors and Messrs. Gandy and Baud disagreed, the plates were taken out of their hands, another conductor appointed, and that the result is the publication of an entirely new work by these gentlemen, in opposition to that issued by Sir Jeffry's representatives.

It combines pictorial and practical illustrations, the former being drawn on stone in the tinted style, and the latter engraved on steel. The three parts at present published contain six external views, and ten plates of details, and are executed in such a manner as to reflect the highest credit on their authors; in fact, anything more charming in the way of architectural illustration than the north-west view of the Winchester Tower and the view of King George's Gateway, amongst others, we do not remember to have seen. We trust sincerely that the artists will obtain, as they have merited, an ample share of the public patronage, and that they will complete their undertaking in the same beautiful manner as that in which they have commenced it.

Windsor Castle is the only royal residence in England worthy of such a destination, and has conferred a lasting reputation on Wyatville. Certain it is that it owes much of its picturesque effect and bold irregularities to the existence of the old structure; and that probably, as has been often said, if Sir Jeffry had been directed to design an entirely new castle, he would not have produced so effective a pile of buildings as that which we now possess. Nevertheless, he has displayed such a kindred feeling with the architect of old, such a power of producing picturesque effects, not here and there, but universally throughout the building, and so good a knowledge of details as to have rendered the whole consistent in every part, that he must be considered fully entitled to all the praises which have been lavished upon him.

We hope due pains will be taken by the authors of this work to render the letter-press complete, and that the interior arrangement of the building will be thoroughly illustrated.

**PORTRAIT OF HIS GRACE THE DUKE OF WELLINGTON.** Painter, H. P. BRIGGS, R.A.; Engraver, THOMAS LUFTON. Publishers, Colnaghi and Puckle.

"ANOTHER and another still succeeds." Long may it be ere we have a portrait of his Grace in his shroud—the only costume in which he is now unpainted. He is here in a plain frock-coat; but with something of the soldier: for his gallant steed is by his side, and his martial cloak is round him. Mr. Briggs is always happy in conveying a likeness to canvas; and it is not easy to miss the marked features of the Duke. This, therefore, is undoubtedly an accurate resemblance; not taken in the prime of life, but at a period sufficiently remote from age; to secure a pleasing, as well as a striking, portrait—one that preserves the features of the mind as well as those of the countenance. It has been well engraved; and may be classed among the valuable acquisitions of art.

**DIGNITY AND IMPUDENCE.** Painter, EDWIN LANDSEER, R.A.; Engraver, CHARLES LANDSEER. Publisher, M'Lean.

NONE who saw, can have forgotten, the gem of the British Gallery the year before last; it was the attraction of all eyes; it added even to the reputation of the accomplished painter who produced it. Yet the picture contained nothing but the heads of two dogs, looking forth from a kennel. In ordinary hands, the subject would have been common-place and insignificant; it is the high privilege of genius to transmute clay into gold. The painting is here engraved, and

in a manner worthy of the original; we scarcely miss the colour; for the engraver has gone very near to render it; and has faithfully copied—copied, indeed, with marvellous accuracy—the force and vigour of the original production. The proud bearing of the gallant blood-hound is happily contrasted with the fretfulness of the little sharp, bitter, terrier by his side: the work, though, as we have said, limited to two dogs' heads, is a key to a volume of thought. There has been, perhaps, no picture after Landseer so likely to become a general favourite; it may grace the hall of every English squire; and be valued, moreover, by every lover of fine art—for its merits in this respect are of the very highest order. It will be difficult for the engraver to approximate more closely to the painter.

**THE NEW TALE OF A TUB.** An Adventure in Verse. By F. W. N. BAYLEY; with Illustrations designed by Lieut. J. S. COTTON. Lithographed by AUBRY. Publishers, Colnaghi and Puckle.

ONE of the pleasantest works that has for a long period issued from the press. It is full of originality—the composition of the author and that of the artist being new, striking, and most effective. Mr. Bayley is a ready, graceful, and sometimes a powerful rhymist; few can more easily master the styles pathetic or comic; and he is always certain to interest when he pleases to do so. He has as yet produced nothing so good as this—it is exciting to a degree, and tells a very marvellous story of the wonderful escape of a pair of Bengalees from the fangs of a tiger, who had a strong desire to dine upon the brace—"Tall and thin," and "short and stout." How he was baulked of his dinner it will be impossible to guess until arrived at the close of the poem. The illustrations are admirable, remarkably free, and drawn with considerable taste, skill, and judgment.

**THE FLITCH OF BACON.** Drawn by H. B. Publisher, M'Lean.

WE do not class this among caricatures; it is a fine work of art; the portraits are wonderfully like; and the thought that suggested it was a happy one. Our readers are, or they ought to be, familiar with Mr. Watt's exquisite engraving of 'The Flitch of Bacon,' after Stothard; and are no doubt aware of the old custom which admitted to claim the flitch, a happy couple who were willing to make oath that during twelve months after marriage they had not quarrelled once. [By the way, it is said, a pair who went to claim it, forfeited their right on the road by a disagreement as to whether the bacon should be boiled or broiled.] H. B. has represented the Prince and the Queen—so happily and honourably circumstanced. They are journeying homewards with "the flitch," accompanied by a group of the great men of their age and country—the foremost of the Queen's subjects. The print is a beautiful one.

**THE ROYAL GALLERY OF BRITISH ART.** Publishers, Messrs. Finden.

WE received Part VI. of this admirable work too late in the month to do it justice. We shall review it in our next; and, for the present, content ourselves with directing the attention of our readers to the statement in our advertising columns.

#### TO CORRESPONDENTS.

Our "Answers to Correspondents," must be postponed until next month.

We have made such arrangements for the regular supply of the ART-UNION on the day of publication, as enable us to state that any error in its proper delivery may now be obviated. If any such occur, we shall hope to be informed of it.

#### NEW ARRANGEMENT FOR THE DISPOSAL

(After the Manner of Drawing for Prize Pictures at the 'Art Union')

OF THE  
**CELEBRATED UNIQUE BIBLE,**  
AS ILLUSTRATED BY THE LATE MR. BOWYER;  
VALUE THREE THOUSAND GUINEAS!

And, as a Second Prize,  
**HILTON'S HISTORICAL PICTURE**  
OF THE  
**TRIUMPHAL ENTRY**  
OF THE

**DUKE OF WELLINGTON**  
**INTO MADRID:**  
VALUE FIVE HUNDRED GUINEAS!

[Each Subscriber receiving the full value of his subscription in Prints not connected with either of the Great Prizes; so that there can be NO BLANKS.]

The Bible is that published by Macklin; the best edition of the best of books, expanded, with the Illustrative Drawings and Engravings, into Forty-five large folio volumes, in superb condition, and it contains nearly Seven Thousand Drawings and Engravings, among which are all the most interesting works that illustrate, pictorially, the sacred text; from the era of Michael Angelo to that of Reynolds and West.

According to the present plan, there will be Three Hundred and Fifty Subscribers, at Ten Guineas each, to contest for this gorgeous prize. The Proprietor intends not to retain a single Ticket; and the decision will be made after the plan of the Art-Union, as to the modes of drawing for the Prizes at that Institution.

The decision shall take place on the 1st of July, 1841, at Twelve o'clock for One, of which this shall be sufficient notice, at Mrs. PARKER'S, No. 22, Golden-square; unless, in consequence of the list not being filled up, notice shall be sent at least ten days previous, fixing some other day.

The other prize will be drawn for at the same time. It is an original picture by the late W. HILTON, R.A., one of the best productions from his hand, and its subject the 'Triumphal Entry of the Duke of Wellington into Madrid, on the 12th of August, 1812.'

It ought to be understood, that, though the holder of a Ten Guinea Ticket may possess one or other of these great works, — THE BIBLE, OR HILTON'S PICTURE, — yet those who do not gain either will not be losers; for every Subscriber receives prints to the full value of his Ten Guinea Ticket; so that, in fact, his chances for the Bible and the Picture cost him nothing.

The novel features of this plan are:—that every purchaser of a ticket receives immediately the full value of his money, independently of his future chance.

Every purchaser of a ticket of Ten Guineas, is not only in the condition of a private purchaser of plates to that amount, but he has, in virtue of that ticket, a chance of securing to himself the great Bible Prize of Three Thousand guineas value, or the Great Picture Prize of Five Hundred guineas value. It cannot, therefore, be doubted that the Subscription List, which is limited to 350 names, will be filled up long before the 1st of July; and an early application is recommended to all intended subscribers.

It is presumed that the Prints published by Mr. Bowyer and Mrs. PARKER are too well known to require a detailed explanation; the majority of them being classed, by connoisseurs, among the best and most popular engravings ever issued in this country; among them, however, may be mentioned LANDSEER'S 'Pillage and Destruction of Basing House, Hants.' HAYTER'S 'House of Lords,' and the 'Trial of Lord William Russell;' DEWIS'S 'Magna Charta;' LESLIE'S 'Lady Jane Grey;' and ALLEN'S 'Queen Mary.'

The Illustrated Bible, in Forty-five large folio volumes, may be inspected any day, between the hours of Eleven and Four, at the House of Mrs. PARKER, 22, Golden-square, where Hilton's Picture may also be seen.

The plan at present proposed for drawing is as follows:—350 Tickets, with the subscribers' names thereon, to be placed in a wheel for that purpose.

The first drawn name will be entitled to Hilton's Picture.

The last drawn name will have the Forty-five splendid volumes of the Holy Scriptures.

ON THE 31st MARCH, THE FIRST PART OF  
**ILLUSTRATIONS OF SHAKESPEARE;**

LANDSCAPE, HISTORICAL-LANDSCAPE, AND ARCHITECTURAL.

Designed by G. F. SARGENT, and engraved in the line manner on Steel, under the Superintendence of JOHN WOODS.

Part I. will contain, Room in Caesar's House, *Anthony and Cleopatra*—Restoration of the Market Place at Athens, *Timon of Athens*—General View of Sicily, *Tempest*—Wood near Athens, *A Midsummer Night's Dream*—Bangor, *Henry IV.*

The Work will be published in Sixteen Monthly Parts, each containing Five Plates, price Half-a-crown; large paper, proofs, 7s. 6d. Prospectuses, with Specimens of the Engravings, may be had of all Booksellers.

LONDON:—HOW AND PARSONS, 132, FLEET STREET.

**NEW AND CHEAPER EDITIONS OF THE WAVERLEY NOVELS.**

**I. WAVERLEY NOVELS—ROYAL OCTAVO.**

*On Saturday, 27th March, PART I.*

In Royal Octavo, Double-Columns, with all the Author's Introductions and Notes—1829 to 1833. To be completed in Twenty-Five Monthly Parts, price *Four Shillings each*, stitched; or, in Five large Volumes, cloth lettered, £5.

PART I. will contain WAVERLEY, and each Issue a complete Novel or Novels.

The First VOLUME, which will be ready on 1st August, will contain WAVERLEY, GUY MANNERING, THE ANTIQUARY, ROB ROY, and OLD MORTALITY, price *One Pound*.

Volume Fifth will have an Engraving of Sir WALTER SCOTT, from Greenshields' well-known Statue, and a Glossary.

**II. WAVERLEY NOVELS—SMALL OCTAVO.**

*Also, on Saturday, 27th March, VOLUME I.*

In Foolsap Octavo, with all the Author's Introductions and Notes—1829 to 1833. To be completed in Twenty-Five Monthly Volumes, price *Four Shillings each*, cloth lettered.

VOLUME I. will contain WAVERLEY; each Issue a complete Novel or Novels, corresponding in matter and arrangement with the Edition in Royal 8vo. The last Volume will have an Engraving of Sir WALTER SCOTT, and a Glossary.

\*\*\* The call for cheaper Issues of these celebrated Novels has induced the Proprietors to bring forward, on the present occasion, Reprints, cheaper than the cheapest books of the day, in the place of more costly and highly-embellished editions.

ROBERT CADELL, EDINBURGH; HOULSTON AND STONEMAN, 65, PATERNOSTER ROW, LONDON.

*Uniform with the Musée Français, and the Florentine Gallery.*

**FINDEN'S ROYAL GALLERY OF BRITISH ART.**

DEDICATED BY SPECIAL COMMISSION TO HER MAJESTY;

And under the immediate Patronage of the President and Council of the Royal Academy.

**PART VII.**

RETURNING FROM MARKET, PAINTED BY SIR A. W. CALLCOTT, R. A.

*(An Etching of this subject is on the opposite page.)*

A DAY'S SPORT IN THE HIGHLANDS, PAINTED BY A. COOPER, R. A.

THE GREEK CITY, PAINTED BY WILLIAM LINTON.

On announcing the publication of the SEVENTH PART of the ROYAL GALLERY OF BRITISH ART, Messrs. FINDEN avail themselves of the opportunity to express their thanks to the Subscribers for the unprecedented success of this National Undertaking, by which they have endeavoured to vindicate the excellence and the interest of British Art; and to render the work still more deserving of the encouragement which has been so liberally given to it, they have enlarged the size of the Engravings without any increase of price.

In this publication of the GALLERY OF BRITISH ART, it is intended to produce a Work truly NATIONAL; in which a selection from the most beautiful Pictures of British Painters, commencing with the era of Sir J. Reynolds, will be engraved, in the finest line manner, upon a scale which will not only enable the eminent Historical and Landscape Engravers, who are already engaged, to preserve the expression and refinement of the Originals, but will also put the Work within the reach of those who, with limited means, have, from nature or acquirement, a feeling for such productions.

Messrs. FINDEN are extremely gratified in stating, that several distinguished Patrons of Art have opened their Galleries to them for this adventurous Undertaking; and that the PRESIDENT and MEMBERS of the ROYAL ACADEMY, have, by their Council, subscribed to the Work (an act unprecedented they believe), and, in the most kind and liberal manner, have promised their support and co-operation. Annexed is their Testimony of Approval:—

"Feeling that the statements set forth in the Prospectus to 'Finden's Gallery of British Art,' are in unison with our views of the subject, and believing, from the Specimens we have seen, that it is calculated to diffuse, through the medium of Line Engraving, a knowledge of the best English modern Pictures, we cheerfully add our testimony of approbation."

Thus, with ready access to the best Productions of Native Talent, the cordial and united efforts of every artist, added to their own professional experience, combined with a determination to spare no expense, Messrs. FINDEN feel assured of producing a Work that shall merit the patronage of an enlightened Public.

## MESSRS. HODGSON AND GRAVES,

HER MAJESTY'S PRINTSELLERS AND PUBLISHERS, HAVE NOW READY FOR PUBLICATION, THE FOLLOWING

## IMPORTANT WORKS OF ART.—

## THE TRIAL OF CHARLES THE FIRST IN WESTMINSTER HALL.

Engraved in the finest style of Mezzotinto by JOHN BURNNET, Esq., F.R.S., from the splendid Picture painted by himself.

"The pomp, the dignity, the ceremony of this transaction," Hume remarks, "corresponded to the greatest conception that is suggested in the annals of human kind; the delegates of a great people sitting in judgment upon their supreme magistrate, and trying him for his misgovernment and breach of trust." This grand historical work of art must add greatly to the reputation of the accomplished artist. All the personages introduced are portraits of the actors in this great drama, which will ever be remembered as one of the most remarkable events in the history of our country.

Prints . . . £3 3s.

Proofs . . . £5 5s.

Proofs, before Letters . . . £8 8s.

DEDICATED TO HER GRACE THE DUCHESS OF SUTHERLAND.

## THE MARQUIS OF STAFFORD AND LADY EVELYN GOWER.

Engraved in the most exquisite manner by SAMUEL COUSINS, A.R.A., from the very beautiful picture painted by EDWIN LANDSEER, Esq., R.A., for His Grace THE DUKE OF SUTHERLAND.

Price to Subscribers, Prints . . . £2 2s.

Proofs . . . £4 4s.

India Proofs . . . £6 6s.

Proofs, before letters . . . £8 8s.

DEDICATED BY COMMAND, TO HIS ROYAL HIGHNESS PRINCE ALBERT,

## THE STATE PORTRAIT OF

## HER MAJESTY IN THE IMPERIAL DALMATIC ROBES,

SEATED ON THE THRONE IN WESTMINSTER ABBEY.

Painted by Command, for Windsor Castle, by GEORGE HATTEY, Esq., Her Majesty's Historical and Portrait Painter, and Engraved in the finest style of Mezzotinto by H. T. RYALL, Esq.

Prints . . . £3 3s.

Proofs . . . £5 5s.

Proofs, before Letters . . . £8 8s.

## THE PORTRAIT OF THE RIGHT HON.

## SIR ROBERT PEEL, BART. M.P.

Engraved in the finest style of art from the original Picture.

Prints . . . £1 1s. Proofs . . . £2 2s. Proofs before Letters . . . £3 2s.

## THE LAST PORTRAIT OF HIS GRACE

## THE DUKE OF WELLINGTON, K.G.

AS CHANCELLOR OF THE UNIVERSITY OF OXFORD.

Engraved in the Finest Style of Mezzotinto, by G. H. PHILLIPS, from the original Picture Painted by H. P. BRIGGS, Esq., R.A., for the Right Hon. the EARL OF ELDON.

Prints . . . £2 2s. Proofs . . . £4 4s. Proofs before Letters . . . £6 6s.

COMPANION TO "THE COVENANTERS PREACHING,"

## THE EXAMINATION OF THE VILLAGE SCHOOL.

Beautifully Engraved by F. BROMLEY, from the very interesting Picture Painted by GEORGE HARVEY, Esq., R.A.

The extreme care and finish bestowed by Mr. Harvey on this Picture, has enabled the Engraver to produce a plate, in every degree equal to its predecessors. The variety of character introduced, the dignity of the worthy teacher, and the anxiety of the venerable pastor to know that the rising generation are properly instructed in the knowledge of those doctrines for which their ancestors fought, are all admirably expressed.

Prints . . . £2 2s.

Proofs . . . £3 3s.

Proofs before Letters . . . £4 4s.

## THE PORTRAIT OF HER GRACE THE

## DOWAGER DUCHESS OF BUCCLEUCH.

Engraved in Mezzotinto by W. HUMPHREYS, from the original Picture Painted by F. GRANT, Esq. S.A.

Proofs . . . £1 1s.

## THE PORTRAIT OF HIS GRACE THE

## DUKE OF BUCKINGHAM, K.G.

Painted by JOHN JACKSON, Esq., R.A., and beautifully Engraved in Mezzotinto, by JOHN PORTER.

Prints . . . £2 2s. Proofs . . . £2 2s. Proofs before Letters . . . £3 3s.

NEARLY READY,

## THE HAWKING PARTY IN THE OLDEN TIME.

Engraving in Mezzotinto by CHARLES G. LEWIS, Esq., from the original Gallery Picture, painted for SAMUEL CARTWRIGHT, Esq., by EDWIN LANDSEER, Esq., R.A. This splendid subject of the Sports of Olden Time is engraving the same size as BOLTON ABBEY, by SAMUEL COUSINS, Esq., A.R.A.

Prints . . . £3 3s.

Proofs . . . £5 5s.

Before Letters . . . £8 8s.

## THE HIGHLAND DROVERS DEPARTING FOR THE SOUTH.

Engraving in the line manner by J. H. WATT, from the Splendid Picture exhibited at the Royal Academy, painted for J. SHEEPSHANKS, Esq., by E. LANDSEER, Esq., R.A.

Prints . . . £3 3s.

Proofs . . . £6 6s.

India Proofs . . . £10 10s.

Before Letters . . . £12 12s.

## THE STATE PORTRAIT

## HIS ROYAL HIGHNESS PRINCE ALBERT,

IN THE ROBES AND JEWELS OF THE ORDER OF THE GARTER.

From the original picture painted in Buckingham Palace, by GEORGE PATTEN, Esq., A.R.A. This magnificent Portrait is engraving on the same grand scale as the Portrait of Her most gracious Majesty in the Robes of State, by SAMUEL COUSINS, Esq. A.R.A.

Present price to Subscribers, Prints . . . £3 3s.

Proofs . . . £5 5s.

First Proofs before Letters . . . £8 8s.

It is by Jordaens, the pupil, and most successful imitator of Rubens, and is in no respect inferior to the original. Its size is 9 feet 8 inches by 7 feet 1 inch. To be seen from Ten to Five daily, except Thursday, by tickets, to be had at Mortimer's Library, 21, Wigmore-street, Cavendish-square.

ART-UNION OF LONDON.  
**THE ANNUAL GENERAL MEETING** for the reception of the Committee's Report, and for the DISTRIBUTION OF THE PRIZES, will be held at WILLIS'S ROOMS, King-street, St. James's, on TUESDAY, the 20th inst., at one o'clock. HIS ROYAL HIGHNESS the DUKE of CAMBRIDGE in the Chair. (By Order) T. E. JONES, Clerk to the Committee.

**ROYAL IRISH ART-UNION.** PRESIDENT—The Marquis of Ormonde. Subscription—One Pound per Share.

N.B.—Post Office orders, for remitting the Price of One or Two Shares, may be obtained of any Postmaster in the United Kingdom, for Three Pence, and up to Five Shares for Six Pence.

Ladies and Gentlemen desirous to become Subscribers, will please to send whatever amount they wish to contribute, without delay, to STEWART BLACHER, Esq., Honorary Secretary, 20, Gardeners'-place, Dublin; and the proper vouchers, entitling them to share in the next Distribution of Prizes, will be forwarded to them immediately.—Impressions of the engravings issued strictly in the order that Subscriptions are paid in.

Subscriptions in London will be received by Messrs. Hodgson and Graves, 6, Pall-Mall; by Mr. Roberson, 51, Long Acre; or the London and Westminster Bank. STEWART BLACHER, Hon. Sec. 20, Gardeners'-place, Dublin.

**THE ROYAL POLYTECHNIC INSTITUTION, REGENT-STREET.** For the Easter Holidays. New application of the OXY-HYDROGEN MICROSCOPE (by Cary); its power and light applied to eighteen beautiful Dissolving Pictures, each magnified to a surface of 500 superficial feet. Among the 1000 Works of Art and Science which the Exhibition contains, are the PHOTOGRAPHIC PORTRAITS, the magnified and illuminated DAGUERRETYPE VIEWS, the PANORAMA OF CANTON, the Table des Mareschaux, the Models in Motion, Diving Bell and Diver. The Electrotypes, and other popular Lectures, and the Bude-Light.—A Band of Music mornings and evenings.—Admission, One Shilling.

TO ARTISTS AND OTHERS.

**T. MILLER**, of 33, Rathbone-place, begs to submit to the Profession, an entirely new mode of holding the Palette, introduced by Mr. Weld Taylor. It is held in the same manner as the one in general use, but the thumb-hole is dispensed with, obviating the misery of oil and colour running through upon the hand. It is a Chinese invention; and, no doubt, will entirely supersede the old plan. To be had of T. Miller, 33, Rathbone-place; also every material for Drawing and Painting.

ARTS AND LITERATURE.

**MR. JOHN BURTON**, Auctioneer, 69, Bold Street, Liverpool, respectfully intimates that his extensive Rooms are now open for the reception of Works of Art in Painting, Sculpture, Engraving, and those objects of interest to the Antiquarian and Virtuoso, in which skill or ingenuity in other branches of the Arts has been exercised; and for LITERARY PROPERTY, of whatever description, intended for Sale.

Liverpool, owing to the wealth, the taste, and the liberality of her merchants, being acknowledged one of the first Ports in the Empire for the disposal of Property of the descriptions above-named, Mr. J. B. begs to call the attention of Executors, Dealers, and others, to the matter of this Advertisement, most respectfully soliciting their support, and assuring them that it will ever be his pleasure, as his duty, to discharge with promptitude the business committed to his trust.

References will gladly be given to Parties requiring them.—No. 69, Bold-street, Liverpool, 1841.

BY ROYAL LETTERS PATENT.

**THE DAGUERRETYPE**, 89, High Holborn. CLAUDET and HOUGHTON beg to announce to the amateurs of this wonderful discovery, that they are now enabled to supply all persons wishing to use the invention for amusement or experiment, with complete Apparatus, Prepared Plates, &c., &c., at a very moderate price. They have on hand for sale the finest COLLECTION OF VIEWS obtained by the DAGUERRETYPE, of some of the most remarkable places and monuments in the world, figures from the living model, &c., from 10s. 6d. and upwards, at CLAUDET and HOUGHTON'S Glass Shade and Window Glass Warehouse, 89, High Holborn.

Published in 4to., Price £4 10s., in French boards; and on Royal Paper, 4to., with proof-impressions of the Plates, and a Portrait of the Author, price £7 17s. 6d., half morocco, gilt tops.

**TREATISE ON PAINTING.** In Four Parts. Illustrated by One Hundred and Thirty Enchings from celebrated Pictures of the Italian, Venetian, Flemish, Dutch, and English Schools; and Wood Cuts. By JOHN BURNET, F.R.S. The Parts may be had separate.

1. On the EDUCATION of the EYE. Second Edition. Price £1 5s.
2. On COMPOSITION. Fifth Edition. Price 15s. in boards.
3. On LIGHT and SHADE. Fifth Edition. Price 18s. in boards.
4. On COLOUR. Fourth Edition. Price £1 11s. 6d. in boards.

This Work is particularly recommended to the Student in Art in the New Edition of the Encyclopædia Britannica.—See the article Drawing.

James Carpenter, Bond-street.

Now ready, Parts I. and II., in twenty plates each.

**THE LIBER STUDIORUM OF CLAUDE LORRAINE**; from the Collection in the British Museum. Proofs, touched with grey colour, £5 5s.; Plain, £3 10s. each Part. Also,

**SIR THOMAS LAWRENCE'S FINEST STUDIES** for his celebrated Pictures, in twenty plates, dedicated by permission to Her Majesty, of Portraits from various celebrated Collections, price Five Guineas; touched as fac-similes of the drawings and size of life.

Engraved and published by F. C. Lewis, Engraver of Drawings to the Queen, 53, Charlotte-street, Portland-place, London.

**A DICTIONARY OF GREEK AND ROMAN ANTIQUITIES.** By various Contributors. Publishing in Monthly Parts, price 1s. each, forming, when complete, one volume 8vo. Illustrated by many hundred Engravings on Wood. Section I. (Parts I. to X.) Price 10s. sewed. Part XVI. was published on the 1st of April.

"As a Dictionary, it is not only the best aid to the study of classical antiquity which we possess in our language, but will also tend to develop and serve to guide that refined taste which it is the great object of classical studies to produce."

"Valuable as this Dictionary must be to the students of ancient literature, it will be of scarcely less service to the students of ancient art; for the illustrations have been selected with care and judgment. This is high praise; but it would be easy to justify it by a reference to the work itself."—*Athenæum*, Jan. 30, 1841.

Printed for Taylor and Walton, Upper Gower-street.

**JOHN CLARE, THE PEASANT POET.**—

It is well known that this amiable man, and highly distinguished poet, has been for some years subject to such aberration of mind as rendered it necessary that he should be removed from his family, and placed in a situation where the best medical treatment and most judicious means of management could be engaged in contributing to his recovery. He has now been under the care of Dr. Allen, of Fairmead-house, Epping Forest, for nearly four years; and it is with much pleasure that all the friends of humanity and admirers of genius will hear, that in Dr. Allen's opinion Clare's recovery would soon be complete, if his anxiety for the welfare of his family could be relieved by the consciousness that he had an income more adequate to their support. A subscription was made towards this object in 1830, which amounted to £393 15s. It was placed in the funds, under the care of trustees, and the interest derived from it is paid half-yearly to the family; but the amount from this source, at 34 per cent., is only £13 15s. 6d. per annum. The Marquis of Exeter also very generously allows Clare £15 a year, and Earl Spencer has most kindly continued his late noble father's bounty of £10 annually. These sums amount altogether to nearly £39 a year. If £500 more could be obtained, or the income of the family could be raised to £60 a year, it is confidently expected that the happy event of Clare's restoration to health, and to the society of his beloved wife and children, would soon be accomplished.

Donations or Subscriptions will be most thankfully received by Dr. Allen, of Fairmead-house; Messrs. Taylor and Walton, 28, Upper Gower-street; Messrs. Hatchard and Son, Piccadilly; and Messrs. How and Parsons, Fleet-street. The following Bankers have also kindly consented to open books at their houses for the same benevolent purpose:—Messrs. HARRIS, FARQUHAR, and Co., St. James's-street; Messrs. LABROOKS, KINGSCOTE, and Co., Bank-building.

# THE CELEBRATED UNIQUE BIBLE,

AS ILLUSTRATED BY THE LATE MR. BOWYER, IN FORTY-FIVE VOLUMES FOLIO, VALUE 3000 GUINEAS,  
TO BE DISPOSED OF

ON THE PLAN OF DRAWING FOR PRIZE PICTURES AT THE "ART-UNION,"  
AND, AS A SECOND PRIZE,

A GRAND HISTORICAL PICTURE, VALUE 500 GUINEAS,

(By the late W. HILTON, Esq., Keeper of the R.A.)

Every Ticket is a Prize, for every Holder of a Ticket receives its full value (£10 10s.) in Plates selected from Mr. Bowyer's Splendid Publications.

These include "The Interior of the House of Lords," with nearly 200 Portraits of distinguished Peers; the "Magna Charta;" the "Lady Jane Grey;" "Babington's Conspiracy;" "Surrender of Mary Queen of Scots;" "The Trial of Lord W. Russell;" "The Commons in Debate;" with 186 Portraits of Legislators; "The Transfiguration," by Raffaele; "Portraits of the Duke of Wellington (after Sir T. Lawrence) and Queen Adelaide;" and numerous works in Series, many of which are extremely rare, and all of approved beauty and value.

Thus secured from loss, the Purchaser of a Ticket has his choice from this inestimable collection, and the chance of the original picture of "Wellington's Entry into Madrid," or of the magnificent Bible.

The Subscription Lists are filling rapidly, and the daily communications from the country render an early application advisable.

## COMMITTEE.

*The following Subscribers have kindly consented to form a Committee, to act as a Board of Trustees for the Public upon the occasion of Drawing the Lottery.*

The Right Hon. Lord GEORGE PAULET, &c. &c.

Rev. H. J. KNAPP, D.D., Subdean of St. Paul's Cathedral, and Priest in Ordinary to Her Majesty.

WILLIAM UPCOTT, Esq.

ROBERT SMIRKE, Esq., R.A.

BENJAMIN BOND CABELL, Esq., F.R.S. and F.S.A., &c.

JOHN YOUNG, Esq.

JOHN LANDSEER, Esq., F.S.A. and A.R.A.

The Rev. RICHARD CATTERMOLE, B.D., Secretary to the Royal Society of Literature.

GEORGE GODWIN, Esq., F.R.S. and F.S.A.

C. LANDSEER, Esq. A.R.A.

LEWIS POCOCK, Esq., F.S.A.

CHARLES ROBERT ELLISTON, Esq., Secretary.

Bowyer's Bible and Hilton's Picture, the Great Prizes and numerous specimens of the plates for selection, may be inspected from 11 till 4, daily, at 22, Golden Square.

## PLAN OF DRAWING.

350 Tickets, with the Subscribers' Names, to be placed in a Wheel. The bearer of the first drawn name will be entitled to Hilton's Picture; the last drawn will have the 45 splendid volumes of the Holy Scriptures.

Each Subscriber receiving the full value of his subscription in Prints not connected with either of the Great Prizes, so that there can be NO BLANKS.

## BY HER MAJESTY'S ROYAL LETTERS PATENT.

**WINSOR AND NEWTON'S TUBES OF OIL COLOUR.**—This beautiful invention obviates the numerous imperfections attendant on the use of BLADDER COLOURS, as the bladder in which the paint is enclosed being porous, allows the oil to exude; and thus, by admitting air, the colour necessarily hardens, becomes contaminated with skins, and frequently more than half of it is rendered totally unserviceable.

The PATENT TUBES are formed of stout cylinders of glass, hermetically secured with an air-tight piston, traversing the tube, and ejecting the colour by a gentle pressure.

The colour being visible through the glass, the artist immediately perceives the one he may require, and the air being excluded, no smell can proceed from them. They are also so perfectly clean to handle, that oil pictures may be executed without the least soil on the table, or on the hands of the artist.

To be had, wholesale and retail, at their Artists' Colour Manufactory, 38, Rathbone Place, London.

Newly invented Zinc Panels for Miniatures and other highly finished Paintings in Oil, and all the new manufactures of the trade.

## ANTI-TUBE BLADDERS OF OIL-COLOUR.

—The great success that has attended the ANTI-TUBE BLADDERS OF OIL-COLOUR, as prepared by WARING and DIMES, having induced others to imitate them, W. and D. in justice to themselves have to state, that the adaptation is entirely their own invention and perfectly novel. To those gentlemen who have given them their patronage they return their thanks, and feel confident these Colours have only to be used to experience the comfort and convenience that attend their plan. The ejection of the Colour from the Bladder is the work of a moment, as there is no machinery to arrange: the colour is easily perceivable, the same being very legibly printed on the top of the cap, and may be preserved for a length of time. Sold in any size bladders up to 8oz., at the extra price of 2d. small bladders, and 4d. large bladders, allowing for returned tubes.

**PREPARED CANVASS WITH INDIA-RUBBER GROUND.**—This article having now stood the test of some years, and patronised by the first Artists, is worthy the consideration of those who would preserve their pictures from the effects of time. The Ground used in preparing this Canvass renders it perfectly secure from cracking or peeling off. Prepared only by Waring and Dimes, Artists' Colour Manufacturers, 91, Great Russell-street, Bloomsbury. An extensive assortment of Crayons, Drawing Papers, and every material in the Arts.

## SPLENDID AND SUPERIOR GILT FRAMES.

**CHARLES McLEAN**, 78, Fleet-street (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET OF DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All goods taken back, not approved of in three months.

**ELEGANT AND ORNAMENTED PICTURE FRAMES OF A SUPERIOR DESCRIPTION, WARRANTED TO CLEAN.**

**C. J. ECKFORD**, 45, FLEET-STREET, corner of Mitre-court, Temple, opposite Fetter-lane, begs leave to inform Artists, the Trade, and Public, that they can obtain A LARGE AND CLEAR EXPLANATORY SHEET OF DRAWINGS, with numerous elegant Patterns, the Size and Prices attached to the various Frames, sent gratis and free of postage to any part of the United Kingdom.

Old Frames re-gilt; large and small Miniature Frames at proportionate prices. Fancy-wood Frames of every description. Orders from the country punctually attended to. ESTABLISHED 1792.

**CHEAPEST AND BEST MANUFACTURED PICTURE FRAMES IN THE WORLD.**

**P. GARBANATI, WORKING CARVER** and GILDER, 19, St. Martin's-court, St. Martin's-lane, respectfully informs Artists, &c., that as he Manufactures every description of ornamented, Gilt, and Fancy-wood Picture Frames entirely on his premises, he is enabled to offer them at such low prices, that he defies competition. A most extensive assortment of every description of Picture Frames kept ready. Re-gilding, in all its branches, done in a most superior manner, and cheaper than by any other Gilder in the kingdom. Estimates given free of charge.

P.S. A List of the Prices of PLATE GLASS, Gilt and Fancy-wood Picture Frames, Room Mouldings, &c., can be had at the Manufactory (gratis), or sent (pre-paid) to any part of the Kingdom.

P.G. respectfully solicits a Trial of his Work, for comparison of Quality and Price, with other Manufacturers.

**THE LONDON, EDINBURGH, and DUBLIN GUARANTEED MUTUAL and PROPRIETARY LIFE ASSURANCE COMPANY**, 3, Charlotte-row, Mansion-house, and 19, Regent-street, London; 21, St. Andrew's-street, Edinburgh; and 64, Fleet-street, Dublin.

**DIRECTORS.**  
Alexander Anderson, Esq. Kenneth Kingsford, Esq.  
John Atkins, Esq. John McGuffie, Esq.  
James Bidden, Esq. John Maclean Lee, Esq.  
Captain F. Brandreth. J. Marm. Rosseter, Esq.  
Vice-Ad. R. Honyman. Sir William White.  
Benjamin Inall, Esq. Alex. Robertson, Esq.,  
John Johnson, Esq., Ald. Managing Director.  
Auditors—H. H. Cannan, Esq.; R. E. Alison, Esq.  
Medical Adviser—Marshall Hall, M.D., F.R.S. L. & E.  
Solicitors—Messrs. Palmer, France, and Palmer.  
Secretary—F. Edgell, Esq.

The Policies are indefeasible and indisputable, unless they have been obtained by fraudulent misrepresentation.

Any important mistake, or even an unintentional omission, in communicating information, in answer to the numerous questions put by other companies, has the effect of annulling the policy, and forfeiting the premiums—thus rendering it in general a matter of uncertainty (until the claim comes to be made) whether the policy be of any value. The London, Edinburgh, and Dublin Assurance Company, determined to obviate what they consider injustice to the assured, satisfy themselves upon the various questions proposed by them before they enter into the contract of assurance, and frame their policies in such terms as to preclude all future questions as to their validity, and thus render them indefeasible and indisputable documents of future debt against the Company. The policies of this Company may, therefore, be regarded as certain available future funds, and as unimpeachable and negotiable documents for pecuniary transactions.

One half of the premiums may remain unpaid for seven years—affording a greater facility for loan transactions and family provisions than any other plan which has been suggested—allowing a policy to be dropped at one half of the usual sacrifice—and entitling the assured at a future period, when loss of health may prevent him from obtaining a new assurance, to continue a policy for double the amount of the sum for which he has paid premiums.

Parties may be assured either upon the participating or non-participating plan; the former are entitled to the whole of the profits upon that branch of the business, and the latter are assured for the lowest premiums compatible with perfect security.

The usual commission allowed to solicitors and agents; and medical gentlemen are in all cases remunerated for their reports.

## THE ART-UNION.

LONDON, APRIL 15, 1841.

## COPYRIGHT IN DESIGN.

We have before us a pile of pamphlets, a heavy Parliamentary report, several heavier debates, a clever "Digest of Evidence," by Mr. Emerson Tennent, and files of Lancashire papers, filled with letters on the subject of Copyright in Designs; but nearly all of them discuss the value and expediency of copying, passing over that which is the most essential element in the controversy—the preliminary question of *right*. It has been long a fashion with superficial reasoners, to assert that property, in the abstract, is the creature of law; because certain species of property are undoubtedly of legal creation, and they repeat this mischievous absurdity with cuckoo pertinacity, mistaking identity of assertion for continuity of argument: expecting, "like the Heathen, to be heard for their much speaking." The utter nonsense of this opinion may be shown in a moment: "property" may be justly defined "the transference of a man's individuality to some animate or inanimate object by appropriation;" and to the common question, "when did property begin?"—the answer is "with the first breath which man drew in this world, when he made a portion of the air his own by inhaling it."

To say that society has created property, is not one whit less absurd than to assert that society has created man; the savage is, in this case, wiser than certain philosophers: ask his *right* to his fish, his fruit, his arrows, or his hut, and he will give you no wire-drawn distinctions about the propriety of encouraging industry by protecting its savings, but he will boldly answer, "the fish is mine, for I caught it; the fruit, for I plucked it; the house, for I built it;" he proves his title by that most conclusive argument, so frequently employed by logicians—the exclusion of all the contraries—"To whom should this belong, if not to me?" The articles wear the imprint of his labour, and are assimilated with himself. No man has ever existed, nor, indeed, is it possible to conceive his existence, without some property; the lowest inhabitant of the Aleutian Islands, the most degraded savage in South Australia, calls his fish-hook, his canoe, or his game, *his own*, and resents every attempt to deprive him of them as a gross outrage.

If the absurdity of calling "property the creature of law," and confounding two things so obviously distinct as creation and protection, had been limited to Owen and his followers, we should no more have attempted to refute such a folly than we should have laboured to demonstrate the existence of the sun to a blind sceptic; but the Owenites have some respectable companions in their delusion, and its exposure is therefore a matter of painful necessity. The process of effecting that individualization of objects, or that relation between men and things, which is called property, may be effected either by production—making a boat, building a hut; by appropriation—gathering fruits, taking fish; or by occupancy, that is, declaring a right of property in something fixed, such as land, and being able to maintain it. The third is the only form of property which can, in any way, be deemed a legal creation; and even that, when closely examined, will be found not to have derived its origin from law, but simply the definition of its tenure.

We are surprised at the undefined state of property in those early stages of society, when piracy was considered an honourable employment, fit to be the profession of nobles, and the theme of eulogy for poets; but we must not forget that we have in our own day rights of property still unrecognized, which are to the full as sacred as those

acknowledged for centuries. There was no copyright in early times, because there were no arts of printing and engraving to make books, paintings, and designs yield profit; and for this exquisite reason, there are many at the present day who believe that copyright is an invented thing, held as a grant bestowed by the mere grace and pleasure of society; nay, more, as the title of one of the Manchester pamphlets aptly expresses it, "The Policy of Piracy as a Branch of National Industry, and a Source of Commercial Wealth," has been expounded and enforced before a Committee of the House of Commons; with Statistical, Geographical, and *Moral* Illustrations, by persons invested with magisterial dignity, and engaged in the administration of justice.

Now, the right of property in any invention or production is far clearer and more easily deduced from absolute principle than any other. It is the title of actual production and pre-occupancy. The claimant of copyright does not ask the legislature for a title; he has that already from the Being who endowed him with talents and industry; he only asks to be *secured* in his right; he demands that society should fulfil the ends for which it exists, and give protection to the property created, independent of it. A law of copyright is not so much, "a law for the encouragement of literature and art;" as "a law for doing justice to literature and art;" society has a right to prescribe the conditions on which it will give protection; but these conditions, to be equitable, must be regulated and proportioned by the nature and amount of the protection.

This simple reasoning is sometimes met by a miserable quibble; it is said that protection gives the value to the property, and therefore may in effect be said to create it. We may cheerfully grant that any species of property deprived of legal protection will be worth very little; if fisheries were placed beyond the pale of the law, we should soon see the rights of fishery without a price in the market; if game should be declared common property, few would incur the expense of a pheasantry. But this wretched objection defeats its own end; for it includes within itself a confession that there exists a species of property, which would have a price and value if it received the same protection extended to other forms of property but which is deprived of its fair worth, and therefore of its fair right, by the refusal of protection.

Copyright, however, is further resisted because it creates what some people are pleased to call a *monopoly*. The whole force of this objection consists simply in the fact that monopoly is a word of four syllables, to which abuses utterly unconnected with copyright, and as unlike to it as possible, have given an odious and unpopular signification. Cervantes tells a story of a madman who, having been punished for beating a spaniel, ever afterwards mistook all dogs for spaniels; and so, because giving men an exclusive use and enjoyment of that which was not their own by any natural right, has been branded as a monopoly; securing to men the use and enjoyment of that which is their own, the result of their own ingenuity and industry, must also bear the odious name. Had "monopoly" been a shorter word, and in more common use, this "sophism of name" could never have been perpetrated. We wish that the clever authors of the Manchester pamphlets, in their next edition of "Argument Made Easy," would give us a chapter "On Measuring the Value of an Objection by the number of its Syllables."

"Monopoly," in its proper sense, is "an unjust usurpation of a public right by privileged individuals;" but where is the *public* right in the author's book, the painter's picture, the inventor's mechanism, or the artist's design? Are the copyists prepared to maintain that invention itself is a usurpation, an invasion of the rights of stupidity? Authors and artists complain of a private wrong; they are answered by being accused of a desire to usurp a public right; assuredly, then, we have a right to enquire what the asserted public right is, and how it came into existence? We can discover no source for it but that which has been revived by the modern school of piratical economy; namely, the will and pleasure of pirates, who insist that inventions should be common property, that they may appropriate it by plunder.

The claims of literary productions and mechanical inventions to some degree of protection have

been recognized, although very reluctantly and imperfectly; but there are species of artistic property, to which all protection is ostentatiously refused. A pirate may copy and multiply the copies of a picture, without the artist's permission; he may engrave from the copy which he surreptitiously procures, and anticipate the artist in the market. This is in principle the same as permitting a robber to carry off the ears of corn, provided he leaves the stalk; to drink the wine, provided he spares the cask. It is in fact—

"The good old rule, the simple plan,  
That they should take who have the power,  
And they should keep who can."

The only safety which the artist possesses now, is derived from the natural difficulties that impede the pirate; but if an extension of the Daguerreotype should facilitate the copying of pictures—and such an invention is not beyond the range of probability—painters, like designers of patterns, would soon find art a losing pursuit, and our School of Painting would follow the fate of our School of Design; that is to say, it would become the worst in Europe.

It has been said that authors and artists derive their ideas from materials accumulated during past ages; that they do not *create*, but *combine*, and therefore that they have no particular right to their ideas. Now, setting aside the very obvious fact that a new combination is, in fact, a new invention, let us test the principle by applying it to other forms of property. Is the right of the agriculturist to the produce of his farm, weakened by the fact of his having learned the best modes of tillage from past and present experience? The objection might be entitled to some weight as an argument against *perpetual copyright*; but, as this has never been claimed, the reasoning, such as it is, has no bearing on the question really in issue.

We are told that this copyright is a new claim; and so it is, for the very obvious reason that the property to be protected is a new thing. Until there were facilities for multiplying copies of books, prints, and patterns, the originals had no moneyed value as subjects of copy; they do now possess such value, and have therefore become property, not by any act of the legislature, but by the ordinary progress of society. Those who, in this instance, declaim about innovation, would seem to reason as if property could not demand protection, unless its claim had been made before it came into existence. This is like requiring a child to lay claim to an estate, before itself was born, or the estate acquired. Those who use such an argument would do well to learn some portion of philosophy from Mrs. Glasse's receipt for dressing hare-soup, "first catch your hare;" men must have the property before they feel the want of the protection.

That which has created the chief value of the property, has also produced the most urgent necessity for its protection, namely, the facility of multiplying copies. Lockett's *Excen-trics*—the most wondrous machinery that exists in this age of mechanical wonders—will copy the most elaborate design with a rapidity which must be seen to be believed. These machines combine the excentric check with Colas's process for engraving in relief, and they achieve the most complicated pattern. The electrographic processes of Spencer, Palmer, and Jacobi, have recently furnished additional facilities to the copyist; that is to say, they have increased the value of the design, and at the same time rendered the tenure of its property more insecure. Assuredly moralists would deprecate the progress of improvement, if its only results were temptations to piracy and helps to robbery.

But we are told that these designs are so trashy and insignificant, that they are not worth protection. It is, however, a clear case, that they are worth being pirated, and in ordinary matters we should be tempted to conclude that what is worth stealing is worth keeping. Granting, what indeed is undeniable, the inferiority of English designs, it is as clear as daylight that this is owing to the absence of protection. Patterns are careless and hasty productions, for the same reason that the coasts of England and France were left uncultivated in the times of the Northmen; people will not expend labour, time, and money, for the benefit of pirates. In France, designs are protected, and in France designs are superior; it is easy to

connect the two facts as cause and effect; we know that orders to artists of the very highest class are at this moment contingent on the success of the claim for protection of copyright.

The present limited protection is absolutely nugatory; friends complain of it as inefficient, enemies boast that they ostentatiously disregard it. Mr. Louis Luc is declared, that "it never entered into the heads of himself or his partners to enquire whether patterns offered for sale were private property or not," and others declare that they never regarded the existing law as any protection at all. Let us take one simple instance of the monstrous injustice that may be perpetrated, when property is thus left without protection; it is not solitary, and we need not therefore introduce personality by the mention of names.

A Dublin manufacturer devises a pattern of such striking beauty, that on showing it in a large Manchester house, he receives so large an order, that he is compelled to execute it by instalments. After half of the goods ordered has been delivered, the Manchester gentlemen refuse to take the remainder, unless a reduction be made in the price; the Dublin manufacturer refuses, but not having a written agreement, he is unable to compel them to receive the goods, and besides, feels confident that he can dispose of them elsewhere. The Manchester gentlemen are too quick for him; they get his patterns copied, print them on inferior cloths and with soft colours, undersell the inventor in the market, and not only injure the sale of his superior goods, but expose him to the imputation of having produced their inferior article. Here, then, is a specimen of the justice proposed by the new school of piratical economy; a man who exerts industry and ingenuity to devise a new pattern, is not only to be deprived of the fair fruits of his labour, but to receive the additional injury of having the character of his house depreciated into the bargain.

It might to most people appear unnecessary to prove, that the production of a good design requires some outlay in time, talent, and money; but as there are some who doubt the fact, we shall indicate some of the sources of expence. Many combinations must be made, many experiments tried; designs which look well on paper will not always succeed on cloth; in point of fact, not more than twenty per cent. of the designs produced are selected for printing: again, not more than a fourth of the designs selected can be fairly expected to succeed with the public, for taste is so capricious, that no man can predict what will take and what will not. An inventor, therefore, has to bear, not merely the cost of producing a design, but also the cost of the rejected designs, and the loss on the prints that have been total or partial failures. The copyist is exposed to none of these hazards; he "takes up that which he laid not down, and repeats that which he did not sow;" there is exquisite modesty in his demand that he should be permitted to continue this course, because he finds such a system profitable. Since the days of the buccaners, we have not met so bold a defence of free-booting under the name of free trading.

"But," say the copyists, "if we do not rob the inventors of designs, the printers on the Continent will do so; and it is better for the nation that the plunder should be in our own pockets, than in theirs." To this admirable reasoning, which shows that we ought to pick the pockets of their neighbours, in order to protect them from thieves, Messrs. Ross, T. Lockett, and Professor Riddle Wood add, that foreigners have peculiar facilities for copying, which can be adequately met only by encouraging piracy at home. This is in fact a revival of the argument by which the slave-trade was defended—"If you do not kidnap the Negroes, the French and Spaniards will." The supposed facilities possessed by foreign copyists exist in the evidence of the "three aforesaid gentlemen, and no where else." Mr. Thomson's "Notes on the Present State of Calico Printing in Belgium," and the evidence collected by Mr. Emerson Tennent, effectually settle that question. Foreigners cannot procure the cloth on such reasonable terms as the British printer; they cannot print so cheaply, and they have not convenient opportunities for bribing workmen to betray the secrets of their employers' manipulation. It is not an impossible event—it has actually occurred—that the secret of a new design being in preparation has come to the ears of

a rival; that its secret has been purchased from a treacherous servant; that the copy advanced *pari passu* with the original, and of course could be sold at a price below that which would remunerate the original inventor. So much for the morality taught in the new school of piratical economy.

It may be worth while to enquire whether the present state of the law is not injurious to the clever and intelligent portion of the copyists themselves, and profitable only to those who combine incurable stupidity and obstinate ignorance with incurable avarice. After all that moralists and divines have written, appeals to the consciences of men are not so efficacious as appeals to their breeches' pockets; and we may therefore be permitted to show that calico-printing is no exception to the good old aphorism that "Honesty is the best policy."

A new pattern suggests several possible variations of form and colouring, based on the original design, but differing from it so much in individual forms or in details, as not to come within the protection of copyright; in other words, a new pattern may directly lead to several other patterns of the same general character, or what is called "a new style." We have before us specimens of sixteen different patterns, all derived from one original, well-known to the trade as "Lane's Net." Now, copyright protects the pattern and not the style; so that a really good and new design opens a mine of ideas for the whole trade, which they may work simultaneously, provided they do not infringe the original design. The short-sighted opposition offered to the protection of designs must therefore keep closed valuable mines of permutations and combinations, which are far more likely to produce profit than piratical imitations of the inferior designs which the present system of policy allows alone to be produced.

There can be no doubt that the introduction of the Arabesque style into printed furniture would suggest an inexhaustible variety of beautiful and graceful patterns, but the first introduction of such a design would entail very heavy expenses, if the execution were at all worthy of the plan. But before the work could become known to the public, copyright would have expired; during the brief interval of protection, copyists would have made all the necessary preparations, and the original proprietor would find himself undersold almost before he was in a condition to sell.

Until protections be given to patterns, schools of design are no better than schools for "teaching how to starve for the good of others;" and assuredly this is a form of National Education not likely to become popular. Art is confessedly low in proportion to the other branches of intellectual industry; and so it must continue to be while the protection of law is refused to the products of artistic labour and skill. The claim for copyright is not, consequently, a selfish demand: it is a claim founded on the most obvious principles of right, and, furthermore, sanctioned by the plainest dictates of common honesty, common justice, and common sense.

W. COOKE TAYLOR.

#### EXHIBITION AT THE LOUVRE.

What is our first emotion on entering the Gallery of the Louvre in a new season? Is it not to look for the works of those we have admired in former years. Alas, in 1841, for many of these we look in vain, we miss many a wellknown name; even pictures we had seen elsewhere and hoped to see again in the Gallery are not there. Of M. Ingres there is nothing, nor of Messrs. Delaroche, Scheffer, Decamps. Nothing from Horace Vernet, nor Couder, nor Camille Roqueplan, nor Adolphe Brune, nor M. Eugene Isabey, nor M. Jules Dupré, nor M. Brascassat. It would seem as if these gentlemen neglected the annual exhibition as unnecessary to their fame, but let them beware no other such field exists for obtaining a universal celebrity, as this, and the world is apt to forget those whom it does not see. Nor let it be thought that the Gallery is barren, crowds of young artists are struggling into excellence and fame; many worthily replace the absent. The gallery is full, and in every style we find the usual variety of compositions. The works of sculpture are perhaps less numerous than usual; but we must not judge of its advance merely by the nu-

merical catalogue. In grand historical composition we have some noble pages, and some striking failures. We recognise the painter of the 'Prison of Tasso,' and the 'Battle of Cassel,' improved in his art; in M. Gallait's scene from Spanish history, 'Charles V. resigning the Government of the Low Countries to his son Philip,' Charles places his hand on his son's head while he leans on William of Orange, a noble and majestic figure; the whole assemblage is magnificent, the subject is treated with breadth and clearness, and the tone of colouring is warm and vigorous. M. E. Delacroix gives us the 'Crusaders entering Constantinople.' The vanquished fly in all directions, old men and women throw themselves on the ground imploring the mercy of the conquerors; in the distance is an immense perspective of the city and the blue Bosphorus, blue hills and grey sky, such as perhaps are never seen in the east. In short we have in this picture all the merits and defects of M. Delacroix's eccentric pencil, which have been the subject of discussion for ten years past, leading to but one useful result, a distaste to extreme opinions.

Further on in the gallery, M. Blondel has placed the "heroes of the Crusades before the Walls of Acre"—the city has capitulated; to the left, the banners of Philip Augustus and Richard Cœur de Lion float on its towers, in the centre, march an indignant band of disarmed Mussulmans, and to the right, the besieging army is seen in order of battle. This picture happily recalls some of M. Blondel's former efforts. Still further on M. Schnetz has encamped the "Crusaders before Jerusalem:" it is the moment of a solemn procession on the arrival of the Genoese fleet. Of the two aspirants to succeed M. Ingres at Rome, the successful competitor does not here also bear away the prize from his rival. We have the 'Return of St. Louis from Palestine landing at Hyères,' by M. Arsenne. The 'Sinking of the Vengeur,' according to the French version of the story by M. Leullier, a bold and vigorous picture. From M. C. L. Muller, we have 'Heliogabalus in his Car, drawn by women, and surrounded by bacchantes, satyrs,' &c. From M. Alaux we have three pictures which place his name very high in modern art. They commemorate three occasions prior to 1789, when the people rose to the surface of the political horizon. 'The Meeting of the States General at Paris under Philip Augustus,' 'The Assembly of the Notables at Rouen under Henry IV.,' of 'The States General under Louis XIII.' These pictures are in a grand style, the composition shows excellent judgment, and they possess great truth. Of religious pictures in a great style we have the 'Resurrection of Lazarus,' by M. Vanden Bergh; a 'Holy Family,' by M. Mottez, which breathes sweet poetry; 'Ecce Homo,' M. Jouy; 'The Flight into Egypt,' by M. Ducornet, that meritorious painter whose works do not betray the cruel infirmity under which he labours, the being without arms. 'The Annunciation to the Shepherds,' M. Cibot; 'Saint Agatha and Saint Genevieve,' M. Gigoux; and four or five other religious subjects treated by Messrs. Jolivet, Varmer, Vaines, Carbilliet, Louis, and Glaize. These pictures represent what is called Christian art, that is, a certain mystic poetic sentiment should be diffused over the work, leading us to feel more than we see. The subject is delicate, and might deserve long discussion; perhaps we may return to it. Of the present matter before us, we think we may safely say that there is more prose than poetry in the pictures exhibited with religious subjects. Of subjects of fancy, life-size, we have M. Decaisne's 'Francesca di Rimini.' M. Tissier has: unmercifully left a sleeping beauty exposed to the inquisitive gaze of the satyrs of the forest. M. Eugene Appert has called by the name of Sarah, and attired in oriental costume, a pretty coquettish young lady, entirely French in air and character. M. Coutine leaves by the wayside the prodigal son without food or clothes, and yet more without oriental poetry. M. Jaquand gives the 'Death of Charles de la Tremouille,' as described in our last number. We pass to subjects of smaller dimensions: 'The Scene in the Inquisition' by M. Robert Fleury, is a work so perfect in all its parts that the most hostile critic must admire it, and so deeply impressive in its effect, that the sensation it inspires is almost terrible, animated as it is to dramatic interest by the skill of the author. It is

a work time will consecrate, and assign to it a brilliant page in the history of the school of France. In the 'Last Judgment,' by M. Gué, the mortals recalled to life are numerous as the sands on the sea shore. We have 'Christ at Calvary,' by M. Steuben; and among a multitude of works we may remark the new interest to a hacknied subject given by M. Auguste Leloir, by the purity of his style and the noble simplicity of the action in his 'Homer singing his Poems.' M. Biard, it is well-known has brought from Lapland views of such truth and terrible power that their icy aspect chills the heart. He also gives us the glorious death of the Commander of the Couëdic, mortally wounded in an engagement with an English frigate: he has been carried on deck and is surrounded by his crew.

M. Joyart makes some beautiful women, with copper complexion and in luxurious attitudes of repose, singing "by the rivers of Babylon." M. Loubon gives "The Annual Migration with their Flocks of the Shepherds of Camargue to the High Alps." We must pass over many pictures worthy of mention, and come to the easel pictures and domestic subjects, and the thousand fancies that drop from the roving pencil of the artist. M. Baron has made a graceful and charmingly coloured picture, having for subject 'Ribera as a Child.' The subject is less interesting than a work of M. Jaquand, engraved by M. Allain, also from the life of Ribera; it is when passing along the streets of Rome, Cardinal Ximenes sees a boy with some pieces of bread lying beside him, in rags, earnestly engaged in drawing some objects before him. He stops his carriage, enquires, and finds the youth is called Josef de Ribera; that, destined by his parents for a learned career, he was unable to resist his love of painting, and left all to paint in the studio of Francesco Ribatti. There he acquired much, but his desire was to study at Rome; thither he travelled on foot, and arrived as we have described. The cardinal took him into his family, and there was formed the great genius of Josef de Ribera. We say great genius, for he must not be measured by the specimens usually seen of his pencil, so called in England; they are much oftener by a far inferior hand, 'Il Calabrese.'

M. Tony Johannot has placed, reclining on soft couches, some Italian-looking women, who, in silence and reverie, seem enjoying a siesta. M. Diaz has given us an enchanting landscape, with a female figure reclining, and Love escaping among the trees. Again, he is with the Arabs in a burning desert. The 'Convalescent Pupil of the Polytechnic School,' by M. Destouches, with his pale face, and the anxious girl who supports his wounded arm, is an interesting and pleasing picture. 'The Stolen Child,' a spirited picture of gipsy life, by M. Grenier. M. Geniolo gives 'Fragments of Moorish Architecture in Grenada,' a 'Scene of an Inundation,' and 'The Refectory of the Trappists.' M. Steuben passes from biblical tradition to 'Napoleon in his Cabinet,' 'Esmeralda in her Little Room, with her Pretty Goat,' to 'The Noble Judith on her Way to the Camp of Holofernes.' M. Louis Leroy immortalizes the nation of rats with his usual felicity, translating one of the prettiest fables of La Fontaine.

In landscape, the gallery is comparatively more rich than in any other department, and we regret we can only name a few of the charming scenes before us. We pass M. Remond's immense canvass with 'Mount Carmel,' and 'Elias Exciting the People to Destroy the Worshipers of Baal,' a picture requiring much consideration; and turn to the pleasing fruits of M. Aligny's studies in Italy, all admirable; but his shepherds—are they more real than those of Theocritus or Florian? M. C. Brune has explored the depths of the Tyrol and the shores of the Seine. M. Calane has studied nature on the mountains of Switzerland; her pines and her oaks, and the effects of morning and evening light. M. Cabat gives two charming landscapes, executed in his old manner, 'A Farm,' and 'The Interior of a Forest.' The landscape by M. Francis is a work of vigour and imagination; but, of an ancient garden, it has nothing but the fanciful title. M. P. Gourlier gives 'Cimabue and Giotto' and the 'Isle of Capri,' studies full of feeling and pleasing ideas.

We are compelled to leave undescribed many works of merit in this department, especially Neapolitan scenes, of which our artists are never tired; and a yet warmer sun portrayed by M. Marhilat, gilding the Greek ruins around Beyrout.

Of marine subjects, we have almost a gallery by the single pencil of M. Gudin: battles, bombardments, &c. &c.; and his name is so justly celebrated, that we require only to say, that, as usual, his sea pieces are full of beauty. M. Francia gives the 'Striking of the Velocity on the Jetty at Calais, when the King was on Board.' M. Morel Fatio repeats the same subject; and also the 'Landing of the Ashes of Napoleon at Cherbourg.' M. W. Wyld and M. Lepoittevin carry us to 'The Bay of Naples,' and hardly can we realize, from his brilliant works, that the last named artist has been threatened with blindness.

In portrait, the exhibition is less rich than in landscape. To us it still appears M. Hippolyte Flandrin bears the prize of excellence from all rivals. His 'Portrait of Madame —,' minus the sympathy a young and beautiful woman always exites, is not inferior to his justly celebrated portrait of Madame Oudiné. His brother, M. Auguste Flandrin, worthily follows in his steps. M. Amaury Duval has lost nothing of his talent, but he will not easily find a face of such interest, nor a model in so pure a mould, as the young girl whose portrait had such success in the exhibition of 1839. Amongst a crowd of portraits, we may notice the happy and vigorous 'Portrait of the Poet M. Arsene Houssaye,' by M. Jules Varner. 'M. des Essarts, another of our Romance Writers,' by M. Vanden Bergh, speaks highly for the artist. MM. Juillerat, Louise, Denos, and Peragallo, have all executed portraits more or less remarkable.

The water-colour department of this season is ably filled. There are various charming views by M. Hubert, picked up here and there. M. Louis David gives a 'Tyrolian Family,' a 'Horse Race through Fields.' M. Finck gives some very pretty portraits. M. Pannier, M. Jules Etex, and Madame Laure de Lecomien, some very elegant ones, &c. &c. M. Dauzat gives five powerful sketches of the French army in the fearful defile, called 'The Iron Gates.' Crayons are dignified by the pencil of M. Marechal, of Metz; he gives 'The Gitano,' 'The Student,' and 'Two Male Heads.'

In sculpture, M. Etex has executed 'The Tomb of Géricault.' The illustrious painter is represented reclining, holding his palette, that which he used in bed till within a few days of his death. The statue is in marble; the bas relief, in bronze, is a copy of his 'Shipwreck of the Medusa,' on the sides of the pedestal, in stone, are engraved his 'Chasseur à Cheval,' and his 'Cuirassier.' M. Pradier has enlarged the proportions of the charming statue known as the 'Odalesque.' M. Bartolini, a Florentine sculptor, has personified in the nymph Arnina, the poetical inhabitants of the banks of the Arno. M. Jouffrays gives us a very striking work: it is called, 'Disenchantment'; it represents a woman, very beautiful, holding in her hand the cup of pleasure, empty. There is in the head of the statue an expression of melancholy, for which language has no word. In the relaxation of the arms and body, a weariness, for which *fastidium* *rite* is the best translation. We have 'Prometheus Chained,' by M. Legendre Héral, and 'Giotto Tracing the Head of a Lamb on the Sand.' M. Juley has modelled the statue of the Marschal Comte Gerard. M. Oudine the bust of M. Galle, &c. &c.

We have thus noted many of the principal works in the gallery. Some deserve more detailed criticism and a more full description; and, of some of these, we reserve to ourselves the right to speak hereafter; particularly of historical works—the style that should most directly fulfil the highest function of the fine arts—the teaching of the people. Who can tell the latent spark that may be awakened in a young or unformed mind by the contemplation of a picture that withdraws the mind from trivial thoughts by recalling what have been the worthy objects of exertion to the great and good of all times.

## OBSERVATIONS ON "THE HANGING OF PICTURES."

SIR,—Nothing can be more just than some of the remarks upon "Picture Hanging" by your correspondent "An Original Subscriber;" but they are not altogether new: he will find very similar recommendations in Blackwood's Magazine for March 1840. I should not now have troubled you with any observations, were it not my intention to revert to the subject; that being the case, it may be worth while to consider, or that your correspondent would reconsider, the good or bad effects of a slanting position: grant that it is in any case proper, his contrivance is simple and easy. Perfectly agreeing with him, that the horizontal line should be with the eye of the spectator, I would not make it so, by the forced position, if suspended high, and by thus making the picture meet the eye at right angles. It is fair to observe, that he seems to more than imply that it is still an evil by saying, "when circumstances render it necessary" to suspend a picture above its suitable position. The following reasons are important. The light, if it be good for the pictures underneath, must be bad for those inclined forward; and if not too high, they will receive reflection from below, from furniture, and even the floor; this I observed last year at the National Gallery; some of the pictures it was impossible to see, particularly the large Gaspar, the 'Abraham.' But there is a much stronger objection in all rooms lighted from above; you have the light more in your eye than on the picture, whereas when you look at a picture you should see no light but there, in fact be unconscious whence it comes. With any glare of light in the eye, it is impossible to judge of the proper effect of a picture; that is, if we judge, it is from habit; but we cannot truly feel the sentiment of the piece: it will make what is light, flimsy and poor; what is deep, will be more certainly destroyed, and obscurity take the place of well ordered chiaro oscuro and colour. The painter, aware of this, then best feels his subject, when he paints with a light from above, and that generally a small light; so it was at least with the old masters. Raffaele's was very small, and there is a natural reason for it, in which too is involved another objection. It is always painful to look up, not only as to the constrained uneasy position; and therefore you never should look at a picture, which requires long observations, under the necessity of calculating how long you may hold out, or rather hold up your head; but nature has done all that can be done to protect the eye from glare; notwithstanding that the poet says, that "Providence has given man a face 'sublime' (to look up), and bade him look at the heavens, and raise his erect countenance to the stars."—

"Os homini sublime dedit cœlumque tueri  
Jussit et erectos ad tydera tollere vultus."

Yet see how the poet labours with his own efforts; for in fact, before he can make his man look up, he thrice attempts the thing; for the separate passages of the two lines present but one act. If man has the face to look up, he has the face to look at the heavens; and if the heavens, the stars. I do not after all know that man can look up a bit better than a bear or a monkey, nor so well as some animals whose noses are in the way of their looking down. But that was well for the poet's argument, and has nothing to do with picture hanging; he never thought about that when he ventured to praise man's audacity. Now it happens that the human eye is particularly fenced in and guarded on all sides from that glare which it is sure to receive in so large a degree and unmitigated when raised. Socrates, reasoning with the atheist, Aristodemus, instances the delicate contexture of the eye of man, and that, therefore, Providence hath prepared eyelids like doors whereby to secure it, which, when necessary, extend and close in sleep: and these eyelids have on them a fence at their edge, "to keep off the wind and guard the eye," says Socrates; but it is much more probably to soften the light, which, thus passing through them, comes softened as through a sieve or blind. Then he compares the brow to a "pent-house," which has not only the purpose of keeping off matter from injuring the eye's surface, which the philosopher notices, but a double purpose, which it is surprising the son of a statuary (and himself had worked at that craft) should not have noticed, the

deep shadow thrown by the brow over the hollow in which the eye is placed, that thus looks out, and contemplates in shade, and as it were in retirement and at ease, whatever it selects to examine. How seldom is it, indeed, that the eyelids themselves are fully drawn back, excepting when we look up; but we naturally take advantage of the whole shelter and protection given us. When we *naturally* look up, it is when we are thrown out, as it were, of our common habit; it is when we are in agony of grief, and in supplication; then, indeed, being in pain we throw off all our wonted, and our own, because personally our, guards, and look for a protection beyond that given to us. Our hands and all our limbs are indeed then taken off from their daily use, and brought into that combined act of prayer, which shows a relinquishment of all other occupation, an abandonment of the body to the desires of the soul. Now let not this be considered a forced argument, because it involves such serious speculations. There is truth in it; and great truths have a wide range, and take in things small as well as great; their very beauty is in their many uses; and I believe no one who reflects upon it will doubt that the argument does bear directly upon Art in the manner I have put it. Thus then it is very manifest, that when the eye is raised for any length of time, as is required in looking at a picture, it is not in its quiescent, its habitual state, and therefore not fit for contemplation, for judgment, and consequently not fit to receive the pleasure which those faculties provide; that also it is in a state of pain, that being too forcibly acted upon by the light, losing the use of its natural protective powers, the eyelids, the eyelash, and eyebrow, it has lost its *measure* of light which is required to understand that of a picture; and the strained position of the neck, painful, and therefore unfit for a state of enjoyment, will not allow it time to adjust its powers properly to the new condition. I have often thought it of *very* great importance to consider this in the hanging of pictures; they are not like furniture to be seen at a glance or at many glances, they are to be seen in an untiring position. I would, therefore, were I to build a gallery for Art, take care to remove the temptation of space to hang pictures above the level of the eye. The picture, it may be said, may be so large that much must be above the due line: no, for the spectator should invariably retire till the whole piece come within his easy observation, and at such distance will be seen to its best. Take, for example, the large picture of 'Sebastian del Piombo,' in the National Gallery, how much is it injured by the horizontal line being so much above the eye; it sinks the principal group; and but that the figures in the back ground are small, they would appear to fall in confusion over the grand conception of the picture. The figure of the Saviour is but little above the centre line of the picture; the whole arrangement of the composition is to place him there, all the figures as lines converging to him, so that he stands, as it were, in a clear space for the display of his miraculous power; and it is not without design that immediately above him is the level stream and bridge, and the cloud above them, which, with the lines of the heads, arches in, as it were, the Divine person. But is this, the intention of the great painter, at once discernible? has it its miraculous, its instantaneous effect? No, we cannot see it as it should be seen, the eye upon the horizontal line. We, indeed, "look up and are not fed."

There is in the National Gallery the large Gaspar, 'Abraham ascending to the Sacrifice'; it is true it is not placed (what would be termed) high; but lower it till the eye rests on the flat of the horizon, you would be on a height then, and with the great father of believers still ascending, heaven's light directing him in the path, with the low valley in which he had left his attendants and wordly cares in deep obscurity below him. To see these pictures as we do see them, is to see them without their sentiment, their moral, their beauty of design, the mind of the painter; and so we only see, as we think, a landscape; but it is more—and only by constant repetition of inspection, and bit by bit, we find out what it is. I have only mentioned two pictures, I might have enumerated all, of any value, that are placed above the eye; all are more or less injured.

It is surprising that your correspondent, "An Original Subscriber," should set up his rule, and with some pains, and then annihilate it by the fol-

lowing sentence:—"If the scene represented be hilly, unless the objects become indistinct from the effect of distance, it matters little at what elevation the picture is suspended; indeed, the elevated angle at which you have to look up to mountainous forms, may add to their apparent elevation and grandeur; and, in such cases, the position of the horizon not being easily determined by the observer, perspective defects, resulting from the elevated situation of the picture, are unobserved." Yet if the picture be inclined downwards, and the head slant upwards, the picture is still at a right angle to the eye. If it be not inclined, the foreground and the intermediate ground are raised with the mountains: what possible advantage, then, can the mountains have? And as to inclining them forward, in that case they are more complaisant than they were to Mahomet; and, in a picture, it is certainly better that we should go to them, that neither be in a false position. The horizon which regulates the painter, ought, likewise, to regulate the spectator, and it is as true in mountainous as in any other scenery. Artists do, indeed, frequently violate this part of their pictures for the sake of raising, as they term it, their figure; but it is done upon wrong principles, and in ignorance or in neglect of better rules for effecting their purpose. I do not remember an instance of this violation in any of the great *old* masters—they worked upon principles which did not demand it. There is a striking instance of this violation in Sir T. Lawrence's 'Kemble, as Hamlet,' in the National Gallery. The eye of the painter is at the foot of the figure or thereabouts, for the elevated turrets do not appear very high: now if Hamlet be on the ramparts, and the painter nearly upon a line with him, so nearly would the horizontal line be with the head of the figure. To have it where it is, and the figure so large, the whole would be very greatly foreshortened, and he would look into the nostrils, and lose the dignity of the forehead. He has not done this, and has violated perspective. If, however, it is offensive (nor does the conception, however fine as it is, justify it), there was no necessity for it. Sir Joshua Reynolds frequently erred in the same way; as in his portraits of 'Three Ladies Adorning the Statue of Hymen.' We have an instance too of it in Opie's 'Troilus and Cressida,' as he pleased to call the thing (more like a laundry-maid airing sheets, and two thieves stealing them): here the horizon is not half-way up the figure, though, to be sure, the balustrade tells you not to mind the actual, for it points to another perspective. That admirable portrait of 'Ralph Schomberg, Esq.,' by Gainsborough, which, we hope, will find its way back to the Gallery, has the same defect; and his celebrated 'Blue Boy.' We see nothing of this kind in the Cartoons; Raffaele did not think it necessary to imagine himself crouching on the ground to see the Saviour and the apostles working their miracles. All these have high horizons above the heads of the figures—so in his Bible: and how admirably subservient to his purposes his back grounds are. They are not shirked or smutched in mistily; they belong to the figures, and are of assistance to the composition; if doing no other service, often varying the lines which the heads of figures standing together would present. But this subject would require more than cursory observations. Let those who would discover principles, study these compositions of the great Raffaele. To return, then, to the hanging of pictures.

How, it might be asked, is a remedy to be found? Where there is not room enough, some pictures must be suspended above others, in private rooms, for instance. The answer is, find room—build proper rooms—not a room, nor fit your pictures to it, as furniture. Pictures are far too expensive for furniture, and too costly to have any of their beauties not well set off. You would not injudiciously set your diamonds; yet pictures are rarer diamonds, and require no less care in the setting. It may be said, that this plan of not allowing pictures over pictures, would have a tendency to limit the patronage of Art. At first view, and perhaps to some extent, at present, it might be so, but not for a continuance. Many are disgusted, as it is, with pictures which (and they cannot account for it) do not look their best, not as they did when on the artist's easel, and they cease to be patrons: for can there be anything more prejudicial, in the end, to patronage and to Art,

than that pictures should not look well, should not be seen according to the mind that is in them? It is positive defamation of the artist as a man of genius. Then, on the other hand, in those who must be patrons, driven to it by their natural tastes and wealth, there would, were this principle well understood, be a change—they would build suitable galleries. The fashion once set would be readily followed, and Art itself be raised by the ambitious position each individual picture would claim; and all of any stamp and note would be rescued from the class of furniture. Galleries should be built, not for one show-room; if still they must be termed galleries. There should be many rooms, each one light, and, in many instances, one picture: but this would only be the case with extraordinary pictures, such as are in their feeling intended to be seen alone—as some subjects of devotional cast, some single figures of a deep and lonely affection. If they are worth the buying at their value, they are worth providing with a proper room. This would be to enjoy pictures. Nor is there any necessity of having rooms of that great height, as when the room is enlarged to receive all; so that in this respect a considerable expense might be saved. But I am here intrenching upon the province of the architect; it is for his genius to remove difficulties, and for Architecture to provide a habitation for the sister Art. Much, likewise, might be said upon the subject of galleries for statues, which, in the common way, are anything but seen. I have been drawn on to these remarks to more length than was intended, or may seem suitable to objections made against the remedy for a difficulty, which I would rather assume should not exist. Rather remove the "necessity" than provide the means for setting it off. I rejoice, Sir, that you have directed your attention to the subject of hanging pictures; and I would take this opportunity of inquiring, through your valuable 'ART-UNION,' of the "hangers" at the Academy, and other places of public exhibition, what object they can have in the pyramidal form in which they build up their shows, generally placing at the apex some unfortunate piece of miniature dimensions, and probably of microscopic execution? If it be, by a false perspective, to give vast ideas of the height, length, and breadth of British talent, it is ingenious, and may have its effect, and astonish the few Esquimaux and New Zealanders that may happen to frequent our exhibitions. It is to be hoped that they will export the custom: but it is very hard upon the poor victims, the artists, who, indeed, enjoy their names in the catalogue, without having "to prate of their whereabouts." There is very little Art-union, certainly, in the practice; for the reciprocity is all on one side, and the junction seems a forcible possession. And why are some honorary members and exhibitors, whose *works* ought to be *suspended*, *hanged* annually "in terror?" As you intend, Sir, to proceed with the subject, it is time that I should conclude, hoping that the views of one who has thought much upon the subject, may elicit notices of value from those who have thought more; or, at all events, be serviceable to those who have not bestowed any thoughts upon it at all. AMATEUR.

#### EXHIBITION OF THE ROYAL SCOTTISH ACADEMY.

No. 90. 'Marriage Festival previous to the Deluge,' W. Etty, R.A. Whether considered in regard to richness of fancy, fulness and skill of composition, scientific knowledge and arrangement of colour, accurate and vigorous drawing, or overflowing luxuriance of sentiment, this picture has no rival in the exhibition; it is filled almost to redundancy with the most varied yet hilarious mirth. It is difficult to say which most to admire, the true poetry of its conception, or the almost wonderful execution by which that conception has been worked out and completed; altogether it is a most gorgeous work of art, of which both painter and possessor may be equally proud. No. 91. 'The Mirror—I see you,' C. Lees, R.S.A. A very fair picture of two interesting children performing their antics before a looking-glass; the subject, although rather hacknied, is one which, if well executed, will always be interesting, and Mr. Lees has not been unsuccessful in it, though he has not done a very great deal to enhance its value; there is a good and pleasing tone, and an agreeable colour over it. His 99, 'Boys Looking at a Print,' is a very natural picture so far as the idea is concerned,

but it has not been worked out with much skill, the drawing in many parts being defective. But what could ever have tempted him to paint such a subject as 145, 'Chess-Players'? two great lubberly fellows sitting over a chess-board till they have all but fallen asleep; one of them yawns most unmercifully: were it not that his appearance has created a dislike to him, we should have great apprehensions of his dislocating his jaw; as it is, we do not care a rush: even the dog beside him seems sick of the matter, and hangs tail upon the subject in a most piteous manner. No. 112. 'Dutch Shipping—Calm,' E. T. Crawford, A. A very cleverly painted picture; almost every thing in it is well and properly executed; yet it is the very same thing to appearance, at least in effect, which we have had from him year after year, for a long, long time, even to the fiery red with which he fills water, air, and earth: he ought to try at least a little variety, for even too much honey becomes nauseous to the palate; he has good stuff as well as industry in him, as his pictures prove, but he must endeavour to throw off this continually recurring mannerism, if he intends to prosper in his art. No. 116. 'View of Scarborough from the Beach,' W. H. Townsend. Seemingly a good picture, so far as it can be seen, but from the arrangements of the "hangers," it has been converted into a regular skyscraper. The same may be said of his 132, 'Landscape, with Cattle,' which, by influence of the same agency, has also become a candidate for the highest honours. No. 104. 'Portrait of Mrs. Wilson,' Colvin Smith, R.S.A. A very characteristic portrait of an old lady, containing many of the peculiarities of Mr. Smith's style: his portraits are generally faithful likenesses, very forcibly painted, partaking much more of vigour than of grace; there is also frequently to be noticed in his works, a considerable heaviness of colouring. Among the numerous portraits which he contributes, his 322, 'Portrait of the late Daniel Ellis, Esq.,' is remarkable for its unconstrained ease and naturalness in every respect; it is among the best of the male portraits in the collection. No. 125. 'His Majesty King George the Fourth received by the Nobles and People of Scotland, &c.,' Sir David Wilkie, R.A. H.R.S.A. A picture not by any means calculated to enhance the artist's reputation; it is, no doubt, well painted, and contains much of artistic excellence, yet it seems to bear evidence of command in almost every line of its composition; every thing seems suppressed, and stunted to make way for the importance of the King; a piece of flattery which may be all very well for Court painters, but is not the best imaginable method for the construction of first-rate pictures; the colouring, and light and shadow, are beautiful, and true, albeit a little under the influence of that depressing subordination to the dignity of royalty already noticed. 268. 'The Guerilla's Return to his Family,' also by Wilkie, is a picture exhibiting great merits, and containing glaring defects: as a piece of beautifully harmonious colouring, it is very fine, but it is totally destitute of the sentiment we should look for in such a subject. The wounded guerilla is returning to a family which, seemingly, takes very little interest in his fate: it appears to consist of two females, but whether they are connected with him in the relationship of wife and daughter, or by what other tie, is not at all apparent; it is, however, perfectly certain, that if the donkey on which he rides had been the sufferer, instead of himself, they could not have shown a greater degree of apathy than is exhibited by both. The wounded man is very ill drawn, in many respects; his head, for example, not being much more than half the size it should be. These remarks may be deemed harsh, but they are not beyond the truth: the influence of Wilkie's name is, in this sense, unfortunately, of such importance, as to render his errors dangerous to all who fall within its reach; converting into objects for imitation, what, in any less fortunate individual, would be shunned as dangerous paths. If we are to be content with a happy arrangement of colours, in the works of such men as he is, where are we to expect excellence? No. 127. 'At Swanston,' Arthur Perigal, jun. A very clever and pleasing little landscape, painted with all the freshness and vigour of a study from Nature. A fine, lively, little mountain rill runs joyously through the picture; imparting a cool pleasantness to the scene, the interest of which is still further enhanced by the skilful introduction of some happy cottage children at play, luxuriating in the sunshine; altogether it is a most charming little morceau. 286. 'Scene on the Water of Leith,' by the same, is another fine out-of-door piece of painting; the water is cool, clear, and flowing. His 375, 'On the Garry,' is also an excellent land-

scape; the feeling and general treatment of it are of a high order; the cattle in the fore-ground are happily introduced, and well painted. This very promising young artist has several other pictures besides those enumerated, all possessing merit in a high degree: he has a fine eye for nature; let him endeavour to follow her footsteps as he has hitherto done, and he will yet attain a high standing in Art. No. 126. 'The Bird Trap,' W. Kidd, H. A nice, clean little picture, of two rather spruce young gentlemen making up a bird-trap with three bricks; they seem very eager on their sport, but whether they will be equally successful with their eagerness is rather a more doubtful question. 298. 'A Gipsy's Encampment,' by the same, is a picture not much to our mind; it is dark and heavy without being impressive: many of the parts are very badly drawn. His 329, 'The Friendly Contest—Greenwich and Chelsea Pensioners playing the Game of Draughts,' is, however, a peer of another tree: the drawing and painting are truly exquisite; the diversity of character and variety of incident are of the richest quality and most felicitous excellence; there is a greater quantity of artistic material lavished on this single subject than would furnish the studios of some half-dozen of artists of repute; yet there is no squeezing, no crowding in it; the whole is skilfully arranged and beautifully elaborated. It has, however, one fault—the want of toning—which tends to injure the effect of what would otherwise be without many rivals in the exhibition. No. 149. 'Interview between Regent Murray and Mary Queen of Scots,' Alex. Johnston. A very good picture; there is good and powerful drawing in it; the expressions are varied, forcible, and appropriate, particularly in the sardonic and biting character of the head of Murray; the whole air indeed of the Regent is that of domineering, arrogant superiority and dogmatic self-satisfaction. The general deportment of the Queen, although good, is not quite so felicitous; there is more of bewilderment than dignity in her aspect and action. No. 409. 'Affection,' by the same, is a very natural and pleasing picture of a pretty and interesting female with a pet lamb; there is an air of fine feeling over this, with which the general tone of colour is in perfect harmony; the unpretending aspect of the picture may render it, to some extent, liable to be overlooked for some more showy and more worthless production. No. 168. 'Becco on the Coast of Genoa,' Sir A. W. Calcott, R.A. A most delicious gem: the pure atmospheric effect of this picture steadily grows into admiration upon the spectator; it is not a picture highly striking at first; indeed, it is one of those, which in the bustle and glitter of an exhibition-room might almost run some risk of being overlooked, but the oftener it is seen the more highly must it be appreciated, producing, as it does, sensations of the liveliest delight: there is in it no pretension, no straining to produce an impression; all is the quiet unobtrusiveness of nature; it possesses a warmth, repose, and inoffensive beauty, which is not to be compared with any other landscape in the rooms. No. 179. 'Faith,' W. Dyce, A. A substantial good picture: there is no flimsiness in any part of it; the head is well drawn and clearly painted, bating a little chalkiness in the flesh; the drapery is ample, and painted in a broad and simple manner. No. 194. 'Portrait of a Lady,' M. Burton. A very clever portrait of an interesting young lady, clearly painted and well coloured, although it probably might have been improved by a little more firmness and decision in the colour. No. 248. 'Norval Learning the Art of War,' by the same, is another good picture. There is a fine feeling in the head and action of the old hermit, who seems to enter with great gusto into the studies of his *cleve*; the whole is sweetly coloured and well toned. His 285, 'The Invalid Student' is a very fine picture, with a great deal of pathetic truth in it. An aged widow is sitting consoling her son, whose hollow, wan cheek and sunken eye speak forcibly the truth, that his abiding-place is not long to be in this world: the incidents introduced are very touching and felicitously explanatory of the melancholy story of one whose days have been spent in the acquisition of that learning which was to qualify him to occupy the pulpit with credit to himself, for the honour of his Master, and the benefit of the flock; but now, alas! his days are numbered, and he is plainly doomed never to hold the office which was his ambition and delight to contemplate the possession of: the quiet resignation of both mother and son are most exquisitely yet painfully depicted. No. 207. 'Drowsy Messenger,' W. Wallace. A well-coloured picture, with a good tone, of a little girl of rather prepossessing appearance, who, however, has rather unaccountably fallen asleep, standing with her elbow resting on the bank of a roadside.

With this trifling abatement, the picture is a very pleasant one. 230. 'Greek Girl,' by the same, is a capriciously-painted and well coloured head of a very pretty female, with no superabundance of expression. His 342, 'Portrait of the late Rev. John Thomson, of Duddington, H.R.S.A.,' is a very well painted portrait: the handling is firm, the drawing and arrangement excellent, and the character of the head true, although the expression seems rather too young. No. 297. 'The Disappointed,' J. A. Houston. A flimsy, trashy representation of a holiday-looking young woman, who, if this be a true resemblance, could expect, as she certainly deserved, no other fate. She appears like a sort of Sunday ghost of a young woman, whom Mr. Burton last year had placed at the foot of a "trysting tree," but has suffered much by bleaching since that period. His 365, 'The Watch-fire,' is another picture of the extremely clean school. Here are soldiers, whose whole life has evidently been spent at their toilet; their sole occupation has apparently been one continuous round of scouring their complexions and furnishing their accoutrements, all is so trim, trig, and bazaar-like. 434. 'Porch of the Church of St. Germain l'Auxerrois,' is worth all his other pictures put together—at least, in an artistic point of view: there is nature and truth in it; while the others are mere dandified absurdities. No. 306. 'A Sketch from Nature,' S. Blackburn, is a sketch from no sort of nature to be met in this quarter at least, but bears a strong resemblance to a bad copy of a similar subject by Sir Joshua Reynolds. 371. 'An Incident in the Life of Columbus' by the same, is a very poor production; the general effect of the colour is not bad, but beyond that, the less said the better. Columbus is represented as a rude vulgar boor, a man as likely to have sailed to the moon in an egg-shell, as to have discovered America; while his patron, the prior of Santa Maria de Robida, seems little removed from the character of a grinning and imbecile baboon. His 388, 'Queen Mary and Bothwell,' is a bad pinky sort of representation of a scene which, if it did occur, assuredly ought never to have been painted. No. 328. 'A Stirrup Cup,' Gourlay Steel. A picture indicating considerable improvement upon any of the artist's previous productions; the pony is well drawn and painted, and his rider good in every part except the head: the girl who waits upon him is a pleasing, clean, and homely Scotch lassie, modest, and properly behaved. His 414, 'Bouthron's Visit to the Duke of Rothsay,' although a more ambitious, is not by any means so good a picture: the subject is in itself a repulsive one, and the melo-dramatic treatment here bestowed on it renders it ridiculous; it is, in fact, a style of art obviously beyond the artist's present powers: he will do well to confine his efforts to subjects more within his reach. No. 341. 'Something in the Wind,' J. Giles, R.S.A. An exceedingly clever picture of its class. Some deer grazing on a wild heathy rock upon a mountain top, while a fine stag on the watch evidently smells "something in the wind," and starts accordingly. The action of the animals is extremely fine, and the handling almost truth itself; the painting of the crispy, dry, stunted heather, might challenge comparison with that growing on the wildest uplands in Loch Rannoch. His 402, 'Drovers,' is another very clever picture: the drawing and arrangement of the cattle, and, indeed, of the whole subject, is of the best sort; the sky is clear with an intensely glowing sunset. Being placed in immediate juxtaposition with a picture of a much cooler tone by Mr. Macculloch, the two have the effect of mutually injuring each other, making the one appear fiery-red, the other chilly and greatly colder than it would have been under other circumstances. No. 343. 'Scottish Emigrants halting in the Prairie,' Tavernor Knott. A good picture, carefully studied, and well arranged; the bustle of an encampment in the prairie is excellently expressed; the figure of the Indian is dignified, and his action simple and graceful as he points across the tenantless and dreary flat. This picture is a decided step in advance of anything this rising artist has yet produced, and indicates industry and observation, as well as judgment to direct these qualities; he has still some errors in his style of painting to overcome, but they are such as a little attention on his part will easily enable him to obviate.

[To be concluded in our next.]

## FOREIGN ART.

**GENIUS OF ART IN FRANCE.**—It was our intention to have given a short essay on the genius of Art in Spain, but as we have, in another page of the number of the ART-UNION, given a brief detail of the works of Art this year exhibited in the Louvre, and we think that it may be more interesting to our readers, in relation to the present state of painting in France, to present them with a slight sketch of the forms under which Art has appeared in that country since the reign of Louis XIV., and to point out the characteristics of some of the leading schools of Paris.

Art is, to a certain degree, a reflection of the manners of the epoch; it is their translation in marble and canvas; but with exceptions; for there are men of genius that arise in their own strength and greatness, and their works represent their individual minds alone. Under Louis XIV., we find a character of majesty and grandeur: the school of Poussin, Puget, Philip de Champagne, and Lesueur. Under Louis XV., we have meretricious and pretending works: rouge, patches, ribbands of a thousand colours; it is the time of Boucher and De Greuze. The encyclopedists and the Roman tragedies of Voltaire awoke recollections of antiquity: Hallé, Carl Vanloo, Vien, attach themselves to the chariots of the philosophers. Hallé composes his 'Trajan Listening to the Complaints of a Poor Woman,' Carl Vanloo his 'Augustus Closing the Temple of Janus,' Vien 'The Benevolence of Marcus Aurelius.' The revolution is slowly preparing itself: it breaks forth, and David, Regnault, Lethière, appear with their pictures of anatomical design and theatrical arrangement; the highest expression of this style is seen in 'The Rape of the Sabines,' by David; the 'Brutus,' by Lethière; the 'Education of Achilles,' by Regnault. This is the first era of republican art; it has little variety, its beauty is conventional, its attitudes exaggerated, its rules mathematical. Carlo Vernet, in his 'Tableaux de Genre,' modifies this style, and while he preserves its severe correctness of design and purity of taste, he introduces a new element into Art, that is—feeling; it will increase hereafter. It is now the reign of Guérin, Giradot, and the heavy Meynier. Opinion places the two first of these artists on a high pedestal—theirs is the sceptre of the day. The first paints the 'Three Ages,' the second 'Endymion' and 'The Deluge,' which obtains the decennial prize contested by Gerard and David. Guérin paints the 'Clytemnestra' and the 'Dido.' Gerard is a man of real talent, and has produced some great works, especially the 'Entry of Henry IV. into Paris,' perhaps the finest work of the French school in modern times; but he also borrows largely the ideas of others, and arranges them skillfully as his own. He is himself the school of the empire; mythology and military subjects, with those of antiquity, have a monopoly of pictures. Gros and Prud'hon are two revolutionary painters—parias of Art; in one we have fire, in the other grace. The style of the last, Guérin characterized when he said, "it is a fine falsehood." Yet Prud'hon threw a real light on Art, and his 'Vengeance Pursuing Crime' produced an unheard-of sensation among true judges of Art. Yet his life passes in obscurity; and Gros is so little appreciated, that he sells his magnificent work of 'The Sick of the Plague at Jaffa' for 4000 francs, while M. Revail receives 12,000 francs for his 'Francis I.' We are now in the full tide of restoration, but the imperial traditions still survive and perpetuate themselves. Gerard is named painter to the king, and is still the ruler of Art; but religious subjects begin to mingle with theological ones, especially from the pencils of young artists. M. A. De Pujol produces a 'St. Stephen,' M. Couder 'The Levite of Ephraim,' M. Schnetz the 'Samaritan,' while Horace Vernet gives to a people yet filled with recollections of Napoleon, his clever lithographs of every kind, the ready money of his genius, reserving for later times more serious labours. Beside the school of Gerard arises that of Gros—more rich and vigorous in colouring; the first is the favourite of the academy and the masters, the second of the pupils; the one is for the present, the other for futurity. The only exceptions are M. Horsent, who is successful in 'Tableaux de Genre,' and M. Granet, who follows no system, but seeks to reproduce nature under conditions

that do not change by theories of Art. Gradually the empire of these two schools is more and more encroached on, some, like M. Steuben, not rejecting what is to be gained from recent traditions; others, like Messieurs Schieffer and P. Delaroche, trampling them under foot. This is a youthful pride which will cure itself. One brilliant individual genius arises—it is Géricault, who dies, not from want, as has been said, but of regret that he was only understood by a few bold innovators. He leaves us that great page in French Art, 'The Shipwreck of the Medusa.' M. Ingres has enthroned sentiment in his 'Vow of Louis XIII.,' the circle of his admirers daily augments notwithstanding severe criticisms. Other original artists follow their individual bent, the unity of the imperial sceptre disappears, and the revolution of July sets its seal to the change in Art which separates itself from the traditions of the immediately preceding period. The romantic school is formed; she rejects the lessons of the more distant past, even while she celebrates the classic names of Raffaele and Poussin. We have M. Delacroix carried away by the flights of his eccentric genius; M. Delaroche exploring the puritanic history of England, while, through his extreme simplicity, pretention peeps forth; M. Seheffer, on the banks of the Rhine, popularizes German ballads and German mysticisms; M. Decamps is a school in himself, full of glowing and original fancy; Leopold Robert died too early to leave successors. Historical landscape revives under the auspices of Christian Art; the classical and romantic schools advance side by side, the one in right of age the other of possession, though they scarcely deserve the name when each pupil seeks to strike out his own path disregarding the experience of the past. Now, at the present moment, these extremes are somewhat calmed, a wiser and truer mode of study begins to prevail.

**STRASBOURG.**—*The Institution of the Rhine.*—This is a fine and useful institution, and will prove a connecting link between France and Germany. An exhibition of paintings and sculpture is proposed to be held successively in the cities of Mayence, Darmstadt, Carlsruhe, Mannheim, and Strasbourg; and the artists of every nation are invited to send their works. The probability of selling pictures is good; and if one is purchased by a member of the association, it is with the condition that the picture remain to be exhibited in the other cities. The programme proclaims the cosmopolitan nature of the fine arts, which in their essence are everywhere the same, and that the varieties drawn from the modifications of country, climate, models, and other causes, will serve to give a higher interest to the proposed exhibition.

**ITALY.**—**ROME.**—Her Majesty, Christina, ex-regent of Spain, has commanded the sculptor, Finelli, to execute a statue of herself in marble, in the royal Dalmatic robes; and also a statue of her daughter, Isabella, the youthful Queen of Spain. To the painter, Cesare Masini, she has given the order for a grand picture, having for its subject the taking of Ciudad Victoria.

**FLORENCE.**—Sabatelli, the celebrated artist, has just finished a splendid picture, 'La Peste di Messina.' It is to be regretted by the lovers of art here, that the Cavalier Masseroni has sold a great part of his celebrated collection in ivory, among which are the 'Adoration of the Shepherds,' by Sansovino; the charming statue of 'The Madonna and Child,' by Orcagna; and the incomparable 'Bouquet of Flowers' by the famous artist Cramer. It is believed, that these objects, with many cameos purchased here, belonging to Caroline Murat, Queen of Naples, and some fine embroidery, belonging to the Princess Caraccioli, are selected by a connoisseur, as a speculation for England.

**NAPLES.**—Guerra, the favourite painter of Naples, has finished his great picture of the 'Battle of Benevento.' The composition is grand; it is full of movement, and the drawing and colouring are magnificent. Some severe critics find a want of chiaro-scuro in the whole effect.

**VENICE.**—The young artist Giacomelli, a native of this place, and possessing true talent, has been commissioned by the city of Trieste to paint all the victories obtained by her citizens during the middle ages; much is expected from the works.

## ARCHITECTURAL COMPETITIONS.

From the commencement of the ART-UNION up to the present time, the subject of architectural competitions has uninterruptedly received our attention; and we have endeavoured, to the best of our ability, to obtain for architects courtesy as gentlemen, and something like justice in the award, at the hands of those in whom the decision rested. The competitions for the honour of erecting the Royal Exchange and the Nelson Monument, have afforded us constant opportunities of recurring to this point; and we are gratified to learn, in many ways, that, notwithstanding a proper regulation of competitions is yet to be arrived at, our efforts have had the effect of concentrating the opinions of others, and have aided in showing clearly to the public what it is that is wanted. At the present moment, both in France and England, it is deemed a question of import by large numbers of persons. All feel that public competitions afford means for the emergence from obscurity of unaided talent, which had otherwise perished unproductively; and that, by the appeal to them, the elder professor is compelled to activity and progress with the times, in order that he may not lose his proper place; but they see that under the present regulation of them,—through the present scandalous abuse of the system of competition,—the artist of long standing will not venture to lose both his time and his reputation; that the younger members of the profession having nothing else to do, who are tempted into the lottery, must acquire careless habits of design, and be led to depend more on chicanery and manoeuvring than on industry and study; and, consequently, that the artistical character is degraded by the whole proceeding.

The admitted mal-administration, however, in all competitions does not touch the system itself; and if advantage is seen to belong to the system, and evil follows simply from the mode of carrying it out, we have merely to rectify the latter and good is the result. At all events, we would maintain that public competition should invariably be resorted to for all works which, from their destination or their importance, are fairly entitled to the term national.

We have been more especially led to the subject at this moment, by the proceedings of the *Société Libre des Beaux Arts* in Paris, respecting the proposed monument to Napoleon; and the publication of a small pamphlet by M. Goldicutt, entitled "The Competition for the Erection of the Nelson Monument critically examined." The main object of this letter,—which although it hardly bears out its title, being somewhat too slight for the subject, is yet likely to be useful,—is to induce the Institute of British Architects to step forward, and by the expression of a strong opinion, and by interference in particular cases, to assist in effecting a proper arrangement of all future competitions. Professing, as the Institute does, to uphold by united exertion the character and respectability of its professors, and to promote by all means in its power the art and science which its members profess, we feel that this is not asking too much of the Institute; but that it owes it to itself and the profession generally, to throw aside all weak scruples and time-serving fears, and to adopt some decisive measures to secure a proper and efficient adjudication. The public, knowing the position and ability of the greater number of its members, would look with confidence to any statement that might be issued in its name; and committees would be forced by the weight of opinion to yield answers to its inquiries, and give attention to its suggestions. A Report on the subject was issued by the Institute some time ago, which was valuable so far as it went: unfortunately, however, it did not go half far enough.

The nature of the directions to which competitors are required to conform is a most important point for consideration: the greatest explicitness should be insisted on in this respect, as well as a rigid adherence to it afterwards in making the selection. Beyond this, one of the most essential steps to be gained is, that the public should be admitted to examine and discuss the designs, both before and after the adjudication—at all events before. We have, over and over again, insisted upon this; but it is really so essentially important in order that the arbitrators may feel the necessity of using due diligence and zeal—and not merely that, but in order to aid them in arriving at a proper opinion on the relative merits of the designs—that we do not scruple again and again to urge it.

## VARIETIES.

THE NATION has purchased the 'Two Francias,' formerly in the Lucca Gallery. "A committee of taste"—among whom were W. Wells, Esq., and Samuel Rogers, Esq.,—recommended the purchase to the Chancellor of the Exchequer. They are bought for £3500; the sum demanded for them last year was £1000; it was considered too much, and the transaction was closed. In order to give our readers some idea of the two pictures—thus become public property—we cannot do better than extract the notice of them we published at the time of the sale:—

"*Francesco Francia, 'The Virgin, Jesus, St. Ann, St. John, and four Saints.'* A sweet and charming production of this early but most admirable master, mentioned by Vasari, as painted for the church of St. Friulano, at Lucca, and having his name inscribed round the border of the throne upon which the Virgin is seated; it has much of the sweetness of Raffaele's early manner, though with less elevation of character. As an excellent example of early art it is to be coveted. "By the same, is the 'Lunetta,' or circular top to the preceding picture, painted for the same church, and representing the Dead Saviour upon the Virgin's lap, attended by two angels: full of the most pious and elegant sentiment. A specimen of great value on account of the rarity of genuine specimens in England."

THE ART-UNION OF LONDON.—The success which has attended the efforts of the Committee during the present year, is of a very gratifying character. The number of members is considerably more than double what it was last year; the amount collected being, as nearly as can be ascertained at this moment, £5200, the whole of which, with the exception of a sufficient sum for the payment of the current expenses, will be devoted to the purchase of works of Art, and to engraving and distributing a print to every subscriber. The allotment of the prizes will take place at Willis's large room, King-street, St. James's, on Tuesday next, the 20th April, when his Royal Highness the Duke of Cambridge will take the chair, and many of the nobility and patrons of Art have promised to attend to support the royal President. This may be said, in fact, to be the first year of the Society's existence as an important public body; and we shall look anxiously for the result, both as regards the purchase of pictures and the selection of a subject for engraving. On this latter head we are glad to find the Committee have cancelled that portion of the regulations which provided that a sum should be set apart every year "for the purpose of engraving some work of Art which shall have been purchased by the Association," and have substituted a clause to the effect, that the Committee shall procure annually an engraving, either by the purchase of the copyright of a picture, or otherwise, as they may deem eligible. It was a most absurd regulation, and would have proved a perpetual handcuff on the Committee. We therefore heartily congratulate the members on its abrogation, and trust that the next print which the Society issues will be a very superior work of Art. They have it in contemplation, we understand, to purchase for the subscribers of the present year an unpublished plate, already completed, so as to enable them henceforward to issue a print annually, instead of at the long intervals which, under the present management, must unavoidably occur.

PHOTOGRAPHIC PORTRAITS.—Daguerre's discovery, like every other, must pass through many stages before attaining the ultimate perfection to which it is capable of being brought. We have already noticed this process from time to time in its advancement, and recur to it now, for the purpose of alluding to those most recent improvements as adapted to portraiture, which have been patented in this country by Mr. Beard, although it is said that this improved process of taking photographic portraits was originally practised by a native of the United States of the name of Wolcott, who added to the camera of Daguerre a metallic speculum, and reflectors for the purpose of modifying the light on the countenance of the sitter. The method of exposing the plates to the action of the light having been already described, renders it unnecessary to detail it; but it must be remarked that the vividness of the picture depends much on the manner of preparing the plates, and these according to the present process are made so finely sensitive to the action of the light, that the value of the improvements is strikingly mani-

fest by the effects produced. For instance the portraits taken in this way are, as may be expected, much more decidedly made out, and the features have a clearness and strength of outline which renders them distinctly visible even by an artificial light. In noticing Mr. Beard's improvements, several of the daily papers have expressed a conviction that this process will operate to the injury of the legitimate artist; but in this view we do not concur, at least to the extent of the "ruin" portended by our cotemporaries. It is true that a photographic portrait is a most perfect icon of the sitter, inasmuch as it is a most faithful reflection; but none know better than artists themselves how rarely a very close resemblance is really pleasing to the person painted, or even to his immediate circle of friends. We have no doubt of yet greater amelioration in this art; but with respect to the question of any serious loss to the portrait-painter if he estimate the matter justly the result must tend to dissipate his apprehension. The fidelity of a Daguerreotype reflection has by no means the effect of robbing an artist of that truth for which his hand and eye have been already distinguished; and it does not follow that because the person itself is thus truly reflected that an oil or other picture is to be unfortunately wanting in resemblance. There is a wide field of difference between a portrait thus procured and one manually executed, it matters little in what style; the charm of colour cannot be imparted to it, it cannot receive any of the innumerable graces which a judicious artist throws into his work, and it cannot be altered to suit the whim of the sitter or friends. The very facility of the process will render it temporarily popular, and those will sit who never sat before, and never would have submitted to be painted in the ordinary way. Engravers might be much benefitted and their labours shortened by the Daguerreotype if their copper plates could be so prepared as to receive the photogenic reflections, and a fortune might be made by any individual ingenious enough to effect such a discovery.

THE DUKE OF WELLINGTON has purchased Mr. Burnet's fine picture of 'Greenwich Pensioners commemorating the Battle of Trafalgar,' with the engraving after which, from the burn of the painter, our readers must be well acquainted. It now hangs at Apsley House, side by side with Wilkie's famous painting of 'Chelsea Pensioners,' which Mr. Burnet also engraved. This is as it should be. The work is worthy of its destination—and that is saying much.

MR. BURNET is engaged upon a work for which artists will look with great anxiety—a new edition of the "Discourses delivered to the Students of the Royal Academy, by Sir Joshua Reynolds, illustrated by Explanatory Notes and Plates." It is preparing for publication in one quarto volume, by Mr. Carpenter, of Bond-street. Perhaps there is no one so well qualified for the due performance of so important a task; for Mr. Burnet has accurate and extensive knowledge upon all the subjects it will embrace, and his critical acumen is well known. Upon some topics he will no doubt hold opinions liable to discussion, and they will receive it. There will, however, be as little question of his honesty as of his abilities.

THE MEDAL offered by the "Institute of British Architects," for the best essay on iron roofs, has been awarded to Mr. Edward Hall, late of Manchester, who gained a similar testimonial of merit some time ago, for an essay on "Grecian Architecture."

THE SCOTT MONUMENT.—The monument intended to be erected in Edinburgh to the memory of Sir Walter Scott, has rendered necessary the passing of an Act of Parliament for the purpose of cancelling certain provisions in other acts having reference to the buildings of the new town. This bill is brought in by Sir W. Rae and Mr. Fox Maule; and proposes to enact as follows:—1st. That so much of the 3rd of George IV., cap. 91; the 1st and 2nd Victoria, cap. 55; the 7th and 8th George IV., cap. 76; and the 1st and 2nd William IV., cap. 45, as enacts that it should not be lawful to erect buildings of any kind in the area opposite Prince's-street, eastward of the mound in Edinburgh, and that the whole of the said area should be used for ornamental purposes &c., shall be repealed; and that it shall be lawful to erect thereon a monument to Sir Walter Scott, &c., which the persons, subscribers to the expenses

thereof, are authorized to do. 2nd. That so much of the two last recited acts as exempts a theatre, &c. from the prohibition of erecting buildings in the said area shall be repealed. 3rd. That the magistrates of Edinburgh be authorized to grant the ground required for the erection of the said monument gratuitously, provided that the space so to be granted shall not exceed 120 feet square, and 50 feet by 30 for the keepers' house, &c. 4th. That the monument, &c., when declared by the subscribers to be completed, shall be vested in trustees, consisting, amongst others, of the Lord Provost and Treasurer of Edinburgh, the Dean of Guild, and the nearest surviving male relation of the late Sir Walter Scott. This bill will undoubtedly receive the almost unanimous approval of both Houses of Parliament, and must meet with the good will of the country not less on the south than on the north of the Tweed.

ARTISTS' GENERAL BENEVOLENT INSTITUTION.—On Saturday, the 3rd inst., the twenty-seventh anniversary of the Artists' General Benevolent Institution was celebrated by a public dinner at the Freemasons' Tavern. The chair was taken on this occasion by Lord Montagu, who presided amid a numerous assemblage of the supporters of the Institution, and who during the evening made a forcible appeal to the company in its favour; the result of which was a subscription amounting to £554.

THE WORTHLESS CARTOONS.—These interesting reliques of Raffaele have lately had an escape from destruction by fire, little less than miraculous. A policeman on duty within the palace of Hampton Court, being alarmed by smoke rising in the gallery, discovered, upon examination, that it proceeded from a part of the skirting-board, which was in a state of ignition; but the progress already made by the fire being inconsiderable, it was speedily extinguished. For a perfect apprehension of the extent of danger to which the Cartoons have been exposed on this occasion, it must be remembered that they are framed in the *wainscot of the gallery*; and when they were therein fixed, had it been suggested that, in such a perilous proximity to a combustible material, they were unnecessarily endangered, the objection would have been doubtlessly pronounced insufficient. To destroy these treasures of Art, a conflagration is not necessary; a degree of heat just intense enough to singe the wainscot would suffice, in a few seconds, to reduce the Cartoons to ashes. The preservation of these works—valuable beyond price—has been a subject of deep and enduring anxiety to every lover of high and refined art; and official, and even parliamentary inquiries have been instituted with a view to the adoption of some efficient means; and the result of these useful labours is announced to us in the fact, that they have been saved by accident from destruction by fire. Long have we been envied the possession of the Cartoons by entire Europe; and foreign artists, until they have seen them, consider themselves as yet imperfectly acquainted with the works of him who, since the days of Leo X., has been called "the dear master." It cannot assuredly now be disputed that any change will not now be for the better. If the country be too poor to build a suitable gallery for the reception of these inestimable productions, let a few of the series be sold, for the sake of preserving the remainder—this is the policy of individuals in case of need; one portion of an estate is sold, to permit the enjoyment of the remainder. Russia, Austria, France, will compete for the purchase: whether such sale be effected, or the Cartoons remain to perish where they are, all will coincide in the opinion of the *Gravedigger in Hamlet*, that they are mad in England.

STATUE OF THE MARQUIS WELLESLEY.—At a General Court of the East India Company, held on the 17th March, 1841, a resolution of the Court of Directors, of the 10th of that month, proposing that a statue of the Most Noble the Marquis Wellesley, K.G., be placed in the court-room, was read; when the Court, entirely agreeing with the Court of Directors in the opinion they entertain of the services of the Marquis Wellesley, unanimously resolved that a statue of his lordship should be placed in the general court-room of the East India House, as a permanent mark of the admiration and gratitude of the Company.

## SOCIETY OF BRITISH ARTISTS.

EXHIBITION—1841.

The EIGHTEENTH Exhibition of "THE SOCIETY OF BRITISH ARTISTS" is now open to the public, in Suffolk-street, Pall-Mall East. The "Address," which accompanies the Catalogue, calls "the attention of patrons and lovers of Art to the improved condition of the present Exhibition, both as to talent, and the undeniable progress made by the Society in furthering the interests of Art and Artists, by the opportunity which their Gallery affords the rising talent of the present day, in placing their works before the public eye; many of those now holding a high station in the world of Art, having been fostered by the Society, although their works are now withdrawn from the Society's Exhibition."

We lament our utter inability to add our testimony to that of "the Society," as regards either the "improved condition" or the "undeniable progress." The Exhibition, in truth, affords no evidence of a step in advance; we look in vain among the exhibitors for tokens of industry and proofs of genius: of the former indeed we may find some, if quantity be considered without reference to quality—for one of the Members places on the walls no fewer than TWENTY-NINE PORTRAITS; and if they are, as we presume they are, the produce of one year, he must have stronger thews than a dray-horse, or possess a knack of knocking off a picture with almost as much rapidity as the wonder-working apparatus of M. Beard, which copies a human countenance in two-and-twenty seconds. But for productions of genius that may be quoted as honourable to the British School, we have vainly searched through the long-room in Suffolk-street. A few artists there are, indeed, who preserve the character of the Exhibition from sinking into that of mere canvas-colouring; and among them are some who are on the right road to fame; but the "undeniable progress" is, for the most part, confined within the narrowest boundaries of mediocrity. It can give us no pleasure to censure, however much it might please us to praise. But the fact is—and this, at least, is "undeniable"—that the constitution of the Society is unhealthy; and that unless some change takes place—and speedily—it will certainly perish, and perish un lamented by a single disinterested lover of British Art. The "address" we have quoted hints in a tone of reproach, that would, under other circumstances, have been not only justifiable but commendable—that certain artists who had been fostered by the Society have ceased to appear among its patrons and supporters. How could it have been otherwise? To the many who have deserted the Institution, we may, we imagine, this year add at least half a score more; for is it to be expected, that men of talent and just celebrity will permit their works to be thrust into corners, out of sight, by persons greatly their inferiors—and yet continue to court treatment so unworthy from year to year? Impossible. We had quoted a dozen cases in point, and were about to print them; but we fear by so doing we should only

"rub the sore  
When we should give the plaster."

Visitors, who are at all acquainted with Art and Artists, will have no difficulty in making out a list for themselves. But it is notorious that the Society does not make these mistakes from ignorance; they are deliberate and designed wrongs; committed openly; and with a tone of triumph, rather than a blush of shame. The avowed object being to force Artists into joining the body, in order that, when members, they may choose their own places on the walls, and share the responsibilities of the Society. It is

not concealed that the putting good pictures in bad lights—such, that is to say, as are produced by Artists who are not members—is done advisedly, and for a purpose. Short-sighted policy! How wise it would be to remember the fable of the wager between the sun and the wind, as to which should first compel the traveller to part with his great coat.

Taking this view of the matter, therefore,—and we do so most reluctantly—we have been somewhat startled by meeting the following passage in the "address."

"The Society have also to state that in consequence of the number of pictures sent for exhibition this year, they have been compelled to return a large number of pictures of great merit, which course they have taken in preference to placing them in situations where they could not be seen to advantage, and their merits appreciated."

Now, really, this is a "quiz"—it was never meant to be taken seriously. It may mislead some people nevertheless; strangers who visit London may be induced to believe that the Society did actually return to their producers "a large number of pictures of great merit"—of great merit, although, of course, inferior to those placed—and that they did so, truly and honestly, because "they could not place them in situations where they could be seen to advantage." Strangers who know nothing of the Society, may possibly credit this statement; but if there be a single one of its members, who would say as much without laughing broadly while he said it, he must possess self-control unparalleled.

But our observations would be idle, or worse than idle, if they had reference merely to the past, and were not calculated to influence the future. We write in no angry spirit; they have gibbeted no picture of ours in Suffolk-street; they have done us no wrong; we have no sin to complain of, either of omission or commission; and we think we have given signs, often enough during our conduct of this journal, how much more heartily we praise than censure. It is very painful to write, as we must write, of a public body; the more especially as its affairs are known to require generous aid. If we were disposed to give the Society up in despair, we should trouble ourselves no further about it; but we have no such feeling. Let there be some changes in the Suffolk-street Society, and we venture to affirm, there is no Institution in the kingdom that may be made to produce so much real and substantial good.

We have thus discharged a painful, though an imperative duty; we may possibly lead some of the older and more established members of the Society, to set themselves seriously to work in order to renovate it—and be thus amply rewarded for our irksome and troublesome task. If change be hopeless, it requires no spirit of prophecy to foretell the speedy downfall of the Institution.

The Exhibition contains 824 works, of which eight only are in sculpture; and these eight are contributed by two artists, J. Bell and P. Park. The busts of the latter are of high merit—that of Macbeth is a good likeness; that of Dickens we failed to recognise. The sculptor has been far too imaginative with the author. The two statues of Mr. Bell are of exceeding beauty; they are comparatively lost in this small and crowded room; but if worthily placed, they would suffice to extend the reputation of an artist, who is surpassed by few in brilliancy of fancy, and whose power to combine and execute is scarcely second to the grace and delicacy which mark his conceptions. Mr. Bell is entitled to a very foremost place among the professors of an art that in England is surrounded with discouragements. The room that contains these few examples of sculpture, and which is dignified by the title of "the Water-colour Room," contains

this year the choicest paintings of the whole collection. There are here about a dozen of great merit. We shall, however, begin with the beginning.

No. 21. 'The Convent of St. Isidoro, a Group near the Convent Door, the Monks giving away Provisions,' F. Y. HURLSTONE. Mr. Hurlstone is the President of the Society of British Artists; and, perhaps, possesses talent to justify his occupying the position. In Suffolk-street, at all events, he takes the lead; and he makes his appearance at no other of the Metropolitan Exhibitions. He is, beyond doubt, a clever artist; but he is not improving: his pictures of Italian character are of considerable merit; occasionally, indeed, parts of them approach very near to perfection; but it would appear that he is heedless of study, and shuns Nature altogether; his stock of sketches made in Italy cannot last for ever; and if he is applying to new sources he has, as yet, given no indications of such a purpose. His portraits of English Ladies are rather studies of colour than copies of the "human form divine;" they each and all "look blue;" some of them reminding us of the story of the rich citizen's wife, who, when about to be pictured, thought it incumbent upon her to expend upon the work as much money as was possible. Her question to the artist was "what is the dearest colour." The answer was "ultra-marine."—"Very well, then, do me all over with ultra-marine."

No. 43. 'Sketch of the Opium Seller at Montfaloot,' W. MULLER. This admirable artist exhibits two sketches of Eastern subjects; and one picture of considerable size—(No. 490) 'The Frozen Ferry—Scene near Haerham, Somersetshire.' It is a fine and effective work, and will uphold his reputation.

No. 44. 'Tower at Andernach on the Rhine.' No. 241. 'Gotsburg on the Rhine.' No. 491. 'Oberwesel,' C. F. TOMKINS. The artist has turned his travels to good account, although he appears to have too much limited them to beaten tracks. The three we have named are, perhaps, the best of the nineteen he contributes—too great a number to be furnished by one person, considering that "many pictures of merit were returned for want of room."

No. 51. 'Romeo and Juliet,' H. O'NEIL. A clever picture; telling effectively the sad story; the conception and arrangement are both good, and it is finished with due care.

No. 56. 'A Day's Pleasure,' E. PRENTIS. This is a work of considerable merit—although, perhaps, a little too much bordering on caricature. A party of holiday-takers have dined at some pleasant inn, and have been enjoying themselves, without let or hindrance, until the moment of "reckoning" has arrived, and the bill is to be paid. Then

"Men smile no more,"

and are taught, that although "pleasure is a very pleasant thing," if purchased, it must be paid for. The artist has displayed great skill, and a very accurate knowledge of human nature, in the varied expressions he has given to the several individuals who compose the group: either of which will communicate the intelligence that the demands have exceeded the supplies, and that the usual accompaniments—wry faces and long bills—on this occasion, go together. The picture is full of character; the colouring, as with all the works of Mr. Prentis, is hard and cold; but the defect is, to a large extent, atoned for by the spirit and truth of the composition.

No. 60 and No. 73. Portraits of their 'Royal Highnesses the Prince and Princess of Capua,' J. STEWART. Two clever portraits, of a minor size, representing a stout gentleman and a fair lady—the story of whose love has gone over all Europe. Her Royal Highness is, undoubtedly,

a fine woman; and, if we may judge from her form and countenance, "born to command."

No. 63. 'The Forum, Pompeii,' T. C. HOLLAND. This is a work of very high merit, and bears evidence of being "a literal truth." There can be no mistake concerning the accuracy with which the excellent artist has copied one of the most striking and singular scenes that prolific Italy furnishes for the pencil. It is, moreover, painted with great care, and with that thorough knowledge of his art for which Mr. Holland has been so long distinguished. His journey to Italy has been a profitable one; he has brought his facility for preserving the realities of nature to bear with admirable effect upon Italian peculiarities of light and shade; and gives us views of the country which do not at once suggest ideas that they owe more to the imagination than the actual.

No. 69. 'Lagetto, between Rovedo and Lago di Garda,' G. E. HERING. This artist exhibits four small pictures; but they are all most disadvantageously placed. If their merit be equal to that of 'Amalfi,' in the British Institution, he has been hardly dealt with.

No. 70. 'Entrance to a Village,' H. J. BODDINGTON. Mr. Boddington also has just reason to complain, that his contributions to the Exhibition have been estimated by the Society at far less than their true value. There are few who paint more accurately and effectively the landscapes and village-paths peculiar to England.

No. 104. 'Beacon Vale, Dorsetshire,' No. 354. 'Loitering,' W. SHAYER. Both are of much merit, and manifest a desire to change a style in which Mr. Shayer has persevered, until the public have grown somewhat weary of it. The former is a rich landscape; the latter pictures two village gossiping girls. It is very highly wrought; far more so, indeed, than is usual with the artist; and yet not at the expense of freedom and spirit.

No. 139. 'The Interior of Gloucester Cathedral in the Olden Time,' E. HASSELL. A work of a good class; the venerable structure has been accurately copied; the light and shade are very happily mingled or contrasted; and the figures which illustrate the scene, are introduced with judgment and taste.

No. 162. 'Monks of St. Bernard Rescuing Travellers,' Mrs. McLAN. A very effective picture; the subject is well chosen, and has been treated with much skill, as well as with true feeling. The work is one of the most desirable in the collection; it exhibits a striking and deeply interesting scene; the travellers, the monks, and the dogs are happily grouped; and the accomplished artist has been very successful in exciting the sympathies of all by whom the picture may be examined.

No. 172. 'On the Coast at Etratat, Normandy,' H. LANCASTER. This is one of the best landscapes in the exhibition; a fine vigorous and true tone pervades it, the original of which could only have been found in nature. It is carefully painted; and bears evidence that the artist believes genius to work in vain unless aided by judgment.

No. 173. 'Li Amanti,' A. EGG. A clever picture, but not sufficiently in advance of the work exhibited by the same artist last year.

No. 179. 'On the Yare—Moonlight,' J. B. CROME. One of Mr. Crome's always pleasant, natural, and effective pictures; there are none of our British artists who excel him in the style he has adopted.

No. 206. 'River Scene,' J. TENNANT. Mr. Tennant is a valuable auxiliary to this exhibition; and, though not a member, he has been well-used. This river scene is very beautiful. No. 355. 'Distant View of Erith, on the Thames,' No. 558. 'Near Scarborough, Yorkshire,' are not only among the best works in this collection, but would hold prominent places

in a gallery much more select. The artist has a true feeling for nature, and possesses taste as well as judgment.

No. 207. 'Crossing the Brook,' No. 294. 'Crossing the Heath,' E. LATILLA. Among the many pictures exhibited by Mr. Latilla, we select these two—the latter especially—as highly satisfactory. He has, in these, been fortunate in his sitters; they are little more than literal copies of the happy and merry children, "Cast in simplicity's own mould."

to be encountered beside hedge-rows, far away from city smoke. The artist has a vigorous pencil, and colours with breadth and effect. He succeeds, however, in proportion as he follows nature; and fails most where he gives the reins to his imagination. For example: how utterly untrue is this No. 340, entitled 'The Forsaken'—a lady habited with as much skill and care as if she waited to receive visitors after her accomplishment. No. 263, 'The Brigand's Daughter,' is about as near an approach to reality.

No. 215. 'A French Fish Wife,' No. 217. 'A Girl Knitting,' R. J. HAMERTON. A name with which we are not familiar; and almost, if not altogether, the only one in the catalogue with which we meet for the first time, and care to meet again. These small and unassuming pictures promise well; they are boldly touched, and fine in character.

No. 225. 'Portrait of a Lady,' T. M. JOR. This is, beyond question, the best portrait in the collection. It is of a high character of art, with nothing meretricious about it. There are, indeed, few men of the present day who could produce a better picture.

No. 269. 'A Scene from *As You Like It*,' A. J. WOOLMER. We looked with much anxiety, and certainly with some apprehension for the pictures of this artist. Last year he exhibited, we believe, for the first time; and although his works had very glaring defects, they supplied so much proof of originality—a quality rare enough now-a-days—that we augured, not however without misgivings, great things of his hereafter. As yet, he has disappointed us. His luxuriant fancy has not yielded to the curb of judgment. We have in his pictures evidence of genius undoubtedly; but it is of genius that requires the trimming and pruning it ought to have from study and reflection; and, above all, the schooling it must receive from nature. In all his pictures, and they are not few, there is the same straining after unnatural and, consequently, absurd effects; a sort of spatter-dash effect of yellow and red ochres, splashed on with no other design, apparently, than to excite curiosity as to what it can possibly mean; a sort of rechauffé of Mr. Turner's wildest vagaries of colour, but without the excuse that those who do not like them may find better things from the same full storehouse. Mr. Woolmer, this will never do. The fripperies of Art will neither satisfy the learned nor gratify the ignorant. Bear in mind, that a style is soon formed, and that a vice is not easily got rid of. Be bold enough to follow nature, and aim less to be thought eccentric, and the qualities of mind which you do possess will rapidly ensure your acquiring those which as yet you are conspicuously without.

No. 325. 'Waiting for a Victim,' J. P. DAVIS; but that we see too clearly the original through the copy, this would be a fine picture; as it is, there are few in the Exhibition that are more pleasing.

No. 333. 'View on the Thames at Chelsea, with Battersea-bridge,' T. M. RICHARDSON. This is a work of high merit; the production of an artist who has long sustained a reputation in the north of England; and who is well able to maintain it in London. We are not often called upon to notice his pictures; they are not likely to be thrown into the shade by younger com-

petitors; there are few, at least, in this Exhibition that can compete with them.

No. 272. 'Southampton, from below Itchen Ferry,' No. 273. 'Cowes, Isle of Wight,' T. DEARMER. Two gracefully painted landscapes, the productions of an artist with whose name we are not familiar.

No. 375. 'Scene at Hambrook, Somersetshire,' No. 380. 'A Peep at the Metropolis, from Hampstead Heath,' J. B. PYNE. Mr. Pyne is an artist—admitted to be so on all hands—whose works would do honour to any exhibition. He holds rank among the foremost of our English landscape-painters; and what is more, he has of late years made large strides in advance. If he continue to improve, there can be no doubt of his being called to fill the highest place his profession can procure for him. The Society of British Artists, however, appear to have formed no such idea either of his past or his future efforts: his contributions to their Gallery have been thrust as far out of the way as possible; No. 375 being as near the ceiling, and No. 380 as close to the floor, as their arrangements would admit of. If Mr. Pyne had been one of the fortunate "many" whose works had been "returned rather than place them where they could not be seen to advantage," he would, no doubt, have been grateful to the Society for the favour conferred upon him. As it is, there was either a design to insult the painter, or ignorance of what a good picture is. Mr. Pyne, we perceive by the catalogue, has two other works in the collection; we take for granted they also are put out of the way, at least in our way they did not come.

No. 390. 'The Water-carrier,' POOLE. This is beyond question the best picture exhibited in Suffolk-street. We presume it is the production of an artist—Mr. P. F. POOLE—who has already established a reputation as the painter of rustic figures in water-colours. But, unhappily, the catalogue before us gives no Christian name; and in the "list of exhibitors with their residences" the name of "Poole" does not appear. This is unfortunate; for we imagine his picture of 'The Water-carrier'—that was "sold" on the first day to Colonel Sibthorp, and might have been sold to a dozen persons—is likely to bring commissions by scores to the painter. It is a work of very high merit, simple in subject, but wrought with great vigour; and Nature is hardly more true to herself. The minor details, and they are few, are well made out; and the back ground is so pictured as to give great effect to the fine figure of the water-carrier—a girl of the village, graceful enough to be a theme for either painter or poet, yet not

"Too good  
"For human Nature's daily food."

If Mr. Poole can produce many pictures such as this, his prosperity is sure; it is scarcely too much to say that—considering the limited character of the subject—no exhibition of the last three years has contained a work so entirely satisfactory.

No. 397. 'Scene from the Memoirs of the Count de Grammont,' E. M. WARD. Mr. Ward has not been fortunate in his choice of subjects. This is not a pleasant scene; and although of a very opposite character, the remark applies to No. 652, 'The Council of Three of the Inquisition of State at Venice.' They manifest ability nevertheless, and evidence the touch of a master-hand; but the great duty of an artist is to teach while affording enjoyment.

No. 418. 'An Italian Sheep-dog,' C. JOST. A bold and true picture of a faithful friend: it carries marks of accuracy about it that cannot mislead.

No. 508. 'Windsor Castle, from the Meadows,' W. FOWLER. An excellent copy of a scene that may be repeated, and we believe has

been, a thousand times. The picture is carefully painted; and the point of view has been judiciously chosen.

No. 509. 'Morning—Crossing the Sands from Cortoy to St. Valery.' 'Evening—Mussel Gatherers,' JOHN WILSON. Two out of a dozen productions by this always admirable artist; each entitled to high praise. He holds his place among our marine painters; no man has a more thorough knowledge of Nature in the garb in which Islanders love her best.

No. 550. 'Village of Liddes, pass of Great St. Bernard, with Travellers making the Ascent.' T. M. RICHARDSON, jun. A capital picture, by an artist of whose works we see too few.

No. 561. 'The Dead Bird.' W. PATTEN. One of the sweetest pictures in the collection. The subject, although somewhat trite, has been treated with much delicacy and true feeling. The poor girl mourns over her dead pet.

No. 572. 'Windsor Castle, from the Locks near Datchet Lane,' J. WILSON, jun. The young artist continues to do honour to the good school in which he has been taught. This, and No. 84, 'On the Thames, near Battersea,' though not very ambitious either in size or subject, may be coveted by all who can appreciate the excellent in art.

No. 590. 'The Novel-reading Housemaid,' T. SMART. Painted with considerable vigour. We do not recognise the artist's name; if he be a new candidate for fame he will surely obtain it, for there are in this production qualities of a rare order.

No. 603. 'Puck,' R. DADD. A most happily conceived picture of the spirit that "wanders everywhere"; and

"Serves the fairy queen,  
To dew her orbs upon the green."

It is cleverly coloured too; and has, as it ought to have, the character of a dream. The drawing is fine and true—and excels in a style in which excellence is still rare among us—the nude figure. The composition is essentially poetical, and goes far to realize one of the most marvellous creations of the immortal poet. Mr. Dadd is on the right road to fame; he must, however, beware; and stop short of the boundaries which divide the imagination from the absurd.

No. 624. 'A Magdalen,' H. LE JEUNE. A slightly painted, although a very masterly work; it is carefully and most correctly drawn, and gives proof of vigour as well as freedom of touch.

No. 630. 'On the Beach, near St. Leonards,' A. CLINT. Of five pictures contributed by Mr. Clint, this is perhaps the best, although the whole of them possess merit of a very high order. He is an excellent artist, whose intercourse with Nature is close and continual; there is a fine and delicate perception of the beautiful evident in all he does; yet industry is sufficiently apparent. He does not dash off his works with a sort of "it'll do" air; but seems to ponder over them, as if his duty to the fair scenes he copies called upon him not to dismiss them with heedlessness or indifference. Among the more graceful of our English landscape painters he is entitled to a very foremost rank.

No. 642. 'Paddy on the Move,' J. ZEITZER. A capital specimen of character. Mr. Zeitzer exhibits also some of his admirable Hungarian scenes.

No. 666. 'Dancing Dolls,' A. MONTAGUE. Mr. Montague has been a valuable contributor. This is a sweet composition, finished with care; and very true to nature. No. 9. 'An Old Water Mill,' is also a vigorously painted picture; but the subject is not of sufficient importance for the size of the canvass.

We must not forget the beautiful water-colour drawings of fruit and flowers—Nos. 752 and 764—by Mrs. WITHERS. They are of the

highest merit, exquisitely and most elaborately finished, yet not so as to make the labour expended upon them too apparent. Judgment and taste have both been exercised in the grouping, the arrangement, and especially in the selection of objects, so as to obtain all the advantage that can be derived from contrast.

We feel that we have gone through this Exhibition as far as our limits will permit; and, indeed, as far as its merits demand; although, no doubt, we have omitted to notice some that deserve notice more than others to which we have directed attention. If our introductory remarks have the appearance of harshness, we trust our readers will believe that we have not given this character to them without extreme reluctance. It can be no pleasure to us to give pain to others. It must be borne in mind, that we have not treated the Society of British Artists as merely a private and irresponsible body—perhaps this may be wrong; and, consequently, that we are not justified in finding fault with arrangements made to suit their own views. We are fully aware that the members incur no inconsiderable risk in maintaining the Institution; and that the aids they receive are now neither large nor numerous. They have tried experiments to coerce their professional brethren into joining them; let them next year see if an opposite course will not produce more beneficial results. We tell them, once for all, that their policy has been, and is, most shortsighted; and that if it be not changed, the consequence will be very injurious to them, and prejudicial to the Arts.

#### EXHIBITIONS.

THE EVILS OF WAR BY RUBENS.—There is at present exhibiting in Pall-mall, a supposed duplicate of this picture, which is in one of the Florentine galleries. Nothing is known of its history, beyond the facts that it has been in this country during the last forty years, has been preserved, rolled up with much care, and has never been in the hands of a cleaner, or received a touch from the pencil of a restorer. When a picture can be traced through a known succession of proprietorship to the easel of the painter, any inconsistencies which may distinguish such picture from the usual manner of the other works of the artist, are comparatively overlooked; but on the contrary, when the channel of its descent is unknown, every departure from a usual style is jealously considered. This picture is supposed to be an original, of which the picture at Florence is presumed to be a repetition, although the difference between the works is striking. On inspecting this picture, there is an absence of that singular freedom and decision of handling which distinguish the works of this master, and for which we find substituted the Italian method of *impasto*; the colouring also, generally, is less rich than that of the picture at Florence. Rubens' series of large pictures in the Louvre are extravagantly glazed; while others of his no less celebrated works are cold in tone, as for instance, his well-known 'Bacchanalian' picture at Florence, 'The Descent from the Cross' at Antwerp, &c. &c.; but, although totally different in their general colouring, the style of work in the whole is uniform. The picture in question is admitted to be in an unfinished state, and for this it is now impossible satisfactorily to account; such fact would by no means preclude the probability of the work being that of Rubens, although a departure from his usual manner of work in this or any doubtful instance, would do so—we say doubtful, because, after all, the most experienced judgment in cases of unauthenticated pictures cannot pronounce, but can only conjecture and attribute.

THE KINEORAMA.—This exhibition is a novelty, in so far as it combines the effects of the peristrepic panorama with those of the illusory diorama. The artist, Mr. Charles Marshall, has been happy in the selection of his subjects, the localities of which, the late political embarrassments of the East have invested with much

interest. The visitor is accordingly presented with a series of views in Turkey, Syria, and Egypt, commencing in Constantinople and terminating at Cairo, and all deriving life from hundreds of figures appropriately costumed and characterized. Among the first *tableaux* is a Turkish review, the foreground group consisting of the Sultan, accompanied by his state officers and the foreign ambassadors. This is followed by an excellent representation of a Turkish Bazaar and Café, and a view of the Golden Horn, or Port of Constantinople, wherein is moored every description of Mediterranean craft. After a few succeeding changes, a transit is at once made from Turkey to Syria, by means of the dioramic effect, when views are presented in course, of Tripoli, Beyrout, Sidon, St. Jean d'Acre, &c. &c. Another change transports the spectator to Egypt, the first view in which is its centre of attraction, Alexandria. This view is taken from the platform of the Pharos, and comprehends the harbour and town, the citadel, Pompey's pillar, &c. &c. In another painting the Delta of the Nile, the artist has successfully availed himself of the extreme flatness of the country to give an excellent effect of distance, with the waters of the Nile shining with reflected light in the horizon.

THE DIORAMA.—The pictures now exhibited here, are 'The Shrine of the Nativity at Bethlehem,' and 'The Interior of the Cathedral of Auch,' both painted by M. Renoux, but the former from a sketch, made on the spot, by David Roberts, Esq., during his late tour in the East. This is incomparably the better picture of the two; it represents the birth-place of our Saviour under present circumstances, and has much the appearance of the interior of a chapel. The stable is an excavation in the limestone rock; but the pillars, which are of marble, are supposed to be Roman, and to have been a portion of some other edifice before set up here. A star of gold, inlaid in the pavement, marks the spot over which the star, that preceded the wise men of the East, rested; and in the recess, immediately over it, are suspended fourteen lamps, which are kept burning day and night. This picture is exhibited under two effects—the first represents the shrine, &c., as it usually appears; the second shows the celebration of midnight mass by the Franciscan monks, with figures at their devotions, when the whole seems to be lighted by a number of lamps; and this scene, with all its sacred associations, is deeply impressive.

THE ROYAL ACADEMY.—The Works of Art for the approaching Exhibition—to be opened as usual, we presume, on the first Monday of May—have been received at the Royal Academy. Report speaks of it as likely to realize the best hopes of the friends of Art, and of those more especially who look for improvement in its junior professors. We anticipate its excellence, the more, because, beyond question, the Exhibitions that have preceded it in the metropolis, have been comparative failures. There are two or three of the leading artists who will be missed: it will, we understand, contain nothing by either Sir David Wilkie or Mr. Edwin Landseer, the former being "on his travels," and the latter having suffered nearly the whole of the past year from ill health. There will, consequently, be more "good places" for younger candidates.

THE SOCIETY OF PAINTERS IN WATER-COLOURS will be opened to the public on Monday, the 26th April; the private view to take place on the Saturday preceding. It will, we understand, be even more than usually interesting and important, containing many works of a large size; and these from the more prominent members—Cattermole, Tayler, Lewis, Harding, Evans, Fielding, Dewint, Nesfield, &c.

THE NEW SOCIETY OF PAINTERS IN WATER-COLOURS.—This excellent Society will open its seventh annual exhibition, we presume, on Wednesday, 21st April (the private view is fixed for Tuesday, the 20th). It has gone on, from year to year, improving; so as, at length, to approach very near the height and strength of the senior branch of the profession; and we have reason to believe that, in completing its seventh year, it may be considered as arrived at maturity. We hear much of the productions of Haghe, Warren, Wergall, Corbould, Bright, &c.

## MARCH AND APRIL.

WHAT an anxious time for the artist is the month of March; and yet there is no period of the year when the mind, naturally and generally, is more inclined to sympathize with the changing aspect of Nature, to brighten up like the season, and prepare to dispel cares by an increased degree of energy in the removal of their causes. But March is the month when the painter in London puts the finishing touch to the efforts of the year; it is his passing of the Rubicon, for the succeeding April prevents any going back, the pictures being then consigned to the grim custody of the porters of the Academy. Every day, therefore, is marked out, every hour has its appointed labour, till that auspicious time when there is the "rattling of the chariot wheels" in the purlieus of Newman Street and Trafalgar Square, and the covered van whirls away, at once, the painting and its attendant troubles. Then, indeed, to the less initiated, and even to the experienced, may succeed the period of suspense—the fiat of the Academy hangs, during another three weeks, like the sword of Damocles, but there is an absence of care in the consciousness that no effort of the artist can arrest its suspension. Thus, whilst everything around is beaming with evidences of that renovating power with which Nature dispels the remnant gloom of winter; while crocuses and snowdrops bloom along the green-edged walks, and every hedgerow presents its flowering tributes to the gladdening presence of the sun; while the skeletons of the trees are beginning to make promises of the richness of their summer shadows; and the denizens of towns are making devious circuits to catch from every surrounding dell more positive assurances of the genial spring,—there is one class of men in London from whom all these interesting workings of Nature are, in a manner, "quite shut out;" and the painter enjoys from morn till night, at this period of the year, an almost unvarying survey of the perennial green baize that adorns the floor of his studio, and the eternal "northern light" that sends its clear cold rays upon his cumbered easel. Dilatory weeks must be atoned for; the brain is working double time; the high pressure is put on. It is a time of most careful scrutiny of the drawing; the composition is criticized in every direction; it is a time of glazing and scumbling, of "bringing forward," and "putting back," and all those mysterious workings of experienced genius on which the *tout ensemble* so much depends—when that which does not "make" must "mar." The freshness of the balmy air must therefore be despised in comparison with the fragrant effects on the olfactory nerves of well turpentine mcgylps, and those other efficient adjuncts which tend to make up and perfect a "strong drier."

Whether it follow as a sequel of all this we know not, but certain it is, that one is struck at the absence of the representatives of *Spring*, in the landscapes and other pictures of the Academy Exhibition. Summer, from the umbrageous shadows and charming sunny gleams of Creswick, to the truthful breadth and extensive distances of Lee, seems to appeal to our love of the rich English glades, and makes us long to be in the heart of the country; the burnt siennas, rich lakes, and deep varied greens of autumn, glow again and again on the walls; and some little silvery bit of highland distance from the brush of Landseer makes us think of steaming to the north and clambering over the heath-covered hills. But where is spring—delightful spring? And yet, what can offer more tempting subjects to the truth-telling pencil of some painter-naturalist! What a charming time it is when Nature looks so young; the olden tree of centuries seeming by its fresh sprouts to assert its claim to youth. But is it practicable for the artist? Surely he can make something of those delicate greens that vanish in silver grey; of those fresh young crops which allow just sufficient appearance of the warm earth to spread a charming hue along the furrowed fields; of the peculiar aspect of the woods; while the operations of husbandry offer figures for the foreground, and every hedge-side presents the poetry of the crowslip "that peeps beneath the thorn;" and other studies of interesting "detail" peculiar to this season of the year.

We know not how far this may meet the views of the members of the profession, but we throw out the hint to those who, like ourselves, may feel the force of the remark that the mine of Nature can never be too much explored by the truth-loving artist—that every nook and corner abounds in wealth and "raw materials," which the magic hand of genius can mould to the gratification of taste.

## CORRESPONDENCE.

## ENGLISH FRESCOS.

SIR,—In the number of the 'ART-UNION' for November, 1840, I observed a remark quoted from an article in the 'Foreign Quarterly Review,' to the following purport: that there was, probably, not an individual in England capable of producing a work in that style of art called *fresco*. I beg leave, in contradiction, to state that in the city from which this is addressed to you, we have one, not only known throughout these nations, and the continent of Europe, as a great oil-painter, but distinguished likewise, at least among his fellow-townsmen, as having executed a truly magnificent fresco picture on a wall of his dwelling-house at Sion-hill, Bath. I allude to the celebrated master, Thomas Barker, who has long held a very conspicuous place, indeed, on the roll of renowned painters of modern times, as the author of numerous splendid works on canvas. His admirable "Woodman," his "Old Tom," &c., repeatedly engraved, attest his celebrity. Those fine productions, his portraits, his nearly matchless landscapes, and pieces of animal history, are as dearly prized as they are extensively known; and I presume to assure you that in the opinions of the severest judges, the British school has never had to boast of a superior to Barker in fidelity of drawing, mellowness of colouring, grace of outline, and originality of manner.

With much of this you are, of course, already acquainted; but not, I apprehend, with his reputation as a fresco painter; and, in common with many of his admirers, I must be permitted to lament that his powers in this exalted class of art, should not be more generally acknowledged than they are. Should this slight notice, however, of his picture, find its way, by your favour, into the columns of the 'ART-UNION,' his name, as an adept, will be most advantageously proclaimed to the world of taste, and by means most gratifying to his professional feelings, and to the wishes of his warmest friends.

The subject of his superb fresco is the savage inroad of the Turks upon the territory of Scio, the happiest and fairest of the Greek Islands in the Archipelago; an outrage on humanity perpetrated in the month of April, 1822, and now become a mournful record in the annals of mankind. The painting which, as I have said, covers the wall of an apartment in the artist's place of residence, is 30 feet in length, and 12 feet in height; and represents, in many figures of the size of life, the last agonies of young and old men, resisting in vain, of distracted and despairing daughters and mothers, and of helpless infancy, perishing under the swords of the assassins; contrasted with the merciless ferocity of their assailants, the gorgeous and antique costume of the personages are correctly preserved; and all without glare of colouring, and free from the slightest distortion, and from everything extravagant in attitude. The various passions of the murderers and their victims are expressed without exaggeration, yet with such force of drawing as often to extort tears from the least enthusiastic spectator. The tremendous scene is, by the magic of Barker's pencil, made to pass beneath a turbulent and portentous sky and at the moment of sun-set, an effect most poetically thrown in, and beautifully managed. Of this great work, I leave the technical description to others, while I venture to affirm that it abounds in charms for the professor, the connoisseur—and the visitant who is neither.

That one who, in the above-mentioned fresco, independently of the grandeur of his subject, has, by his treatment of it, as well as by all his other eminent works, conferred imperishable honour on the place of his birth; that a man endowed with the genius of Thomas Barker, should not enjoy his fair portion of public applause, seems hard: the harder too, because it appears that, unhappily, fortune has been less kind to him than nature. To a truly liberal mind this intimation is sufficient; and I feel satisfied that I need add no more.—Yours, &c., E. M.

Bath, March 22, 1841.

## PRICES OF PICTURES IN SCOTLAND.

SIR,—I beg leave to agree most cordially in the sentiments expressed by your correspondent Scotias, in your March number, respecting the high prices charged here for most of the pictures brought forward in the annual exhibitions. From any knowledge I happen to possess of prices charged in London as well as on the continent, I should say that, in general, the productions of artists here are fully from 3 to 400 per cent. dearer; in other words, what could be got for £20 in London, would have been marked £60, or even £80, and perhaps £100. I feel persuaded that, in comparison with prices in Holland, the terms here are far more exorbitant: I have no hesitation in saying that you may buy in the Hague original pictures for 10 or 12 guineas, which would here be marked 100 guineas and upwards. I do not mention these circumstances with anything like a view to disparage either Scottish art or artists; far from it. Perhaps our painters cannot afford to execute works at lower rates, and of course every man is entitled to make the most of his labours; but, at the same time, there is no reason why picture-buyers here should be limited in their choice to articles of home produce. As an advocate for the abolition of all restrictions whatsoever on imports and exports, I do not see why we should not in future buy pictures as well as corn in the cheapest and best markets. By way, at least, of making a trial, and trusting to the effects of fair competition, I think it would be advisable for a body of London artists to form an association for the purpose of exhibiting their productions annually in Edinburgh. If such an association was well organized, and contained a fair share of artists in different departments—landscape, marine, moonlight, (the moonlights here are horrid), and historical—I have little doubt of its success, speaking of it commercially; and as for the benefits it would confer upon art, they are too obvious to require comment.—Yours, &c.

Edinburgh.

W. CHAMBERS.

## ENCAUSTIC PAINTING.

SIR,—I should be glad to learn what progress has been made, of late years, towards ascertaining the exact process of *Encaustic Painting*, as practised by the ancient Greeks.

In the "Philosophical Transactions for the Year 1775," there is a translation of part of a letter from the Ab. Mazzeas, descriptive of the experiments of Count Caylus, to revive Encaustic Painting. And, also, in the Transactions of the same society, anno 1759, some interesting experiments, made by Mr. Josiah Colebrooke, of the same nature; together with a translation of a passage in "Vitruvius de Architectura," relating to wax paintings on walls. There are also many particulars to be met with in the Cav. Rossi's "Memorie delle Belle Arti," (1784); whereby it appears, that the Ab. Vincenzo Requeno combined his colours with wax, gum mastic, and water, which he formed into crayons, and finally blended his tints by means of heat.

I understand that, a few years ago, a lady in this country succeeded so far in this style of painting, as to produce most pleasing effects; but whether her process is generally practicable, or was ever made public, I cannot learn.

As I am prosecuting this enquiry under disadvantages, I shall feel much indebted to any of your readers for information and advice.

I am, Sir, your most obedient servant,  
A SUBSCRIBER.

[We have before us half a dozen letters on the subject of Vehicles. We shall next month print one of them—the "Student's" reply to a "Fellow Student;" but we suspect the subject is beginning to get wearisome, and we do not perceive that as yet much good has proceeded out of it. If our space were not better occupied, it would be amusing, at least, to peruse the very opposite opinions that exist on the matter. One writer, "Anti New-medium," considers "the puffer of the starch mixture a very short sighted observer; and his notions of colouring and texture as far from correct as the poles are asunder." He considers we have wasted many columns in treating it; and yet calls upon us to publish another long letter about it. A second correspondent has "tried the plan recommended by a student with complete success," and is "happy to add his testimony in favour of the starch medium." Artists, as well as doctors, differ.]

## REVIEWS.

A DICTIONARY OF GREEK AND ROMAN ANTIQUITIES. Illustrated by numerous Engravings. Parts I.—XVI. London: Taylor and Walton.

Independent of the great antiquarian merit of this work—the best guide to the study of the Greek and Latin authors which has yet appeared in our language—it has, in our estimation, the additional and equal value of rendering the eye of the student familiar with the forms of classic art, and thus creating that taste for beauty and sublimity which is, or ought to be, an essential part both of moral and intellectual education. The wood-engravings, copied in bold outline from vases and other precious relics of antiquity, are novel and precious features in a school-book; the information they afford by their accuracy, is not more important than the elements of judgment which they develop by their grace. It is not our province to enter into any investigation of the varied topics which the contributors to the work have discussed with equal learning and discernment; our attention must be limited to the artistic illustrations—a few specimens of which we are enabled to lay before our readers.

The following is a representation of the sportive and graceful attitudes in which the ancient rope-dancers placed themselves, taken from a series of paintings discovered in the excavations at Herculaneum.

The touching practice of crowning the tomb of a deceased relative with garlands, and offering testimonials of love to the memory of the lost one, is represented in the subjoined engraving. The tomb is built in the form of a heroic temple, and has a representation of its occupant depicted on it. The cut is taken from an ancient painted vase; and we may add that on such vases the honours paid to the dead are very frequently depicted.

Our next specimen shall be a cut taken from a bas-relief, representing the fabulous origin of the bridge. According to the mythologists, when Bellerophon was about to undertake the marvellous exploits required of him by the King of Lycia, Minerva presented him with a bridle, as the means of subduing the winged horse, Pegasus. Bellerophon is here represented after having succeeded in taking the wondrous steed while quenching his thirst at the fountain of Peirene.

Many reasons induce us to select as our example of a cut derived from statuary, the representation of the quoit-player, taken from a well-known statue in the British Museum. The subject was originally represented by the sculptor Myron, and seems to have been very highly valued by the ancient lovers of art, on account of the extraordinary power developed in the attitude. Quintilian adduces it to show how much greater skill is displayed by the artist, and how much more powerful an effect is produced on the spectator, when a person is represented in action, than when he is at rest or standing erect. There is probably no other production of art which so powerfully exhibits force collected and concentrated for a single effort: every muscle of the body is brought into play for the one single object, and we seem to expect that the arm of the statue should move with it the whole impetus of the body before our eyes.

The last specimen we shall give is the representation of a gladiatorial combat, taken from the bas-reliefs on the tomb of Scaurus at Pompeii. This was a favourite subject with the Roman artists: it was even popular in the remote provinces, for a fight of gladiators is represented on

the Mosaic pavement in the Roman ruins at Bignor, in Hampshire. The figures at the left hand in the engraving are engaged in an equestrian combat. The left gladiator of the second pair has been wounded, and has let fall his shield; he is turning to the spectators to implore their mercy. The right hand figure in the third pair represents a defeated mirmillo; and the group of four represents two net-casters with their tendents and two swordsmen. The last pair exhibit a Samnite defeated by a mirmillo.

We need not wish this work success, for that it has obtained, but we most earnestly hope that the publishers of school-books will profit by its example, and give the aid of high art to the business of education.

## TO CORRESPONDENTS.

We are largely in arrear with many esteemed correspondents; we claim their indulgence until next month, when we shall give an *extra half-sheet*, and find space for several important matters upon which we have been called to comment.

We have several Reviews in type, and among them one of Mr. Sarsfield Taylor's work.

The lines on "Cruikshank's Illustrations to Ainsworth's Tower of London," though good, do not altogether suit us.

An Amateur suggests the formation of a society on the principle of the ART-UNION; but devoting its attention exclusively to the production of fine Engravings. We shall notice this project hereafter.

"A Foreign Admirer of British Engraving" shall be attended to in our next.

Robert Hay, Esq. In reviewing this gentleman's admirable work on "Cairo," we described him as holding a diplomatic situation in Egypt. We were in error: he was there merely as a traveller. We cordially hope he will be a traveller in some other country:—

"He travels to good purpose who takes note."

Exhibitors will obtain free tickets to the Exhibition of the Royal Academy on application to Mr. Vaughan, the Under-Secretary, on the day of opening the Exhibition, or any day after. The application to Mr. Vaughan must be made at the Students' door.

We were in error last month in stating that the names of the purchasers at the British Institution were not entered in the Sales Book. The person whom we employed to copy the list states, that "he inquired for the *usual* Book, and was informed that the Book from which he made his copies, and which did not contain the names, was the only one to be inspected." We shall publish a complete list when the Institution closes.

The continuation of "the Artist" must be postponed, in consequence of the press of more immediate matters.

"An Admirer of the Arts."—There is much good sense in his remarks; but we have frequently canvassed the subject.

We shall take especial care to give notice when the exhibitions of works of Art in the several provincial exhibitions are to take place; and sufficiently early to enable artists to transmit pictures to them. We believe, indeed that they, each and all, advertise in our columns; and we take for granted that artists look to these. Some, it would seem, do not; we have received a letter of inquiry concerning the Royal Hibernian Academy. It was advertised in our February No., "All works intended for this exhibition must be sent to the Academy House, on or before the 17th of April." There is yet time to send pictures.

A Provincial Artist complains bitterly, and with some justice, of our neglecting to inform him of the days for receiving pictures at the Royal Academy. We exceedingly regret this omission; the more especially as he states, "The consequence is that I have lost the fruits of several months' labour, bestowed expressly for the exhibition at the Royal Academy, and doubt not others have experienced the same loss through the same cause." We shall take care to prevent this in future; but the fact is, we had thought it sufficiently notorious that pictures are sent in about a month before the first week in May, the invariable period for the Exhibition to open. We had also supposed, as a matter of course, that an advertisement would have appeared in our paper; and never thought of ascertaining whether it had or had not been sent.

In a small pocket volume, price half-a-crown,  
**THE EPICURE'S ALMANAC**; or, Diary  
 of Good Living. Containing a choice and original  
 Receipt or a valuable hint for every day in the year;  
**THE RESULT OF ACTUAL EXPERIENCE**,  
 applicable to the enjoyment of the good things of this  
 life, consistently with the views of those who study  
 genteel economy. By BENSON E. HILL, Esq.  
 London: How and Parsons, 132, Fleet-street.

**FIELD ON COLOURS.**  
 Now ready, in a large 8vo. vol., price 14s.,  
**CHROMATOGRAPHY**; or, a Treatise on  
 Colours and Pigments, and of their Powers in  
 Painting. By GEORGE FIELD.

New edition, revised and improved.

Also, by the same Author,

**1. CHROMATICS**; or, an Essay on the  
 Analogy and Harmony of Colours. Coloured Diagrams.  
 Royal 4to. 21s., cloth.

**2. OUTLINES OF ANALOGICAL PHI-**  
**LOSOPHY**; being a Primary Review of the Princi-  
 ples, Relations, and Purposes of Nature, Science, and  
 Art. 2 vols. 8vo., 30s.

**3. THE WORDS OF CHRIST**; being a  
 Manual for all Christians. 8vo., 5s. 6d., cloth.  
 Tilt and Bogue, Fleet-street.

#### A VALUABLE GIFT.

In 21 Volumes, uniform with SCOTT, BYRON, &c.,  
 price 5s. each, bound in cloth,

#### VALPY'S ONLY COMPLETE AND UNIFORM HISTORY OF ENGLAND.

By HUME, SMOLLETT, AND HUGHES,  
 With a **CONTINUATION** from the Reign of George II.  
 (1760 to 1835.)

By the Rev. T. S. HUGHES, B.D.,  
 Prebendary of Peterborough, late Christian Advocate  
 at Cambridge, Author of "Travels in Greece," &c.

The Work is completed in Twenty-one Volumes, and  
 embellished with Eighty highly-finished Engravings  
 on Steel, comprising Portraits of the Sovereigns of  
 England from the Norman Conquest to the present  
 time, and a selection of Historical Illustrations, com-  
 memorative of important events in English History.

The **CONTINUATION**, by the Rev. T. S. HUGHES,  
 commences from the Reign of George II., and is con-  
 tinued to 1835.

Vols. I. to VIII. contain HUME—IX. to XIII.,  
 SMOLLETT—and Vols. XIV. to XXI. Mr. HUGHES'S  
 Continuation. Either portion can be had separately.  
 Indexes to Hume and Smollett, incorporated with  
 that of the Continuation, are given in the last volume.

ALSO,

#### THE CONTINUATION,

In Seven Volumes, 8vo. price 10s. 6d. each,  
**HISTORY OF ENGLAND.**  
 From the Reign of George II.—(1760 to 1835).

By the Rev. T. S. HUGHES, B.D.,  
 Prebendary of Peterborough, late Christian Advocate  
 at Cambridge, &c. &c.

This Work is completed in Seven Volumes, to range  
 in size with the various octavo editions of HUME and  
 SMOLLETT, to which it forms a **CONTINUATION** to the  
 present time, and thus enables the possessors of those  
 editions to render their libraries more perfect by the  
 addition of a faithful record of an eventful period, more  
 particularly interesting to the present generation.

To the first Volume is prefixed a "PRELIMINARY  
 ESSAY ON THE POLITICAL SYSTEM OF EUROPE, and its  
 Connexion with the Government of Great Britain,"  
 which has been characterized as a "most useful intro-  
 duction to a perfect comprehension of the work, writ-  
 ten in a tone of impartiality and fairness as to state-  
 ments and deductions, and with elegance and conden-  
 sation as to style."

#### OPINIONS OF THE CONTINUATION.

"It has been our opinion that this Continuation has  
 been impartially done—even well done. It is the best  
 History of England extant."—*Metropolitan Magazine*.

"Mr. Hughes's undertaking was one of no mean  
 difficulty. He has, however, executed his task in a  
 way equally honourable to his understanding and his  
 industry, and the result is, an impartial and critical  
 history of one of the most important epochs of ancient  
 or modern times."—*Monthly Magazine*.

"The author appears moderate and impartial as  
 regards opinions. He seems to have sought after his  
 facts and information with pains-taking industry, and  
 to have combined his materials with sufficient skill;  
 whilst his narrative carries us smoothly and quietly  
 along, without excitement, without weariness."—*Spectator*.

"Mr. Hughes is a partisan neither of Whig nor  
 Tory, but he does justice to both."—*Sun*.

"For clear and lucid arrangement, perspicuity of  
 style, and pictorial fidelity, Mr. Hughes stands un-  
 rivalled."—*Sunday Times*.

London: Printed by A. J. Valpy, M. A.; sold by  
 H. Wix, and all Booksellers.

Just published,  
 Price £1 1s. post 8vo.; £1 16s. large paper, proof  
 plates,

#### THE BRITISH ANGLER'S MANUAL;

or, the Art of Angling in England, Scotland,  
 Wales, and Ireland. With some account of the Prin-  
 cipal Rivers, Lakes, and Trout Streams; and Instruc-  
 tions in Fly-fishing, Trolling, and Angling at the Bot-  
 tom, and more particularly for the Trout. The work is  
 highly embellished with numerous Engravings, on  
 Wood and Steel, of Landscape Scenery, Fishes, Flies,  
 &c., from Original Pictures and Drawings by the  
 Author. By T. C. HOFLAND, Esq. Fifty sets only of  
 India proof impressions of the Steel Plates, before let-  
 ters, have been printed, also fifty sets of India im-  
 pressions of the Wood Engravings. Price One Guinea each  
 set, in a Portfolio.

"The result of thirty years' experience, as an angler,  
 is here given to the brethren of the 'gentle craft.' As  
 a cicerone to the veteran and an instructor of the tyro,  
 Mr. Hofland appears to be equally competent."—*Spectator*.

"This is the most comprehensive work on angling  
 that has as yet appeared in this country. The author  
 is an artist and an angler, and his pencil illustrates the  
 descriptions and instructions given in his text."—*Bell's*  
*Life*.

"Its directions for different kinds of fishing, its de-  
 scriptions of scenery and the various fishing stations,  
 with its very beautiful illustrations, render it valuable  
 to the class for which it was especially intended."—*Argus*.

"Mr. Hofland's own charming pictures and drawings  
 are transferred to wood and steel, in a manner to  
 gratify not only every brother of the angle, but every  
 admirer of the fine arts and of nature. It is a very  
 complete view of the art, with much practical infor-  
 mation, and is a capital companion for every angler."—*Literary Gazette*.

"The tourist can hardly have a more elegant or  
 agreeable companion."—*Sporting Review*.

London: How and Parsons, 132, Fleet-street.

Messrs. Fisher & Co. have this day published,

**NO III. OF FAMILY SECRETS**; or Hints  
 to those who would make Home Happy. By the  
 Author of "The Women of England." To be com-  
 pleted in about Twenty Monthly Numbers, at One  
 Shilling; each embellished with a highly-finished  
 Engraving on Steel.

**PART IV. OF THE RHINE, ITALY, AND**  
**GREECE.** Illustrated in a Series of Views from  
 Drawings on the spot, by Messrs. Leitch, Bartlett, and  
 Wolfensberger, Col. Cockburn, and Major Irton. Con-  
 taining, The Campanile, Venice—Lago di Como—The  
 Lantern of Diogenes, Athens—and Braubach on the  
 Rhine. Price 2s.

**PART IV. OF REV. THOMAS SCOTT'S**  
**FAMILY BIBLE.** With a View of "The Cedars  
 of Lebanon." Price 2s. To be completed in about  
 Forty Monthly Parts; every Part embellished with a  
 highly-finished Engraving on Steel.

Part I. Views of Jerusalem and Zidon.

— II. — Damascus.

— III. — The Lake of Tiberias, or Sea of  
 Galilee.

— V. — Ephesus—will be ready May 1st.

SCOTT'S BIBLE—FISHER'S EDITION.

THE LORD CHANCELLOR has this day dissolved  
 the Injunction granted by the Vice-Chancellor against  
 the Announcement on Part I. Misapprehension  
 having gone abroad, the Publishers beg to inform the  
 Public that *against* the Work itself no Injunction was  
 ever applied for or granted.

The First Volume of Fisher's

**HISTORIC ILLUSTRATIONS OF THE**  
**BIBLE**, after the Old Masters. Embellished  
 with thirty highly-finished engravings on Steel. Cloth,  
 21s.; half morocco, gilt edges, 25s.; morocco,  
 elegant, 30s.

May the 1st will be published, dedicated to His Royal  
 Highness the Prince Albert,

**MR. BUCKINGHAM'S AMERICA**,  
 Historical, Statistical, and Descriptive. With  
 a portrait of the author, and Seventy Wood Engravings.  
 3 vols. 8vo., price £2 2s.

"The more minute details of the scenes and events  
 in reference to these and other subjects presented by  
 his extensive tours in America, are reserved for a work  
 which he is now preparing for the press. Enough has,  
 however, been said to lead us to look forward with  
 pleasure to the publication which Mr. Buckingham  
 has announced."—*Athenæum*.

N.B.—The Queen has ordered two copies for the  
 Royal library, and Prince Albert one copy for himself.

May 1st, Uniform with "The Women of England,"

 HOLBORN, where lists of prices of the above articles  
 may be had.

SIR DAVID WILKIE, R.A.

JOHN KNOX ADMINISTERING THE SACRAMENT  
IN CALDER HOUSE,  
FOR THE FIRST TIME AFTER THE REFORMATION.

PAINTED BY

SIR DAVID WILKIE, R.A.,

*Principal Painter in Ordinary to Her Majesty.*

TO BE ENGRAVED IN THE HIGHEST STYLE OF LINE, OF THE SAME SIZE, AND TO FORM A COMPANION TO HIS  
CELEBRATED PICTURE OF

“THE PREACHING OF KNOX.”

MR. MOON is authorized to intimate to the Patrons of Art, and more especially to the Subscribers to the Engraving by Doo, from SIR DAVID WILKIE's great picture of John Knox Preaching the Reformation, that the same Illustrious Artist, having occupied a part of several years in collecting materials, and making the necessary preparatory studies, has for some time past been engaged on a work, which it is believed will surpass all his former efforts, representing “*John Knox Administering the Sacrament of the Lord's Supper in Calder House, immediately after the Reformation.*”

This Picture is to rank as a companion to the Artist's celebrated *chef-d'œuvre* above mentioned, viz. “*Knox Preaching the Reformation,*” a work now in the collection of Sir Robert Peel, Bart., and worthily considered the greatest historical painting of modern times.

It is confidently anticipated that the subject of the proposed work, which, in so interesting a manner, marks the commencement of a new era in the religious history of our country; the high devotional feelings which must pervade the scene, the variety of character, station, and opinions of the personages introduced, and the picturesque accompaniments of a Baron's Hall of the period,—as they combine in furnishing ample materials for a great and solemn National Work, so they will not fail to call forth the best energies of the greatest living genius in Art.

The Picture, on being finished, will be put into the hands of an eminent line engraver, for the purpose of having an Engraving in the highest style of the Art produced from it. It will, in size, quality, and price, rank as a Companion to that of the “KNOX PREACHING.”

SIR D. WILKIE is now in the East; and Mr. MOON has the honour to state, that immediately after his return to this country, the Picture will be Exhibited in Threadneedle Street.

PRICE TO SUBSCRIBERS:

PRINTS	£4	4	0

A MONTHLY JOURNAL OF THE FINE ARTS.

No. 28.

LONDON: MAY 15, 1841.

PRICE 8d.

THIS JOURNAL BEING STAMPED, CIRCULATES, POSTAGE FREE TO ALL PARTS OF THE UNITED KINGDOM.

**THE THIRTY-SEVENTH ANNUAL EXHIBITION** of the SOCIETY OF PAINTERS IN WATER-COLOURS, at their Gallery, Pall-mall East, is NOW OPEN. Open each day from Nine till dusk.—Admittance, 1s. Catalogue, 6d.  
R. HILLS, Secretary.

**THE SEVENTH ANNUAL EXHIBITION** of the NEW SOCIETY OF PAINTERS IN WATER COLOURS, FIFTY-THREE Pall-mall, next the British Institution, is NOW OPEN, from Nine o'clock till dusk.—Admission, 1s. Catalogue, 6d.  
JAMES FAHEY, Secretary.

**ROYAL IRISH ART-UNION.**  
PRESIDENT—The Marquis of Ormonde.  
Subscription—One Pound per Share.

N.B.—Post Office orders, for remitting the Price of One or Two Shares, may be obtained of any Postmaster in the United Kingdom, for Three Pence, and up to Five Shares for Six Pence.

Ladies and Gentlemen desirous to become Subscribers, will please to send whatever amount they wish to contribute, without delay, to STEWART BLACHER, Esq., Honorary Secretary, 20, Gardeners'-place, Dublin; and the proper vouchers, entitling them to share in the next Distribution of Prizes, will be forwarded to them immediately.—Impressions of the engravings issued strictly in the order that Subscriptions are paid in.

Subscriptions in London will be received by Messrs. Hodgson and Graves, 6, Pall-Mall; by Mr. Roberson, 51, Long Acre; or the London and Westminster Bank. STEWART BLACHER, Hon. Sec. 20, Gardeners'-place, Dublin.

The Sixteenth Part of **RYALL'S PORTRAITS OF EMINENT CONSERVATIVES AND STATESMEN**, is published this day, containing Portraits and Memoirs of his Grace the Archbishop of Canterbury; Lieut.-Col. Alexander Perceval, M.P.; the Right Hon. the Lord Viscount Castlereagh, M.P. Royal folio, India proofs, 21s. Royal folio, French proofs, 18s. Imperial quarto, prints, 12s.  
London. George Virtue: and sold by all Booksellers.

**EIGHT MONTHLY PICTORIAL ILLUSTRATIONS** to the **WAVERLEY NOVELS** appearing simultaneously with the new and cheap issue, and adapted for all previous editions.

**THE** Proprietors of this Work feel flattered by the liberal reception the ILLUSTRATIONS to **WAVERLEY** and **GUY MANNERING** have met with from the Public, and being thus encouraged, beg to announce, that no expense will be spared on the forthcoming parts. On June 1, will appear the **ANTIQUARY**, which will be followed successively by **ROB ROY** and **OLD MORTALITY**; these five will complete the First Volume, royal 8vo.; the Covers of which, as issued to Subscribers, will be large enough to contain both Novels and Illustrations.

"This is the first number of a new Work, designed to illustrate the **Waverley Novels** apart from the text, in aid of which the talents of some of the first Artists have been put in requisition, including the names of Cattermole, T. Landseer, Creswick, Buss, &c. The Drawings are engraved on Wood, and are not only very beautifully executed, but are a perfect miracle for cheapness. Eight first-rate Engravings for One Shilling and Fourpence, or Twopence a piece! This Number contains the Illustrations of **Waverley**,—to be followed shortly by **Guy Mannering**."—Morning Herald.  
Houlston and Stoneman, 65, Paternoster-row.

Now ready, 8vo., with Plates, 12s.,  
**GOETHE'S THEORY OF COLOURS.**  
Translated from the German, and Edited, with Notes, by CHARLES LOCK EASTLAKK, R.A.  
John Murray, Albemarle-street.

Second edition, revised, with 65 Plates, Woodcuts, and Maps, 8vo., 18s.,  
**JOURNEY THROUGH ARABIA PETRÆA** to MOUNT SINAI and the EXCAVATED CITY of PETRA, — the EDOM of the Prophecies. By M. LEON DE LABORDE.  
John Murray, Albemarle-street.

FIELD ON COLOURS.  
Now ready, in a large 8vo. vol., price 14s., cloth,  
**CHROMATOGRAPHY**; or, a Treatise on Colours and Pigments, and of their Powers in Painting. By GEORGE FIELD.  
New edition, revised and improved.

Also, by the same Author,  
1. **CHROMATICS**; or, an Essay on the Analogy and Harmony of Colours. Coloured Diagrams. Royal 4to. 21s., cloth.

2. **OUTLINES OF ANALOGICAL PHILOSOPHY**; being a Primary Review of the Principles, Relations, and Purposes of Nature, Science, and Art. 2 vols. 8vo., 30s., cloth.

3. **THE WORDS OF CHRIST**; being a Manual for all Christians. 8vo., 5s. 6d., cloth.  
Tilt and Bogue, Fleet-street.

**L O N D O N .** —  
Now publishing in WEEKLY NUMBERS, price FOURPENCE each, and in MONTHLY PARTS, price EIGHTEEN-PENCE; illustrated by numerous Engravings on Wood, by some of the most eminent engravers.

"To one of observation, and reflection, and adequate knowledge, everything in London is suggestive. In her external features we read the history of her past and the description of her present social state.

"The things of fame That do renown this city,"—  
Churches, palaces, theatres, exhibitions, courts of justice, prisons, hospitals,—parks, squares, streets, bridges, wharfs, docks, warehouses, markets, shops, factories, inns,—pavements, sewers, gas-lights, water-pipes,—post-offices, rail-roads, steam-boats, public carriages,—have each their tale of that mighty stirring of humanity, which in its aggregate is a spectacle of real sublimity unequalled in the world. It is the more sublime and the more wonderful that all this mass—with its manifold associations of Government, Municipal Arrangements, Police, Supply of Food, Population, Disease, Mortality, Industry, Wealth, Poverty, Crime, Religion, Charity, Education, Literature, Science, Art, Amusements, Dress, Manners, Domestic Life—is ever-growing and ever-changing. The features of such a city, physical and moral, present and antiquarian, if truly and strikingly presented, are to be looked upon with interest and curiosity, by the stranger as well as the citizen who daily hears the sound of Bow-bell. London is not England, as Paris is said to be France; neither is she the head and England the body, as used to be set down; but she is so identified with the whole empire—she absorbs and returns again so much of the general prosperity—that what belongs to her belongs to all. To the British public, then, we offer, in confident hope of their support, our '**LONDON**.'—Extract from Prospectus.  
London: Charles Knight & Co., 22, Ludgate-street.

Shortly will be publicly published,  
**THE** Pair of splendid PRINTS, in Oil Colours, representing the deeply-lamented Missionary, the Rev. JOHN WILLIAMS, landing at Tanna, and the last day of this devoted Missionary's life at Erromanga. Prints, £1 5s. each; Proofs, £1 11s. 6d. each.

The description by J. Leary, one of the survivors of the massacre, and an account of the Islands when visited by Captain Cook and Captain Dillon, will be presented to the purchasers of the pair.

"These are very striking specimens of Mr. Baxter's new method of Printing in Oil Colours. The subject of them can never cease to be an object of interest to the Church of Christ while the world stands. They are beautiful works of art. Mr. Baxter has already contributed, from the profits of the sale, upwards of fifty pounds to the fund now being raised for Mrs. Williams, and hopes soon to make a second payment."—Evangelical Magazine, for April.

"The sum of fifty guineas, as a kind of 'first fruits,' has already been generously presented by Mr. Baxter—an act just as honourable to him as a man, as his pictures are creditable to him as an artist. Such genius and such generosity must command respect, and ought to obtain public patronage."—Christian Examiner, for April.

London: Published by the Patentee, G. Baxter, 3, Charterhouse-square; and may be obtained of the principal Booksellers and Printers.

**GLOBE INSURANCE,**  
PALL MALL AND CORNHILL, LONDON.

For FIRE and LIFE INSURANCE, and ANNUITIES, and the PURCHASE OF REVERSIONS and LIFE CONTINGENCIES.

**CAPITAL, ONE MILLION STERLING.**  
The whole paid up and invested, and entirely independent of the amount of premiums received; thereby affording to persons Assured an immediate available fund for the payment of the most extensive losses, without liability of partnership, and free from uncertainty as to the result of their engagements—which the Directors consider to be highly important to those who effect Insurances in the capacity of Trustees, or otherwise in the performance of a specific trust or duty.

Insurances may be effected with this Company to the extent of £10,000, on a single life, if approved. (By Order of the Board)

**JOHN CHARLES DENHAM, Sec.**  
Rates and Conditions of Fire and Life Insurance, or other information, may be obtained at the Offices in London, and of the Company's Agents in the Country; and where Agents are not appointed, persons in active life, and desirous of the appointment, may apply to the Secretary.

Fire Policies due at Lady Day must be paid on or before the 9th April next.  
London, 25th March, 1841.

Published in 4to., Price £4 10s., in French boards; and on Royal Paper, 4to., with proof-impressions of the Plates, and a Portrait of the Author, price £7 17s. 6d., half morocco, gilt tops.

**A TREATISE ON PAINTING.** In Four Parts. Illustrated by One Hundred and Thirty Etchings from celebrated Pictures of the Italian, Venetian, Flemish, Dutch, and English Schools; and Wood Cuts. By JOHN BURNET, F.R.S.

The Parts may be had separate.

1. On the EDUCATION of the EYE. Second Edition. Price £1 5s.
2. On COMPOSITION. Fifth Edition. Price 15s. in boards.
3. On LIGHT and SHADE. Fifth Edition. Price 18s. in boards.
4. On COLOUR. Fourth Edition. Price £1 11s. 6d. in boards.

This Work is particularly recommended to the Student in Art in the New Edition of the Encyclopædia Britannica.—See the article Drawing.

James Carpenter, Bond-street.

Lately published, in one vol., royal folio, half-bound in morocco, with patent caoutchouc binding, price Four Guineas.

**LORD MONSON'S VIEWS IN THE DEPARTMENT OF THE ISERE AND THE HIGH ALPS;** chiefly designed to illustrate the Memoir of Felix Neff, by DR. GILLY. Lithographed by LOUIS HAGHE.

Extracts from Reviews:—

"We should be at a loss to mention a series of views more magnificent in scale, subject, or execution."—*Athenæum*.

"The work is so excellent throughout, and so exquisitely finished in every part, that it would be difficult to point out any of the views as entitled to preference. Lord Monson deserves the thanks of the lovers of history, as well as of art, for giving to the world this highly interesting work."—*Times*.

"A series of the most charming lithographic drawings conceivable; they comprehend a variety of scenes of contrasted beauty, sublimity, fertility, and desolation, the interest of which is greatly increased by Lord Monson's accompanying narrative (in French and English) of the memorable events of which these scenes were the localities."—*Literary Gazette*.

"These beautiful views reflect the highest credit on the taste and artistic skill of Lord Monson. In point of execution, as lithographs, they add, if possible, to the reputation of Mr. Haghe, who has now shown himself as familiar with the beauties of nature as we have already found him conversant with the details of art."—*Morning Herald*.

London: W. H. Dalton, Cockspur-street, Charing-cross.

AGENCY IN NEW YORK FOR THE SALE OF ENGLISH AND FRENCH STATIONERY, ARTISTS' MATERIALS, FANCY GOODS, &c.

On the 1st of March, 1841, was published, Part IV., containing Ten Plates, price 12s. 6d. of

**THE MONUMENTAL EFFIGIES OF GREAT BRITAIN.** Drawn and Etched by THOMAS HOLLIS and GEORGE HOLLIS. The Plan of this Work is formed upon that of The Monumental Effigies of Great Britain, by C. A. STOTHARD, with which it will correspond in extent, and also present a uniformity in size, paper, and printing. It will appear every three months, and be completed in Fifteen Parts, containing Ten Plates each, with the exception of the last; which will consist of Five Plates and the Descriptive Letterpress. In conformity with the spirit of the times the cost of this work has been fixed at little more than half the price at which Mr. Stothard's was published, in the hope of an extended patronage. A few copies are printed on double elephant paper, to range with the large paper copies of Mr. Stothard's Work, price 21s.

TO ARTISTS AND AMATEURS IN OIL PAINTING.

**THE Ancient VENETIAN VEHICLE** re-discovered by an eminent Artist, after ten years assiduous experiments. This new menstrum possesses all the qualities most required by Artists. It is thinner than varnish, dries well, and affords the performance all the aid it requires in dragging and finishing, as well as giving a transparency and richness beyond any other Vehicle in present use. Pictures painted with this Vehicle undergo no change. To be had only of THOMAS MILLER, Artists' Colourman, No. 33, Rathbone-place, London.—N.B. Improved Moist Water Colours for Sketching, &c.

ELEGANT AND ORNAMENTED PICTURE FRAMES OF A SUPERIOR DESCRIPTION, WARRANTED TO CLEAN.

**C. J. ECKFORD, 45, FLEET-STREET,** corner of Mitre-court, Temple, opposite Fetter-lane, begs leave to inform Artists, the Trade, and Public, that they can obtain a LARGE AND CLEAR EXPLANATORY SHEET OF DRAWINGS, with numerous elegant Patterns, the Size and Prices attached to the various Frames, sent gratis and free of postage to any part of the United Kingdom.

Old Frames re-gilt; large and small Miniature Frames at proportionate prices. Fancy-wood Frames of every description. Orders from the country punctually attended to. ESTABLISHED 1792.

SPLENDID AND SUPERIOR GILT FRAMES.

**CHARLES McLEAN, 78, Fleet-street** (opposite The Dispatch Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET OF DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All goods taken back, not approved of in three months.

**PIANO-FORTE TEACHING.**—The utmost Economy, with efficient instruction combined, in the Terms and Methods of Mr. J. S. MAJOR, Nephew of the late Mr. JOSEPH MAJOR, so extensively known in the Musical World for upwards of Forty Years. Families, Schools, &c., may rely on every particular likely to ensure the recommendation of all who favour him with a trial. 13, Camden-terrace West, Camden-town. Letters (post paid) attended to immediately.

ARTS AND LITERATURE.

**MR. JOHN BURTON, Auctioneer, 69, Bold Street, Liverpool,** respectfully intimates that his extensive Rooms are now open for the reception of Works of Art in Painting, Sculpture, Engraving, and those objects of interest to the Antiquarian and Virtuoso, in which skill or ingenuity in other branches of the Arts has been exercised; and for LITERARY PROPERTY, of whatever description, intended for Sale.

Liverpool, owing to the wealth, the taste, and the liberality of her merchants, being acknowledged one of the first Marts in the Empire for the disposal of Property of the descriptions above-named, Mr. J. B. begs to call the attention of Executors, Dealers, and others, to the matter of this Advertisement, most respectfully soliciting their support, and assuring them that it will ever be his pleasure, as his duty, to discharge with promptitude the business committed to his trust.

References will gladly be given to Parties requiring them.—No. 69, Bold-street, Liverpool, 1841.

CHEAPEST AND BEST MANUFACTURED PICTURE FRAMES IN THE WORLD.

**P. GARBANATI, WORKING CARVER** P. and GILDER, 19, St. Martin's-court, St. Martin's-lane, respectfully informs Artists, &c., that as he Manufactures every description of ornamented, Gilt, and Fancy-wood Picture Frames entirely on his premises, he is enabled to offer them at such low prices, that he defies competition. A most extensive assortment of every description of Picture Frames kept ready. Re-gilding, in all its branches, done in a most superior manner, and cheaper than by any other Gilder in the kingdom. Estimates given free of charge.

P.S. A List of the Prices of PLATE GLASS, Gilt and Fancy-wood Picture Frames, Room Mouldings, &c., can be had at the Manufactory (gratis), or sent (pre-paid) to any part of the Kingdom.

P. G. respectfully solicits a Trial of his Work, for comparison of Quality and Price, with other Manufacturers.

BY HER MAJESTY'S ROYAL LETTERS PATENT.

**WINSON AND NEWTON'S TUBES OF OIL COLOUR.**—This beautiful invention obviates the numerous imperfections attendant on the use of BLADDER COLOURS, as the bladder in which the paint is enclosed being porous, allows the oil to exude; and thus, by admitting air, the colour necessarily hardens, becomes contaminated with skins, and frequently more than half of it is rendered totally unserviceable.

The PATENT TUBES are formed of stout cylinders of glass, hermetically secured with an air-tight piston, traversing the tube, and ejecting the colour by a gentle pressure.

The colour being visible through the glass, the artist immediately perceives the one he may require, and the air being excluded, no smell can proceed from them. They are also so perfectly clean to handle, that oil pictures may be executed without the least soil on the table, or on the hands of the artist.

To be had, wholesale and retail, at their Artists' Colour Manufactory, 38, Rathbone Place, London.

Newly invented Zinc Panels for Miniatures and other highly finished Paintings in Oil, and all the new manufactures of the trade.

**ANTI-TUBE BLADDERS OF OIL-COLOUR.**

—The great success that has attended the ANTI-TUBE BLADDERS OF OIL-COLOUR, as prepared by WARING and DIMES, having induced others to imitate them, W. and D. in justice to themselves have to state, that the adaptation is entirely their own invention and perfectly novel. To those gentlemen who have given them their patronage they return their thanks, and feel confident these Colours have only to be used to experience the comfort and convenience that attend their plan. The ejection of the Colour from the Bladder is the work of a moment, as there is no machinery to arrange: the colour is easily perceivable, the same being very legibly printed on the top of the cap, and may be preserved for a length of time. Sold in any size bladders up to 8oz., at the extra price of 2d. small bladders, and 4d. large bladders, allowing for returned tubes.

**PREPARED CANVASS WITH INDIA-RUBBER GROUND.**—This article having now stood the test of some years, and patronised by the first Artists, is worthy the consideration of those who would preserve their pictures from the effects of time. The Ground used in preparing this Canvass renders it perfectly secure from cracking or peeling off. Prepared only by Waring and Dimes, Artists' Colour Manufacturers, 91, Great Russell-street, Bloomsbury. An extensive assortment of Crayons, Drawing Papers, and every material in the Arts.

## THE ART-UNION.

LONDON, MAY 16, 1841.

THE ROYAL ACADEMY.  
THE EXHIBITION—1841.  
THE SEVENTY-THIRD.

THE Exhibition of the year 1841—the seventy-third since the foundation of the Royal Academy—is calculated to give very general satisfaction; for although there are few pictures of commanding merit, there is ample evidence of improvement in a large proportion of the Exhibitors. The collection is to be viewed in reference to the absence of three leading British Artists—Wilde, Callcott, and Landseer: and in forming an estimate of its relative value, we are bound to consider what it would have been if there were added to it about twenty pictures of the highest class. So tested, it will be, undoubtedly, characterized as an advance upon its predecessors.

As usual, some serious complaints have been urged against the "Hanging Committee:" this evil will inevitably arise—to give universal content being utterly out of the question. Making, however, all due allowance for difficulties that cannot fail to exist, we must admit that some artists have good right to enter an appeal against the decision of their judges. In the Miniature-Room, quite out of sight, there are seven or eight excellent works, by painters who do not begin their career to-day, but who have already achieved professional distinction; in the room for "Architecture" there are four or five of very considerable merit, by men not many degrees below the most celebrated members of the Academy; and in the "Octagon Room" several of the most admirable pictures in the whole assemblage have been doomed to a close atmosphere, and a "dim, uncertain light." We can point out at least a dozen productions, to remove which we feel assured the Artists who produced them would sacrifice the full value of the time employed in their creation. While we perceive along "the line" many an example of mediocre painting, we find, on and near this post of honour, pictures which, whether meritorious or not, would have been sufficiently well seen in higher places—places now, by a strange contrariety of fortune, error of judgment, or shameful negligence, adjudicated to carefully-executed works of a higher character, and whose delicate finish and smaller parts indicate the necessity of a nearer view. Nothing can justify this; if they cannot be better placed let them be excluded. When a picture is ill-hung, the hanger places upon it the daily ban of a damnable criticism, far more injurious and depressing than any the pen can produce—the effect of which may pass speedily away, or be negated by a kinder or sounder judgment. The remark especially applies to the Royal Academy—arbiters of the fate, for a season at least, of all up-rising men; and whose decision will be considered as final by thousands who know no better, or who distrust their own opinions.

We have, as is duty bound to do, given this troublesome, painful, and embarrassing subject our best attention; and sure we are, that the evil cannot be remedied until in an exhibition-hall there are no bad places; none, that is to say, where a picture cannot be fairly examined,

and its merits or demerits fully ascertained; so that neither undue eminence nor injurious depression can be given to any artist by the caprice, or biassed feeling, or wrong judgment, of any tribunal. This can be done effectually only by providing rooms spacious enough to accommodate all applicants; or until this advantage is obtained, by placing such works alone as can be placed where they will benefit and not injure the producer. The object of the painter in exhibiting his work is that it may be seen: it is small recompense to him to perceive his name in the catalogue, and be honoured with a free ticket of admission; his hopes of a year—perhaps of a life—are blasted if his friends and the public are insidiously led to form the idea that he is held in small estimation by his brother artists—by those who are considered the best judges as to the rank he ought to hold. In every point of view, it is prejudicial, if it be not ruinous, to a painter to have his picture hung where it is stamped with the baleful mark of inferiority: be it ever so mediocre, the great mass of examiners will be sure to think it worse than it really is; and instead of the exhibition being to him a step forward, it is a thrust backward; he will have more difficulty than he previously had to make his way to public favour. Now, if we state the case fairly, this is a manifest injustice, gratuitously inflicted; for no association can be so circumstanced as to be compelled, against their better feelings, to do the injury. In no gallery, that at present exists, is there space to exhibit favourably all the works that are sent to be exhibited; but we submit, that it is far wiser and more generous to exclude those that can be only placed disadvantageously. But is not the real and practicable remedy sufficiently obvious? If a cotton-spinner's trade increases beyond the limits of his building, what does he do? He either enlarges his premises, or builds to an extent commensurate with his wants. We have not the remotest doubt, that if the Royal Academy will bestir themselves they may either obtain the whole of "the National Gallery"—for a season, or altogether—or obtain funds for erecting a structure worthy of the country, and of such a size as shall completely answer the purpose for which it will be intended. If the country will not do this for the Arts, the Artists themselves must—and they can! It should be remembered, that although the profession—like every other profession—has increased at least fourfold during the present century, the accommodation is very nearly what it was thirty years ago; for we much doubt whether the number of square feet allotted to artists in the National Gallery is greater than it was in old Somerset House. In this age there is no standing still; if we do not advance of our own accord we shall be driven onwards. We earnestly hope the Royal Academy will be more active than it has been, so as to think and act for an altered state of things. They have the confidence of the country; to a very large extent the confidence of the profession—and they deserve both; but it is impossible not to know that a time is at hand when they will be called upon to do more than they have hitherto done. Their means must be less circumscribed; but their proneness to avoid the movement must be less liable to suspicion.

For our own parts, we shall not cease to agitate upon this all-important matter—THE ABSOLUTE NECESSITY FOR PROVIDING A SPACE SUFFICIENT TO EXHIBIT PROPERLY EVERY PICTURE THAT OUGHT TO BE EXHIBITED; AND THAT NO WORK SHALL BE HUNG WHERE THE HANGING OF IT IS INJURIOUS TO THE PAINTER.

Let the members of the Royal Academy, or any portion of them, will that this shall be done, and it will be done as surely as that day will follow night.

The present exhibition consists of 1343 works, of which 126 are in sculpture. We shall notice them in the order in which they are placed; and, as we shall endeavour to comment upon many, our comments must be necessarily brief.

No. 1. 'Portrait of a Setter and Spaniels,' C. Hancock. We have here no drawback on the ground of imitation; the dogs are painted with a masterly hand, and are obviously true copies.

Nos. 2 and 3. 'The Biter Bit,' 'The Rencontre,' J. Bateman. These also are pictures of the dog; portraits relieved by a touch of fancy. They are unfortunately hung very high; and so close to No. 1 as to be prejudicial to both artists. With the name of the painter we are not familiar, but his work seems of a good order.

No. 6. 'St. Cecilia,' J. Hollins. A sweet and graceful composition, and finely coloured; but reminding one rather too forcibly that it is an actual portrait thrown into an attitude.

No. 7. 'Scene in a Polish Synagogue,' S. A. Hart, R. A. A picture of great merit, judiciously composed, coloured with much ability; and the heads—a series of apostolic studies—dignified and expressive, and yet peculiar to "the tribe."

No. 9. 'Castello d'Ischia, from the Mole,' C. Stanfield, R. A. A noble work, possessing the highest qualities of which the art is capable; skilful and judicious in arrangement, bold and brilliant in execution; with episodes introduced that add interest to a glorious scene. It is one of the finest productions of a master, who secures the supremacy of England in a most interesting and valuable department of the arts.

No. 16. 'Giorgione Studying from Nature,' A. Geddes, A.R.A. The artist's "nature" is a fair woman; but she is too indifferent to touch a more manly heart than that of the "petit maitreish" youth who "studies" her. They have not a single grain of soul to share between them. Pity the artist has not given better expression to the characters, for his picture is happily coloured; a fine rich tone pervades it, and it is a very pleasing composition.

No. 17. 'The Temptation of Andrew Marvell,' C. Landseer, A.R.A. A worthy subject, and worthily treated; it commemorates a striking incident in the life of one of the most remarkable men "that ever flourished in the tide of time"—the attempt, on the part of Charles II., to bribe Andrew Marvell, by sending a present through the hands of a courtier. It lessens somewhat the merit of the refusal to receive it, that it is given in the presence of two servitors of the briber, as well as the domestic of the patriot. Vraisemblance is therefore wanting. Lord Danby would hardly have proffered his gift so publicly, and Marvell, if he had longed for it ever so much, would not have so openly taken it. The work, however, has high merits. The figures are carefully drawn, and strongly characteristic; and the picture is boldly and yet delicately coloured.

No. 18. 'A Country Ale-house,' J. Bonnington. A pleasant example of an artist who is always natural and true; and whose subjects are studied in the best school for a landscape painter—in the open air, among fragrant meadows.

No. 20. 'The First Thought of Love,' H. O'Neil. A very sweet composition; graceful and full of nature, and finished with all care; the tree that waves over the young maiden is, however, of too pale a green even for the early spring which it is meant to indicate, as an allegorical illustration of the story.

No. 22. 'The Pedler,' J. C. Horsley. Most elaborately wrought; the labour bestowed upon it being somewhat too apparent; it is, however, in all respects a most excellent picture: the composition is simple, and the characters are just such as one would encounter at a cottage door. The artist never slights his work, or sends it out wanting a "few last touches;" his

fault is, indeed, the opposite—he seems not to think he can ever do enough to make his production perfect.

No. 24. 'Un de la Jeune France,' S. J. Rochard. We are generous enough to hope that all the births of July are not such small saplings as this very lack-a-daisical youth. If so, the present age will see no such sight as that their fathers saw at Austerlitz.

No. 29. 'The Stolen Child Recovered,' W. Allan, R.A. A work of high merit; a sombre tone of colour pervades it, in keeping with the subject. The story is well told, although, perhaps, there is somewhat of affectation—of studied attitude, at least—in the group by whom the stolen child is recovered. The gipsy thieves are full of true character; and the several minor accessories of the picture are well made out. We have, here, certainly no evidence of indifference about keeping the eminent position to which the artist has attained: the picture is in no degree slighted; on the contrary, it is finished with much care, thought, study, and labour.

No. 33. 'Irish Girl,' D. MacLise, R.A. A study from nature; with the rare truth of character, such as genius only can produce. The girl is occupied in "burning nuts" by a turf fire—a famous charm in Ireland, by which young maidens test the constancy of their lovers. Two nuts are burned together—representatives of the "he and she" of the trial: if they consume together, the issue is safe; if one start off, woe be to the heart that puts the trust. This girl is obviously content with her prospect; we suggest to Mr. MacLise to paint a companion—a young maid, all alarm at discovering that her "batchelor" is faithless.

No. 35. 'Slave-market, Egypt—Sketch for a Picture,' W. Müller. A vigorous sketch; but why is it merely a sketch?

No. 38. 'Going to the Fair,' J. J. Chalon, R.A., elect. This picture does not call upon us to change our opinion as to the wisdom or justice of the artist's election into the Academy. Does it bear out the opinion that he is an "original genius?" and will "all his brethren" who examine it "know and esteem him as such?"

No. 45. 'Midsummer Night's Dream,' H. Howard, R.A. This is an attempt to embody one of the most beautiful of all the conceptions of Shakespeare—the Mermaid singing, when  
"Certain stars shot madly from their spheres,  
To hear the sea-maid's music."

And the "certain stars" are represented by two of as clumsily formed matrons as ever tramped a bye-road; if they chance to fall upon the singer, down will go the sea-maid, dolphin and all, to the very ocean depths.

No. 52. 'Le Bourgeois Gentilhomme,' C. R. Leslie, R.A. A rich example of character, full of point and humour, and admirably illustrative of the scene. It is in most respects a production of unapproachable excellence, in the class to which it belongs; that class, to be sure, is not the highest; and it is matter for regret that the painter does not deal with more elevated and worthier themes. Mr. Leslie's views of life are so shrewd, and his perception, and pouring, of character so strong, that he is borne safely through peculiarities of colour, that would seriously injure a lesser man. We cannot, however, avoid expressing a regret that this "one fault" appears verging towards an unpleasant extreme. Either all the usual theories of colouring are misplaced, or the arrangements of colour, and the agremens of chiaro-scuro are mere artistic *nugæ* in the eyes of this accomplished artist.

No. 53. 'Ducal Palace, Dogano, with part of San Giorgio, Venice,' J. M. W. Turner, R.A. A glorious example of colour, leaving, as usual, much to the fancy of the spectator; and absolutely extorting applause.

No. 61. 'Portrait of her Majesty,' J. Partridge.

A very agreeable copy of the gracious countenance of her Majesty; the expression is most pleasing, kindly, generous, and affectionate: she is pictured, indeed, without the trappings of her state; and has the look that more befits the woman than the queen. It is, perhaps, too young and too girlish; and too free from that care which is inseparable from her position; but it is a picture which no one can examine without pleasure, or without a favourable augury for the future life of the sovereign; she seems happy, and eager to make others happy. The work is executed with great ability.

No. 64. 'The Miser,' Fleury. The dismal tone of colouring is in good keeping with the subject—a miser poring over his ill-gotten gains. It has been ably dealt with by an able artist.

No. 65. 'The Boy and many Friends,' T. Webster, A.R.A. One of the best works in the collection; carefully drawn, ably coloured, and excellent as a composition; it is full of humour, too; in no degree exaggerated; the expression of each member of the group is admirably true—calling forcibly to mind our school-days, and sending the heart back, half a century, to the joys and fears that have never since been half so real as they were in boyhood. Who is there that will not recall to memory the very duplicate of the artist's picture? Nay, the basket is our own—the cake and fruit taste of our own home, and these are our playmates eager for a share; we can name each one of them; the face of each is familiar to us; we marvel that we have been away from home so long. It is this faculty of giving reality to his pictures that constitutes the excellence of the painter—a rare faculty it is. We seldom see a work of Mr. Webster's that we do not believe we could ourselves have described to him every point and character it contains. There is a wonderful "fitness" in all he does—he is, moreover, a master in the comparatively minor attributes of the artist. The play of line in the composition, the minute variations in expression, the gradation from the warm to the cool light, the transparency of the shadows, and the adaptation of the background, are all admirable, and indicate with what surety Mr. Webster's conceptions once formed are carried out.

No. 68. 'Portrait of his Grace the Archbishop of Canterbury,' Sir M. A. Shee, P.R.A. A portrait of the best class; painted with vigour and delicacy; the head may be adduced as one of the most excellent examples of the art—so essentially English; few works superior to it have proceeded from the modern school.

No. 75. 'The Prophecy for Jerusalem,' C. L. Eastlake, R.A. We cannot find words to express our admiration of this work—as near perfection as was ever a production of genius. It is, beyond doubt, the gem of the collection; one that may stand without prejudice beside the most famous productions of the great old masters; and that will at once settle the question whether British artists may not surpass the best masters of the modern German-school, in grace of composition and accuracy of drawing, as far as they do certainly surpass them in vigour and brilliancy of colour. This picture is one for the nation to be proud of—one that will be invariably referred to in every discussion that may arise hereafter as to the rank which British Art is entitled to hold. It is impossible for us to exaggerate in any terms we may apply to it. It is the emanation of a mind nobly, gracefully, and beautifully constructed, the production of a pencil possessing a combination of the rarest powers; and finished with a deep and thorough knowledge of all the qualities of which the art is capable. If we class it immeasurably above any work—either of the painter or the poet—that our age has given birth to, as a lesson in practical wisdom, virtue, and beauty, we shall scarcely do justice to the genius that produced

it. Who is there that can look upon it without being wiser and better? Without feeling ~~faith~~ confirmed in that belief to impress which is the leading object of all teaching? Is it a pious and moral lecture, far more impressive, effectual, and convincing than the best homily that ever came from uninspired lips; and will go a very long way to remove all doubts concerning the policy of instructing, in our churches, by the pencil of the artist. He must be a sceptic indeed who would question the beneficial influence of such an object. As a composition it is exquisite; the form and countenance of the Saviour are, in truth, divine; the subdued but poignant sorrow with which He looks down, from the mount, upon the devoted city, and pronounces the solemn, affectionate, and touching prophecy.

"O Jerusalem, Jerusalem! thou that killest the prophets, and stonest them that were sent unto thee: how often would I have gathered thy children together, even as a hen gathereth her chickens under her wings, and ye would not! Behold, your house is left unto you desolate."

It is a very triumph of art in giving perfectly the character all would desire to conceive. Only inferior in deep interest are the expressions given to the surrounding apostles; the anxiety, and hope, and fear, and believing, that characterize each, as they watch the bearing of their Lord, and slowly and yet eagerly ask—"Tell us, when shall these things be?" It is not alone the great point of the picture that tells upon the hearts of the spectators—it is full of illustrative allegories, that well deserve close scrutiny, when the grander object has been fully contemplated. The axe laid to the root of the tree is one of them; the sheep following the Shepherd, "for they know his voice," is another; the tender lamb, the stricken of the fold, another; the hen gathering her chickens under her wings, another. The subject is full, yet it is one of the simplest grandeur; and the execution is worthy of the conception. The broad masses of drapery skilfully contrast with the minuteness of expression in every one of the actors on the solemn scene, and the delicacy of finish displayed in the minor portions of the design. The colouring is admirably judicious, and the light and shade so well managed, that while the eye finds from it a delightful repose, the parts come out with a vigour far superior even to the former productions of Mr. Eastlake. The blue drapery around part of the principal figure is a fine specimen of "casting" and painting, and is carried into the deep central shadow with eminent skill. In a word, the work is *PERFECT*. It is worth a pilgrimage to examine it, and a fortune to possess it. There are few who would not gladly sacrifice the produce of years of labour to acquire so glorious, beautiful, and instructive a companion. It will dwell with our happiest memories for life.

No. 79. 'The Little Sick Scholar,' Mrs. M'Ian. A touching copy of one of the most touching episodes in the works of Mr. Dickens—the death of the little school-boy, his pillow watched over by his tender and loving master, and by one who was destined so soon to follow him—"poor Nelly." An author has rarely received greater justice from an artist; the very picture the one describes in words, has been displayed by the other, so as to bring it completely home to the hearts and understandings of all who have read it. In composition and arrangement there are few more successful performances in the exhibition; and it manifests so much knowledge of art and its capabilities, that it cannot fail to procure for the accomplished lady a very foremost rank in the profession—and that without demanding any courtesy on the ground of sex.

No. 82. 'Vienna,' G. Jones, R.A. A vigorously-finished picture of part of a noble city, introduced into which are a number of charac-

teristic figures; the subject carefully arranged, skillfully drawn, and admirably coloured.

No. 95. 'Fairlop Fair,' C. R. Leslie, R.A. As a collection of parts this picture is far better than it is as a whole; there is a sad want of harmony in the composition and colouring, and its spotty effect is very disagreeable to the eye. The lavish use of white is certainly not taught by nature. There are portions of the work worthy of the admirable painter; but it cannot be classed among his more successful productions.

No. 107. 'Enlarging the Park, Old Windsor,' J. Stark. A noble and beautiful example of landscape painting; worthy of a better place, for there are few works in the collection more true to nature, or more firmly and vigorously wrought.

No. 109. W. Mulready, R.A. Although in execution this picture is one of the highest merit, and will, perhaps, be considered a step in advance even for the artist, the subject is not agreeable, and certainly not easily intelligible. We supposed the scene to be laid in Italy; and the wayside beggars to be a trio of bandits, watching for their prey; and marvelled, therefore, why it was that the fair young maidens did not "make off" as rapidly as their delicate limbs could bear them—following the example of the little boy in their company, who, though he seems a stout lad, shrinks back with instinctive dread from contact with the rascal-looking fellows who are asking charity. The subject is unfortunately chosen; we venture to assert that not one person out of twenty who examine it, will comprehend that the painter designed to picture three weather-beaten Lascars making their "salam" to the gentle ladies who offer them relief. This error is greatly to be lamented, for the work is of the highest possible quality; a fine rich and true tone of colouring pervades it; the drawing is admirable; and one of the female figures is absolute grace and beauty—a more perfect form Mulready never painted. Leaving out of consideration the defect in the story—and what a sad defect it is!—there is seldom a finer picture to be met with; and we rejoice that such a bright addition is contributed to the stock that will form, we hope, some future day, the National Gallery of BRITISH ART. There is a gem-like appearance about Mr. Mulready's painting which none but a master of colouring can achieve; he has often produced it, but in most points this is his climax, and one rendered even more interesting to study, because a portion apparently unfinished, in brown, gives us a little insight into the artist's method of working. The landscape portion, so grand and true, unites excellently with the figures: how delightfully pencilled are the stumps of the trees! This picture serves as an ample indication—like that of Mr. Eastlake—that size has small influence on grandeur.

No. 110. 'The Daughters of J. E. Cooper, Esq., M.P.,' F. R. Say. A finely painted group of a fair and promising family; very gracefully and carefully finished; and ranking with the best examples of the Art-portraiture in the gallery.

No. 116. 'Portrait of Sir Peter Laurie, Alderman,' Sir David Wilkie. An agreeable picture of a cheerful and pleasant countenance; with rather more of intellect than the world looks for in a city knight. It is a finely and vigorously painted portrait.

No. 124. 'The Sleeping Beauty,' D. Maclise, R.A. This work is "the observed of all observers," and it is worthy the reputation of the painter; possessing all the high qualities for which he is famous—invention, imagination, the power of combining and arranging, and of afterwards giving actual being to his thoughts; and it has more delicacy than is his wont. Still

there will be many who will prefer some of the bolder creations of his genius, where the action of the picture is a higher effort of the mind. It is absolutely wonderful what a variety of materials he has introduced into his subject. From the 'Beauty' sleeping on her curtained couch to the small goblet held in the hand of the unconscious waiting-maiden, each object is finished with the most consummate skill; the gorgeous array of the chamber positively glitters; it seems easy to count a thousand objects, every one of which is so elaborately wrought as to appear as if the painter had considered that to pourtray it was his exclusive purpose. The attitudes of the sleepers—"maids of honour, gentlemen-ushers, grooms of the bed-chamber, lords in waiting, waiting women, governesses, stewards, cooks, scullions, guards, porters, pages, and footmen"—are all perfectly natural, yet presented in infinite variety. It is triumphing, indeed, to achieve so signal a victory over an obstacle that would have been insurmountable in ordinary hands—the fact that all the persons introduced into the picture are motionless and lifeless except the Prince, who divides the curtains to look on the face of 'the Beauty,' and the group of seraphs who watch above her bed. "The tallest oaks are most exposed to the storm;" and thus Mr. Maclise escapes not, all-popular though he be, the oburgations of critics; some of these are ridiculous or amusing, because, while there is a touch of truth in the criticism, there is sometimes a total overlooking of the real and transcendent qualities of genius. We must add our quantum of fault finding, but it will be evident that it is not in the nil admirari spirit. The character of the Prince we cannot like—he is by no means the daring adventurer who is to break the spell that has hung for a hundred years over the enchanted palace. There is an unpleasant confusion in the foreground, a want of massing of the parts, which, beautiful in themselves, tend to produce a straggling effect. The finest piece of painting we conceive to be the portion surrounding the old lady who is reading the illuminated book; the doves also are beautifully given, and the women's faces are full of loveliness, but we should almost say "facies omnibus una." The general aspect of the painting would not remind one of the "English School," so decidedly deficient is it in that beauty of tone and richness of colour which it might have received, without other alterations, at the hands of many of our painters. There is, however, no direct evidence of a want of the power to achieve this; on the contrary there are two or three parts of this picture that indicate the possession of the faculty, whilst the whole looks as if there were a carelessness about its exercise. In the lady with the Indian dress, by the same great artist, there is some most exquisite colouring; indeed, as a piece of powerful and facile handling united with a rich tone, it is one of the most favourable specimens of his powers of painting. Despite of hardness of manner, defect of colour, and a want of repose, Mr. Maclise always presents such a copious combination of the highest attributes of a painter that we hail with delight every fresh inspiration of his genius.

No. 136. 'The Repentant Prodigal's Return to his Father,' W. Etty, R.A. An admirable work, and full of touching character; with all the rare advantages of drawing and colour for which the artist is pre-eminent; but its effect is sadly marred by an unaccountable incident introduced in the back-ground—where the painter has represented a group of half nude damsels dancing. This is utterly out of keeping with the solemn and impressive character of the scene—the return of a dissipated youth to the sober home of his father; where, if the circumstance could have occurred, it would have been at least kept from the eye of the repentant prodigal. It threatens a relapse.

No. 151. 'Westward of Dieppe,' J. Wilson. A fine picture of the sea, with the materials that appertain to it. The artist, who attracts so much attention elsewhere, is seen to advantage even here where he has so many competitors.

No. 152. 'Response to the First Serenade,' T. M. Joy. A composition of much grace and elegance, coloured with very considerable ability.

No. 153. 'Repose,' W. F. Witherington, R.A. A picture of small value—with reference either to composition or execution; and placed, disadvantageously for it, just above Nos. 151 and 152, and still more to the prejudice of the painter, close to

No. 165. 'The Old Man's Blessing,' J. P. Knight, A.R.A. The intention of the artist is not sufficiently apparent; but here are qualities that deserve the highest commendation. He excels eminently as a painter; but we are always looking for some re-edition of 'The Wreckers.' Is it that portraiture engages his time? His paintings are well hung, and attract attention; but there has lately been wanting that stirring interest which, when a man has once excited it in the public mind, must be appealed to again and again, or there is a chance of the present being slighted in the more agreeable remembrance of the past.

No. 166. 'Lear and Cordelia in Prison,' T. Uwins, R.A. The grandest and the most tender of all Shakspeare's portraits, copied in a kindred spirit. The head of Lear is powerfully rendered; while that of Cordelia is "beautiful in death."

No. 172. 'Hebrew Exiles,' H. Howard, R.A. Of a far pleasanter and truer character than the work to which we have objected.

No. 174. 'Watching the Game,' A. Montague. A capital transcript of a common village scene, rendered picturesque and interesting by an artist, whose works are always of a valuable order.

No. 176. 'Roseneu, Seat of His Royal Highness Prince Albert, near Coburg,' J. M. W. Turner. An interesting scene—if one could make out its character; but German nature may be like German art, not designed to be intelligible to common-place mortals. This, and one or two others by the same hand in the collection, have been likened to a smeared palette—and in truth the simile is not far out. A time will come when one of Mr. Turner's earlier productions will be worth far more than its weight in gold; and when his more recent perpetrations, in spite of the marvellous power that will be seen through their absurdities, will be retained only as evidences of the whimsicality of genius—that, because it can work miracles, sets itself to form baubles. "Tis true, tis pity!"

No. 181. 'A Rocky Stream,' T. Creswick. One of the purest gems in the collection; as true a copy as art ever made of nature; boldly and vigorously painted; but with strength so happily mixed with delicacy, as to be a fine example of the artist's excellent style with a higher and more daring tone of colour.

No. 188. 'Portrait of his Royal Highness Prince Albert,' J. Partridge. This work is very inferior to its fair companion. We should have concluded that an artist can do little or nothing with the unpicturesque drapery of a Hussar's uniform, but that we recollect the picture of the Marquis of Londonderry, from the pencil of Sir Thomas Lawrence.

No. 195. 'The Peace Maker,' W. Collins, R.A. A delicious picture of an Italian scene and incident. An aged monk is making "peace" between a rugged-looking husband and his enduring wife; who with her children stand by the side of the good father. The group is gathered on a balcony that overlooks the Bay of Naples; and we dare swear the circumstance was wit-

nessed by the artist—there is an air of absolute reality about it. The work is finely composed and brilliantly coloured; still these borrowings from a "classic" land cannot make us forget the sweet lane scenes and peasant lads and lasses of England, in the portraiture of which Mr. Collins was so long—and may still be—without a rival.

No. 200. 'Portrait of a Gentleman in the Highland Costume of 1745,' J. Watson Gordon. Although he has received an air somewhat too *degagé*, this is an excellent portrait.

No. 205. 'The Castle Builder,' R. Redgrave. The old story, well told, of the village girl who "reckoned her chickens before they were hatched;" and in the midst of her day dream, forces her foot against her basket of eggs, and ruins the nucleus of a fortune that was to buy a carriage and a peerage.

No. 206. 'To Arms, ye Brave!' W. Etty, R.A. We cannot think this a fortunate example of the ability of Mr. Etty. Mars is represented as a most awkward hero, with a "squat" and ungainly figure; and "the fair," whom "the brave" is to "deserve," are but a degree more graceful specimens of the human form divine.

No. 207. 'Titania Sleeping,' R. Dadd. There is a volume of poetry in this beautiful work; the production of an accomplished mind, and the result of matured thought and study.

No. 216. 'The Farewell,' A. E. Chalon, R.A. It is impossible to admire this work—an attempt to produce a something with loftier purpose than merely elegant drawings; the composition is neither natural nor graceful; and the colouring is crude enough to be the production of a junior student in the academy. The young lady must be a giantess.

No. 237. 'England's Pride,' No. 419. 'England's Glory,' W. Kidd. Two capital pictures of old Chelsea pensioners, and old pensioners of Greenwich; full of admirable character, and with a fine rich tone of colour.

No. 242. 'Poor-law Guardians—Board Day—Application for Bread,' C. W. Cope. A fine lesson for legislators—an emphatic teacher of humanity. A bereaved widow and her orphans are beseeching charity from "the board;"—for that which was once a right, freely asked, and cordially given, is now a boon often accorded most grudgingly. The artist has certainly not refined upon his subject; one or two of the "donors" have sympathizing looks; but the majority manifest indifference, or a worse feeling—

"Can such things be?"

No. 252. 'A Rustic Scene,' F. W. Topham. A rude tent by the way side, in the midst of a rich English landscape: the production of a painter with whose name we are not familiar; it is, we trust, an earnest of better things to come.

No. 268. 'The Frown,' No. 271. 'The Joke,' T. Webster, A.R.A. Two of the most interesting and excellently painted works in the collection; perfect examples, indeed, in a class of art in which the painter has attained the highest eminence. Groups of young urchins are represented—in the one, in melancholy mood poring over unlearned tasks; having traced

"The day's disasters in the morning face"

of the master, that looks a rod: in the other, laughing, with counterfeited glee,

"At all his jokes, for many a joke had he."

The effect is inimitable: there is a story in the countenance of each of the "apprehensive" rogues, 'The Pair' will be coveted by all who visit the Exhibition.

No. 270. 'Christ appearing to Mary Magdalene,' J. P. Knight, A.R.A. A work altogether beyond the capabilities of the artist; and one that will deteriorate his reputation.

No. 275. 'The Will of Mrs. Margaret Bertram,' T. Clater. A capital picture of one of

the most exciting incidents related in the novel of "Guy Mannering." The characters are developed with considerable ability; the artist having very accurately studied the conceptions of the great originator of them. It is painted, too, with manifest care; and the work is an exceedingly favourable example of the class to which it belongs—a class that will always find admirers and purchasers in England, because it can be fully comprehended by the mass.

No. 277. 'Depositing of John Bellini's three Pictures in La Chiesa Redentore, Venice,' J. M. W. Turner, R.A. A gorgeous picture; full of the highest and richest poetry.

No. 286. 'The Smugglers of the Pyrenees,' V. Dartigue, R.A. This, and No. 420, 'Lawrence's Death,' are, we understand, the productions of a French Artist. They are pictures of very high merit; composed in a fine spirit, and wrought with rare power. The tone of colour is such as some of our own artists (who are too lavish in the use of white) will do well to study. It would have been just, and certainly generous, to have placed them in better positions.

No. 287. 'Sir Roger de Coverley's Courtship,' R. Redgrave, A.R.A. A picture of great merit, although not entirely satisfactory. The arch and characteristic expression of the widow is capital—as she begins her "learned discourse concerning love and honour," and plays with the fish she has caught; but the expression of Sir Roger strikes us as too silly; "his silence and confusion" being rather overdrawn.

No. 291. 'The Bay of Naples on the 4th of June—various Groups returning from the Festa of St. Antonio,' T. Uwins, R.A. In all respects a picture of the very best class; touching in character, graceful in composition, and wrought with the knowledge and skill of a master. With all the grace of form and drapery and fine grouping that make the memory of Stothard sacred; and without the defects that not unfrequently deducted largely from that great painter's fame; while, as an example of pure and natural and forcible colouring, there are none to surpass it in the Exhibition. As a source from which the observer may derive enjoyment and instruction, there are few modern works that go beyond it.

No. 300. 'Highland Scenery,' F. R. Lee, R.A. A landscape of the grandest and noblest class; with qualities of as high a character as are displayed by the most famous of the Old Masters. It is, as it may well be, one of the leading objects of attraction in the Exhibition. The younger students will do wisely to consult it again and again, for it contains a volume of instruction.

No. 313. 'Hunt the Slipper, at Neighbour Flamborough's,' D. Maclise, R.A. A delicious work; one that may be gazed upon for an hour, and in which the observer may

"Still find something new,  
Something to praise, and something to admire."

It is full of incident—one of the happiest points of it being the contrast to the pure village maidens, supplied by the brace of flaunting city ladies that enter at the door—Satan peering into Eden. The picture has all the characteristics for which Mr. Maclise is distinguished—fine drawing, force, and variety of expression; a general harmony, and perfect grace in arrangement.

No. 308. 'The Death of Demosthenes,' F. Sawyer. We are not familiar with the Artist's name; and his picture, although of the higher class, is placed too high to be fairly examined. There are so few historical works in the collection, that we think a worthier station might have been allotted to this; it seems to give good promise of future excellence.

No. 323. 'Portrait of Sir Henry Edwards, Bart.' P. Corbet. This also is a new name, and

one from which we augur much hereafter. The portrait is of a small size, and the subject is not a favourable one; but it is painted with exceeding care, and yet with much freedom.

No. 330. 'Mont St. Michael, from Avranches,' W. Fowler. A landscape of considerable merit, carefully painted; and taking the old and favourite subject in a very striking point of view.

No. 336. 'The Ruin of a Fort at Castell-a-Mare, Bay of Naples,' T. C. Hoffman. A work that should have received a better place; for it is worthy of the reputation of a good and true artist of the veritable English school.

No. 339. 'De Montfort,' C. Landseer, A.R.A. We cannot consider this one of Mr. Landseer's happiest productions. The figures seem as if they had been studied on the stage, where they had placed themselves in attitudes to be affected by the foot-lights.

No. 340. 'The Library at Holland House,' C. R. Leslie, R.A. There is no mistaking the portraits; although small in size they will be at once recognised. The picture, too, is skilfully arranged and elaborately finished.

No. 349. 'Lazzaroni, Naples,' W. Collins, R.A. Redolent of the lazy south; the very air seems indolent; and the group, sleeping or lounging, appear incapable of exertion—even the fellow who eats his macaroni does so as if it were a labour to move. The character is admirably rendered, and the tone of the picture natural and true.

No. 350. 'Answering an Advertisement,' F. R. Stephanoff. A capital notion, pictured with much humour, yet by no means exaggerated. "A respectable female" is making application for the office "of housekeeper to a middle-aged gentleman, of serious and domestic habits."

No. 354. 'Pozzuoli, from Caligula's Bridge; the Island of Nerida in the distance, Bay of Baie,' C. Stanfield, R.A. Another of Mr. Stanfield's noble landscapes—works that will be dates to after ages.

No. 368. 'Portrait of William Wordsworth,' H. W. Pickersgill, R.A. A fine portrait and a striking likeness of the purest and best of all our British Poets. He is growing aged now, but his eloquent features are here preserved in good time; the picture is one to which his successors will be content to make a pilgrimage.

No. 379. 'Female Bathers Surprised by a Swan,' W. Etty, R.A. A most perfect example in a style of art in which excellence is of very rare attainment; the form is after a faultless model—improved, doubtless, by the matured study of the more accomplished of the ancient masters, who loved to copy from the fairest of created works. Mr. Etty has never surpassed this in true and natural colour; the design, too, is admirable, and all the lesser portions of the picture are exquisitely drawn and painted. It is as near to nature as a transcript can be.

No. 385. 'Portrait of the Hon. Mrs. Henry Marshall,' Mrs. W. Carpenter. Beautifully painted. A work that may vie with the best efforts in any school. How is it that Mrs. Carpenter is not a member of the Royal Academy? How creditable it would be to that body to elect her: such election would be by no means without precedent, for "the books" contain the names of three or four ladies—and sure we are there are very few competitors with superior claims to those of this accomplished painter.

No. 395. 'A Trout Stream,' J. Stark. A sweet copy from nature, with a happy blending of vigour and delicacy: how we long to pace beside it, and throw a fly under the branches of yon aged oak, just where the ripple rises on the water! It would be, indeed, a treat just now, for our fingers and our heart are both weary, and we deeply covet an exchange of fresh air for midnight oil. This we may not have; but we may go again and look at Mr. Stark's picture—and "keep the word of promise."

No. 399. 'Jerusalem, from the Mount of Olives,' D. Roberts, R.A. A chef-d'œuvre of the Artist; realizing a scene linked with so many gloomy and glorious associations—the city that "sits solitary;" that was great "among the nations." In truth "all her beauty is departed;" nothing of the grandeur of ancient Jerusalem now exists. The painter has judiciously thrown the city into the back-ground, from which rise its square and ungainly towers; while in the foreground he has introduced a procession of pilgrims, on their way to bathe in the river Jordan. The picture is one of the highest class; deeply interesting in subject, and of surpassing excellence as a work of art.

No. 407. 'An Irish Market-day, Ballyhay, Co. of Monaghan,' H. MacManus, R.H.A. A capital example of Irish character, full of incident and animation; there is no mistaking the accuracy of the portraits; they are veritable sons and daughters of "the sod."

No. 410. 'Pirates of Istria bearing off the Brides of Venice from the Cathedral of Olivolo,' J. R. Herbert. This picture cannot fail to place Mr. Herbert in the foremost rank of the profession. Its qualities are of the highest and rarest order; with one or two exceptions it may be classed as the most satisfactory production in the Exhibition. The drawing is marvelously correct—a perfect triumph of the art, considering that every subject introduced into it is in action; and that a thorough knowledge of anatomy was necessary to carry out the design. The various passions that agitate the several individuals of the group are admirably expressed; from the leering and self-confident ruffian to the terrified or fainting woman. As an example of colour, too, it is of great excellence; indeed, in this most difficult branch of the art, Mr. Herbert has long gone beyond the majority of his competitors. We have looked—in common with all who love art—with much anxiety for Mr. Herbert's contribution to the collection this year; for last year, unfortunately, ill health compelled him to send in his work unfinished. He has fully realized our best hopes, and established his claim to that professional distinction which is now certain to be awarded him. He will do honour to any society.

No. 411. 'Portrait of a Lady,' S. A. Hart, R.A. Another successful production of this Artist. He has established, this year, his right to the position in which the Academy have placed him; and we rejoice to find he has discovered his own proper *forte*. A more purely graceful portrait than this has been seldom produced; it is grand in its simplicity; and receives no aid—or it may, perhaps, be more correct to say, sustains no injury—from the burthensome accessories with which portrait painters are too prone to crowd the canvas, as if they desired to attract the eye from the form and face, to the curtain or pedestal that forms the prominent object of the picture.

No. 428. 'Celestial City and River of Bliss,' No. 570. 'Pandemonium,' J. Martin. Offsprings of a vigorous and brilliant imagination; full of rich poetry: few artists surpass Mr. Martin in the grandeur of his conceptions—they astonish, perhaps, more than they satisfy; and are certainly deficient in that academic truth, without which the greatest work will fail to receive homage from the greatest minds.

No. 429. 'Mary Queen of Scots and Her Retinue Returning from the Chase to the Castle of Stirling, in 1562,' W. Simson. A fine and highly-interesting picture, grouped with rare skill; drawn with great accuracy and coloured with truth and power. It is, moreover, finished with care, and yet with freedom, being excellent in parts and admirable as a whole.

No. 437. 'The Escape of Earl Nithsdale from the Tower, in 1715,' S. Drummond, A.R.A. A well-selected subject, cleverly treated; it tells

the story of the escape of Lord Nithsdale, by the artifice of his wife, who conveyed the apparel of her nurse into the prison; the moment selected by the artist is when her ladyship, having succeeded in passing the Earl by the guards, returns to the prison door and pretends to converse with him; attracting their attention from the object of the watch. Her ruse was successful.

No. 444. 'Portrait of a Spanish Lady,' J. Linnell. A small portrait of the highest merit; such as very few of our painters can equal. Mr. Linnell has the rare faculty of refining without sacrificing character; of preserving truth and rendering it agreeable.

No. 450. 'Jessica and Lorenzo,' S. A. Hart, R.A. Another capital example of the Artist's ability; one of the most pleasing and characteristic copies of a delicious scene.

No. 463. 'On the Coast at Fecamp, Normandy,' H. Lancaster. A landscape of the best and purest class; the materials are arranged with skill and coloured with a strict adherence to nature.

No. 466. 'The Sculptor's Triumph when His Statue of Venus is about to be Placed in Her Temple: a Morning at Rhodes,' F. Danby, A.R.A. This is a very meritorious work, and worthy of the Artist's earlier reputation. The huge statue, seen in the misty distance, happily contrasts with the gay procession in the foreground, as they bear the Artist and his work to the temple for which it is destined. The composition is a high and pure example of poetry; the several minor parts are carefully wrought, and the effect of the whole work is excellent to the highest degree. It may be liable to the charge of affectation in style, but it has qualities that amply compensate for any defect.

No. 467. 'Portraits of Viscount, Lady Augusta, and the Hon. George Fitzclarence,' J. Lucas. A good and carefully-wrought picture of a family group; the production of an artist who is rapidly making his way onward.

No. 471. 'Portrait of Henry Phillips, Esq.,' J. P. Knight, A.R.A. A soundly painted portrait, which tells us that the vocalist is a brother of the angle.

No. 486. 'Amongst the Mountains in Cumberland,' T. S. Cooper. One of the best examples in the style for which Mr. Cooper has obtained a reputation that is by no means limited to his own country. In portraiture of cattle he goes far beyond any modern competitor, and closely approaches the most renowned of the old masters; whose works are considered treasures above all price. It is not, however, in this quality alone that Mr. Cooper excels; he has been an attentive student in the meadows, and has closely noted the peculiar features that nature presents as fittest to be copied by the artist. His cattle, therefore, are always in keeping with the scene; and the scene is generally such as would "tell" by its adherence to fact, even without the advantage of its accessories. His figures, too, are skilfully introduced, and are invariably in perfect harmony with the surrounding objects. It is not too much to say that no collection of works of British Art will be complete without a specimen of this excellent and pleasing master.

No. 490. 'The Covenanter's Wedding,' R. R. M'lan. There are few pictures in the collection that will afford more pleasure than this—regarded in reference either to the treatment of the subject or the ability with which it has been executed. It manifests a thorough acquaintance with Scottish character, and a mastery over the means of making a conception easy of comprehension by the mass. There is nothing forced about it; it is just such a scene, as we can imagine to have been often acted, in troubled times, when brave youths and fair maidens plighted troth in the midst of armed men,—under the dread that the bridal feast might be the last which the bride and bridegroom were

to make together. Every part of the picture affords evidence of matured thought and careful study; and some portions of it would do honour to the best artists of our time. The young couple, the white-haired pastor, the anxious mother, the loving friends, the resolute relatives, that keep guard against interruption, are, each and all, aids to realize a touching and exciting incident—a wedding in a little vale, in the midst of mountains, hidden from the reach of the fierce soldier, to whom religion according to the dictates of conscience was an atrocious crime. A good moral, as well as an historic truth, is conveyed by this fine production of Mr. M'lan's pencil—and we are glad that it is to be consigned to the hands of a competent engraver: it will be a valuable acquisition to our store of illustrations of history.

No. 492. 'Party at Ranton Abbey, the Shooting Lodge of the Earl of Litchfield,' F. Grant. A work that might alone give fame to any modern painter: a very difficult subject treated with good taste and sound judgment, and with a depth and strength of colouring rarely equalled.

No. 498. 'The Vicar of Wakefield finding his Lost Daughter at the Inn,' R. Redgrave, A.R.A. The most touching incident in the sweetest of books, rendered with truth, grace, and right feeling. The characters are happily portrayed; the subject would be at once known, without the aid of the catalogue. It is painted, too, with great skill and power; and will rank among the universal favourites of the collection.

No. 507. 'The Stolen Interview of Charles I., when Prince of Wales, with the Infanta of Spain,' F. Stone. Mr. Stone is rapidly establishing his claim to high professional rank. This work will go far to advance it. It is painted with great delicacy and beauty; and, as a composition, is conspicuous for the grace that has long distinguished the less ambitious productions of the Artist.

No. 518. 'The Waifu's Heart,' T. Duncan. A most painful, but most affecting picture: poor Jenny, the heart-stricken wife of "Auld Robin Gray." It touches almost as nearly and powerfully as the lines copied from the ballad. There are few better works of its class in this or any other collection.

No. 519. 'David,' W. Etty, R.A. Another noble production of the artist's masterly pencil—a glorious and beautiful conception of the King of Israel "awaking the lute and harp right early."

No. 532. 'The Dawn of Christianity,' J. M. W. Turner, R.A. And another example of a great man's folly. It is far more like the dawn of creation—when "earth was without form and void"—before "the Spirit of God moved upon the face of the waters."

No. 552. 'Thorwaldsen, in his Study at Rome,' E. M. Ward. A picture of great interest, as supplying a likeness of one of the greatest men of the age.

No. 553. 'The Ballad,' G. Lance. A gorgeous picture in the peculiar style of the artist, a style in which he continues without a rival.

No. 563. 'The Cottage Door,' J. Linnell. A delicious and purely English landscape.

#### THE ARCHITECTURAL ROOM.

This still presents the same ill-judged admixture of highly-coloured oil paintings with quiet architectural drawings, so prejudicial to the effect of the latter, of which we have before spoken. Surely architecture, important alike as an art and a science, might have the whole of one small apartment ceded to it? As things are at present managed, its professors have hardly fair play, and may justly complain.

Looked at as a whole, the exhibition of architectural subjects this year, about 130 in number,

may be deemed satisfactory; for although at first sight there may seem to be few important designs, on examination it will be found to give evidence of much careful study, and to show more freedom of thought, than has been sometimes the case.

Mr. Barry exhibits a design for rebuilding Bridgewater-house, London, the residence of Lord Francis Egerton (No. 981); a design, we regret to say, which is certainly more commonplace than we should have expected from this accomplished architect. Like several of his works, it consists of a square pile of building, with a massive tower attached. The elevation of the sides presents a range of three-quarter Corinthian columns on a basement, supporting an entablature and balustrade, beneath which, and between the columns, appear the windows of the second and third floors. This general description of the design, as our readers will see, would apply to very many buildings already erected, the Strand front of Somerset House for example; nevertheless, from its extent and the constant recurrence in it of the same parts, it cannot fail to form an imposing structure, carried out too, as it doubtless will be, with all the excellence of detail, for the knowledge of which its author is justly eminent.

No. 993, called a 'Study for the Front of a Public Building,' by Mr. Cockerell; and No. 1090, by Mr. Mocatta, are two of the designs for the Royal Exchange, concerning both which we have already spoken at great length in the Art-Union. They are beautiful drawings; that by Mr. Cockerell, perhaps the more laboured of the two, and may be usefully studied by the young architect. Mr. Mocatta also exhibits a view of the Brighton Railway terminus now erecting; an Italian design, with a colonnade in front, the intercolumniations of which are somewhat too wide.

Of the designs for the Assize Courts at Liverpool, submitted in competition last year, there are no less than eleven exhibited, including that by Mr. H. Elmes, which obtained the first premium. Of these we may mention No. 1031, by Messrs. Wigg and Pownall; No. 988 (a clever Italo-Grecian design), by Mr. Lamb; No. 1028, by Mr. Greig, and No. 966, by Messrs. Mair and Browne. No. 1006, 'Design for St. George's Hall, Liverpool,' by Mr. Elmes, which obtained the first premium in 1839, is an exceedingly beautiful project; wherein many of the difficulties which attend the adoption of a purely Greek model for a modern building are cleverly overcome. The order used is Ionic. The dressings of the windows are particularly elegant. This design, as well as that for the Assize Courts by the same author, has been abandoned in order to arrange one building to serve the two purposes.

For the Infant Orphan Asylum, proposed to be erected at Snaresbrook, there are four designs:—No. 963, by Mr. Alfred Lang (apparently a clever arrangement, but put so far out of sight as not to allow of examination); No. 992, by Mr. A. Beaumont; No. 1097, by Mr. T. Allom; and No. 1112, by Messrs. Hambley and Marriott; the latter two are Elizabethan.

Mr. W. J. Donthorn exhibits the 'Session Court and Gaol, now building at Peterborough,' (No. 1078), which take the shape of a Norman keep, and are effective. No. 987, 'St. Stephen's Church, Bath,' by Mr. J. Wilson, has a clever little tower. No. 1083, 'Chapel of Ease and Boys' School, Horsham,' by Mr. W. Moseley, is a pleasing design, with more adornment than is now-a-days permitted to churches. The churches that, for the most part, are now being erected throughout the country (such, for example, as that at Nuneaton, by Mr. T. L. Walker, No. 957), seem—thanks to the Church Commissioners—to be designed by the dozen, with no recommendation but cheapness; and no better point about them than the certainty that they cannot last many years. Our ancestors could build stone churches in every village—enduring monuments of piety and skill worthy of their sacred purpose. Alas for the degenerate moderns!

No. 965, 'A Design for the altar-end of a church,' by Mr. T. Allom (a masterly drawing), might then probably have been realized; in these times, however, it can hardly be hoped for.

No. 1092, 'An aquatic approach to a Mansion,' by Mr. E. A. Gifford, is an ambitious attempt deserving applause; as have been several previous

efforts of this artist. Mr. Drew displays some beautiful drawing in No. 1064, 'Side Elevation of a Church,' No. 1063, 'Design for an Opera-house, in the Italian style,' by J. C. Tinkler, is neatly expressed.

We are most reluctantly compelled here to break off our notice, which we shall, of course, continue in "our next;" and as our next will be published on the 1st of June (our design being, as we have elsewhere advertised, to publish in future on the 1st instead of the 15th of each month), a very long period will not elapse before we shall be enabled to close our observations upon this subject—the subject of the year to Artists, and all who love Art. We repeat our entire satisfaction with the Exhibition 1841: it is too much the fashion, year after year, with a portion of the public press, to exclaim about annual "inferiority;" as if our British Artists were retrograding rather than advancing—a grievous mistake, arising in some cases from wilfulness, in others from ignorance, and in others from utter oblivion of the past. It has been our yearly duty, for the last 15 years, to write a notice of the produce of the Royal Academy, and we have therefore, necessarily, scrutinized it closely. We do not hesitate to affirm that there has been no single year unmarked by general improvement; every year exhibiting a safe and sure progress upon the parts of the majority of the exhibitors. It is deeply to be lamented that many critics imagine they will stir men to activity and emulation by depressing them—that men can be urged to do much by being told they can do nothing—a principle as unnatural as it is unwise. We have not ourselves had opportunities of examining the Exhibitions of the Continent; but we have correspondents in most of the foreign states, and we may rely upon their assurances, that nowhere have the Arts manifested so decided a progress onwards as they have, of late years, in Great Britain; nowhere are there to be found so many good pictures or so few bad; nowhere has any Academy produced so large a number of able pupils as the Royal Academy of this kingdom—unsustained by any aid but that which they derive from exhibiting the year's produce.

Such is the opinion expressed to us in the most unqualified terms by the many we have been enabled to consult who have visited the various cities of Europe; and it is grievous in the extreme that the press—or rather a considerable portion of it—which should foster and protect the promise as well as the performance of genius, should manifest a disposition to dishearten, discourage, and embarrass.

#### THE BRITISH INSTITUTION.

The prizes offered have been allotted to Messrs. T. Von Holst, F. Stone, Edward T. Cooke, and E. Goodall; and, on the whole, the allotment must be considered satisfactory. In reference to the first-named artist, there was but one opinion; so, also, it was of the second; and although we do not consider that the other two manifested, in this year's collection, very decided marks of improvement, we may not forget that Mr. Cooke deservedly ranks among the best landscape painters of the country; and that Mr. Goodall has established a character—very high for so young a man. We have neither time nor space to comment upon this topic at greater length, just now; our communications upon it are very numerous; and we might amuse our readers by printing some of them. A strong feeling appears to prevail that Mr. Linnell ought to have had the preference. We rejoice that some of the "speculators" will be agreeably disappointed; and, as we have intimated, we regard the selection as creditable to the good taste and strict justice of the arbiters.

The following is a list of the pictures which have been sold at the Exhibition, together with (in most instances) the prices, and the names of the purchasers.

No. 12. 'The Return from Christening,' F. Goodall, W. Wells, Esq. No. 59. 'Don Quixote giving advice to Sancho,' J. Gilbert, W. Wells, Esq. No. 188. 'Columbus and his son Diego, receiving relief from the Monks of La Rabida,' W. Simon, W. Wells, Esq. No. 41. 'Mont St. Michel—Peasants returning to Pontason on the approach of the tide,' E. W. Cooke, 160 guineas, the Marquis of Lansdowne. No. 63. 'Sketch of a Bazaar at Siout, Egypt,' W. J. Müller, £10, C. B. Wall, Esq. No. 288. 'The Slave-market, Cairo—Sketch for a Picture,' W. J. Müller, £10, C. B. Wall, Esq. No. 341. 'Bonaparte in Prison at Nice,' E. M. Ward, the Duke of Wellington. No. 180. 'Baptism—

Interior of the Church of St. Gilles, Caen,' F. Goodall, 100 guineas, Sir C. H. Coote, Bart. No. 58. 'Avenue of Willow Pollards,' Jas. Stark, 45 guineas, Lord F. Egerton. No. 296. 'Sketch from Nature,' F. R. Lee, R.A., 15 guineas, John Sheepshanks, Esq. No. 108. 'View in Denbighshire,' Mrs. Arnold, Lord F. Egerton, M.P. No. 40. 'From the Parable of the Ten Virgins,' W. Etty, R.A., 150 guineas, Vincent Thompson, Esq. No. 8. 'A Girl Reading,' J. W. King, Edward Bell, Esq. No. 294. 'Head of a Mahomedan,' W. Etty, R.A., T. S. Cooper, Esq. No. 245. 'Arming for Battle,' F. Newerham, £80, N. Farrer, Esq. No. 7. 'Waiting for an Answer,' J. C. Horsey, John Sheepshanks, Esq. No. 108. 'Street Scene in Cairo,' D. Roberts, A.R.A. No. 72. 'Horses returning from Plough,' J. F. Herring, 50 guineas, Sir Benjamin Smith. No. 228. 'View in the Kingdom of Naples,' W. L. Leitch, — Sheppard, Esq. No. 342. 'Terrace of the Capuchin Convent at Sorrento,' J. Uwins, R.A., James Hall, Esq. No. 304. 'Bay of Naples—Peasants going to the Villa Reale,' J. Uwins, R.A. No. 159. 'Eagle and Black Cock in a Highland Glen,' F. R. Lee, R.A., W. Wells, Esq. No. 215. 'A Dog with Bittern, Wild Duck, &c.,' F. R. Lee, R.A., W. Wells, Esq. No. 362. 'Ship shortening sail off the Shears Beacon,' G. W. Butland, 150 guineas, W. Danford, Esq. No. 201. 'Evening,' H. Bright, F. Chittenden, Esq. No. 148. 'Cottage Scene in Sussex,' H. J. Bodington, 6 guineas, F. Chittenden, Esq. No. 25. 'Scheveling Pink getting off Shore,' E. W. Cooke, Lord Northwick. No. 395. 'Child in the Bath,' (sculpture), Patrick Park, 250 guineas, John Clow, Esq. No. 125. 'Mountain Streams,' Thomas Crewick, 80 guineas, Lord Northwick. No. 248. 'Blacksmith's Shop,' Thos. Crewick, John Clow, Esq. No. 255. 'The Wish,' Theodore Von Holst, 50 guineas, Lord Northwick. No. 319. 'Evening,' John Wilson, 15 guineas, Lord Northwick. No. 287. 'A Calm—Morning,' John Wilson, 8 guineas, Lord Northwick. No. 367. 'Ober Lahnstein, near Coblenz,' Charles Deane, 40 guineas, No. 14. 'The Seven Mountains, from the University-gardens, Bonn,' R. H. Hilditch, 15 guineas, Colonel Wyde. No. 225. 'Amalfi, coast of Salerno,' G. E. Herring, 46 guineas, Colonel Wyde. No. 162. 'Flash—a Study,' S. Pearce, 4 guineas, Lady H. Williams. No. 185. 'Burning Vase, Jersey,' E. W. Cooke, 50 guineas, Chas. W. Packe, Esq. No. 100. 'Cattle Returning—Evening,' J. Wilson, jun., 10 guineas, J. E. B. Stevenson, Esq. No. 289. 'Sunset,' W. Welfert. No. 198. 'The Account-day,' C. Brocky, 18 guineas, H. A. J. Munro, Esq. No. 121. 'La Maitresse,' C. Brocky, 35 guineas. No. 312. 'Scene on the Sussex Coast,' W. Shayer, 45 guineas, T. Miller, Esq. No. 45. 'Cain,' Walter Measor, G. Louis, Esq. No. 195. 'Narcissus,' G. Lance, 200 guineas, — Robertson, Esq. No. 351. 'An Interior,' G. Lance, 175 guineas, — Robertson, Esq. No. 314. 'H.M.S. Howe getting under weigh,' and No. 332, 'The Wreck,' G. W. Butland, £50 (the two), J. S. Christian, Esq. No. 344. 'Still Life,' Edward Bell, 6 guineas, — Kent Esq. No. 175. 'French Herring-boat entering Havre,' E. W. Cooke, 160 guineas, H. Gritten, Esq. No. 36. 'From a Dramatic Romance,' F. Stone, Lord F. Egerton. No. 31. 'Morning in the Meadows of Sturry,' T. S. Cooper, £100, W. Bennett, Esq. No. 227. 'Oranges, Grapes, &c.,' A. J. Oliver, A.R.A., 8 guineas the three, the Rev. Sir Samuel Jervoise, Bart. No. 389. 'A Young Fruitress,' A. J. Oliver, A.R.A., 124 guineas, the Rev. Sir Samuel Jervoise, Bart. No. 396. 'Sappho—a bust in Marble,' N. C. Marshall, £30, J. Vincent Thompson, Esq. No. 164. 'The Ruins of St. Augustin's Monastery, Canterbury,' T. S. Cooper, 60 guineas, W. Peile, Esq. No. 35. 'Moonlight,' J. B. Crome, 10 guineas, Sir H. Bunbury, Bart. No. 295. 'Distant View of Dunster Castle,' Copley Fielding, 12 guineas, Sir H. Bunbury. No. 269. 'The Warder,' Charles Hancock, Sir W. W. Wynn, Bart. No. 226. 'View near Pembroke, South Wales,' E. Goodall, 40 guineas, W. Wells, Esq. No. 282. 'View near Ben More, Isle of Mull, Copley Fielding, 12 guineas, Lord Haddo. No. 298. 'View of Snowdon,' Copley Fielding, 15 guineas, Lord Haddo. No. 134. 'Marie,' Mrs. McLan, 18 guineas. No. 79. 'A Ferry,' T. Crewick, 65 guineas, Earl Grey. No. 237. 'Landscape Composition,' R. Hilder, £12. No. 267. 'Oberwesel on the Rhine,' G. Hilditch, 10 guineas, Enoch Durant, Esq. No. 274. 'Ruins of the Rheinfels from the Lily Inn, St. Goar,' G. Hilditch, 10 guineas, Enoch Durant, Esq. No. 64. 'The Village Church—Sunday Morning,' — Stanley, 45 guineas, R. S. Cox, Esq. No. 89. 'Evening on the Sands near Hastings,' A. Clint, 25 guineas, R. S. Dawson, Esq. No. 48. 'Study from Nature,' C. M. Aldis, 10 guineas, Miss Acocks. No. 375. 'Boar Hunters and Pilgrims of the 15th Century receiving Refreshment at the gate of a Convent,' R. Herbert, 200 guineas, — Mee, Esq. No. 241. 'Christ arrayed in the Ensigns of Mock Royalty,' J. King, 40 guineas. No. 132. 'Gil Blas entertained by the Valets of the Beaux who sup at their Masters' Cost,' J. M. Joy, 30 guineas, W. Egley, Esq. No. 80. 'The Plain Gold Ring,' T. Clater, 40 guineas, E. Benton, Esq. No. 143. 'The Thames, near Reading,' H. C. Pigeon, 65 guineas, R. Thackthwaite, Esq. No. 165. 'Hush!' W. Reviere, Lord Colborne. No. 294. 'The Bath,' Miss F. Corbeaux, 25 guineas, Enoch Durant, Esq. No. 24. 'Fisherman's Cottage, Clovelly, N. Devon,' W. Shayer, 35 guineas, — Acocks, Esq.

# THE SOCIETY OF PAINTERS IN WATER COLOURS.

## THIRTY-SEVENTH EXHIBITION.

This Society, to which we are indebted for so much of the supremacy of "the Art" continues to progress; its Exhibition is still foremost among the most attractive of the metropolis. This year, we miss from its walls, the fine conceptions and masculine executions of Cattermole, whose health has, unhappily, prevented his bringing to them the aid of his powerful pencil; but the other members have bestirred themselves, to make amends for his absence, and the result is, a collection of great excellence—taken as a whole, perhaps, more satisfactory than any that has preceded it, although there are none of a very striking character. It consists of 333 paintings.

No. 1. 'The Melancholy Jaques,' P. De Wint. A bold and vigorous copy from nature; for, although the old incident from Shakspeare is introduced into the picture, the oak,

Whose antique root peeps out  
Under the brook that brawls along this wood,"

is still growing and flourishing, in gigantic size and strength, at Oakley Park, near Ludlow. Mr. De Wint's other principal works—and, although not sufficiently numerous, they are worthy of his well-earned fame—are, 3, 'Ferry on the Severn,' 76, 'Winter,' and 110, 'An Effect on the Cross Fells, Cumberland.'

No. 2. 'Ben Cruchan, looking up Loch Etive, Argyllshire,' Copley Fielding. One of the most forcible and effective productions of this admirable master; it is delicate and graceful in the foreground, and the mist is happily represented as passing up the distant mountains. The artist is an extensive contributor, and there is no one of his contributions that will not be coveted by all who can appreciate excellence. No. 37, 'Vessel off Beechy Head,' is a fine contrast, by its force and vigour, to the delicacy displayed in No. 2. It is grand in composition; the gloom of the sky and waves commingle; the relic of an old wreck is among the breakers, and the tall masted vessel is rapidly nearing destruction. The painter is a poet. In 131, 'Scarborough, Yorkshire—Morning,' we have another variety; another, No. 163, 'View from Bolton Park;' and another, a small work of exquisite character, No. 291, 'Scene on the Waste of Cumberland, near Bew Castle.' He appears, indeed, to have studied how best he might embellish and give interest to the rooms, by varying, as far as possible, the productions he exhibited.

No. 4. 'Remnants of the Tournament,' W. Hunt. Full of character and humour, without jarring by approach to caricature: a rude, rustic boy has dressed himself in portions of the garb of a knight of tourney; it is vigorously drawn and brilliantly coloured. A capital picture, too, is 13, 'A Cottage Door,' at which a village coquette is standing. So is No. 88, 'A Winter Effect'—a lad whose fingers have been bitten by the nipping frost. No. 99, 'Asking a Blessing,' is in a different style, but of equal merit with the copies of his more comic "sitters." No. 105, 'Giving himself (H) airs,' borders too much on the burlesque to please us; and the pun is not a good one. No. 126, 'An Irish Pilgrim Boy,' is forcible and true, and very touching; it exhibits a fine feeling for the pathetic, upon which Mr. Hunt will do wisely to improve. No. 166, 'A Laboratory,' is an attempt—and, as far as the design goes, a successful one—to essay a new path. It is of larger size than usual, and, though immensely crowded with objects, each one of them is wrought to a high degree of finish; showing great capability in copying with marvellous accuracy. The whole of the artist's contributions to the collection are of great merit; in his peculiar walk he has not yet been approached. His single figures are all admirable: we hope, however, he will study the art of grouping, so as to avoid the charge of sameness that has been urged against his works.

No. 9. 'Gougan Barra, near Bantry,' W. A. Nesfield—(the Animals by R. Hills.) A fine copy of one of the wildest and most picturesque

scenes to be found, perhaps, in any country in Europe. The sacred lake of Gougan Barra is situated in the midst of mountains, and is formed by the thousand streams that perpetually run from them. Its character is that of exceeding gloom, and the solitary feeling it creates is augmented by the ruins of a small chapel that occupy a little island, on which grows a group of trees, the only ones for miles around the district. The artist has transcribed, with great ability, the place and its peculiarities; but, in the name of truth, what could have tempted him so completely to outrage fact, as to introduce into it a herd of wild deer; they might have been seen there, indeed, two or three centuries ago; but we venture to assert, that never since has aught been beheld in the district more nearly resembling them than the goat or small mountain sheep. This is a sacrifice of the real to the fanciful, which we cannot pardon; nature wants none of these aids, or, if they be resorted to, the artist should not profess to copy the actual. Mr. Nesfield exhibits several other works of great value; we cannot test them so closely as we can No. 9, but will take for granted that he has not made so free with all his subjects. No. 17, 'Fall of the Tumel,' is a brilliant picture; full of high and right feeling. No. 164, 'A Day in the Highlands,' is of considerable merit, but the game is too lavishly exhibited in the foreground.

No. 10. 'The Youthful Florist,' J. Crisall. A graceful and pleasing portrait, with a very agreeable background. No. 33, 'Highlanders Consulting,' although a more ambitious subject, is far less effective.

No. 22, 'Lock Scene,' C. Bentley. A fine and interesting example of this artist's ability; it is, evidently, "a true copy," and the original was skilfully selected. There is evidence of much improvement in this artist; he has used his pencil with a more free hand, and with greater self-dependence. No. 73, 'Fishing Boats—Wicklow Bay,' is an able display of colour; and the composition, though the materials are limited, manifests good taste. No. 197, 'Fishing Boats Running into Harbour in a Stiff Breeze,' although unpropitiously placed, is among the best works of the collection; it is of large size, and is painted with the vigour of a master. Few of our artists are so completely at ease on the broad ocean, or so conversant with its "wooden walls."

No. 29, 'Distant View of Loughborough and Charnwood Forest, from Cotes Hill, Leicestershire,' J. D. Harding. This is a noble work; one of the best examples we could produce of the excellence to which, in England, we have carried "Painting in Water Colours." It nears perfection as closely as aught that has yet been done; added to the delicacy attainable by the material used, is the force and vigour obtained by the use of oil; it is as vigorous in execution as if wrought on canvas. The composition is very happy; for, although nature has supplied the middle and background, the painter has introduced into the foreground a group of sportsmen, that adds essentially to the effect of the picture. No. 121, 'The Falls of the Tumel,' is another choice specimen of the artist—a production of grace, as well as grandeur. These, and No. 144, 'Boats Going Off—Hastings,' are the only contributions of Mr. Harding—too few.

No. 34. 'Interior, with Dog and Game,' Fredk. Tayler. A very vigorous picture; painted with great care, and manifesting great power over the pencil and the matter employed. In No. 54, 'Early Morning—Unkennelling,' the hounds are admirably portrayed, but the subject is scarce worthy of the artist's talents. No. 117, 'The Highland Keeper's Bothy,' is Mr. Tayler's most ambitious work in the collection: it is of high merit, elaborately painted in every part, and very effective as a composition; but its value is materially marred by the moustachioed countenances of the sportsmen, who seem fitter to whine within a lady's bower, than to hunt the wild deer and roe over highland mountains. The character given them is ill keeping with the scene.

No. 45. 'View from the Summit of Scawfell Pike, Cumberland,' W. Turner. A noble copy of a peculiarly grand scene; the selection of such a subject does credit to the taste and judgment

of the artist. No. 91, is, unfortunately, a contrast. Is there any thing like it in nature?

No. 59, 'Notre Dame, from Place de la Calende, Rouen,' S. Prout. Although Mr. Prout contributes several pictures, they are all of minor importance, giving unwelcome evidence that his state of health has prevented his producing a work worthy of him; these small "bits," are, indeed, of high merit, but how gladly should we have examined some production of his pencil, that gave proof of renovated strength of hand, as well as undiminished grace and right feeling for the excellent in art and nature.

No. 72. 'Stapleton Mill, near Bristol,' G. A. Fripp. A work manifesting talent, but of a character too sombre to seem natural. No. 113, 'Tivoli,' is hard and disagreeable. No. 209, 'Scene in the Via Mala Pass of the Splügen,' is a far nearer approach to reality.

No. 82. 'Windsor,' W. Evans. A most delicious work; accurate as a portrait, and yet beautiful as a composition. It has the merit, too, of being a new view of an old subject—a subject, however, that cannot fail to interest, taken from any point. No. 102, 'Caversham on the Thames,' is another example of the grace and vigour of the artist—qualities in which he is equalled by few. It is the production of a highly poetic mind, and of one that has been duly schooled in the love of nature as in the pursuit of art. How much the value of the picture—a true copy of an actual scene—is enhanced by the introduction of the sweet group in the foreground; and, how judiciously the painter has brought the aid of fancy to bear upon reality, by the simple touching in of the rainbow, arching the village church.

No. 85. 'Dunluce Castle, County of Antrim,' H. Gastineau. A scene of surpassing grandeur; admirably copied. A ruined castle overhangs the rocks, against which the wild waves rush and break into foam; the sea birds exult in the midst of desolation, and the awful loneliness of the spot is illustrated by the smuggler, who bears, unquestioned, his keg up the rugged cliffs. Mr. Gastineau has brought a store of wealth from Ireland—a country singularly rich (and yet scarcely touched) in materials for the painter. Of an opposite character is No. 170, 'Trim, County of Meath,' a graceful and fertile inland scene, rendered interesting and memorable as a place associated with the early life of the Duke of Wellington; a pillar erected in honour of whom, is judiciously introduced in the distance. It is a beautiful work, and one that we hope the Duke will see; for, although his glorious career has been extensively illustrated, artists have been strangely neglectful of the earlier portions of it. The county of Meath has hundreds of subjects, not only inviting to the painter because of their natural beauties, but important, as interwoven with the history of one of the greatest men of the age.

No. 107. 'Scene from Milton's Comus,' J. M. Wright. A fine conception of the "divinest" character of Milton—"Sabrina fair!" but the work is injured by the heavy looking Cupid that "rides the air" overhead. The figures are skilfully grouped, and the story is told with happy effect.

No. 111. 'Afternoon,' G. Barret. One of Mr. Barret's "peculiar" works—a glorious sunset—and one of his best; manifesting anything but diminished power. He exhibits several excellent pictures; No. 246, 'Drovers' (on the screen), being a gem of the purest water.

No. 141, 'Easter Day at Rome—Pilgrims and Peasants of the Neapolitan States awaiting the Benediction of the Pope at St. Peter's,' J. F. Lewis. A gorgeous work, with merits of the very highest order; but of greater value as a painting than as a composition. Pilgrims and peasants, priests and monks, women and children, are mixed—and rather confusedly—around the steps of the palace church. The subject is, undoubtedly, too crowded, and presents no object of sufficient prominence.

No. 142. 'Landscape—Composition,' J. Varley. Full of imagination, and yet of truth—truth of nature and of art. No. 146, 'Evening—Composition,' calls for the same remark. The painter has a fertile and vigorous fancy; he will not please those who are content with prettiness,

but he will satisfy all who desire to see exercised the higher qualities of mind. His works seem to have been executed in "a new style," as if he had hit upon some plan for producing a novel effect. This alone is highly creditable; by far too few of our painters ever study to invent—being, for the most part, satisfied to work as lawyers do, by "precedent"—and to eschew suggestions they do not find in "the books."

No. 156. 'Venice, from the Riva degli Schiavoni,' W. Callow. Less crude and hard than the other works of the artist.

No. 169. 'St. Mark's, and the Piazzetta, Venice, during the Carnival,' Lake Price. The painter is scarcely sustaining the reputation he acquired in a very difficult and original style. This work is marred by masses of red, blue, and yellow spots; and sadly lacks harmony, both in arrangement and execution.

No. 185. 'Curiosity,' Miss E. Sharpe. A prettily composed and highly finished picture.

No. 199. 'The Glove,' Mrs. Seyffarth. Although manifesting much ability, the story is not well told. An exquisite sonnet, commemorating the event, was written by Leigh Hunt, which we regret did not chance to come in the way of Mrs. Seyffarth. A much pleasanter and more effective picture is No. 227, 'Paul and Virginia.' A picture full of point, humour, and character, is No. 266, 'The Alarm in the Night,' representing a household roused from their sleep by a hubbub in the pantry; the thief being a huge brindled cat.

No. 200. 'Poppies.' No. 215, 'Autumn Fruit,' V. Bartholemew. It is impossible to copy nature with greater accuracy; a breath might seem to stir the petals of the flower; and the fruit might realize the old story—the birds might come to peck at it.

No. 224. 'The Witch's Progress,' H. Richter. A fine conception of an unnatural scene: the artist has carried much humour into his work; moreover, it is skilfully and cleverly painted.

No. 237. 'The Contrast.' No. 319. 'Rosalind and Celia,' J. W. Wright. Two very sweet pictures; gracefully conceived, and executed with much ability—the latter especially so. It is a gentle and pleasant reading of a passage in Shakespeare—the friendship of two fair girls.

No. 258, 'The Selected Flower,' F. Stone. It will be generally regretted that Mr. Stone has this year contributed but one picture to the collection. It is, however, a worthy example of his abilities in a class of art we suspect he is deserting for that which is considered the higher. In this small production is represented a young girl's first thought of love, a beautiful mingling of surprise, pleasure, and bashfulness.

No. 299. 'A Grove,' F. O. Finch. A work of considerable merit; very tastefully composed and carefully and judiciously finished.

No. 302. 'Presence Chamber, Hampton-court,' Joseph Nash. One of several good pictures, by an artist who has succeeded in "restoring" many of the ancient halls of England, and peopling them with the worthies of old times.

There are a few of the Exhibitors, and many of the pictures, that still call for notice; but we are closely approaching the boundary to which we are of necessity confined. Seven-and-thirty years have now elapsed since the foundation of the Society; it will be curious and interesting, as well as useful, to trace its career, from the commencement to the present time. Who were its founders? Under what discouragements it laboured at its outset? What changes it has produced upon the art? We hope that we may yet be favoured with the materials for its history.

#### NEW SOCIETY OF PAINTERS IN WATER COLOURS.

##### SEVENTH EXHIBITION.

The Society is in the last year of its apprenticeship—a fact that must be borne in mind in 1842! While the elder has, perhaps, attained to as much vigour as it is capable of possessing, and will give abundant satisfaction by merely keeping its ground, the younger *must* progress; that it has

progressed is certain, every year exhibiting a manifest improvement in its character and condition, until it is very nearly on a par with its competitor. Both societies are honorable to British art; the public favour both; and both afford exceeding enjoyment to the tens of thousands who look for the month of May as opening up to them sources of pleasure and instruction. The rooms at 53, PALL-MALL are, perhaps, better fitted for the purpose of exhibiting pictures than any other in the Metropolis; the light is good, and pretty evenly distributed; they are sufficiently spacious; and on the ground-floor in the most fashionable street of London. We are not surprised, therefore, to find that the artists here have made an annual harvest of profit and encouragement; and we rejoice that it is so, for they merit both. The effect is this year more than usually perceptible. The more matured painters have considerably advanced, while their juniors are treading very closely in their steps. The collection consists of 308 pictures.

No. 4. 'The Dying Camel,' H. Warren. This is a fine passage of poetry. In the arid desert, the traveller and the camel have been left to die; the vultures have scented the prey afar off, and are flocking to the banquet. The man seems unconscious of his sad position; but the poor animal is willing to make a struggle for life. The scene of utter desolation along the trackless waste is in admirable keeping with the touching incident. Of a higher class, though scarcely more effective, is No. 75, 'Rebekah at the Well of Nahor.' Its tone of colour is firm and vigorous; and the subject is treated with great simplicity, while the various details exhibit careful and considerate study. The "Maiden very fair to look upon" is gracefully and beautifully pictured; and the group round the well, is skilfully arranged. The work establishes Mr. Warren's claim to a high professional position.

No. 44. 'The Covenanter's Home,' Jas. Fahey. A gracefully conceived and beautifully painted landscape; rich in natural treasures—fair children, flourishing trees, bees, and flowers. The cottage is a happy-looking retreat for contented virtue. It is of course the "Covenanter's home" before it was visited by the curse of the destroyer; and illustrates a passage in a sweet poem of poor Lætitia Landon's. The artist should have painted, as a companion to it, the aspect of the "Home" after the foot of war had crushed it.

No. 60. 'The Oath of Vargas in the Conseil des Troubles, 1567,' Lonis Haghe. A picture, in some respects, of vast ability, but affording little pleasure. The subject is a revolting one—a far better might have been selected. Time and genius are wasted if they teach nothing, and supply no enjoyment. It relates an incident in the history of the infamous Duke of Alva, whose ferocious representative, Jean Vargas, characterized as the "cruellest of the cruel," having signed a mass of death-warrants, is described as in the act of swearing—with his hand on the book of life—not to spare even his own mother if ever she should be infected with the plague-spot of heresy; while a bigot monk, standing by, exclaims, "God has heard you—your oath is registered in heaven." The more the artist succeeded, the more likely his work would be to excite disgust. We do not think he has succeeded. He pictures, it is true, a gang of ruffians, and commemorates a revolting incident; but he has failed in telling his story by the countenances of the actors in the bloody drama. As a development of the evil passions, it is, we think, a failure; as an example of fine drawing and powerful colouring, however, few modern works approach it.

No. 77. 'Smugglers Captured by the Coast-guard, in running their Cargo,' G. B. Campion. Full of energy and spirit, and apparently a very true transcript of a striking scene. No. 137, 'Landscape with Gipsies,' is also a work of considerable merit.

No. 102. 'The Apartment leading to the Banqueting Hall, John Chase. A clever composition, skilfully and powerfully coloured; illustrating the architecture of the sixteenth century. It may rank among the best of its class.

No. 118. 'Caernarvon Castle, North Wales,'

T. M. Richardson. A fine copy of one of the most extensive and interesting ruins in Great Britain. The style is remarkably nervous and free.

No. 146. 'The Triangle,' A. H. Taylor. A clever composition, coloured with much force and effect.

No. 84. 'Ruin of an Old Mill, on the Marshes near Loddon, Norfolk,' H. Bright. An early morning effect, and one of the most effective productions of the excellent artist. Another 'Old Mill,' is No. 100. Mr. Bright has a fine feeling for the picturesque; he must, however, beware in time of the danger of falling into mannerism, by studying only one class of subjects.

No. 156. 'The Battle of Agincourt,' H. Warren and C. H. Weigall. The joint production of two excellent artists; a brilliant and vigorous conception of a battle-scene in the olden time, before

"Villainous salt-petre had been dug  
Out of the bowels of the harmless earth—"

when knights fought hand to hand; and in bright armour, mounted upon gallant steeds, took from war more than half its ugly features, and made subjects for artists in succeeding ages. There are portions of this picture of very high merit; and, as a whole, it gives a good idea of the exciting scene. Mr. Weigall exhibits several brilliant "bits" of cottage-door incidents. No. 225, 'Poultry,' is a capital example of a style in which the artist is unrivalled.

No. 180. 'Falstaff, Bardolph, and Hostess,' W. H. Keeling. A powerfully coloured painting, the tone of which is uncommonly vigorous; but the artist has not embodied the conceptions of the poet. Neither Sir John, nor Bardolph, nor Mrs. Quickly are as Shakespeare pictures them; the countenance of the knight is an especial failure.

No. 203. 'Luggelaw, Co. Wicklow,' W. Telbin. A charming work; giving an accurate idea of one of the grandest scenes in the most picturesque of the Irish counties.

No. 209. 'Sunday Morning,' No. 224, 'La Bondeuse,' John Absolon. Two tasteful and carefully-wrought works; the colouring, however, is somewhat too thin.

No. 230. 'Griselde and the Markis,' Edward Corbould. This is, beyond question, the most striking and interesting picture in the collection; and will, as it ought, attract all visitors to the gallery. It is a work of the highest merit, both in design and execution, and cannot fail to establish the reputation which the young artist has been gradually and surely acquiring. Mr. Corbould drinks largely at

"The pure well of English undefiled—"

a better teacher than the old poet he could not study under. His continual application to so rich a source of instruction is evidence of his taste and judgment. The conception and arrangement of this picture are both good; the characters are well-imagined and well-placed (a little more animation to the countenance of a Griselde, and of energy to that of the Markis, would have improved it, however), and it is finished with great care in every part. The costume, too, is very accurate, and manifests no lack of painstaking. The group of village girls, the knights and dames, who form the procession, the various minor details, are all elaborately wrought. It is a gorgeous display of magnificence, but so tastefully and judiciously treated as to lose nothing of the touching character of the main incident.

No. 257, 'The Portes and Boulevartes St. Denis and St. Martin, Paris.' No. 278, 'The Conciergerie, &c., Paris, from the Pont Neuf,' T. S. Boys. Two highly characteristic street scenes, drawn with extraordinary fidelity and rendered remarkably pictorial. In this department of the art there is no painter who approaches Mr. Boys.

We must apologize for the brevity of this notice; but, in truth, our space is exhausted; and it will excite no surprise if we have grown weary of passing over ground that presents but little variety, and where we have been compelled to ring the changes again and again to the same tune—one of satisfaction, certainly, but also one of sameness. There are few of the members of this society who have not done well; and we lament we are now so completely worn out as to be utterly unable to particularize.

# EXHIBITION OF THE ROYAL SCOTTISH ACADEMY.—(CONCLUDED.)

No. 345. 'Cleveland cast ashore on Sumburgh Head,' John Irvine, A. A capital picture: it is well imagined and beautifully drawn, the colouring is rich, and the finish of the highest excellence, affording evidence of power which, if ripened into maturity, gave promise of the fairest fruit. A melancholy interest attaches to the history of this unfortunate son of genius, whose exertions have been prematurely torn from enriching the arts of his country: delicacy forbids our saying more on this subject, which has been feelingly alluded to in a northern contemporary in an appeal to the Committee of the Association for Promotion of the Fine Arts in Scotland, in which appeal we most heartily concur, and, under all the circumstances, sincerely trust it will not be thrown away. (Since the above was in type, we are happy to say the Committee has purchased this picture.) No. 364. 'The Lothians,' the late Rev. John Thomson, H. The last relic of the greatest Scottish landscape painter, cannot be looked on at present without deep interest apart from its intrinsic merit, great as that unquestionably is. We shall soon begin to devalue the contributions of him who wielded with such magic influence his pencil, to delineate with faithful and exalted truth the sublime scenery and natural glories of his native land. This picture, among the last efforts of his genius, was one also of his most favourite works; it is said to have been his labour of love for years before his death; and a great work it undoubtedly is, although evidently unfinished. Whether we consider the vastness of the field embraced, or the success with which that vastness has been imparted, we have little fear in saying he has left no contemporary who could have filled it up; the airy-ness of the distance is truth itself, and the eye strains after objects on the extremest verge of the horizon in search of others yet beyond them, as an inquiring eye will do in nature, so true is the deception: take all in all it is the most poetical landscape in the rooms; indeed, in point of poetry of conception and execution, there is no picture here will compare with it, if we except Etty's.

**WATER-COLOURS.**—The arrangements for the water-colour drawings and the sculpture, are of the worst possible kind; they are huddled together into one small apartment, with two large side-lights on the west, fronting which, at the back of the room is erected a semicircular screen, against which the sculpture is placed, right in front of the glare of a stage light; the consequence to it being a total destruction of the steady downward light which is indispensable to the regulated shadow, without which the beauties of sculpture can never be duly appreciated; while the screen has the effect of darkening nearly one half the room, and many of the water-colour drawings are actually placed behind it with so narrow a stripe of a passage round it on both sides, as to render it extremely inconvenient for one party to pass another: these defects, as a matter of course, have detracted from the attention to those branches of Art which their merits undoubtedly deserve. No. 421, 'Water-mill,' Andrew Donaldson, is a very picturesque scene, well coloured and richly toned, rather overwrought a little. 435, 'Old Carr Bridge,' by the same, has less crowding upon the eye of the various objects composing the picture, and is well treated otherwise. 466, 'Brakeen Bridge,' also by the same, is another very pretty little subject well treated: this clever artist has several other interesting pictures in the collection, all marked by the peculiarities of his style, which has a tendency to over-labour, and rather too much of a yellowish brown tint over the whole of them. No. 423, 'Portrait of Mrs. Buchanan,' Mrs. Musgrave. This lady has a numerous collection of very ably treated portraits in the room all characterized by good feeling, fine taste, and artist like treatment. Want of space, however, compels us to be brief in our notice of portraits; the one most to our liking of this accomplished lady's productions, is 461, 'Portraits of the Children of Capt. Isack, R.N.; there is a fine simplicity of arrangement in the group, richness without heaviness in the colouring, and a delightful juvenile expression in the whole of the heads. No. 425, 'Portrait of a Gentleman,' Kenneth Macleay, R.S.A. An extremely clever portrait: the same observation with respect to portraits must plead our apology to this artist which has dictated the previous notice; his best is 448, 'Portrait of Lady Mackenzie and her Daughter:' it is very cleverly treated; the colouring and drawing particularly fine, the heads dignified and ladylike. No.

435, 'Yarmouth Roads—Light Breeze,' W. L. Leitch. An exceedingly clever sketch, the colour admirable, as well as the drawing and arrangement. 445, 'View of the Isola Leche on the Lago di Garda,' by the same. A very fine picture indeed; the subject, although picturesque, is grand and impressive, and the sky is beautifully managed. His 522, 'Interior of the Church of St. Mark's, Venice,' is a rich and clever representation of a very striking and beautiful interior, rendered with great fidelity and power: this artist's productions are out of sight, the most talented and artistic water-colours exhibited here, at least in the landscape and marine departments. No. 437, 'The Return of the Chamois-Hunter,' H. Newton. A very laborious and good picture, but rather soft and washy in the general style of its treatment. This gentleman has several other pictures nearly characterized by the same qualities, i. e., good, warm, and rich colouring, but a laboured feebleness in the handling. No. 458, 'Sir Arthur Wardour and his Daughter' (a scene from the 'Antiquary'), Thomas Kearnan. A very gorgeously painted interior, filled with rich and elegant furniture: 463, 'Edward the Confessor's Chapel, Westminster Abbey,' by the same, is also a splendidly painted interior, very beautiful in tone and in handling. His 512, 'East End of Westminster Abbey,' is one of the richest and most elaborate water-colours we have met with; it is a striking and excellent picture, of a most picturesque and interesting subject. No. 472, 'Portrait of Miss Jane Pollock,' W. T. Musgrave. In Mr. Musgrave we have an aspirant to fame, and no mean one in this walk of Art; his experience has been but of very short duration, while his progress has been great, as shown in this portrait, which is well drawn, clearly and cleverly painted, and it is given with a fine air of reality; he has also a number of other portraits, all meritorious and of good promise. No. 505, 'The Coliseum,' C. H. Wilson, A. A clever drawing, the painting of the architecture is true and beautiful; the figures in the foreground are too large, and have the effect of detracting from the magnitude of the building. 513, 'Ponte della Carraja, and part of Florence,' by the same. It would be unjust to omit mentioning Mr. J. Pead, who exhibits several miniature portraits of much excellence. W. Essex has some very beautiful enamels here, in particular that of 'Sancho Panza,' after Wilkie, is very fine, and conveys the peculiarities of that great artist's manner with much truth; his enamelled portrait of Wilkie is also very fine, it is richly imbued with character, and possesses great brilliancy of colour.

**OF THE SCULPTURE** we cannot say much, there is but little of it, and that little is principally busts, some of which, however, are very good. The artist of the best one we cannot name, as it is not catalogued; this is a neglect which certainly ought not to have occurred. There is a fine old head in marble by Steele; a marble bust by Park, the drapery and shoulders of which are so gigantic as to lead to the belief that his choice has been dictated by the size of his marble. Scouler has contributed a very fine marble statue of Narcissus, which is so placed, although the principal piece of sculpture, as to make it impossible to see the face, a very tantalizing circumstance, as it seems a fine one. There are also some good little groups by Alex. H. Ritchie and W. C. Marshall, but they are all so disposed as to defy criticism; and under such circumstances any attempt to make remarks would be ridiculous: we must, therefore, take our leave of them for the present, hoping to meet them under more auspicious favour next time.

In such a review as this, it is neither possible, nor indeed desirable, that every work should be noticed; we have been guided generally, as far as our judgment goes, by the principle of selecting the best of those exhibited, where that could be done, which we are afraid could not always be the case, as some apparently good works are placed beyond reach of the eye, and have been, consequently of necessity, omitted in the review. Our remarks, although to some they may have appeared harsh, have been dictated by a very opposite cause than any wish to detract from merit; on the contrary, we have lost no instance of commendation where we could conscientiously award it, and where censure has been bestowed, the love of Art must plead our apology in opposition to private predilection. With these concluding observations we close, hoping, that when next called on to notice the Academy's exhibition, we shall have much more to praise, and little or nothing censure.

## THE GLASGOW STATUE.

Meeting of the Sub-Committee of the Wellington Memorial, April 14, 1841.

We again call the attention of our readers to the resumption of the strange proceedings at Glasgow, where, from the details which it is now in our power to subjoin, it will be seen that the sub-committee have advanced a step farther in their warfare upon the arts and artists of their country. Although reporters were not admitted to the meeting of the 14th April, the subjoined sketch of the proceedings has been supplied to the Glasgow papers:—

The meeting consisted of the following gentlemen:—The Convener of the Committee (Mr. Stevenson Dalglisch,) the Sub-Convener (Mr. Archibald M'Lellan,) Lord Belhaven, the Lord Provost, Sheriff Alison, Mr. Wm. Stirling, Mr. George M'Intosh, Mr. James Campbell, Mr. Charles Hutchison, Mr. Kirkman Finlay, Mr. John Houldsworth, Mr. Wm. Leckie Ewing, Mr. Michael Rowand, Mr. Robert Findlay, Mr. Henry Dunlop, Mr. W. M. Alexander, and Mr. Robert Lamond, Secretary.

The Chairman read the following letter:—

"To the Convener of the Wellington Committee.  
"Sir,—To prevent conflicting statements of the business which may be transacted at the meeting of the Wellington Committee on Wednesday next, and in order that the subscribers and the public may get that information, which in our opinion they have a right to receive, we beg that you will have the kindness to instruct the Secretary to intimate the meeting to the Editors or Reporters of at least three of the Glasgow Newspapers, and request him to make the necessary arrangement for their accommodation, should they attend. (Signed) "WM. LECKIE EWING,  
"GEORGE M'INTOSH,  
"ARCHIBALD M'LELLAN."

The CONVENOR stated, that he did not conceive that he had any authority to ask reporters to attend this meeting, or that the public had any thing to do with their deliberations.

The SUB-CONVENOR asked by whose authority reporters had attended former meetings of the Subscribers, of the General Committee, and occasionally of the Sub-Committee; he denied that the meeting was private, or ought to be private, and that the public, and particularly the subscribers, had a right not only to know the result, but the means which were used by a portion of the Committee to produce these results.

Mr. KIRKMAN FINLAY and Mr. ALEXANDER spoke strongly against the admission of Reporters, on the ground of delicacy to the Artists, whose merits they were to consider, and "Exclude," or "Admit," being put to the vote, the following gentlemen voted in favour of admission:—Provost Campbell, Sheriff Alison, the Sub-Convener, Mr. George M'Intosh, Mr. Wm. Stirling, Mr. Wm. Leckie Ewing, Mr. Charles Hutchison. The majority carried the vote of exclusion.

The CONVENOR now rose and said, that he hoped gentlemen would not themselves report the proceedings of the Committee. The Sub-Convener replied, that he would obey no such injunction, and would exercise his own discretion in the matter, and would give to the subscribers and the public whatever information regarding the means used to operate upon the Committee, which he might consider they were entitled to possess.

Mr. WM. STIRLING asked the Chairman by what authority the meeting had been convened to "determine" upon letters and communications from Italian, German, and English artists, which the Committee would now hear read for the first time, and to determine upon prints, casts, models, and busts, which they had never before seen. Mr. W. L. Ewing, Mr. M'Intosh, and the Sub-Convener, supported Mr. Stirling. Sheriff Alison and Mr. Kirkman Finlay defended the circular; and Mr. Stirling protested against the meeting being coerced into a decision by any circular such as the one he now objected to.

Mr. GEORGE M'INTOSH now moved that the former recommendation of the Sub-Committee in favour of Marochetti, which stood uncanceled in the books, should be expunged, in order that it might be distinctly understood that no Member of the Committee was bound by that resolution to vote for Marochetti.

Mr. Kirkman Finlay and Sheriff Alison called Mr. M'Intosh to order, and insisted that the minute of last meeting be first read. To this Mr. M'Intosh assented, and the minute was read accordingly.

The Secretary was now proceeding to read the letters which he had received from the artists, when Mr. M'Intosh begged that his motion might be entertained. After a further struggle for its postponement, Sheriff Alison rose and proposed an amendment to the following effect:—

"That this meeting had no power to cancel a former resolution of the Sub-Committee; that the recommendation of Marochetti had been virtually expunged by the General Committee, and that every member should be held at liberty to vote for what sculptor he chose. And he now also moved, that the Baron Marochetti be employed to make a model and bust of the statue of the Duke."

The Sheriff, after a long debate, separated his amend-

ment to Mr. M'Intosh's motion from the substantive motion in favour of Marochetti, with which he had concluded, and on the vote being taken the Sheriff's amendment was carried.

The Sheriff now brought forward his motion "That Marochetti be employed as Sculptor of the model of the Glasgow Wellington Memorial." Upon this the Sub-convenor proposed the following amendment:—

"That a Committee be appointed, composed of six gentlemen, members of this Committee, to investigate and report,

"First—Upon the competency of the British School of Sculpture to execute, in the very highest style of art, an Equestrian Statue of his Grace the Duke of Wellington.

"Second—Whether the living British Sculptors, in respect to the execution of this commission, be inferior to those upon the Continent or not.

"Third—Whether the first resolution of the general Committee can be legally implemented by any Sculptor but those who have modelled the Duke of Wellington in the prime of his life.

"Fourth—Whether the Acts of Parliament passed in the reigns of George the Third and George the Fourth, for the protection of Pictures, Models, and Designs produced by British Artists, do or do not exclude from this country the works of foreigners or others, executed abroad, confessedly copied from or founded upon, those pictures, models, or designs.

"Fifth—That the whole of the letters now read, and every document bearing on the question of the selection of the artists now in the possession of the Committee, or any member thereof, or which they may yet receive, be placed in the hands of the Committee now moved for, and that it be empowered to take legal advice or any steps which shall appear to its members to be necessary to place before this Committee full and satisfactory answers to these questions."

He also begged of the Committee to consider what they were doing, in thus, in defiance of common decency, coming to a decision upon the numerous communications, which had been so hurriedly read to them, from the most eminent British and Foreign Sculptors, the latter of whose letters were evidently loosely, and it might be, inaccurately translated, and without giving to those important communications a moment's consideration, or bestowing the slightest attention upon the models of Mr. Wyatt, or the bust by Mr. Campbell, who, together with the other eminent men with whom the Committee had corresponded, had been put to no small trouble, their time occupied, their hopes excited, and their attention distracted, by this Committee, believing that their respective merits would have a fair, a deliberate, and an impartial consideration.

Mr. CHARLES HUTCHISON expressed in strong terms his disapprobation of the Sheriff's motion, and of the trifling models exhibited by Marochetti.

Messrs. Stirling, Ewing, and M'Intosh, strongly censured the indecency of coming to so hasty a decision, particularly after the Convenor had allowed months to elapse without bringing the Committee together.

The vote was then taken upon the Sub-Convenor's amendment, which was rejected.

Mr. STIRLING now rose and proposed an adjournment for a fortnight. This amendment was also rejected by the casting vote of the Convenor.

Mr. W. L. EWING then moved that a model be taken from Wyatt or some other eminent British sculptor.

After some discussion, this amendment was withdrawn, when the Sub-Convenor moved that, as the Sheriff and the Convenor had of their own authority already procured a model of the Duke by Marochetti, which model was now in Mr. Banks's in London, "That each member of the Committee be at equal liberty to place before this Committee models or designs from any of the artists named by the Committee."

On this amendment being proposed, Mr. Kirkman Finlay rose and moved an adjournment. To this the Sub-Convenor consented, and another meeting was fixed for Wednesday next at twelve o'clock.

On the 21st, accordingly, the Sub-Committee again found themselves assembled, to resume the consideration of Mr. Alison's motion "To prefer the Baron Marochetti as the artist to whom the preparing of a model of the equestrian statue to his Grace the Duke of Wellington be entrusted."

The members of the Sub-Committee assembled on this occasion were:—The Duke of Hamilton, Viscount Kelburn, Lord Belhaven, Provost Campbell, Principal Macfarlan, Mr. Houston, M.P., Mr. Kirkman Finlay, Mr. M. Rowand, Mr. James Campbell, Mr. William Stirling, Mr. George M'Intosh, Mr. W. L. Ewing, Mr. Robert Findlay, Mr. John Houldsworth, Sheriff Alison, Mr. Charles Hutchison, Mr. Stevenson Dalglish (the Convenor), Mr. Archibald M'Lellan (the Sub-Convenor), Mr. Robert Lamond (Secretary), and Mr. Hope.

The Duke of Hamilton addressed the meeting at considerable length in favour of Baron Marochetti; and upon Sheriff Alison again moving that the Baron should be preferred for the work, his motion was seconded by Mr. Michael Rowand. Mr. Houston, M.P., then moved, as an amendment, that Mr. Gibson should be substituted in the place of the Baron Marochetti, and upon his motion being seconded by Mr. W. L. Ewing, and the vote taken, the numbers stood as follows:—

For the Baron Marochetti:—Lord Belhaven, Lord

Kelburn, The Lord Provost, Sheriff Alison, Mr. K. Finlay, Mr. Robert Findlay, Mr. Hope, Mr. M. Rowand, Mr. James Campbell, Mr. John Houldsworth, Mr. Stevenson Dalglish.

For Mr. Gibson:—Principal Macfarlan, Mr. Houston, Mr. William Stirling, Mr. Geo. M'Intosh, Mr. W. Leckie Ewing, Mr. M'Lellan, Mr. Charles Hutchison. The Duke of Hamilton declined to vote.

Mr. M'Lellan then proposed, as a second amendment, upon the Sheriff's motion in favour of Marochetti: "That Sir Francis Chantrey should be preferred as the artist." It was here argued by Lord Belhaven, Mr. Kirkman Finlay, and the Convenor, that the loss of Mr. Houston's motion was decisive of the question, whilst Lord Kelburn, equally stoutly, advocated the competency of the meeting to entertain Mr. M'Lellan's motion; and after some very warm discussion, and the motion being seconded by Mr. George M'Intosh, it was finally put to the vote with the following result.

For the Baron Marochetti:—Lord Belhaven, Lord Kelburn, The Lord Provost, Sheriff Alison, Mr. K. Finlay, Mr. Robert Findlay, Mr. Hope, Mr. M. Rowand, Mr. James Campbell, Mr. John Houldsworth, Mr. Stevenson Dalglish.

For Sir Francis Chantrey:—Mr. M'Lellan, Mr. William Stirling, Mr. W. Leckie Ewing, Mr. George Mackintosh, Mr. Charles Hutchison.

The Duke of Hamilton, Principal Macfarlan, and Mr. Houston, M.P., declined to vote; and the Lord Provost, seconded by Lord Belhaven, then moved, "That Marochetti be instructed to proceed with his model."

On this, Mr. Stirling entered a protest of considerable length, stating, that he believed it to be more congenial to the British feeling of the Duke of Wellington that a native artist should be employed, as also more in accordance with the wishes and expectations of an overwhelming majority of the subscribers, and more consistent with our national character and the patriotic feelings of the originators of the Wellington Testimonial; pointing out also the incongruity of the same artist being employed to commemorate both the victor and the vanquished. He said that to have the best work, the artist should not only understand British character, but be acquainted with the life and career of our own illustrious Duke, from the time he took the field in India up to the present day. Mr. Stirling also stated that, in his opinion, the Baron Marochetti was guilty of great presumption, or in utter ignorance of what is expected from him, because he offered to erect the Wellington Memorial in Glasgow in eighteen months, although our native artists, who must be already much better furnished with information and materials, require three or four years to execute such a work; and that we have among ourselves artists not only better qualified to do justice to this National Testimonial, but to any other general subject of Art; and, therefore, by employing the Baron Marochetti, the Committee cast an undeserved reproach on the artists of our country. Mr. Stirling also objected to the Baron, because he has in some manner thrust upon the Committee an uncalled-for model, and because he has had an undue advantage over the other artists as to correspondence; and because, although the Committee have had considerable time, they have not had sufficient opportunities to inform themselves of his merits, inasmuch as it was only at the last meeting that two additional letters of his were read in a rapid manner to the Committee; which letters were not originally distinctly expressed, or not correctly translated. Finally, Mr. S. objected to the Baron because he cannot be employed agreeably to the instructions of the General Committee, and he cannot erect the monument in Glasgow without being guilty of plagiarism, and of acting contrary to the spirit, if not the letter, of the British Law.—To this protest Messrs. M'Intosh, W. L. Ewing, and M'Lellan, adhered.

We have heard not a little of the tone and temper in which these proceedings have been carried on, and of the influences to which it has been thought proper to render them subject; but it is the character of the circumstances in question, as the same has more immediately been accessible to the public eye, to which alone we feel disposed to direct attention. In the first place, then, it appears that a majority of this sub-committee insist upon carrying on their proceedings in a species of secret conclave, in which gentlemen who differ in opinion with the majority, are not even to be permitted to tell their constituents and the public that they are not guilty of actions of which they are ashamed. The plea of delicacy to the artists whose merits they may discuss, is assigned as the cause of this secrecy: whilst, at the same time, they insult and malign the whole body of British artists by declaring their preference for an unknown foreigner, alike destitute of talents and reputation. The only intelligible motive to be assigned for this desire for secrecy, is that of a fear to appear openly to the public as the supporters of Marochetti: and, as it were, to compel their opponents to share the obloquy of such proceedings from a concealment of the opinions and state of voting of both parties. In the face of their own act in ex-

cluding reporters, the Marochettites were vehement in denunciation of alleged inaccuracy in the newspaper reports of the meeting of the 14th, as if it were possible to insure complete accuracy from the reporting of gentlemen engaged at the same time in discussing the questions under consideration. A striking instance of this occurred at the meeting of the 21st, when, upon some opposition being offered by Mr. M'Intosh as to the terms of Sheriff Alison's motion differing from that which he had proposed at the meeting of the 14th, and to consider which the meeting stood adjourned, the Sheriff and Mr. Secretary Lamont both declared, that from the confusion which prevailed it was impossible to note the sheriff's motion accurately; and the result was that the sheriff was permitted to adopt, avowedly, a new motion at the meeting of the 21st. Lord Belhaven also, at this meeting, characterized the meeting as a public meeting, although at the meeting of the 14th, he had stated as his reason for his wish to exclude reporters, that the meeting was altogether private. In a similar spirit of consistency, Mr. Kirkman Finlay, at the meeting of the 14th, voted against Mr. Stirling's motion for an adjournment; and, in a few minutes afterwards, himself proposed a motion for adjournment, which was carried!

We have nothing to add to these painful details except that, in the room in which the committee assembled, were a number of models and drawings by Marochetti, which Mr. Charles Hutchison justly denounced as the veriest trash which he had ever had the opportunity of seeing: one of these was a sort of costume carving of Buonaparte; another a Turkish figure seated beside a dead horse, and whether it was intended to represent a "knacker," or the son of the Grand Turk renowned in Molière's "Bourgeois Gentilhomme," and to whom our friend Mousie Jourdain, in his love for foreigners, insists upon espousing his daughter, was a question which the meeting did not pretend to decide. A third was a lackadaisical figure of an old gentleman seated in an arm chair, which some of the members took for a statue of Mr. Banks, of Corfe Castle, late M.P. for Dorsetshire, who, it appeared in the course of these proceedings, had been mainly instrumental in forcing the Baron Marochetti upon the good people of Glasgow. The others were like nothing in the heavens above, or the earth below.

The question, however, would now appear to resolve itself into a narrow compass, and to be simply this—what is the construction to be put upon the Acts 54, c. 56, of George III., and of 6, c. 109, George IV., and whether, if our custom-house authorities do their duty, the bust of the Duke of Wellington, ordered by this Glasgow Committee, can, under these Acts, reach its destination?

The allegation urged in opposition to Mr. Macintosh's motion, for rescinding the recommendation of Marochetti, which stood on the books of the Committee, to the effect that the Committee had not, like other bodies, the power to rescind its own resolutions, appears about the most singular and puerile which it is possible to imagine!

At these committee-meetings we have also heard it reported, that letters from the Baron Marochetti were read, suggesting the adoption of allegorical *basso-reliefs* on the pedestal of the Glasgow Statue. Now, we are by no means disposed to adopt what may be termed *ultra purist* taste in all such matters of sculptural detail; but we believe that many persons will be disposed to doubt the propriety of introducing any such allegorical representations in a case of the kind. Be this as it may, however, as we know that the Glasgow committee have determined upon the introduction of these representations on the pedestal of their statue; we trust we may express the hope that the figures in question may not be mere vague and meaningless generalities, winged Victories, and impersonifications of Concord, but such as bear pointed and manifest allusion to the deeds of the hero whom the monument is intended to commemorate. We have an example of this style of allegory in the celebrated pillar of Trajan, of which the historian, Gibbon, says, in reference to its condition at the time he wrote, "This column, which still subsists in its ancient beauty, exhibited an exact representation of the Dacian

victories of its founder. The veteran soldier contemplated the story of his own campaigns, and by an easy illusion of national vanity, the peaceful citizen associated himself to the honours of the triumph." In the column in the Place Vendôme, in Paris, the French have adopted the same style of allegory; and it exhibits an exact representation of the victories of its founder over the English, Austrians, Russians, Prussians, and Spaniards; and the occupation, by his armies, of the various capitals of Europe. In their coinage, the Romans carried out the same system; and Dacia capta, Iberia capta, and various other captures and conquests, meet our eyes on coins and medals, not alone in the form of allegories, but in most intelligible Roman capital letters; and the well-known Napoleon medals are about as conspicuous an instance in point as any to which we can allude. We trust, therefore, that our Glasgow friends will not allow themselves to be "fobbed off" in this matter, nor go hand in hand with their Italian *protégé* in purloining from the duke any portion of his renown, otherwise they will have on their pedestal, Waterloo represented as a defeat, and the occupation of Paris so far in the back ground as to be ought of sight. Indeed, "if aw' be true we hear" on this subject, the baron has already shown the cloven foot in his letters; he talks, for example, of the dukes differing from other great warriors in being the great pacificator of Europe! this is true, and all very well; but did it not occur to the baron that in this feature of his character, the duke bore a resemblance to Alexander? Thus it was when no longer any enemies remained for him to conquer, that he gave peace to the world; not that we mean to compare, in other respects, the unprincipled Macedonian with his Grace. It seems that Baron Marochetti also thinks that the duke resembles other great commanders in having sometimes overcome his opponents, now here we also differ in opinion from the baron, for the duke did not sometimes overcome his opponents, but he always overcame them! In this case, is it that the baron mistakes the meaning of language, or the character of the duke? for really the difference between *sometimes* and *always* appears to us calculated to be rather important in forming a just or an exact appreciation of an individual's character and exploits. Why, under these circumstances, did no gentleman rise and move, that since a majority of the committee had resolved to adopt the allegorical representations proposed by Baron Marochetti to decorate the pedestal of the statue of the Duke of Wellington, that this sub-committee require in any such representations that after the manner of Trajan's Column, and the Column of the Place Vendôme, that pointed and unequivocal allusion be made to the achievements of the Duke of Wellington, including his victories and conquests in India, the Peninsula, France, and elsewhere, and in particular to the victories of Thoulouse and Waterloo, and the occupation of Paris by the British forces? We suspect the baron would feel himself in a still more perplexing dilemma than did the mighty minstrel, when he sung of Flodden Field, exclaiming:—

"Alas! that Scottish maid should sing  
The combat where her lover fell,  
That Scottish bard should wake the string  
The triumph of our foes to tell!"

Sir,  
I had the honour to send you a note during the month of March, relative to the Glasgow Statue in Memorial of the Duke of Wellington. I see it is decided that Marochetti shall be employed. Now, Sir, if this be true, where is British patriotism, natural feeling, and common sense? The love of one's country and its home ought to be the next feeling to the love of God.

Common sense induces us to look for the best in all that it may concern us to require: in this instance, then, with great respect to Marochetti's work at Turin, the horse is inferior to Wyatt's, in Cockspur-street; and the whole, as a dignified statue and representation of a hero, is in no way to be compared with Chantrey's equestrian statue, one of calm dignity and indicative of reflecting and commanding power.

If Sheriff Alison thinks to raise himself by such a proposition, he had better turn to his Homer, and to a line to which I am sure his parent would have directed his attention—

"και τε πολλοις εσασσε, μαλιστα δε κ' αυτος ανεγνω."

IA N 734.

Yours, &c. M. M.

## THE ARTIST:

### A SERIES OF SKETCHES FROM THE LIFE.

By MRS. S. C. HALL.

#### CHAPTER IV.

The cottager's wife, beautiful though she was, did not, happily for herself, possess a higher order of mind than her husband; but her tastes and manners were more refined. I hope that none will sneer at the notion of a cottager's wife possessing taste and refinement: I have spoken of them only with reference to her husband; though I would have it remembered, there is a wide difference between vulgarity and rusticity, and that what is called "good manners," is frequently nothing more than the etiquette of a *clique*.

Mrs. Birch, or "Kate," as her husband called her, astonished and looked confused when she saw the sketch; "the baby was so like—he had quite nose enough—but as for herself, she was never like *that*, she was quite sure—she never was so handsome;" and her husband, upon this, kissed her so that she blushed, and said "For shame!" and he as instantly exclaimed, "Bless thee, Kate! if thee'd not ha' been the prettiest girl in the parish, thee'd never ha' had such a many sweethearts." This made her blush still more, and blushes are the light of beauty; and then she placed an old oak chair for the young artist, with that reverence of manner which is the purest homage that nature can render; and then she made her husband "poke" his great hard finger into the baby's mouth, to feel for a tooth he had (his mother said) cut that morning; and which the good man thought he felt, and expressed as much pleasure and triumph thereat, as if the tooth owed its appearance to his own individual skill. The boy did not resent the intrusion, but crowed and laughed; and the artist was requested by the father to feel how heavy he was, while the mother gently held him back, saying, "young gentlemen were not fond of babies."

"I tell thee, Kate," said the hearty peasant, "he bean't a young gentleman—I mean, he bean't like them young gentlemen that see nothing in natur' worth looking at, but a covey of partridges—didn't he pictur the boy—and don't thee tell me but he'd loike to know his weight."

Hamilton really thought the infant the most heavy creature he had ever felt, and the father was perfectly satisfied—the mother looked pleased, but said little, while her husband laughed and talked with the frank manner of an honest hearted man, who is not troubled with a very high or delicate appreciation of the society he is in. He pinned Hamilton's sketch against the wall, and his bright, clear, open eye constantly glanced from it to his wife—the boy was already asleep in his cradle—the clock of the village church struck ten—it was sufficiently distant from the cottage to render the deep-toned voice of Time one of solemn, yet sweet music—and yet he told the youth that, penniless as he was, he ought to depart: the cheerful content of the humble pair had well nigh astonished one who had associated—in the high ways of the world—the dazzling glare of ambition with happiness. As the last stroke cleaved the air, he arose, but the strong hand of Thomas Birch was upon him. "Not a foot—if thee'll put up with our homely ways—thy bed is ready, and thou'rt welcome."

"Sir," said the gentle Kate, "if you'll excuse the homeliness, I'm sure there is not a better bed at the little inn; and my husband will show you things to-morrow better worth picturing than this cottage. Do, Sir, stay—we call it Mother's room—Thomas built it—that, when she comes, I might know she was under our roof."

"Ay!" added the husband, "and he'll sleep none the worse in it, Kate, because it has been often blessed by her prayers." The artist sat down, and, after a minute's pause, Thomas Birch stretched out his arm, and took a Bible from the shelf: his wife looked at him, as well as to say, "Wait!" and then said aloud, "Perhaps the young gentleman would like to go to bed now?"

"As he pleases," replied the peasant, placing the unopened book before him: "My father used to say, gentle and simple, peer and peasant, must come to this—I bean't a good scholar, but

I can read my father's Bible. I do not ask you to stay, Sir—only just do as you loike."

Hamilton expressed his desire to remain. He had heard that Infidelity had succeeded Ignorance, and that the cottages of England were no longer temples where the peasant desired the presence of his Creator. He had heard fearful things—and some of them were true; but he had to learn that there are thousands upon thousands of high-souled, right-headed men in this country, steadfast, and true in the clear path—fervent and faithful—whose lives are as a lesson-book for those who wish to read the truth—that simple, unostentatious piety, thrives by the way-sides. I have seen many like Kate and her husband, and hope, ere long, to see many more; though the din and turmoil of the busy city is not so in harmony with their lives as the calm and pleasant country, where Nature is ever at hand—sweet, gentle mistress!—to set the thoughtless thinking, and the wrong-thinking right.

Thomas Birch's pronunciation was none of the purest, and he made some blunders which might have excited a smile, had it not been for the deep earnestness of his voice and aspect. The shape of his well-formed head, and its massive features, accorded well with his athletic frame; and yet it was evident that every fibre yielded to the written word. The exceeding beauty of his wife, whose attention was evidently divided between her desire to profit by the chapter and watch her child, who tossed his rosy arms more than once, as if his sleep was restless—the group altogether was one Hamilton longed to, yet dared not, sketch, for he saw that Birch exacted attention for the love of what he read.

When the book was closed, Kate went to the cradle.

"Ah, lass!" said her husband, "the boy must not stay here while I read, another night. I warrant me, you were thinking more of him than of the word."

"No," she replied; "though—bless him, Thomas, he is wide awake now—though I do not deny I was thinking how much I should like—"

"Well, lass, speak out."

"If it was God's will, just to live to see him parish clerk."

"Now, there it is Kate!—I wonder you don't wish to see him Parson at once. Thee must curb ambition, wife—though I own I should like to hear him giving out the Hundred-and-twenty-second—it would be a great thing, to be sure!—and who knows—who knows what may come in the end?"

"We have all our ambitions," thought Hamilton, as he sat by the bed-side in the little room, which the kind-hearted labourer had built, that his wife's mother might enjoy the tranquillity of sleeping beneath her child's roof: "We have all our ambitions—but what a poor one, to desire her boy to grow to be parish clerk. Still it may be a great ambition, according to her means. And what a disturber that same ambition is of the sobrieties and realities of life!—what an inciter to great things!—how long and how steadily does it proceed—silently and determinedly—the undercurrent of all our actions; until, in strong soils, gaining strength by opposition, it bursts forth—while the world wonders how it came, and whence it came—while on it goes, carrying its originator, in the full glare of light, to fame, to fortune, and—to death! And yet, what would man be without it? Is raises him above himself—above the paltriness and littleness of that life—which, far from being his end, is only his beginning!"

Youth is seldom long given to philosophy! Hamilton could have smiled at the anxiety with which he had calculated, during the past day, upon how he was to subsist—where he was to sleep. It is almost impossible to resist the healthful influence of cheerful and contented minds! And never in past times, when pillowed upon down and courtained by damask, had he slept more profoundly than beneath the humble roof of an English yeoman. Very early in the morning, even before the earliest cock had crowed, Hamilton was awake by a noise as if some one was creeping round the house outside, pausing every now and then, and managing to do something with as little bustle as possible, —always a sure way to create attention. Still the artist was too sleepy to conjecture more than

that an animal might be browsing unceremoniously upon the roses which he had observed in the twilight wreathing so luxuriantly over the walls. When he really awoke, the sun was high in the heavens—the breakfast ready—Kate smiling at her baby, and her baby at her. "It was so lucky," she said, "Thomas had always two days in the week for his little farm and garden, and this was one, and he had managed to get every thing so neat; if the young gentleman would only step outside and look at the cottage now, it was better worth putting in a picture, ten times over, than ever it had been before."

Hamilton *did* look; and oh! what a change! the woodbines and trailing roses that grew so wood-wild had been pruned and trimmed, and nailed to the walls, which had been white-washed—ay, made as clean as a sheet of Bath post. The cottage was a model of English neatness, but its picturesque beauty was gone; the very Eglantine was threaded out in straight lines, and the Virginia creeper, which here and there had changed a little so as to introduce a warm tone amid the light foliage, was picked away, because it would not be controlled.

"Ah, ah! lad, there's an improvement," said Thomas Birch, rubbing his hands with great glee; "saw thee ever more than that? I began it by moonlight—yet I did not disturb thee. I've scraped the *toiles* too; now they're all one colour, and as red as a cherry, ah, ah!" And his glee, like the glee of an elephant, was very ungainly, and yet so jovial, so earnest, that the gentle-hearted artist could not hint even that he had completely destroyed his subject. "Now," he continued, "Kate will not look like an owl in an ivy-bush—I cut all that clean away. I was resolved thee should have fair play, so that the 'squire and madam, and Miss Blanche, should know it; and now take breakfast, and eat hearty. I wish, dear heart! I could see thee stout and jovial, loike myself; and make haste lad, for I've a deal to show thee. I loike to watch thee take down the things—it's the greatest curiosity I've seen for many a day, that's what is—Lor, I never gave a thought before to how pictures were made—eh! but I wish my boy were old enough to learn—it would be better than being parish clerk."

"Not so profitable, perhaps," was Hamilton's meek answer. It would be impossible to convey an idea of the expression of intense interest which softened the features of the sturdy peasant as he followed the young artist into the cottage; he observed him for some time silently, and then, after a certain quantity of whispering had passed between him and his wife, he left Hamilton to finish his breakfast, which in truth he did quickly, for the immediate cravings of hunger being satisfied, he bethought him that he had no means of recompensing the cottagers, and this certainty sent a warm uncomfortable flush to his cheek. One of the most beautiful points in Hamilton's character was his straightforward truthfulness. He was proud, but his pride lay in truth; and no one being *really* poor ever confessed to poverty in England without feeling a thrill of shame.

"Pray eat, Sir," said Mrs. Birch: "do, Sir; it is but humble, but its wholesome; I made that loaf myself."

"It is too good for me," replied the young man, "for I have not the means of paying for it. I will finish the drawing you both seem pleased with, and that may remunerate you in some degree. When better times come, I will pay you all."

"The little we can do, we do not want payment for," she replied; "though of course a gentleman would not like to feel obliged to the poor. The picture, Sir, must be worth a deal of money: I have one not half so big that cost mother ten shillings. Pray, Sir, do not make me feel that I have no way of paying you."

Mrs. Birch's tact was as admirable as her feelings were kind, and that is what no one can learn or teach. In a few minutes Hamilton was working at the drawing, much to her delight.

The farmer had gone his way towards the patriarchal abode of the 'squire, an upright benevolent old gentleman, who prided himself upon doing and thinking exactly as his ancestors had done before him.

## OBITUARY.

## MR. RICHARD DAGLEY.

TO THE EDITOR OF THE ART-UNION.

DEAR SIR,—You have requested me to furnish you with any recollections I may have of my late dear and highly valued friend, Mr. Dagley, and I gladly comply with your desire, because it is a pleasure to recall to memory so good and amiable a man, even whilst we selfishly lament the loss of his society and his friendship.

I have known him intimately 32 years, but as that does not include any portion of his early life, I can only refer to what I have casually gathered in conversation. Himself and two brothers were left orphans when very young, and he was placed, by the kindness of friends, in Christ's Hospital. He spoke of the late Mr. Walker (the engraver of Stodhart's view of the interior of that noble charity), Mr. Parsons, a Russia merchant, and one or two others as contemporaries; remembered Charles Lamb and his aunt's good baskets, and classed Coleridge as one of the young fry who went about the time when he came out. Having a decided taste for fine art, and being a delicate child, he was apprenticed to Mr. Cousins, jeweller and watchmaker, which business then included gold-chasing and the painting of ornaments and miniatures for bracelets. His fine taste and unremitting industry rendered him, undoubtedly, a valuable servant, for he married one of his master's daughters before he was of age, and it was, undoubtedly, with his consent, though it could hardly have been the result of his judgment, since Dagley could have no provision for a matrimonial home; and as this union produced ten children, of which one alone remains, and the most of whom lived for several years; unquestionably there were experienced by them long seasons of anxiety, and painful prospects of poverty—bearings and burials, doctors and nurses, hovered like demons o'er the dwelling of "young love," but the window was never opened for his escape. Whatever might be the trials of the times, perfect confidence, unceasing industry, and untiring affection bore them through all. Mrs. Dagley was a woman whom to know was to love; she was cheerful, gentle, of active kindness and sound understanding, and therefore well calculated to endure the evils inseparable from the wife of an artist; and such, from the time he left Mr. Cousins, our friend desired to be considered.

At that time he was very intimate\* with the late Mr. Bone, R.A., and they were alike employed in enamelling views for the backs of ladies' watches, eyes for rings and brooches (then a reigning fashion, and extremely profitable), together with small elegant designs (of mythological subjects principally) for bracelets. In pursuing these branches of art, Mr. Dagley became a good water-colour artist; but oil always foiled his attempts, and rendered many excellent designs, on various subjects, absolutely nugatory as works of art, the execution annulling the value of the conception. He read much and thought much, and thoroughly understood the style and merits of the painter he studied, whether ancient or modern. He became also a good medallist and published a work on gems, which brought his name advantageously before the public, which became still better known from his designs to "Flinn-flams," a work of the elder D'Israeli, of great attraction at the time.

That he should pursue fortune in some line distinct from that which had hitherto been his support became, in a few years, absolutely necessary, for fashion had decreed that ladies might neither wear bracelets nor watches, nor the eye of beauty beam from the hand of a beau; and I believe it was a desirable thing at the time, when he formed an engagement at Doncaster, with a lady who had a very excellent school, to become a drawing-master, and to which was shortly added pupils from the establishment of a D.D. who prepared a few young men for the university.

\* An intimacy not broken till the death of Mr. Bone; indeed, Mr. Dagley could not possibly lose a worthy friend, and it is certain he could never leave an unfortunate one. Walker, from severe necessity, was a frequent claimant on his little store; and when the unhappy man committed suicide from want, well do I remember Mr. Dagley exclaiming, "Oh! why did he not trouble us again, Mr. Hofland?"

He brought hither one daughter, the sole survivor of his little train, and together with his wife, her younger sister, Miss Cousins; and a more cheerful, contented, unassuming, and intellectual family circle I have never known. Mr. Dagley's society was much courted; his employers were generous and hospitable; but, alas! they were more willing to *give* than to *pay*, and the artist found it more difficult to live (according to his own ideas of honesty and regularity) now he was in possession of a regular, and what he deemed an handsome income, than he had been when soliciting employment for the exigencies of the day; and after the first four or five years had gone by, as difficulties increased with the extravagant, so did their consequences press upon the prudent and innocent, and it was only by keeping up a perpetual warfare that he could gain bread for his family in accepting small portions of large bills. He, however, acted firmly and wisely, and finally escaped with but little loss in the year 1815, being the only creditor of either party who came off even tolerably; and returned to London.

Since then, he has lived in Earl's-court-terrace, where Mr. Cousins, his father-in-law, joined him, a gentle, amiable old man, whose days, prolonged by the cares of his daughters, and him held dear as a son, exceeded 90. During the past 25 years, Mr. Dagley has been engaged in writing reviews of works of Art, and in making designs for various publications. He produced another volume of gems, enriched by the poetry of Dr. Croly. "Takings," the illustrations of a humorous poem; "Death's Doings," a series of designs suggested by "Holbein's Dance of Death," each of which reached a second edition. He also wrote a catalogue raisonné of Mr. Vernon's splendid gallery of modern pictures—made designs for his daughter's pleasing books and those of other writers, and was always alive to the interests of art and the welfare of artists, whom he assisted by judicious advice, friendly commendation, or valuable introduction. Every neighbour looked to his dwelling for help in the hour of sickness and sorrow—for the advice experience alone can supply—the prompt kindness, the ready help, which trebles the value of the gift. Dear old man! he could not draw from a full purse the means of relieving an impoverished widow, or finding an asylum for a deranged father; but he *could* and *did* (aged and shadowy as he was) walk miles and miles, taxing mind and means, to their utmost, to procure the aid required. In his humble dwelling there was but one heart, one mind; and the good which emanated thence, if it could be summed up, might surprise the dwellers in mighty mansions. Within a few months the breaking hearts of two dying parents\* were relieved by Mr. Dagley, or rather his daughter, consenting to become guardians to their little children, left destitute save for the small annuity allowed by Government. What a task was this to undertake! what a charity to perform!

Four or five years since, a neighbour to whom they had been invaluable, left to Miss Dagley £400 after the death of an invalid sister, whose income arose principally from the kindness of a wealthy brother. Within a short time afterwards this gentleman, a great merchant, sustained many losses and failed. The poor sister (a confirmed sufferer) was exceedingly distressed, her own income being utterly unequal to her absolute necessities. Mr. Dagley proposed *immediately* that the money left to his daughter should be sunk in order to help her income, and undertook to persuade several other legatees to be equally considerate, and as none of them made near so large a sacrifice this object was effected to the good man's great satisfaction. When we remember his intense love and anxiety for his only child, how soon he must be taken from her, and how little, even with the utmost economy, he could endow her with, surely few more noble actions have ever dignified humanity? The lady on whose behalf it was made, refused to accept more than a part; and I trust the restoration of her brother (a man of tried probity) to his station in society, will soon render even that unnecessary.

Mr. Dagley was a pleasing writer, and a still more pleasing converser; he had some few "old gentlemanly" pronunciations, and occasionally a

\* Captain and Mrs. Bruce.

quaintness in his phraseology, that told well in his succinct relation of an anecdote, or reason for an opinion; but when his feelings were excited his language rose to eloquence. I trust I shall never forget the relation he gave me in the cholera time of Miss Agnes Jerdan's heroic self-forgetfulness which has placed her in my memory "above all Greek, above all Roman fame," and recalc sweet tears even now dropping to her honour—neither can I fail to remember, his partly humorous, yet truly affecting account of his meeting Mr. Parsons by appointment, whom he had not seen since they parted as boys at Christ's. His rapid survey of their far different fortunes; the exclamation on either side "Can that be Richard Dagley?"—"Is it possible you are Ned Parsons?" each longing to add "What an old fellow you are grown!" His reading the many cares in the rich man's countenance was, I well remember, wound up by grateful thanks to God that he had never moved out of his own quiet sphere.

If I have intruded too much, remember you invited a "garrulous" pen, and that a much better had traversed the ground before. It is difficult to be brief when both the heart and the eyes are overflowing.—Yours, &c. B. HOFLAND.  
Hammersmith.

We add to this valuable touching and affectionate tribute to the merits and memory of Mr. Dagley, from the pen of Mrs. Hofland, a few lines on the same subject, contributed by her to the *Literary Gazette*:—

To the Memory of Mr. Richard Dagley, Artist.  
SINCERE and manly—void of strife and guile,  
Kind in thy frown, and honest in thy smile;  
To every sense of pure affection warm,  
Thy child life's treasure, and thy art its charm.  
Dagley, 'twas thine in these ambitious days  
To win the right, yet shun the meed of praise;  
From probity's secure and modest way  
Too wise to soar, and far too good to stray.  
To friendship firm, to justice more than true,  
Thou gav'st to pity what to self was due.  
Unchill'd by age, unmov'd by boding fears,  
Thy latest act bath wip'd the orphan's tears,  
Thy latest sigh to love and prayer was given,  
Death's gentle passport to the Christian's heaven.

ALEXANDER DAY, Esq., died at Chelsea, on the 11th of January last, in the ninety-sixth year of his age. To the rising school of art the name of this gentleman is but little known, although associated with the history of some of the most valuable works of the National Gallery. During the early part of his life he resided in Italy, whither he had repaired to indulge and cultivate a strong predilection for Art, which led him to pursue it in both forms—painting and sculpture—so diligently that in the former he at length excelled. He was for some years a prisoner in the hands of the French, during their war with the Neapolitans, but he nevertheless continued to labour in the prosecution of his art, and produced many medallions of great merit, which still enrich some of the best private collections in the country; for which they were purchased from the artist himself. The works of Mr. Day were not generally known, and his life, comprehending such a lengthened term of years, outran those of his early associates and friends; he stood, therefore, alone, the last of his time; and even during his latter life was spoken of, in reference to his works, as long since deceased. On his return to England he stamped his reputation as a connoisseur, by bringing with him some of the finest pictures in the National Gallery, viz.—'The Descent of Bacchus,' by Titian, 'Ganymede,' and a 'Venus and Adonis,' by the same; 'Portrait of Pope Pius,' and 'Portrait of St. Catherine,' by Raffaele; 'Ecce Homo,' Corregio; 'The Flight of St. Peter,' Carracci; 'Land Storm,' Salvator Rosa; 'Abraham and Isaac,' Gaspar Poussin; 'St. Ambrose and the Emperor Theodosius,' Vandyke. On the occasion of the purchase of the Elgin Marbles, Mr. Day was, with some others of well-known reputation, summoned to give evidence before a committee of the House of Commons, which had been appointed to examine into the merits of these works; and this is the only instance in which his name was ever brought prominently before the public; no notice even of his death has, we believe, appeared in any journal; but this circumstance is attributable to the comparative seclusion of a period of life so unusually protracted as was his.

## THE ART-UNION OF LONDON.

Tuesday, April the 20th, was a gratifying day for the few individuals who, five years ago, at the expense of much time and exertion, founded the Art-Union of London, and have continued since then labouring zealously to advance its interests and increase its power of doing good. The Duke of Cambridge, the Marquis of Northampton, Sir Martin Archer Shee, President of the Royal Academy, Lord Roseberry, Mr. Ewart, M.P., Mr. Cabell, F.R.S.; Mr. W. Tooke, F.R.S.; Sir Benjamin Hall, M.P., and more than fifteen hundred of the most respectable people in London and its neighbourhood, met on that day at Willis's great room, St. James's, to receive the Report of the Committee, and to distribute the prizes. It may be well to remind our readers that the amount subscribed by this society in the first year of its existence, for the advancement of art, was £489. 6s.; in the second year, £757; in the third, £1295. 14s.; and in the fourth, £2244. 18s.; in all cases nearly, but not quite doubling its revenue in each succeeding year. On the present occasion, however, the increase is even more striking still, the amount subscribed being £5610. 4s., or twice and a half times as much as it was last year. To this rapid and extraordinary increase, the Duke of Cambridge, on taking the chair, referred with evident gratification: he expressed his decided conviction that the association would be greatly conducive to the advancement of art in this country, and gave his warm approval of the principles on which the Committee regulated and carried it on. His Royal Highness stated, that he had the gratification some years ago of founding a similar society in Germany, and was fortunate enough on one occasion to obtain the chief prize, so that to this mode of obtaining pictures, he observed, he could not possibly express the least objection.

Mr. George Godwin, F.R.S., one of the honorary secretaries (and to whom, by the way, the Society is indebted for much exertion at the meeting), then read the report, from which it appeared that the sum collected, £5610. 4s. was appropriated thus, namely,

Expenses . . . . .	£ 634 11 7
For purchase of works of art, . . . . .	3650 0 0
Reserved for engraving, &c. . . . .	1325 12 5
	£ 5610 4 0

The sum of £3650 was allotted for the purchase of 133 works of art; namely, one of the value of £300, one £200, one £100, two of £80, two of £75, four of £60, and so on, progressively, to forty of £10 each.

Relative to the engraving, it was seen, that the Committee, anxious to prevent delay, and to distribute an engraving forthwith to the subscribers of the present year, had determined to suspend the regulation which provided that "the picture selected for engraving should be one purchased by the association;" and that they were endeavouring to obtain some unpublished plate worthy of the Society, which might at once be printed from. The Committee properly remarked, "they still consider it highly desirable that, whenever it is practicable, the picture to be engraved should be selected from those purchased by the prizeholders; but should it so happen that no picture of sufficient importance offered itself in this manner, while from other quarters one of first-rate excellence was obtainable, they consider they would be acting injudiciously alike for the interests of the members and the arts, were they to hesitate in adopting the latter. To perpetuate and disseminate mediocrity is surely not the purpose of the Art-Union of London."

After the reception of the Report (moved by Lord Northampton, and seconded by Mr. C. E. Michele), the drawing commenced, and continued for two hours—the mode of distribution being as follows:—Before the chairman was placed a book, containing an accurate alphabetical list of all the subscribers, numbered regularly (and according to the number of their chances) from 1 to 5298. Into a large wheel, provided for the purpose, scrutineers, appointed by the meeting, placed a round wooden tally for every member in the list, each being marked with a corresponding number to that against the name; so

that there were precisely the same number of tallies in the wheel as chances in the list. Into a second wheel they placed 193 tallies, the number of the prizes (sixty proofs of the engraving being added to the 133 works of art before alluded to), each tally representing a £10 prize, £50 prize, £100 prize, and so on, according as they were marked.

The wheels being turned, a lady deputed by the meeting drew a number from the larger wheel, and handed it to one of the committee, who announced it to the room. Mr. Godwin, then turning to the list, stated the name and address which appeared against that number; after which a second lady drew from the other wheel a tally, and handed it to Mr. Lewis Pocock, the other honorary secretary, who announced the value of the prize; and this was continued till the whole of the prizes were drawn. By this arrangement, which seemed to give universal satisfaction, the interest in the proceeding is maintained to the end, and as the address of the successful members is known even before the prize is declared no mistake as to identity can occur.

The names of the principal prizeholders are as follow:—Mr. George Fry, £300; Mr. T. D. Light, £200; Mr. W. R. Stanton, £100; Rev. R. Roy, and Mr. W. J. Fry, £80 each; Mr. S. Angell, and Mr. C. M. Korkell £75 each; Mr. T. Cammac, Mr. A. Cox, Mr. B. Leggett, and Mr. Robert Nunn £60 each; Miss E. Buckle, Mr. G. Gandell, Mr. Jules Godet, Miss Lovegrove, Mrs. Morrell, and Dr. Watmough £50 each; Mr. C. Barton, Mr. John Bullock, Mr. R. Jarvis, Mr. C. Jones, Mr. E. Lomax, Mr. P. Long, Dr. Robertson, Mr. Edwin Shaw, Mr. G. Wartonaby, and Mr. J. Smalman £40 each; Mr. John Ball, Mr. John Clow, Lord Colborne, Mr. Charles Compton, the Honourable Edward Curzon, Dr. Gardner, Mr. C. Haghe, Mr. G. Scamell, Mr. R. Thackthwaite, and Mr. J. S. Wreford £30 each; Mr. T. Austin, Mr. John Bothams, Mr. P. Brocklehurst, Mr. H. Brown, Mr. R. S. Cox, Mr. W. Egley, Mr. Charles Goodwyn, Mr. W. Hanley, Mr. T. Harper, Mr. W. Larkworthy, Lieut.-Col. Robinson, Mr. R. Sale, Mr. James Shaw, Mr. C. Stevens, Mr. John Trapp, and Mr. E. N. Winstanley £25 each; &c., &c.

Mr. Henry Wilkinson moved, and Mr. Erasmus Wilson seconded, from the body of the meeting, a vote of thanks to the committee, with a request that they would continue in office, on the ground that each year's experience was increasing their efficiency. The Duke having quitted the chair, the Marquis of Northampton was called to it; and it was moved by Mr. B. Bond Cabell, seconded by Sir M. Archer Shee, and carried by acclamation, that the thanks of the meeting were eminently due to His Royal Highness for his gracious conduct in the chair. Mr. Cabell informed the meeting that His Highness had kindly accepted the office of President of the Art-Union—an announcement which was received with loud applause. A cordial vote of thanks to Messrs. Godwin and Pocock was then carried, and the meeting separated without the expression of a dissentient opinion, or the occurrence of a single circumstance to interfere with its harmony and good feeling. We may safely say that we never saw proceedings better managed, or so large an assemblage acting with so good a spirit.

The Report of the Committee, when printed, will doubtless come into the hands of the majority of our readers; nevertheless we cannot avoid forestalling it in some degree by quoting the concluding paragraphs which, we may mention, were most cordially responded to by the meeting:—"In conclusion, your committee would venture again and again to urge that every man has it in his power, merely by spreading a knowledge of the objects and plan of the Art-Union in his own particular circle, still further to extend its influence and ability of doing good; and they say, let him feel, while he is doing so, that he is not simply getting a few guineas for a society, in the success of which he is interested; that he is not only aiding substantially the artists of his country (men who minister more to a nation's lasting glory than all the warriors who ever lived); not only assisting by that encouragement to elevate the arts amongst us—but that he may happily be the means of opening the mind of some of

his fellows to gratifications before unguessed of; of weaning them from debasing pursuits, and thus increasing the sum of general happiness. To dwell at this time on the importance of the fine arts, the arts which 'the mind exalt, give great ideas, lovely forms infuse,' would seem to be unnecessary; all acknowledge their importance; all see their connection now even with our manufactures, and are compelled to admit each day their influence on our social well-being.

'However puff'd with pow'r and gorged with wealth  
A nation be; let trade enormous rise,  
Let east and south their mingled treasures pour,  
Till swelled impetuous, the corrupting flood  
Burst o'er the city and devour the land;  
Yet these neglected, these recording Arts,  
Wealth rots a nuisance; and oblivious sunk,  
That nation must another Carthage lie.'

One word to those who may have the good fortune to obtain the prizes, and your committee resign their trust again into your hands. It must be borne in mind that the larger the funds placed at the disposal of the society, the greater is the degree of care required in the expenditure of those funds; or it may become, instead of good, an equally powerful means of ill. They trust sincerely that the prizeholders will exercise the greatest care and discretion in their purchases; that they will consider themselves but as the stewards of the association, and endeavour to promote, as much as possible, its highest objects. Unless this be done, they may give rise to a class of pictures got up for the occasion, and priced, not according to their merits and the power of mind expended on them, but to the wants of the prizeholders; by which means most serious and lasting injury would inevitably result to art.

"As one, and the only, piece of criticism which your committee will venture to quote, let us all constantly remember that 'the good, the beautiful, the true—these are the sound basis of all art, of all science, and of all philosophy; and that their connexion is so intimate, so perfect, we cannot seek one and find it, but we meet the others also.'"

GEORGE GODWIN, JUN. } Hon. Secs.  
LEWIS POCOCK.

## CORRESPONDENCE.

### VEHICLES.

SIR,—I am sorry to find that a "A Student," of Manchester, has been unsuccessful in his attempts to work with the starch-and-oil medium; and I likewise regret that a "Fellow Student" should have met with no better success. Both must recollect, that a new style is never acquired till after frequent trials, not only because the method of working is new, and the material to be used different, but because no written explanation is capable of conveying to the reader, or the student, the precise notions which are necessary to enable him to produce *successfully* a style which he has had no previous knowledge. I make these remarks to encourage your two correspondents to persevere in the use of the starch-and-oil medium, assuring them that they will soon overcome the difficulties they have encountered; and that when overcome, they will be amply repaid by the pleasure which they will derive from this new way of working.

The starch-jelly ought to be made of *pure* starch powder, sold in the shops under the name of "hair powder." It is perfectly white; whereas ordinary starch, coloured with smalt, &c., to answer the purpose of the laundress, is composed of small lumps of blueish tint. This latter is not the kind which must be used; it must be the first described, pure white starch powder. The jelly must not be made as thin as water, but a little thicker in consistency than gruel.

To this starch-jelly a *sufficient* quantity of oil must be added, according to the purpose for which it is to be used, and according also to the manner of each person's *mode of working*. No general rule can be laid down to suit every student; in this respect, he must cater for himself. I have found equal parts of starch-jelly and of cold-drawn linseed oil, suit my purpose sufficiently; but, should the colour peel from the canvass, as the "Student" of Birmingham has found, he may easily remedy the defect by adding to the medium a larger proportion of oil—say, of oil, two parts; starch-jelly, one part.

On the other hand, the "Student," of Birmingham, may have laid on his canvass too thick a coat of priming, and this would certainly ensure a "total failure."

The intention is merely to cover the surface, and fill up the pores of the canvas. If thick threads and knots rise above the priming, they must be ground down with a flat piece of pumice stone, and then a second coat of priming may be applied; but in no instance must he load the canvass with priming; the adhesive quality whereof is at the minimum ratio, in order that it may the better absorb the superfluous oil used in the progress of the future work.

All these circumstances taken into account, I look forward to the success of "A Student," of Manchester, as certain; and I trust he will make the announcement thereof in your highly useful publication. I will only add, for his information, that no ground is probably more absorbent than that, the priming whereof consists of chalk, or of white lead (ceruse), worked up in a starch-and-oil medium. But I must also observe, that the more oil the vehicle contains, by so much will its drying properties be diminished.

With respect to the difficulties complained of by a "Fellow Student," I must—1st,—inform him, that the oil I have found to answer best is cold-drawn linseed oil; and that I never use the powder of glass of borax, unless I am working with very transparent colour, such as terra verte, or the lakes, to prevent their *spreading*, and to enable them, as an underground, to receive the finishing touches without running. It will be obvious, therefore, both to the "Student," of Manchester, and to a "Fellow Student," that the employment of borax is highly improper in the grounds, and early stages of the work.

2nd. That the best way of uniting the starch and oil, is either by rubbing them together briskly on a glass or porcelain slab with a spatula, or by working them together with a long hair brush, such as is used in the preparation of pastry.

3rd. That I have never noticed the effect he speaks of with respect to the curdling of ultramarine. I do not often use this beautiful pigment, because I conceive that the employment of a perfectly durable or permanent colour is scarcely to be recommended, when it is to be associated to other pigments, the nature of which is changeable; for these latter changed, and the blue unaltered, it is possible to conceive that the entire harmony of the picture would be lost. I have, however, occasionally used ultramarine in draperies; but I will ascertain the cause of this defect, if I find it to exist, when the *pure* starch-jelly and oil are employed.

Lastly. Glass of borax is certainly an incorrect term for the substance I recommended. I ought to have called it *vitriolized borax*, by which name he will have no difficulty in procuring it from the *operative* chemist. I beg here to thank a "Fellow Student," for putting the question, which has enabled me to correct a mistake that might mislead.

I have recently taught an excellent amateur artist the method of painting in starch-and-oil, and it will be sufficient to say, that she is so delighted with it, on account of the facility of handling which it gives, of its little smell, and its cleanliness, that she will never be induced, she says, to point with any other medium, and is desirous of disposing of her macgylips and turpentine, &c.

I hope these answers and explanations will be sufficient; but, if otherwise, I shall be most happy to give any further information which it may be in my power to afford.—Yours, &c. A STUDENT.

### PICTURE HANGING.

SIR,—As the general views of "An Amateur" on picture hanging seem, I am happy to find, not to differ very materially from my own, I need only refer to one or two points, the explanation of which may, I hope, still lessen the difference between us.

By a hilly landscape, I mean one which is so in such a degree as to present but a very small extent of level country, or smooth water; examples of which are to be found amongst the works of Salvator Rosa, Both, and many others. I believe that in landscapes of this description, painters, skilled in perspective, would often be at a loss to point out on the canvass the supposed or intended elevation of the horizon. Where this is the case, it would, of course, be impossible to adjust the horizon of the picture to that of nature.

Your correspondent observes, that the real elevation of a mountain is not increased by raising the picture, the foreground at its base being raised in the same proportion. Still, I believe, that from the effect of habit, the mountainous forms in a picture have a more imposing appearance when we look up to them, as we do to the ridges of the Alps from the bottom of a Swiss valley, than they would have in an opposite position.

And I flatter myself that your able correspondent will himself be, in some degree, of this opinion, if he will afford me, some day, the pleasure of showing him, in my humble collection, pictures representing Alpine scenery.—Yours, &c., A SUBSCRIBER.

### WINDSOR CASTLE.

SIR,—The notice of, and judicious praise you bestow on, the "Illustrations of Windsor Castle," by Gundy and Baud, excited in my mind pleasing and painful reminiscences, as connected with that famed palace and fortress, and its late much respected architect. Intimate for many years with Sir Jeffrey Wyatville, I had frequent communion with him before he commenced his vast and fine alterations of that castle, and also during its progressive improvements. He lent me some of his large drawings for *Lectures on Castellated Architecture*, to exhibit at the Royal and London Institutions, and I then urged him to publish illustrations of the castle. For a long time he declined to encounter the trouble and the expense of such a work, as would fairly and fully display the whole edifice and its varied features. After repeated conferences, and persuasions on my part, and the recommendation of a young artist to etch the plates, and a further assurance that I would either write the history and description of the building, or assist him in that task, he gave some of the drawings for engraving. Had that artist satisfied his kind employer in the execution of the plates, and his charges for them, I believe the work would have been published long since; but the architect often complained on both these subjects. At the time this was preparing, I wrote a short memoir of Sir Jeffrey for Messrs. Fisher's "Portrait Gallery," in which essay is the following passage on *Windsor Castle*, which will serve to show my opinion of the building, and of its architect:—

"In 1824 Parliament voted £300,000 for the projected improvements, and Messrs. Soane, Nash, Smirke, and Jeffrey Wyatt, were instructed to prepare designs to be submitted to a commission of eight gentlemen. The first, in one of his fits of caprice, declined to compete, and the drawings of the last architect were adopted.

"In 1830 the Commissioners, having found that the most decayed and dangerous parts of the building had occasioned an expenditure much beyond the original estimate, applied to Parliament for further advances; but to this application an opposition was made in the House of Commons, and a committee was appointed to investigate the public works at Windsor Castle, and endeavour to ascertain the amount of money required to complete them. At an age when economy in every department of the state has been demanded by the people, and partly conceded by the government, it is presumed that a million of the public money will be expended on this palace, and paid without a murmur, and without reproach. Nothing can be a stronger proof of the ability and integrity of the architect, than the fact that the monarch and the subject, the tory and the whig, the liberal and the radical, are nearly unanimous in commendation of these works; and such is the unaffected liberality of John Bull, when thus pleased, that he freely opens his purse, and proffers his tens of thousands without reserve, and without regret. Under these circumstances and persuasions, we will indulge the fond hope that the respected object of this brief biographical sketch may live to complete all his projected improvements to this British palace, and transmit it to future ages, for the admiration and boast of other monarchs and statesmen, as well as for every other class of Englishmen.

"As in the naval code of renown, one of its honoured heroes proclaimed that, 'England expects every man to do his duty,' so in that of the fine arts and literature, every one, who, in discharging his duty, exercises talents and taste, enhances his own fame with that of his country.

'Beneath one Royal head, whose vital power,  
Corrects, enlivens, and exerts the whole;  
In finer arts and public works shall she,  
Shall Britain shine.' THOMSON.

Of Messrs. Gundy and Baud's illustrations, I can vouch, not only for their fidelity of delineation, but for the artistical skill manifested in the treatment of the different views. These will serve to show foreigners and English critics the general style, the forms, and the details of the new-old palace; but, until the whole series of illustrations be completed, until we have a plan, as well as views, elevations, and parts at large, and, indeed, until the artists show us some of the interiors, it will be improper to criticise the architect, or attempt to form a judgment of his skill as manifested in this great national work.

April 10. Yours, &c., J. BRITTON.

## ENCAUSTIC PAINTING.

SIR,—In answer to the inquiries of "A Subscriber" on the subject of Encaustic Painting, allow me to mention that not a few years ago, but perhaps more nearly half a century, Miss Greenland, the lady to whom I suppose he adverts, undertook a series of ingenious experiments, with the view of reviving the encaustic style. The result of her observations she communicated to the Society for the Encouragement of Arts, &c., who published her papers as a part of their Transactions, and awarded to her on several occasions their premiums, not excepting the "palette," which I believe is their highest reward in the class of Fine Arts, and is usually confined to professional artists.

I am enabled to add, from a personal acquaintance with Mrs. Hooker (such being her name by marriage), that she continued her researches at intervals up to the time of her death, which occurred about two years ago. But her health having been for some time previous in a declining state, I fear that she had not brought her process to the state of maturity she desired; and that, although she had accomplished much, she had not prepared for publication any account of her recent improvements. She left several unfinished works, which, with others of her earlier productions, are in the possession of her son, Captain Greenland.

As Mrs. Hooker was most kindly communicative to every person who took an interest in her pursuits, I cannot flatter myself that this statement contains any thing either new or forgotten. I am induced to trouble you with it, merely because the expression used by your correspondent indicates that the circumstances have been mentioned to him unsupported by any precise detail.

While on this subject, permit me to inquire what has become of a picture, said to be a genuine specimen of encaustic (the subject, if my memory serves, 'Cleopatra'), which was exhibited some years ago by Mr. Reinagle, in illustration of his lectures? and whether any record exists of the statements by which the antiquity of the work was proved?

London, 22nd April, 1841.

## DESIGNS FOR SILK.

SIR,—I am an original subscriber to your valuable publication, the "ART-UNION;" and have great pleasure in expressing the high opinion I have of it, as advocating the real interests of the Art and Artists; also the advantages to be derived from the application of the arts to our domestic manufactures. I am a fancy silk manufacturer, and have considerable intercourse with the trade in submitting patterns for approval, and goods for sale; but I am constantly met by a complaint, that the arrangement of our colours in England is far inferior to the French. In fact, it is so much the case, that there are many "buyers" who both think and say that there is nothing done well in this country at all; an opinion that I am not disposed to agree in, although I think there is room for improvement.

Now, Sir, what I am about to recommend to the consideration of some of your numerous readers, is, what I am sure would be of immense benefit to the fancy trade of this country, where a variety of colours are used—my recommendation is this, let some qualified person publish a series of coloured plates with *single colours* on them, also a *variety of colours*, both in harmony and contrast, with accompanying explanations why they are so; also explaining what colours look well by candle light, and what colours do not, with reasons why they do so. Sir, a work of the above description, if in accordance with true taste and scientific principles, would be of inconceivable benefit; and, if no individual could be found to undertake it as a private speculation, it would be well worth the attention of the School of Design.

If you think the above remarks worthy a place in your valuable journal, you will oblige one, who has to apologize for troubling you.—Yours, &c. J. W.  
Spital Square, April 24.

We have received two or three letters complaining of what is styled "a job" in refusing to admit to the private view of the Royal Academy, the gainer of the £300 in the Art-Union—admission to which it would appear he applied for. Now "a job" it is not, although it would have been if "Mr. Fry" had been admitted, and the advantage had been refused to holders of other prizes. We have no doubt that this difficulty will be removed another year; and that it would not now have existed if Mr. Fry had applied to any individual member. Painters only want to sell their pictures—and care little whether they are bought by John Nokes or Tom Styles.

## FOREIGN ART.

## FRANCO-GERMAN GENIUS OF ART—STEBUEN.

—We have in former numbers of this work given some particulars of the lives of two of the principal professors of painting in the German school. We now propose to give a short account of the life and studies of Charles Steuben, a German by parentage, but the greater part of whose life has been passed at Paris. He may be regarded as a "*Capo Scuola*," for his works neither belong to the French nor German schools, but form a sort of link between preserving a tinge of the mysticism and repose of the one combined with the movement of the other. The father of Charles Steuben was in the military service of Wirtemberg, and married contrary to the rules of that service, which he was consequently compelled to quit. He took refuge at Smolensko; and from thence, after some years, went to reside at St. Petersburg; there, in the house of his father, many books, covered with juvenile attempts in drawing, attested many years afterwards the early predilection of Steuben for his art. This taste so far received encouragement from his parents, that he was sent to learn to draw at the Imperial Academy, then directed by M. Lagrené, an old Frenchman, whose talent, if talent he had, consisted in drawing long faces like those of Barbier. But he was intended for the military profession; and his parents sent him to an aunt, at Weimar, in the service of the Grand Duchess, with the intention that he should be a page, as a step to the career of arms. To Weimar he went; but instead of arms spoke only of painting, and of his desire to go to Paris to study. Schiller, then just reappearing in the world, after three years creative retirement, was consulted, and he advised that the child's desire should be granted. Steuben was therefore sent to Paris, in the year 1804, when he was himself twelve years old; he was provided with letters from Madm. de Stael and Schiller. He presented himself in the painting-room of Gerard, who received him kindly, and expressed much interest in his future career: but it was from Robert Lefebvre that he received his first lessons—an artist who will be remembered by his excellent portraits. Steuben left him to study under that charming painter, Prudhon; and, after some years passed with him, he finally, at the age of eighteen, took his place in the studio of Gerard, whom he had always continued occasionally to visit from the time of his arrival in Paris. Gerard was then in the zenith of his fame: beauties, wits, men of learning, warriors, statesmen, all resorted to his studio—all would have their portraits done by his hand—from the old Ducis to Mademoiselle Mars: we may add, that, in subsequent years, that threshold was trod by almost all that was most distinguished in Europe. Here Gerard might be seen painting amidst his scholars, and gaily accompanying his work with some lively anecdote of the stormy times he had witnessed; then he takes a segar, but it is quickly thrown from his mouth, under the easel of his favourite Steuben, who is near him. Steuben turns round, and already Gerard has left his seat, and is receiving in his apartment, with the grace of a man of the world, three persons, who have just entered—they are the Emperor and his Marshals, Duroc and Murat. Such scenes were of frequent occurrence in the painting-room of Gerard. Beside Steuben sat a young Prussian gentleman, a few years older than himself, full of ardour and talent, seeking to perfect himself in the art of faithfully drawing and seizing the character of any object he chose. This young man, to whom Steuben attached himself, and whose advice was of much benefit to him, was M. Alexander Humboldt, who soon after sailed for America, to commence those researches that have rendered his name so illustrious. We believe it was in the studio of Gerard he wrote his first work, with great rapidity, entitled an "Essay on Landscapes and Forests."

But we must leave the studio of Gerard and follow Steuben, who soon established himself as an independent artist, and was not long in acquiring a position and a name. The first historical work which he gave to the world, at the age of nineteen, was called 'Peter the Great on the Lake of Ladoga'; it is said he chose the subject as a mark of gratitude to the country which had sheltered his infancy. This picture was con-

sidered superior to the work of any young artist that had appeared for years, and gave indications of an inventive genius and a vigorous style. The 'Oath of the Three Swis' was hailed with great applause, and added much to the fame of its author. Then followed, 'Peter the Great Saved from the Strelitzes by his Mother,' which has since been copied in the Gobelin looms. In 1829, he produced his interesting and affecting picture of 'The Death of the Emperor Napoleon'; to perfect which, all the companions of his captivity passed in review in the studio of Steuben. M. Delatouche has made this picture the subject of an eloquent description. In 1832, appeared 'The Battle of Vitry,' which increased his fame as a painter of history; and 'Napoleon at Waterloo,' one of his best works, and most powerfully composed. The sad but animated countenance of the Emperor, is in keeping with the scene as are all the other figures of the drama. The author here shows the true spirit of epic composition. Many other historical works might be named, which have proceeded from the pencil of Steuben, but we must close our list, naming only an early work, full of religious feeling, and finely coloured, called 'St. Germain Distributing his Possessions to the Poor.' In portraits, Steuben excels, and he gives a softness to the heads of his young women and children that is peculiar to himself. He has painted many distinguished persons, and has usually been happy in seizing the spiritual character of the countenance. Of the studies which he has given to the world, several will not easily be forgotten: we may name his 'Young Girl Reading,' 'A Spanish Woman Plucking the Leaves of a Marguerite,' 'A Young Mother Suckling her Child,' 'An Odalisque,' &c. We shall only further observe on Steuben, as a painter, that we believe his firm and unexaggerated style will gain ground, and be more admired, when the re-action against the classical style has ceased to affect the public taste. He does not merely intend; he executes what he means to represent. His strong and philosophic mind has supported him in his independent course, amidst opposing voices; and he learned from Prudhon to be contented in a tranquil existence and devotion to his art. He married early, and became a naturalized subject of France. He is still in the prime of life; and in contemplating, lately, the fine portrait, in crayons, of Steuben, by M. Paul Delaroche, we were struck by the expression of calm strength which characterizes his countenance, in which we seem to read hope for the future.

FRANCE.—PARIS.—We proposed, in reference to our account of the exhibition in the Louvre last month, to describe more particularly some of the principal pictures; for the present we merely add that, almost by acclamation, the prize of excellence this year is awarded to M. Alaux, the painter of three works—'The Assembly of the Notables at Rouen, under Henry IV. (1596),' 'The States General of Paris under Louis XI. (1614),' and the 'States General of Paris, under Philippe de Valois, (1328).' The two first are alike excellent in design and colouring, the first especially distinguished by its magical perspective, the second by the flood of broad, harmonious light, distributed over the picture. The accessories are perfect as to correctness of costume, furniture, &c., but the intellectual part of the pictures deserve yet higher praise than the material; in the last-named picture the multitude of heads is immense, yet not one is insignificant in itself, and all take part in the scene; all, by insensible transition, contribute to direct your attention to the principal persons who give movement to the whole; but these are, by the necessary management of the picture, so small that, without this conducting of the mind, their effect would be lost. The difficulty, also, of varying all the heads in attitude and character is great, when we consider that the smallest expression of passion would be unsuitable to the calm solemnity of the scene. The third picture is much inferior, it appears to us, to the two first; but by these M. Alaux has nobly justified his claim to a place in the institute.

ITALY.—MILAN.—The attention of amateurs is drawn to two statues larger than life, executed by the sculptor Marchesi for the Court of Vienna. The subjects are two Athletes, and they are in the style of the 'Moses' of Michael Angelo.

**VENICE.**—Lipparini has finished, with his usual magical colouring, a picture representing the 'Explosion of Missolonghi.' It is a fine and lively composition, of great effect, and the number of figures is immense.

**MODENA.**—The President of the Ducal Academy of Fine Arts, the young painter L. Malatesta, bids fair to become an artist of European celebrity. In his two pictures, 'Spartacus Fighting against the Roman Legions,' and 'King Entius made Prisoner by the Bolognese People at the Battle of Rivalta,' he seems alike happily inspired by the genius of classical and romantic art.

**BOLOGNA.**—The Gandolfi family have a traditional inheritance of glory in the pictorial art; justifying the praises bestowed on them by Lanzi, in his 'History of Painting in Italy.' Mauro Gandolfi, besides being a great engraver, had a peculiar talent for drawing in water-colours and in Indian ink; to these works he gave a beauty not to be imagined but by those who have seen them. In the latter style he has no successor; but a pupil of his, Luigi Pedrelli, has carried the art of water-colour drawing to very high perfection: it is a perfectly pure style, no lights are put on, no body-colour is used, no scraping or mechanical process of that sort, by which a water-coloured drawing is often rendered a mere daub. Without such aid he carries his colouring to a high degree of richness and finishing, along with a free pencil. He has lately exhibited two heads, the size of life, of Greek contours; the one a venerable old man, the other a lovely nymph. 'Three Loves Sustaining a Basket of Flowers,' that seem by Correggio himself, and a 'half figure of the St. Cecilia,' after Raffaele.

**GERMANY.**—**MUNICH.**—The fresco paintings by Professor Hess, in the Basilika of St. Boniface, are advancing rapidly; the cartoons for the whole are completed, and the style of them strictly accords with the architecture of the church, which is the work of the Inspector Zeitland; in which the ancient style of art is followed out without losing sight of the present, nor of the individual feeling of the artist's mind. The church militant has furnished subjects for the nave of the building, while in the chancel appears the church triumphant, between which the arch of the tribune, with paintings of the four Evangelists, looking earnestly to the apocalyptic Lamb, whose history they write, seems to guide the eye from the one to the other. We may hereafter more particularly describe the immense works in this church.

**RUSSIA.**—**MOSCOW.**—At the last exhibition here, in October, the picture which excited the greatest enthusiasm was the work of a native artist, named Padkianchenikof. We hope to be able, hereafter, to give some particulars of this exhibition.

#### VARIETIES.

**SIR DAVID WILKIE.**—A rumour, without the slightest foundation, has been somewhat extensively circulated, that the great painter died of plague at Alexandria. We are enabled—we need not say how heartily we rejoice to do so—to remove all apprehensions on the subject, upon the safest authority. His family received letters from him, on the 11th of the present month, dated from Jerusalem—where he had just arrived, on the 9th of March. He was then in perfect health, and deeply interested with all he had seen on his journey to the Holy City.

**MR. JAMES UWINS** (son of the late Doctor Uwins, and nephew of the academican), to whose skill as an artist we have had frequent occasion to do justice, has been appointed draughtsman to the Niger expedition, and is gone out with it. This is an appointment of no common responsibility. The draughtsman is expected to bring away not merely characteristic drawings of new people and new countries, but also specimens in botany, natural history, and of all matters that may tend to illustrate character and habits, and to advance the design of the project—one of great interest, and out of which the most important and valuable results may arise. We hope and trust that the young painter, who has already given sure promise of future excellence, may preserve health and life in the

midst of dangers by which he will be inevitably surrounded. We cannot forget that Africa is "the grave of the white man;" and that it required no ordinary energy and enterprise to encounter the obvious and hidden perils that must be encountered at every step. There are few artists so likely to do credit to the appointment, or to render it more beneficial to his country.

**THE ACADEMY DINNER.**—The anniversary dinner of the Royal Academy took place, as usual, on the Saturday preceding the opening of the exhibition. It was attended by a host of the most distinguished noblemen and gentlemen of the country; among whom were—

The Lord President of the Council, the First Lord of the Treasury, the Lord Privy Seal, the First Lord of the Admiralty, the four Secretaries of State (Home, War, Colonies, and Foreign Affairs), the Lord Chief Justice of the Common Pleas, the Lord Chief Baron of the Exchequer, the Master of the Rolls, the Vice-Chancellor, the Attorney and Solicitor General, the Lord Chamberlain, the Commander of the Forces, the Lord Mayor of London, the Governor of the Bank of England, President of the College of Surgeons, Master of the Horse, Chairman of the East India Company, the Ambassadors and Ministers of France, America, Bavaria, Belgium, Greece, Hanover, Naples, Portugal, Sardinia, Saxony, and Württemberg; their Graces the Dukes of Wellington and Beaufort; the Marquis of Anglesey; the Earls of Rosbery, Grey, Ripon, Brownlow, Burlington, Eldon, and Cadow; Viscount Duncannon; the Bishops of London, Llandaff, Lichfield, and Chichester; Lords Burghersh, Prudhoe, Stanley, Brougham, Wharfedale, Colborne, Alford, Morpeth; Baron L. de Rothschild; Right Honourables Sir Robert Peel, C. W. Wynn, H. Labouchere, J. W. Croker; Sirs R. H. Inglis, Willoughby Gordon, J. Swinburne, G. Phillips, T. D. Acland, G. Warrender, T. Baring, H. Ellis, J. Brunel, G. Staunton, Field Officer in Waiting, R. Vernon, E. K. Tunno, W. Wells, S. Rogers, R. Hart Davis, J. Morrison, Gally Knight, C. Babbage, F. Cartwright, D. Solomon, J. Neeld, A. Milne, H. A. Munro, W. Scozier, P. H. Howard, G. Knot, J. H. Hippeley, Baring Wall, H. Hallam, J. H. Green, Esqrs., &c.

The Duke of Wellington spoke with fluency and occasional energy, as he pointed out the various modes in which the Fine Arts are valuable to a nation, not merely as conducing to the superior enjoyments of high civilization, but also in handing down to the latest posterity the records, sculptured or pictorial, of the achievements of their fleets and armies, and of the chiefs whose good fortune it has been, under an Almighty Providence, to lead them through toils and danger to victory, in defence of their dearest rights and their country's independence. The fact that this day, Saturday, May 1, was the anniversary of his Grace's birth-day, added greatly to the interest derived from his presence; an interest that was greatly enhanced when the Duke, on taking leave of the company, went round the table, and shook hands with every member of the Royal Academy present.—The Marquis of Lansdowne spoke long and well on the usefulness, as well as the elegant and ornamental character, of the Arts, and expressed his decided opinion that it was amongst the serious duties of those who have the advantages of wealth and high station, to encourage and promote the cultivation of the Arts generally, but of the intellectual branch more especially, as tending to give a high tone to the public taste, and to do honour to the character of a nation.

**THE PRINCE ALBERT** has purchased four pictures from the walls of the "Society of British Artists"—productions of Mr. Joy, Mr. Egg, Mr. Tennant, and Mr. Lancaster. It is of great importance, and matter for sincere congratulation, that the leading personage of the nation so frequently manifests a desire to aid the Arts of the country—the more especially as all his selections afford satisfactory evidence of good taste and right judgment.

**THE ILLUSTRATED BIBLE.**—We are glad to find that the project of disposing (after the manner of drawing for prizes at the Art Union) of the Bible so extensively illustrated by the late Mr. Bowyer, will shortly be realised—a very large proportion of "tickets" having been already disposed of. We direct attention to an explanatory advertisement in another column; and would impress upon our readers that the purchaser of a ticket has his chance of obtaining one of two magnificent works, literally for nothing; inasmuch as at the time of subscribing he may select from a large and valuable stock of interesting prints, such as he pleases, to the full amount of 10 guineas—

the sum paid for his ticket. Among the prints are those—so famous and so excellent—of King John signing Magna Charta, after Devis; the Trial of Lord William Russell, after G. Hayter; Lady Jane Grey's Refusal of the Crown, after Leslie, &c., &c. As a guarantee for the entire propriety of the plan, Mrs. Parkes publishes the following list of noblemen, clergymen, and gentlemen who have consented to act as a board of trustees for the public upon the occasion of drawing the prizes:—The Right Hon. Lord George Paulet, &c., Rev. H. J. Knapp, D.D., Subdean of St. Paul's Cathedral, and Priest in Ordinary to Her Majesty, William Upcott, Esq., Robert Smirke, Esq., R.A., Benjamin Bond Cabbell, Esq., F.R.S. and F.S.A., John Young, Esq., John Landseer, Esq., F.S.A. and A.R.A., the Rev. Richard Cattermole, B.D., Secretary of the Royal Society of Literature, George Godwin, Esq., F.R.S. and F.S.A., C. Landseer, Esq., A.R.A., Lewis Pocock, Esq., F.S.A.; Charles Robert Eblston, Esq., secretary.

A COMMITTEE ON THE FINE ARTS, &c., has been nominated by the House of Commons, on the motion of Mr. Hawes, the Member for Lambeth. It consists of the following hon. members:—Mr. Hawes, Mr. Labouchere, Sir R. Peel, Mr. H. G. Knight, Mr. Hume, Mr. Wyse, Mr. Blake, Sir R. Inglis, Lord Brabazon, Lord F. Egerton, Mr. Ewart, Mr. R. M. Milnes, Colonel Rawdon, Mr. H. T. Hope, and Mr. P. Pusey. What express object this committee is designed to accomplish, we cannot exactly say; but we recognise a few names in the list that will sufficiently guarantee the justice and propriety of any result that may arise out of their inquiries. We shall of course watch the proceedings. Good may be done; good ought to be done; but whether good will be done, is quite another matter.

THE SKETCHING CLUB are about to publish, with the letter-press, their illustrations of Goldsmith's "Deserted Village." We have seen some of them, and can testify to their exceeding beauty. We apprehend, however, that the price their design to fix upon the volume—which varies from five to ten guineas—is far too high to promote a taste for this class of Art in the public generally; and that if it be meant to confine the issue to connoisseurs, too large an edition is to be published. But upon this matter we shall be better enabled to speak when the work is before us.

THE PEPOLI COLLECTION.—We have been favoured with a view of a portion of the valuable collection of pictures that has for centuries enriched the Palazzo Pepoli at Bologna; and many of which have been commissioned or purchased of the artists themselves by the Pepoli family, one of the most ancient of the noble houses of Italy. The Palazzo Pepoli was built in 1344, by Taddeo Pepoli; and under the auspices of its successive proprietors, during the best ages of Italian art, this collection gradually accumulated, until there were numbered among its contributors not only most of the celebrated masters of the various schools of Italy, but also many of the best Spanish painters. These pictures are in that fine condition, in which we find such works of Art nowhere but in Italy; and many of them more valuable in their effects than when they were removed from the easel. They are all on the canvass on which they were painted, and have never suffered from cleaning, nor have they ever been retouched and masked, but present to the most superficial inspection the method and handling of the master in unbroken continuity. The Counts Pepoli, of course, patronized especially their own school—the Bolognese. The collection contains, therefore, choice works of the most celebrated artists of that school. There are several charming specimens of Guido, exhibiting his various manners, as also of the Caracci, Domenichino, Raffaele, Correggio, Vandyke, Velasquez, Murillo, &c. &c. Of Correggio there is but one specimen, a work which has been held by the house of Pepoli as one of its most precious heir-looms. It is an exquisite picture, a 'Madonna and Child,' painted on panel, with all the characteristics of the master's best style; his inimitable flesh texture, and pure tones, graduated to a clear shadow, in which the drawing is as careful as in the highest lights. The pictures by Guido are valuable for their execution, and most curious for the contrasts of style they present. This painter is known in England more by

his earliest or softest manner, than by the others which he practised, and is recognised by, in Italy. The example of his earliest practice is a 'Madonna and Child asleep'—a later method, and that in which some of his most remarkable works are executed, is instanced by a picture, 'Madonna delle Spine,' and 'Mary Magdalen Weeping,' in which is exhibited an extraordinary power of expression. The head of the Madonna in this work coincides in character very much with that of the 'Niobe,' which was a favourite study of Guido, inasmuch that frequent repetitions of it are found in his works. Another picture by this master—'St. Francis in Prayer,' is so distinct in manner from the above, as to leave but few traces of the same hand; and, indeed, it is so widely different from the works of every other artist of the Italian schools, as to be distinguishable among many, even at any distance at which colour and outline will tell to the eye. The finest works of Guido were painted at Bologna, and the above were immediately transferred from his studio to the Palazzo Pepoli, where, until recently, they have remained. Among the works of the Carracci is a 'Madonna with a Book,' a picture of much beauty; and among those of Albano, so celebrated for his children and the elegance of his female figures, is a curious imitation of a bronze basso-relievo, representing 'Young Bacchanals.' The Neapolitan landscape painter Martirelli, who flourished about the commencement of the 18th century, is but little known in England; this collection, however, contains a set of four large landscapes deliciously painted by this artist: they are highly finished, but with a free and graceful touch; and in comparing them with the landscapes of Claude and of Poussin, they may be said to constitute a middle degree; the figures alone are perfect studies, and the whole are finished with inconceivable sweetness of colouring, which is singularly true to nature. By Joseph Ribera there is a head of an old mendicant, which, in its own style, is equal in excellence to some of Rembrandt's more finished works of the same kind. In this picture there is as much shadow as in the heads of the last-named master, but it is much more transparent; for the asphaltum found in such abundance on Rembrandt's canvasses has lost its transparency, and is become black with age. By Juan de Juanes, of the Spanish school of Valencia, there are two admirable portraits of the Prince and Princess Gonzaga. These pictures fell into the hands of the Pepoli family after having been brought to Bologna by the Bentivogli, from Mantua. Of Diego Velasquez there is but one specimen, called 'Ambition,' and believed to be a portrait of a lady of rank. By Bassano, there are several pictures, distinguished by the highest finish, and in that peculiar style approaching so closely to that of the Dutch school. There are continual importations of pictures from all parts of the Continent; and it is known that unless these can be offered as the works of known masters, the prices which they return are insignificant. It is difficult, nay, impossible, to certify the genuineness of a work of Art, unless, with every undoubted proof of style and manner, it can be retraced distinctly through its line of possession to the hand of the artist. The history of the most remarkable pictures of the Pepoli Collection may be said to be publicly known in Bologna, since the residence of this family has been long celebrated for its wealth in works of Art; and it is from such collections that our finest specimens of Italian Art have been procured. The pictures above described, together with many others from the same gallery, are in the possession of Count Carlo Pepoli, resident at No. 6, Gloucester-road, Old Brompton.

**CAREW'S DESCENT FROM THE CROSS.**—We are in England little accustomed to look upon works of this class of Art, not because the ability for their execution is wanting, but rather because necessity diverts it into other channels. This composition contains a challenge to all similar works, not only of the new schools, but even of the old; and while considering it, the spectator is involuntarily led into comparisons between its merits and those of every other manner of treatment to which he may have seen the same passage of Scripture subjected. The work is a basso-relief, consisting of life-sized figures, representing, besides the body of the Saviour, the three Marys, the two Josephs, &c. The grouping is an able arrangement, and the eye is led from figure to

figure with consummate skill, and at length directed, by the coincidence of expression in the whole, to the dead Saviour, the object of the lamentations of his last followers. The cross rises of course high above the group; and to break the severity of its lines, and connect it with the scene below, one of the figures is seen descending the ladder, a disposition which has already been observed by others in the treatment of this subject; but the cross cannot be omitted, therefore, being a necessary feature of the composition, perhaps no other method equally judicious could be devised for disposing of it. Nothing can be more beautiful than the dead Christ—the spirit has fled, but its celestial impress remains on the features which are in death not less divine than they had been in life: there is certainly in this figure nothing to remind us of earth, but its powerful and deeply-wrought description of death. The finest male head of the group is that of Christ's secret disciple—Joseph, 'the rich man of Arimathea,' and it will not suffer in comparison with the very best efforts of the same kind. The women, as more prone to outward expression than men, are seen moved to grief, which declares itself by outward sign and action; but it must be borne in mind that the first paroxysm of passion is past, and has yielded to a more subdued tone of suffering. The heads of the Marys, as descriptive, in the one, of resignation to the Heavenly will, and in the other, of earthly sorrow, will remind the artist familiar with the great Italian classics, of something similar in Guido's works. In works of this kind it has been customary to make an offensive display of anatomy; a show of this kind is not necessary to stamp a sculptor as well schooled in his profession; and we are happy to find that an artist capable of executing a work of the high merit which this possesses, has the good taste to eschew such demonstrations.

**SALTER'S PICTURE OF THE WATERLOO BANQUET.**—This picture is at present exhibiting at the house of Mr. Moon, previous to passing into the hands of the engraver, Mr. W. Greatbatch, from whose well known abilities it is sure to receive ample justice. Before pronouncing an opinion on a work of Art of this class, it is necessary to consider whether, in its execution, the ends in view have been successfully accomplished; and also to estimate the difficulties with which the artist has had to contend. He has not here been enabled to dispose, at will, of strongly opposing lights and shadows for the purpose of producing a concentrated effect, aided in every way by composition subservient to his purpose; but in this picture, much of the value of which consists in the recognition of the guests of the lord of the banquet, it has been absolutely necessary to generalize the light. To deal with two straight lines of human heads, and vary the positions in such a manner as to present the features of each to the spectator, requires skill in Art of a very high order. The artist has done this, and more; for, as the table intersects the picture longitudinally, the backs of half of the assemblage are properly turned to the spectator; but the grouping is so ably managed, that this effort of the painter to show the faces is concealed by the ease of the positions. These seem to be but a few of the difficulties which must have presented themselves in this work, which, on the whole, cannot be accounted otherwise than as a successful production. The time represented is, perhaps, the best that could have been selected, being the moment at which the Duke of Wellington rises to return thanks for his health having been proposed by the king (William IV.), and drunk by the company "with three-times-three;" and it would appear that he has not yet commenced speaking, otherwise every head would have been turned towards him. The magnificent furniture of the saloon, appropriately termed the "Waterloo Gallery," is admirably given, without interfering with the chief interest of the picture. The portraits are 83 in number, and as many of them, as opportunity has enabled us to compare, in recollection, with the sitters, we find to be faithful resemblances. A picture of this kind is one of the severest trials by which ability in Art can be tested; and it must be said that the author of this work has creditably acquitted himself.

**GUILDHALL.**—This building may be justly pointed out as more abundant in barbarisms than any other in the City of London, notwithstanding

the host of examples of bad taste the metropolis unfortunately contains. The exterior, a rich example of the caprice of Dance, could not easily be rendered endurable without entire remodelling; and this, we hope, will one day be effected. The interior, however, might be much improved, at a comparatively small expense; and we are glad to find that the corporation are beginning to take into consideration the propriety of so doing. The panelled ceiling and clerestory or modern construction with which the building, in other respects Gothic, is absurdly terminated, should be taken away and replaced by others, in accordance with the rest of the structure. An open timber roof, as at Westminster Hall and Crosby Hall, hard by, would wonderfully improve the general appearance. While they are about it, too, they should take out the present stained glass, which is as bad as bad can be, and substitute better.

**THE WELLINGTON STATUE.**—Mr. Wyatt has commenced the casting of this colossal work, which when completed will be estimated weigh about fifty tons, and stand thirty-two feet above the pedestal. The head and portions of the legs are already cast, and it is intended that the whole shall be formed of guns taken in the campaigns of the Great Captain, the required number of which must be considerable for an equestrian statue of the magnitude of this, when it is understood that the metal of one gun has been expended in producing merely the head and the boots. The model of the horse is only half finished, but the design is sufficiently obvious from what has been done, and the action of the fiery animal thus far is not less spiritedly expressed than happily conceived. In the palmy days of the Roman empire the honour of an equestrian statue was never decreed to heroes below the imperial degree, and even pedestrian statues only to successful commanders who had extended the limits of the empire, or otherwise very signally benefited the state. It is a curious fact that the first equestrian statue erected in Rome was decreed to a woman; and before the abuse arose of rendering honour indiscriminately to all power, an equestrian statue was the compliment most to be coveted by a distinguished soldier from a grateful nation; if, therefore, among ourselves any man merits this highest classic honour, the Duke of Wellington is that man. The likeness to the Duke in Mr. Wyatt's work is an identity not to be mistaken: and a recognition of this will give a double interest to this national monument. The term fixed for its completion is said to be two years, nearly one of which has already expired. For the perfect success of the casting every precaution has been taken. The metal is cleared and purified by implements constructed for this purpose, which is thus effected with much more facility and certainty than by the old method; and by means of exhausting air tubes, an equal and perfect distribution of the metal takes place, inasmuch as infallibly to fill every part of the mould. The Duke of Wellington has visited Mr. Wyatt to inspect the work in its progress.

**THE LATE MR. HILTON.**—It is gratifying to be able to state, that this genuine artist did not die in the reduced circumstances generally supposed; but yet, nevertheless, has his life been a most ruinous experiment, and a most powerful commentary on the vein of taste that prevails among us. The will which he left was in his own handwriting; but, in consequence of the absence of witnesses, we believe some difficulties arose with respect to its execution; but these have now been disposed of. He died possessed of a share or shares in the Steam Navigation Company to the amount of a thousand pounds; likewise of property in the funds, and also of other property in the city of Lincoln, of which place the lady whom he married was a native, and the daughter of a clergyman. With his wife he received a dower of five hundred pounds, but this money was returned to her family. It is, however, confidently calculated, that a sum of ten thousand pounds will be realized by the sale of his works and effects. Hilton was, from his retiring manners, less fitted than many of his cotemporaries for making his way into those circles where an artist's worldly interests are centered; he was, therefore, continually surpassed in the race by many small-talk painters of puppy dogs and baby faces. Of course, his known objection to paint portraits had much to do with his circumstances; and we

cannot help admiring this enthusiasm for art for the sake of itself alone. Thus his commissions were few: of these rare instances we remember one particularly, given by Sir John Soane, which was to paint two pictures on given subjects. Sir John, as is sufficiently known, died wealthy; and it was habitual with him during his life to speak to his friends of liberal bequests, legacies, &c. at his death; and to Hilton he held the same language, in the hope, as was said, that the academician would present him with the commissioned pictures; but the latter had been warned by some already disappointed expectant of the wealthy knight's beneficence. When the works were finished, it was necessary to say something about the payment. "What then am I indebted to you for these beautiful works, Mr. Hilton?"—"Three hundred guineas, Sir John," was the reply. A cheque was duly given for the money; but it is unnecessary to say that Hilton's name did not appear in Sir John's will. In that memorable instrument, Sir Francis Chantrey was named executor, with a legacy of *fifty pounds*, but he declined acting.

**INSECTS IN PICTURES.**—At a recent meeting of the Entomological Society, a subject very interesting to artists was discussed. Mr. Westwood called the attention of the meeting to the state of the great picture by Sebastian del Piombo in the National Gallery, as described by Dr. Waagen. The picture had been transferred to canvass, on which it was fixed with paste, which material is now attacked by insects, which were considered to be the *Anobium puniceum*, an insect well known to attack preparations of flour. The plans suggested at a former meeting for the destruction of insects which attack paintings on panels, or the stretching frames, would be inapplicable to the present case; and it would be dangerous to saturate the back of the picture with any solution which would affect the paste, so as to render it unpalatable to the insects, or sufficiently strong to destroy them.—Mr. Gutch considered, that in the case of so valuable a picture, it would be most advisable to reline the painting with fresh canvass, employing paste in which a little corrosive sublimate has been mixed; he had constantly used paste mixed with that material, and had always found it perfectly effectual in preventing the attacks of insects.—Mr. Waterhouse, however, strongly objected to this, and proposed that an air-tight frame, or flat box, should be prepared to fit the back of the picture, leaving about an inch space, the air in which should be be strongly impregnated with prussic acid.

**THE VAN MULDER COLLECTION.**—On the 7th inst., Mr. Phillips, of New Bond-street, sold by auction, the remainder of the cabinet collection of the late Maes Van Mulder, of Antwerp; the prices at which a few of the most remarkable pictures were disposed, are as follows:—*'A Moonlight,'* by Vanderneer, 105 guineas; *'A Lady Preparing for the Bath,'* Boucher, 30 guineas; *'A View in Venice,'* Canaletti, £28 7s.; the companion, by the same, £33 12s.; *'The Return from the Chase,'* Watteau, 70 guineas; and the companion, by the same, 70 guineas; *'Lady Reading a Letter,'* Watteau, £35 14s.; *'View near Dort,'* Van Stry, 60 guineas; *'The Gipsy Fortune-tellers,'* Laucet, £14; *'The Concert,'* Watteau, 50 guineas; and *'Innocence,'* Greuze, 200 guineas.

**MR. EASTLAKE** is about to appear again in the literary world, as the editor, if not the translator, of a popular German history of Painting. We hope the pen of this learned and distinguished painter will not become the rival of his pencil.

**THE ART UNION** prize-holders have selected eight pictures from the walls of the British Institution—the exhibition of which closes this day.

**Messrs. Hodgson and Graves.**—A dissolution of partnership has just taken place between these gentlemen; Mr. Hodgson retiring; and the firm will be in future carried on in the name of "Henry Graves and Co." As this is a matter very interesting and important to many of our readers, we shall have something to say regarding it in our next.

## REVIEWS.

**EXCURSIONS DAGUERRIENNES. Part 4. Paris.**  
Published by M. Lerebours.

We have before us the last number of the "Excursions Daguerriennes,"—being engravings, copied from the Daguerrotypes plates. They are curious, and deserve the attention of the connoisseur for their beauty, and that of the artist for their perfect correctness; as representing nature in its simplicity, unadorned by the imagination. This number, which is the fourth of the series, contains views of Beyrouth, London, Pompey's Pillar, and the Cascade of Tivoli. The view of Pompey's Pillar pleases us most, inasmuch as the engraving is finer, and gives a better idea of the original plate, over which it has the advantage of being free from "mirioteage," the great defect of the Daguerrotypes plates. That of Beyrouth is, also, particularly interesting. The original plates were taken "on the spot," principally by Messrs. Horace Vernet and Goupil, during their recent journey to the East. These engravings are executed on steel by the well-known Parisian engravers, Messrs. Salathé and Martens: the work could not have been intrusted to better hands. We have no doubt that it will become popular, the great variety of the subjects adding to its attractions. The publisher, M. Lerebours, announces in his prospectus that the work, when complete, will contain views of Paris, Milan, Venice, Florence, Rome, Naples, London, Switzerland, Germany, Malta, St. Helena, Egypt, Damascus, Constantinople, St. Jean d'Acre, Athens, Moscow, the Alambra, &c. &c. Without intending to object to the manner in which the engravings are produced—indeed, while giving our testimony to their amazing accuracy—we cannot but feel surprise that the actual Daguerrotypes plates have not been engraved, especially as the late discoveries of M. Donné seem to render the process perfectly practicable. As we are not aware that M. Donné's system has been promulgated in this country, we are induced to print an extract from his pamphlet, explaining his method of engraving, in the hope that some one in England may be led to try the experiment:—

"The first point to which I gave my attention," says M. Donné, "was in the choice of a plate, as on its perfect evenness and proper thickness, of silver (which for engraving is required to be much thicker than those in common use), mostly depends the success of the plate. Having obtained one of the proper thickness perfectly even, well polished, and free from any scratches, the design is executed in the ordinary Daguerrotypes manner, and ought to be as perfect as possible, since the engraving reproduces most minutely, all the details of the picture, with its qualities and imperfections. The washing takes place in the same manner, with the hyposulphate diluted with water, taking care that nothing but the iodine is carried off. The plate being quite dry, the edges are covered with engraver's varnish, nitric acid having no power over it, to prevent all contact with the acid and the copper part of the plate. Thus prepared, the plate is ready for the engraving process. Nitric acid, diluted with water, is the only acid with which I have been able to succeed. The plate is placed in an horizontal position over a basin, on which it rests at the four angles; you then pour over it the nitric acid, mixed in this proportion with water; three parts of nitric acid, pure, and four parts water; the plate should but just be covered. At the end of three or four minutes, a little more or less, according to the temperature, and probably also from other reasons, which it would be difficult to explain, the action of the acid begins to show itself, at first by very small bubbles of gas adhering to the metallic surface, which increase by degrees, till every part of the plate in contact with the acid is covered by them. Here the greatest difficulty of the process is encountered, for it is most difficult to judge how long the acid should be allowed to work; nothing but experience and practice could enable any one to judge with any certainty. If the action of the acid is stopped too soon, the shadows of the pictures will not be sufficiently deep; on the contrary, if allowed to remain too long, the light parts and half-tints will be made too dark. At all events, the acid acts most quickly, and should not be allowed to remain more than two or three minutes at the utmost. When the picture is strongly marked with light and shade, I have often succeeded in keeping the light parts free from the acid, by blowing with

the mouth on those parts which ought to be lightest, and leaving it on the darker parts, thus allowing time sufficient for the acid to act on them without injuring the light. As soon as the plate is sufficiently *blé*, the acid is poured away, and the plate washed in water, after which it is lightly wiped with very fine cotton; then it is washed a second time with spirits of wine, so as to clean the plate thoroughly, and take off the varnish. This is the last part of the process, the plate now only requires to be intrusted to a good printer, who can take proofs from it in the ordinary way."

This is an abridged account of the process, which has enabled M. Donné to obtain the proofs he presented to the Academy of Paris. We have not seen them; but we learn they are tolerable, to say the least; and certainly prove that the Daguerrotypes plates *may* be engraved. We much regret that M. Donné is not an artist, and that from want of time he has been unable to pursue the discovery further; but we hope some one will continue it, in the hope of perfecting what M. Donné has so ably commenced.

Like every invention, possessing any value, the Daguerrotypes is receiving daily improvements from scientific individuals, whose attention has been directed to it. A communication has been received by the French Academy of Sciences, to the effect that M. Grehoff, of Moscow, has succeeded in rendering Daguerrotypes drawing ineffaceable; specimens of which result have been received by this body. The same experimentalist has also succeeded in obtaining drawings on copper and brass plates; and asserts that he can transfer an engraved plate on to copper, and engrave it afterwards either in relief or intaglio.

Other improvements in this art have been brought under the notice of the French Academy, especially one practised by an architect named Hubert; who, by a process which he has not published, has succeeded in communicating colour to the plates, having already produced white, red, and yellow. Chloride of gold has, by some experimentalists, been employed for the purpose of giving more tone to the drawing; and a method of converting Daguerrotypes drawings into lithographic, has been communicated to the Academy.

**THE ILLUSTRATED SPECTATOR.** The Illustrations in Acrography. Publisher, Effingham Wilson.

While we admit, to the full, all the advantages held out by the projectors of this invention, as far as they regard a substitute for wood-engraving, that may enable the artist to be his own engraver, and render unnecessary any intermediate hand between him and the public—or rather the printer—we confess we have many and strong doubts as to the results of this experiment. Still it is the only one of at least half a hundred projects that has been submitted to us in a tangible form. We have here a publication actually illustrated—and very extensively—by the novel process. After a close examination—and a sincere desire to advocate anything that shall seem to be an improvement—we cannot describe the embellishments to this book as much superior to worn and inferior wood-cuts, as far as the execution is concerned; and greatly fear that M. Louis Schonberg will share the fate of a vast number of other ingenious men, who have just reached the limits, and fallen a few inches short of, the precise thing that was wanted; which is, in fact, doing nothing at all. In the designs there is certainly great freedom; but as prints they are utterly ineffective.

In justice we allow the parties interested to speak for themselves:—

"Acrography, or Relief Engraving, offers such simplicity to the designer, that the latter has merely to be *very proficient in his drawing*. (An art acquired by very few.) He must, in every line, show his master hand; must show that he does not feel, but know his way; that he can give full flow to his ideas and his hand; he must not crawl, nor be too slow; he must be expeditious, but not too rapid, or careless; he must dispose his lines with grace, delicacy, or swelling. He has the power to make every line express an idea; and

if he make lines, or a line without language, he betrays his weakness, and Acrography does not flatter. When he considers his design finished, the acrographer, who requires no manipulations depending on personal skill, or depending on changeableness of operation, produces the design in relief in shape of a metal plate, and the result shows that there has been neither copying nor altering.

"The designer commences his work by drawing with a point, &c., on almost any material; but nothing can be used or worked more economically and easily than a common lithographic stone. Its surface being prepared and coloured, the designer draws with a tool made for the purpose, and as easily, as if he used a lead pencil, and on paper; he alters and corrects at pleasure. The designer delivers the drawing made on the block to the acrographer, who, without addition, diminution, or alteration, makes the subject in metallic relief fit for the letter-press printing."

It must be remembered, however, that the invention is yet in its infancy; possibly the next part of the published work may manifest a great improvement. Meanwhile, it is evident that the process may be so applied as to illustrate books very cheaply—for here we have 250 pages, with about 100 prints, in a neat binding, for the sum of six shillings.

**THE RHINE, ITALY, AND GREECE.** Illustrated in a series of views from Drawings taken on the spot. By W. L. LEITCH, Esq., Col. COCKBURN, and MAJOR IRTON. Parts I., II., and III. Publishers, Fisher and Co.

This work is on the plan of Messrs. Fishers' publications, descriptive of Constantinople, Ireland, &c. It is issued in monthly parts, cheap, and yet good; for the prints are without exception well engraved, and some of them may rank high as examples of the art. Each part contains four, and with descriptive letter-press, for the sum of two shillings. Among the illustrations those of Mr. Leitch are pre-eminent; indeed the three first parts contain few that are not the productions of his pencil.

**THE ORIGIN, PROGRESS, AND PRESENT CONDITION OF THE FINE ARTS IN GREAT BRITAIN AND IRELAND.** By W. B. SANSFIELD TAYLOR. 2 vols. London: Whitaker, 1841.

Demand generally precedes supply; we may, therefore, regard this as another of those proofs, now frequently furnished by the press, of the increasing estimation of the Fine Arts in this kingdom. As there is no saying how soon the latent spark may be kindled, how quickly and how widely the self-gratifying love of Art may be enlarged into a generous desire to foster such ample means of national refinement, we rejoice in every emanation of a literary character calculated to lend aid in the achievement of such results. Collection of facts, enthusiasm, eloquence, each may take their share in directing the thoughts of men to this noble branch of intellectual exertion; and whether a work excel in all these, or be wanting in part, we welcome it as another labourer in the same good cause.

"The aim of the author," in the volumes under consideration, "being to place before the public all the authentic facts he could collect, for the purpose of enabling every one to judge, whether the Artists of the United Kingdom really have done all that they might have effected to advance the arts, according to the degree of encouragement they may have received; he now resigns the decision of the question to those for whose information the work has been composed, merely observing, that his intention was to produce a record rather useful than ornamental, which would secure the memorials of certain facts important and interesting to the Arts and to Artists; but which, not being embodied in a tangible form, were gradually fading from the public mind." The scope proposed is evidently a large one, which the works of Edwards, Dr. Waagen, and others, have, in some measure, anticipated; but we will give Mr. Taylor the credit of having made the

most complete collection of memoranda connected with the progress of Art in Great Britain, that has yet been placed before us. It might be wished, however, that in making this record Mr. Taylor had either adhered closely to the simple recognition of facts, or that in the disquisitions under which the pages now and then labour, he had succeeded in making his style somewhat more "ornamental."

A book of this order should evidently be either an unvarnished catalogue of circumstances, or if this bound be overstopped, should be rendered pre-eminently "readable." In this latter quality the work before us certainly does not shine. In the midst of positive information for which the mind is seeking, it is unpleasant to be interrupted by a course of reflections, so manifest as to bear the character of truisms, or dressed in language, which deviates generally from the didactic and flat to the stiff and inflated. We do not scruple to ascribe this error of judgment and manner to the author of the present work, an error which we notice, because it interferes with the best object of the book, while tending necessarily to increase its bulk; for it seems probable, that a judicious clipping of the sentences and restraint of the discursive tendency, would have condensed an equal body of information into one moderate volume.

Having alluded to this drawback, we have pleasure in stating, that the work possesses merits that will entitle it to a good reception from the public. The aim of the observations is in the right direction, and there is every indication of good feeling on the part of the author.

**AN INTRODUCTORY LECTURE,** delivered at King's College, London, Jan. 25th, 1841, and addressed to the Class of Civil Engineering and Architecture, by WILLIAM HOSKING, F.S.A. Weale, London.

The appointment of a professor of the art of construction in connexion with civil engineering and architecture in King's College, may be regarded as certain to produce much good, and must be gratifying to all interested in these pursuits or properly impressed with a sense of their importance. Mr. Hosking, to whom the professorship has been given, is eminently fitted by his practical knowledge as well as by his acknowledged literary talents, for the duties of the position; and we look therefore with great hopes for the result of his labours. Nevertheless, as Mr. Hosking says in the introductory lecture, which we now cordially recommend to our readers, "In promising you information and instruction that will be useful to you in the pursuit of your professions respectively, we must beg to be understood not to promise to qualify you here to practice as architects or civil engineers. We offer you information whereby you may become qualified to avail yourselves most effectually of the practice of the engineer's or architect's office, and thereby to become better architects and better engineers to your own confidence, comfort, and advantage, and for the advantage of society, to whom your services will be hereafter offered, than you would have been without such instruction and information as we offer. The medical student comes here versed in pharmacy and in the simpler surgical operations, and he finds his field of study and practice complete between the lecture and the dissecting rooms of the college, and the wards and the operating theatre of the hospital; but to you who come to us unskilled in carpentry and masonry, the pharmacy and surgery of your professions, we have the deficiency to supply as well as to teach the science which those humbler arts aid you in applying; but your hospital must be walked in mud boots, and your operating theatre found on the stage of the carpenter and on the scaffold of the mason and bricklayer." We trust that before long we shall also have professors of architecture as a FINE ART, expounders of the principles of beauty, at all our universities.

[We have in type several reviews of new works and engravings—the publication of which we are compelled to postpone.]

## TO READERS AND CORRESPONDENTS.

*Various arguments, with which it cannot be necessary to trouble our Subscribers, have induced us to change our day of publication from the 15th to the 1st day of each month; our principal reason, however, is, that we shall thus ensure the punctual delivery of the paper; for many copies go through the booksellers, who forget altogether that a periodical work is issued in the middle of the month, and seldom procure it until the other monthly works make their appearance.*

*We have, therefore, to announce that No. 28 of*

THE ART-UNION

WILL BE PUBLISHED ON THE

FIRST OF JUNE,

*and that the work will in future be issued on the FIRST day of each month.*

The Secretary of "The Society of British Artists" having taken umbrage at our remarks last month, has been silly enough to write to our publishers, desiring to know "whether the article in question was read and approved of by them previous to its insertion in the publication referred to." We must inform this very juvenile gentleman (for he must be very young in experience), that we should as soon think of consulting the Khan of Tartary as our publishers concerning the opinions we thought fit to put forth in our publication. When the Secretary's letter was handed to us, we considered it a forgery; but we have since learned that, in a lecture delivered by him in Suffolk-street, upon some subject or other, he honoured us publicly with his abuse—beginning with "a heavy blow" at the Royal Academy, and closing with a "great discouragement" to ourselves. We did not learn, however, that the official said a word concerning the *Times*, the *Literary Gazette*, the *Spectator*, and the other public journals, that with far less charity and more severity, described the Society, of which this gentleman is the writing organ—a "secretary at war" as well as "at home." In censuring certain arrangements of the Society of British Artists, we know well enough that they emanate from a few, whose "most sweet voices" have overwhelmed the murmurs of its older and more respectable members, and who, like the starling in Sterne's story, "can't get out."

W. D.—We regret there should have been any mistake about "the Index" to the volume of the 'ART-UNION' for 1840. It was published with the number for January 1841; we found it impossible to get it ready with the December number, as it necessarily included the contents of that number.

"The Royal Hibernian Academy" will open this day. To the Irish Art-Union we shall direct attention in our next; it is progressing most favourably. We shall, at the same time, notice the project at Cork.

A Correspondent complains strongly of heterogeneous mixture of classes at the gas-light meetings of the British Institution, and that the original purpose of these "Evenings" has been completely frustrated by the admissions of persons who go there merely to stare at their betters. There is no doubt that the design was to bring artists and amateurs (the patrons of art more especially), into immediate and social contact. We shall look into this matter another year.

We must postpone till next month the insertion of a communication from Bristol.

We have forwarded the article on Encaustic Painting to the party who required information.

A Foreign Admirer of Engraving in our next.

We are also compelled to postpone inserting the communications from Birmingham and Manchester.

S. T. may be assured that his information is altogether erroneous. It is quite impossible. It regards a charge advanced against the Porters at the Royal Academy; we should not have named it but that we have just received another letter on the same subject; we shall make due enquiries before we again publish.

The information from Plymouth came too late to be available; we shall give it next month.

The obituary of Mr. Thomas Grundy was also received too late for our present number.

Several "Letters" are in type, the publication of which we trust our correspondents will permit us to postpone.

The letter from "Edinburgh" would occupy too much space to justify its publication. We agree with the writer in many of his remarks.

Reviews of several new publications are in type; but we have found it impossible this month to make room for them.

Although we do not publish his letter, we perfectly agree with our correspondent who protests against the misdirection too often received from criticism. He will perceive, perhaps, that, on the whole, it would be wiser not to print it.

THE ROYAL ACADEMY.—We think it necessary—as we have not been honoured with an advertisement (as other papers have been), from the Royal Academy—to inform our readers that it is

"OPEN DAILY"

For this advertisement we shall willingly pay the "duty" into the Stamp-office.

22, GOLDEN SQUARE, 12th May, 1841.

MRS. PARKES has much pleasure in being able to inform the Public that her plan (after the manner of the ART-UNION) for the disposal of the celebrated ILLUSTRATED BIBLE, and HILTON'S HISTORICAL PICTURE, is succeeding beyond her most sanguine expectations; and she begs leave to remind those patrons of Art, who are particular in obtaining choice impressions of Engravings, and who intend becoming purchasers from the subjoined list to entitle them to a chance in the scheme, that they will be allowed to make their selection from the Prints immediately on their names being entered on the list.

## COMMITTEE.

*The following Gentlemen have kindly consented to form a Committee, to act as a Board of Trustees for the Public upon the occasion of Drawing the Prizes.*

The Right Hon. Lord GEORGE PAULET, &c. &c.

Rev. H. J. KNAPP, D.D., Subdean of St. Paul's Cathedral, and Priest in Ordinary to Her Majesty.

*Drawn by G. F. Sargent. Engraved by J. C. Verrall.*

IN MONTHLY PARTS. Price, Imperial 8vo., 2s. 6d.; and Proofs, on India Paper, folio, 7s. 6d.,

## LANDSCAPE, HISTORICAL-LANDSCAPE, AND ARCHITECTURAL ILLUSTRATIONS TO THE WORKS OF SHAKESPEARE; A SERIES OF LINE ENGRAVINGS FROM ORIGINAL DESIGNS

BY

G. F. SARGENT.

The design of the present work is to realize to the senses—the *scenes, pictures, and associations*, which SHAKESPEARE has presented to the imagination. It is not proposed, however, to invade the province of the ideal, or to make the vain attempt to give a “local habitation and a name” to images and persons created by, and existing in, the Poet’s rich fancies only.

Each Number to contain Five highly-finished Line Engravings, on Steel, of LANDSCAPES, ARCHITECTURAL RESTORATIONS, or INTERIORS.

The LANDSCAPES, in all cases where possible, shall be from Drawings made on the spot, or from the best authorities. The RESTORATIONS will be carefully compiled from existing Remains, and the Works of ancient Authors. The INTERIORS will represent the Domestic Architecture of the Ancients, as well as the Halls and Chambers of our own forefathers.

### PART I. CONTAINS

A Room in Cæsar’s House . . .	ANTHONY AND CLEOPATRA.
Restoration of the Market Place at Athens . . .	TIMON OF ATHENS.
General View of Sicily . . .	A WINTER’S TALE.
A Wood near Athens . . .	A MIDSUMMER NIGHT’S DREAM.
Bangor, North Wales . . .	HENRY IV.

### PART II. CONTAINS

Restoration of the Temple of Jupiter Olympius, the Acropolis, and the Theatre of Adrian, at Athens . . .	TIMON OF ATHENS.
Scene in the Island of Ivica . . .	THE TEMPEST.
Waterfall at Kirka, Coast of Illyria . . .	TWELFTH NIGHT.
Interior of the Palace of Cleopatra . . .	ANTHONY AND CLEOPATRA.
Warkworth Castle . . .	HENRY IV.

### PART III., TO BE PUBLISHED ON THE FIRST OF JUNE, CONTAINS

A Room in Philario’s House at Rome . . .	CYMBELINE.
Leicester Abbey . . .	HENRY VIII.
Flint Castle . . .	RICHARD II.
Palace of Seleucus, Antioch . . .	PERICLES.
View of the Island of Ivica and Cape Formentera . . .	THE TEMPEST.

PUBLISHED BY HOW & PARSONS 132, FLEET STREET, LONDON.

THIS JOURNAL BEING STAMPED, CIRCULATES, POSTAGE FREE TO ALL PARTS OF THE UNITED KINGDOM.

## SCHOOL OF DESIGN, SOMERSET HOUSE.

18th April 1841.

THE COUNCIL of the GOVERNMENT SCHOOL of DESIGN, with the sanction of the Right Honourable the President of the Board of Trade, have determined to educate a class of persons for the purpose of qualifying them to become TEACHERS in Branch Schools of Design, and propose to found Six Exhibitions of £30 a year each, to be paid for two or three years, as may hereafter be determined, to Six Students to be selected by the Council.

A Probationary Class will be opened on the first of NOVEMBER NEXT for all who may wish to become Candidates for the Exhibitions, and those who are admitted will be taught gratuitously for three months, at the end of which time the six successful Candidates will be chosen.

The qualifications necessary for admission to the Probationary Class may be learned on application either by letter or personally, between the hours of Twelve and Three, to Mr. DYCK, Director of the School of Design, Somerset House.

### FINE ARTS.

A SPECIMEN ETCHING of the beautiful Engraving, now in progress of engraving, by H. T. RYALL, Engraver to the Queen, for the Members of the ROYAL IRISH ART-UNION, for 1839-40, from BUXTON's celebrated picture of

'THE BLIND GIRL AT A HOLY WELL.'

May be seen at Mr. ROBERTSON'S 51, Long-acre, Messrs. HODGSON and GRAVES, 6, Pall Mall, &c. &c., where Subscriptions for this year.

ONE POUND PER TICKET, will be received, or the same may be forwarded direct to

STEWART BLACHER, Esq., Hon. Sec.  
20, Gardiner's-place, Dublin.

N.B. Post-office orders, for remitting the amount of one or two tickets, may be obtained at any office for 3d.

THE GRANGER SOCIETY, for the Publication of Ancient English Portraits and Family Pictures.—The FIRST ENGRAVING published by the Society, containing Portraits of QUEEN MARY and PHILIP the SECOND of SPAIN, by Sir ANTONIO MORRIS, is now ready for delivery.

Members residing in the Metropolis will have their Engravings delivered to them at their own residences, or at such other places as they may appoint. Members resident in the Country, are requested to state the residences of those friends or agents in London to whose care they wish their Engravings to be consigned.

WILLIAM J. THOMS, Secretary.

Communications may be addressed to any member of the Council, or to Messrs. NICHOLS and SON, No. 25, Parliament-street, Westminster; and Members may pay their subscriptions (One Guinea annually) to the account of the Society with the Metropolitan Bank, No. 4, Pall-mall East.

ITALIAN PICTURES of very high class.—

Mr. HENRY ARTARIA begs to acquaint the Collectors of Works of the Italian Masters, that he has received for private SALE the undermentioned choice SPECIMENS, which formerly adorned the Tarma Gallery of Venice, viz.:—'Christ in the House of the Pharisee,' an admirable cabinet production, by P. Veronese; an authentic Portrait of 'Gonzaga, Duke of Mantua,' by Giulio Romano; the 'Holy Family,' by Tintoretto, remarkable for possessing all the fine characteristics of the master; the 'Madonna and Child,' a chef-d'œuvre, by Sasso Ferrato; and a Pair, by Schiavoni.—26, St. James's-street, May 20.

PRACTICAL and EXPERIMENTAL CHEMISTRY. Adapted to Arts and Manufactures. By E. MITSCHERLICH, Professor of Chemistry at the University of Berlin. Translated from the First Portion of his Compendium. By STEPHEN LOVE HAMMICK, M.D., one of the Radcliffe Travelling Fellows of the University of Oxford, and Fellow of the College of Physicians, &c.

Dedicated, by permission, to Dr. Faraday, Professor of Chemistry, &c.

Whittaker and Co., Ave Maria-lane.

MÉRIMÉ ON OIL PAINTING, BY TAYLOR, Just published, 1 vol., post 8vo., price 12s., cloth.

THE ART OF PAINTING IN OIL AND FRESCO; describing all the methods and materials used in the Great Continental Schools of Painting during the best period of art. Translated from M. MÉRIMÉ's celebrated work. By W. B. SANSFIELD TAYLOR, who has placed the English chromatic scale in juxtaposition with that of France; and added an Historical Sketch of the English School of Painting, with the methods and materials used therein.

"Mr. W. B. Sansfield Taylor, so well and honourably known as the Senior Curator of the Living Model Academy, has executed his task with fidelity, and has, to M. Mérimé's History of the various processes and materials employed from the time of Hubert and Van Eyck to the present period, added some original observations of his own."—A most valuable manual to the artist."—Age.

"The Royal Academy has given this volume its sanction, by permitting Mr. Taylor to dedicate it to them."—Literary Gazette.

"The most practically useful publication which has issued from the press for many years on the subject of art."—Morning Herald.

Whittaker and Co., Ave Maria-lane.

A COLLECTION of CAPITAL PICTURES, by distinguished modern Artists, on SALE at Messrs. GRITTEN and Sons' Gallery, corner of Trafalgar-square, opposite St. Martin's Church. Including a 'View at Venice,' and Companion, by C. STANFIELD, R.A.; several by D. ROBERTS, R.A.; choice examples, by P. NASMYTH, including a large Landscape, painted for the Rt. Hon. LORD NORTHWICK; two, by HONINGTON and others; by the late DOUGLAS COWPER, ROBERT EDMONSTONE, &c. &c. &c.

### ARTS AND LITERATURE.

MR. JOHN BURTON, Auctioneer, 69, Bold Street, Liverpool, respectfully intimates that his extensive Rooms are now open for the reception of Works of Art in Painting, Sculpture, Engraving, and those objects of interest to the Antiquarian and Virtuoso, in which skill or ingenuity in other branches of the Arts has been exercised; and for LITERARY PROPERTY, of whatever description, intended for Sale. Liverpool, owing to the wealth, the taste, and the liberality of her merchants, being acknowledged one of the first Ports in the Empire for the disposal of Property of the descriptions above-named, Mr. J. B. begs to call the attention of Executors, Dealers, and others, to the matter of this Advertisement, most respectfully soliciting their support, and assuring them that it will ever be his pleasure, as his duty, to discharge with promptitude the business committed to his trust.

References will gladly be given to Parties requiring them.—No. 69, Bold-street, Liverpool, 1841.

## TO HISTORIC AND LANDSCAPE ENGRAVERS.

**A**N unpublished Plate, of not less than 14 inches by 12 in the engraved part, is wanted, either completely finished, or capable of being so within four or five months, for which a liberal price will be given. Full particulars as to subject, style, &c., must be sent in the first place (pre-paid), directed to A. B., 18, Edward-street, Portman-square.

## BY HER MAJESTY'S ROYAL LETTERS PATENT.

**W**INSOR AND NEWTON'S TUBES OF OIL COLOUR.—This beautiful invention obviates the numerous imperfections attendant on the use of BLADDER COLOURS, as the bladder in which the paint is enclosed being porous, allows the oil to exude; and thus, by admitting air, the colour necessarily hardens, becomes contaminated with skins, and frequently more than half of it is rendered totally unserviceable.

The PATENT TUBES are formed of stout cylinders of glass, hermetically secured with an air-tight piston, traversing the tube, and ejecting the colour by a gentle pressure.

The colour being visible through the glass, the artist immediately perceives the one he may require, and the air being excluded, no smell can proceed from them. They are also so perfectly clean to handle, that oil pictures may be executed without the least soil on the table, or on the hands of the artist.

To be had, wholesale and retail, at their Artists' Colour Manufactory, 38, Rathbone Place, London.

Newly invented Zinc Panels for Miniatures and other highly finished Paintings in Oil, and all the new manufactures of the trade.

To be disposed of after the manner of Drawing for Prize Pictures at the "ART-UNION."

## I.

## THE CELEBRATED UNIQUE BIBLE, AS ILLUSTRATED BY THE LATE MR. BOWYER,

VALUE THREE THOUSAND GUINEAS!

The Text is MACKLIN'S Folio Edition of the HOLY SCRIPTURES; and the Illustrations consist of upwards of Six Thousand Engravings, Paintings, and Drawings, after Raffaele, Marc Antonio, Albert Durer, Callot, Rembrandt, &c. &c. &c., and include every ocular fact, circumstance, and object, to which the Holy Writ alludes. Trees, Plants, Flowers, Quadrupeds, Birds, Fishes, Insects,—Fossils in proof of the universal deluge, and the most complete and perfect Atlases, are comprised in

FORTY-FIVE SPLENDID VOLUMES.

## II.

## THE TRIUMPHAL ENTRY OF THE DUKE OF WELLINGTON INTO MADRID, VALUE FIVE HUNDRED GUINEAS.

This Grand, Original, Historical Picture, by the late W. HILTON, R.A., is considered one of the best productions of that distinguished Artist.

## COMMITTEE.

The following distinguished Individuals amongst the Subscribers, have kindly consented to form a Committee to act as a Board of Trustees for the Public upon the occasion of Drawing the Prizes:—

The Right Hon. Lord G. Paulet, &c.	The Rev. Richard Cattermole, B.D., Secretary of the Royal Society of Literature.
Rev. H. J. Knapp, D.D., Sub-Dean of St. Paul's Cathedral, and Priest in Ordinary to her Majesty.	J. Landseer, Esq., F.S.A. and A.R.A.
William Upcott, Esq.	G. Godwin, Esq., F.R.S. and F.S.A.
Robert Smirke, Esq., R.A.	C. Landseer, Esq., A.R.A.
Benjamin Bond Cabbell, Esq., F.R.S. and F.S.A.	Lewis Pocock, Esq., F.S.A.
John Young, Esq.	C. R. Elliston, Esq., Sec.

There will be 350 chances for these Prizes. The first drawn name will have the Picture, and the last drawn name will have this Matchless Copy of the HOLY BIBLE.

The chances are to be obtained thus:—Any person who purchases prints to the amount of ten guineas, becomes entitled to a chance in the above scheme; so that subscribers obtain in the first instance the full value for their money—with the possibility of gaining the above gorgeous prize, or the splendid historical painting, for nothing.

Amongst the large and valuable stock of celebrated engravings from which selections may be made, to the amount of ten guineas, are 'Landseer's Pillage and Destruction of Basing House,' 'Hayter's Interior of the House of Lords,' and his 'Trial of Lord William Russell,' 'Devil's 'Magna Charta,' Leslie's 'Lady Jane Grey Refusing the Crown,' &c. &c. &c.

As a large portion of the Chances are already taken, Mrs. PARKES takes this opportunity of reminding those who intend to obtain a Chance in the above Scheme, and are particular in the choice of their Engravings, that the Prints are delivered immediately on the name being entered, and that of some of the Engravings but few of the early Impressions remain.

For further particulars, and for permission to view the Prizes and Specimens of the Plates, application may be made to Mrs. PARKES, 22, Golden-square.

## PERIODICAL WORKS

PUBLISHED BY

GRATTAN AND GILBERT,

51, PATERNOSTER-ROW,

Map Agents, by Appointment, to Her Majesty's Board of Ordnance.

Just published, Parts I. and II.. price 1s. each, to be completed in Fourteen Monthly Parts, illustrated by 120 fine Engravings,

## GILBERT'S SPLENDID PICTORIAL

EDITION OF

## BUNYAN'S PILGRIM'S PROGRESS,

With COPIOUS NOTES and LIFE.

Just published, Parts I. to VII. price 6d. each, **PRIOR'S DRAWING BOOK,** FOR THE USE OF STUDENTS WHO ARE UNABLE TO OBTAIN THE ASSISTANCE OF A MASTER;

Containing four large quarto pages of Examples, selected with the greatest care, and forming, in connexion with each other, a regular Series of Drawings showing the progress of the art, from the simplest to the most elaborate form.

EACH NUMBER WILL ALSO INCLUDE

TWO PAGES OF INSTRUCTION,

Having direct reference to the Examples contained in the accompanying Engravings, pointing out to the young artist the best method of proceeding, and rendering the aid of an instructor unnecessary, thus placing this delightful art within the reach of all who are willing to bestow a little time and attention on its acquirement.

Part I., price only 2s., to be completed in Ten Monthly Parts,

## PRIOR'S VIEWS OF SHIPPING,

OR

## NAUTICAL DRAWING BOOK.

Each Part will contain Three large Drawings (size 20 inches by 13), and descriptive Letter-press. Part I. contains 'The President Steam Ship in a Storm,' 'The Merchant Trader,' and 'The Convict Hulk.'

The extraordinary demand the Publishers have received for these Works by Mr. Prior sufficiently proves how much such works, at a reasonable price, were needed by the Public.

## GILBERT'S MODERN ATLAS of the EARTH.

This cheap and highly approved Work will be completed in August. The price, including the Sixty Maps, with the descriptive letter-press (equal to 720 pages of an ordinary 8vo. vol.), by ROBERT MUDIE, and the alphabetical consulting Index of nearly 60,000 places, with their latitude and longitude, and the No. of the Map in which they are to be found, will be £2 17s., strongly bound in cloth; or half-bound Turkey morocco extra, £3 3s. An edition, without the Index, price £2 10s., in cloth; or £2 15s., half Turkey morocco extra. The Work will continue to be kept on sale, in Monthly Parts.

\* \* A Catalogue, gratis, and post free, of G. and G.'s other Publications, including the Ordnance Survey of England and Wales, with a complete list of all the Periodical Publications, may be had on application.

## BY ROYAL LETTERS PATENT.

**THE DAGUERRETYPE**, 89, High Holborn. CLAUDET and HOUGHTON beg to announce to the amateurs of this wonderful discovery, that they are now enabled to supply all persons wishing to use the invention for amusement or experiment, with complete Apparatus, Prepared Plates, &c., &c., at a very moderate price. They have on hand for sale the finest COLLECTION OF VIEWS obtained by the DAGUERRETYPE, of some of the most remarkable places and monuments in the world, figures from the living model, &c., from 10s. 6d. and upwards, at CLAUDET and HOUGHTON'S Glass Shade and Window Glass Warehouse, 89, High Holborn.

## IMPORTANT SALE OF PICTURES, FROM THE COLLECTION OF

## HIS R. H. THE DUKE OF LUCCA.

**M**R. PHILLIPS has the honour of announcing to the Nobility, Gentry, and Amateurs of Painting, that he has received directions to SELL by AUCTION, at his Great Room, 73, New Bond-street, on Saturday, the 5th of June, at Two o'clock precisely, the Pictures above referred to—in particular,

1. LA MADONNA DEI CANDELLABRI, by RAPHAEL D'URBINO. A picture well known in the world of art, as having passed from the Prince Borghese to the collection of Lucien Buonaparte, in whose possession it was engraved.

2. THE NOLI ME TANGERE, by FREDERICO BAROCCIO. The celebrated picture which has been so beautifully engraved by Raphael Morghen.

3. THE CAPITAL PICTURE by DOMENICHINO, which belonged to the Prince Beaumont, and was afterwards transferred to the Lucca Gallery—representing the Transporting the SANTA CASA DE LORETTO.

4. MICHAEL ANGELO.—CHRIST ON THE CROSS, attended by the VIRGIN and St. JOHN. The celebrated picture of the Palazzo Borghese, which was considered as the only original painting in oil by that master which existed in Rome; it passed afterwards into the gallery of Lucien, in whose possession it was engraved.

5. NICHOLAS POUSSIN.—LE MASSACRE DES INNOCENS. This very celebrated picture also belonged to the Borghese, and was purchased by Lucien out of that collection; it is known, from the engravings of it, to all connoisseurs.

6. ANNIBAL CARRACCI.—THE MADONNA AND CHILD, attended by SAINTS. A grand altarpiece: formerly in the Convent of St. Giovanetto, of Lucca.

7. ANDREA DEL SARTO.—THE REPOSE IN EGYPT. Purchased from the family of Bracci Zanobi, of Florence.

8. PIETRO PERUGINO.—THE VIRGIN AND INFANT, with two SAINTS. From the Church of St. Jerome, of Lucca.

To these and other Pictures of the Lucca Collection, well known in Italy, a few Pictures of great merit and consequence will be found in the Catalogue, originally in the collection of Lucien Buonaparte, and other important collections; among which are—

RAPHAEL D'URBINO.—THE CREATION. This brilliant picture was painted by Raphael for the family of Buonocorsio Perini, of Florence, during his first visit to that city, and being then only eighteen years of age, was assisted in its execution by his friend, Il Terate Bartolomeo di San Marco. It is the picture where Lanzi states that he borrowed his Adam and Eve from the previous design of Masaccio; the figure of Adam is the portrait of Raphael himself, and was probably painted by Il Terate. The late James Irvine, of Rome, the most intelligent connoisseur of his time, considered this picture to be one of the most interesting and genuine works of this great master. Its history is fully given in "The Memoirs of Painting."

THE CELEBRATED PICTURE by SEBAST. DEL PIOMBO, of CHRIST CARRYING HIS CROSS. From the Casa Calderara, of Milan, which is now being engraved by Toschi, of Parma.

THE CHASTE SUSANNAH, by GUIDO; engraved in the collection of Lucien Buonaparte. A picture of great power and beauty, full of character, and of the finest execution of the master.

THE ST. CECILIA attended by ANGELS, by DOMENICHINO. Originally in the Cambiasio Palace, at Genoa.

THE BECKFORD CLAUDE. Originally painted for the Spada Palace, at Rome. No. 194 in the Liber Veritatis.

THE BECKFORD JAN STEEN, representing the FAMILY of the Artist.—One of his finest works.

THE CAPITAL PICTURE by BACKHUYSEN, representing Dutch Men of War coming to Anchor off the Brille. Considered by all marine painters to be the finest work of the master in this country.

Together with other fine examples of the ITALIAN, SPANISH, DUTCH, and FLEMISH SCHOOLS.

Which will be found fully particularized in the Catalogue. The Collection will be on View Three Days previous to the Sale, at Mr. PHILLIPS'S Great Room, where Catalogues may be obtained.

73, New Bond-street, May 3, 1841.

## THE ART-UNION.

LONDON, JUNE 1, 1841.

## ON VEHICLES FOR PAINTING.

SIR,—You offer very little encouragement to add another word to what has appeared in the ART-UNION upon the subject of Vehicles. Yet the very reason you give, that, "as yet not much good has proceeded out of it" (the discussion), is the very inducement with me for resuming the subject. I would wish this very important matter to be treated of, till something good does proceed out of it. It is one that must expect to encounter contrariety of opinions, from the habits of painters—from the peculiar handling, which certain vehicles in use have rendered necessary—the different manners of working of artists; and, above all, from a bigotry arising out of an entire ignorance of the real question. Allow me then space in your ART-UNION to offer a preliminary summary of the History of Painting in Oil, which, though very easily obtained, is, I am persuaded, by the greater number of artists, unknown; and by others misapprehended, chiefly owing to the unwarrantable assertions and assumptions in recent publications, which have unfortunately come forth to the public with a dangerous authority, too hastily given, and used without hesitation. I would more particularly allude to the posthumous work of Mérimée, translated by Mr. Sarsfield Taylor. If the assertions in that work rested upon the proof of experiments, the details of which were laid down, there would have been a test to apply to them. That is not the case; and the real object of the work, to recommend the mixing of varnish with the colours is so evidently a preconceived notion in the author's mind, that he makes everything bow to it; and by most singular mistranslations and omissions of easily-known facts, jumps to his conclusion; and, as it appears frequently, in a most whimsical manner. I do not here say, that he is not right in his conjecture, but let it be conjecture only; I would only desire a point, so material to the durability of pictures and the future fame of artists, to be ascertained by every possible test: and, now it is time that our improvement in chemical knowledge should be brought to bear upon it. This I fear will not be the case as long as you and your readers consider it a wearisome subject. Before, however, proceeding to show, as briefly as I can, the state of the case of the invention of "Painting in Oil," lest there be some who will read no further, permit me, as the first who recommended the starch medium, *for trial only*, not presuming to assert that it was the best of all possible mediums, to mention a method of preparing it, that may remove some of the objections of your correspondents; I am happy, however, to learn that there are some who have found it answer. It is very easy for any one to modify it according to his own method of practice. The following mode of preparing it is effectual. I reduce to a very fine powder sugar of lead and borax, as much sugar of lead as may be necessary to render the oil a good dryer—about a table-spoonful and a half of the borax to a quarter of a pint of oil. The sugar of lead and borax I mix well together, and put into the pipkin with the oil, and stir continually over the fire; the borax will swell and froth on the top of the oil, care should therefore be taken to have the pipkin large. When the froth has subsided, after much boiling, the oil has probably taken up sufficient of the borax for the after purpose; but as the borax, if there be any negligence in the stirring, will settle in lumps in a calcined state at the bottom, it may be advisable to take them out and grind them, with a muller, and return them, and stir till there be no

appearances of such settlement. The oil is then ready for use, either cold or warm. Then you may apply the starch, in equal or other proportions, as you wish to use your medium; and when you wish to prepare it (thick or thin). I have found good thick starch, especially when warm, jelly instantly with the oil so prepared, requiring very little mixing together with the spatula. I will only say this of the medium, that for some uses it is very effective and pleasant, and offers great facilities; and if it be true as asserted, that the Venetian Painters got in their subjects with size, and then glazed over them, it is possible that this, or something like it, may have been their size; at least there is this good in it, that it is one which will bear out, and not wash off with water. Nor do I say that such is the best method of preparing it, or even the proper quantities of the substances. It is extremely probable that the same may be effected without boiling the oil; and previously calcined borax may be preferable, or fused borax may be better still, or a glass made in a crucible of sugar of lead and borax. This starch medium, or rather the starch, may be superseded by something better; I think the borax may not be omitted, and I have reasons, which it may not now be proper to trouble you with, for thinking that borax did form a component part in the invention of Van Eyck.

There is no account given by any writer of Van Eyck's process—there is no account of any actual process used by any painter of any good date. And it may be taken as a fact, and a startling one it is, that Van Eyck's process is lost; for it is admitted that the pictures of Van Eyck are still in a better state, as to hardness and brilliancy, than subsequent works; and that pictures of the last century particularly, are not in any good state at all. To whom must we refer for the statement of Van Eyck's discovery. To Vasari? It is upon his authority that the fame of the inventor rests, and doubtless the authority is sufficient—himself a painter, born very shortly after the death of Raffaele, living in the very glory of Art—some-what more than a century after the discovery was made by John Van Eyck, of Bruges. It is so very certainly ascertained, that *even pictures* were painted in oil ages before Van Eyck, that it is needless to go deeply into a proof of the matter, which is so manifest and undeniable, that Walpole was inclined to think that Van Eyck must have received the process from England, where it had been practised. It had been likewise in use in Germany, and in Naples, as is fully stated by Lanzi; but the process was decidedly inferior to that in general use in Italy, as the existing specimens of the Italian painters before the discovery now sufficiently testify: they are so much more brilliant, and even better preserved than pictures painted in oil only, during the last century, that no one can hesitate to say, that if the discovery of Van Eyck was no other than our common painting in oil, it was one of no value, for it is no improvement upon the previous method. We undoubtedly have the recipe of Theophilus, of the tenth century, for painting in oil; but we want not even his testimony to a fact, that any one, by an hour's inquiry directed to this subject, will so easily find established to his hand. Van Eyck's process was such as rendered the colours more brilliant and hard; and, probably, offered greater facility of execution than any other method, not to say of oil, which must have been in disuse, as having none of these qualities, but more than any which did possess in a degree these advantages.

It appears that the ancient Greek method had been lost; that the method adopted by Greek painters in Italy, probably altered from the ancient, of which, says Lanzi, they were the heir, had been lost. Lanzi considers it would be a most valuable discovery to ascertain what gums and colours the Greek painter in Italy used; and he speaks with admiration of a 'Madonna,' in the Medicean Museum, by Andreas Rizzo de Candia, of its freshness, vividness of colour, and brilliancy, above that of any modern work. Of its hardness and consistence he says, "Ed e sodo in guisa, e compatto, che tentato col ferro non si dilegua; si distacca anzi, e ne schizzano quasi minute squame!" Lanzi further asserts that it would not be superfluous to examine into that "solid, fused, or melted, and lucid colouring," "quel colorito, solido fuso, lucente," which distinguished the works of the painters of Lombardy and Venice, and chiefly Correggio. But

to return to Van Eyck. The account given by Vasari of his discovery is this—that having exposed a picture to the sun, it cracked; and, to remedy this inconvenience, being "filosofo e filologo a sufficienza," he began experiments upon oils which should "*dry of themselves*," without exposure to the sun; and that, by adding "his other mixtures, he made the varnish which, when dry, is not injured by water; which heightens the colours and makes them lucid, and unites them wondrously." That this discovery was made about the year 1410. Antonello da Messina having seen some pictures of Van Eyck, brought from Flanders to Alphonzo I., King of Naples, was so astonished at their brilliancy that he journeyed to Flanders on purpose to obtain the secret from Van Eyck. In this he succeeded; and in gratitude remained in Flanders and worked with Van Eyck till the death of the discoverer, when he went to Venice, where he communicated the secret to his friend Domenico—"Domenico Veneziano." This Domenico, after having prosecuted the art at Loreto, and other places in the Ecclesiastical States, went to Florence. There, being in high estimation, and particularly admired by Andrea del Castagno, he imparted to him the secret he had learned from Antonello; but Andrea del Castagno, from his treachery called "The Infamous," out of envy of the admiration bestowed upon the works of Domenico; and, that he alone might possess the secret, stabbed his benefactor at a corner of a street and escaped unobserved to his own house, and sat down composedly to work; and shortly, for they lived together, Domenico was conveyed home to die in the arms of his murderer. This Andrea, through remorse, disclosed upon his death-bed.

Theophilus, a monk of the tenth century, has given a recipe, accurately detailed, for painting; likewise for a varnish of linseed oil, and "Gummi, fornus, quod Romana Glassa vocatur," which is called Roman Glass; not called by the Romans glass, as in Mérimée, and which that author whimsically concludes to be copal; showing, at the same time, by his account of its consistence, that it could not well be; and he strangely mistranslates the passage, to make it appear that this copal was mixed with the paint in painting pictures, though in another place he discards the authority of Theophilus as not extending to pictures at all. "Pictures prepared with this varnish are brilliant, and remain without any alteration." The words of Theophilus are "*Hoc glutine omnis pictura super linita lucida fit et decora ac omnino durabilis.*" "Every picture, smeared over with this gluten, becomes lucid and beautiful, and altogether durable." Then he mistranslates the other passage of Theophilus, asserting, too, that "he does not any where give advice to apply oil-painting to pictures." He does not *give advice*, but he certainly speaks of the practice; and if not pictures in oil, what did they varnish with the compound? He (Theophilus) says, the second layer of colour must not be laid on till the first is dry; "*Quod in imaginibus diuturnum et tediosum nimium est.*" "which, in painting portraits, is too slow and too tedious;" not, as translated in Mérimée's work, "such a method would be too slow and too laborious for painting pictures." There is no *would* be, but *is*; and I take "*imaginibus*" to mean portraits, in which sense the word has been transferred into the Italian and so used, as by Bellori and others. Now, certainly such a process is too slow and tedious, both for painter and sitter; but it by no means follows that other pictures were not painted with it—they assuredly were. I have somewhat to say of this recipe of Theophilus, and his "Glassa Romana," which at present I omit, proceeding to the treatise of Cennino Cennini, "Upon Grinding Colours in Oil," written in 1437; and as it has been supposed Domenico had not yet arrived with the secret, Vasari, who quotes the treatise, has been by some thought to contradict himself in ascribing the invention to Van Eyck, whereas it is evidently no contradiction at all; for he does not speak of one and the same thing. Van Eyck's was the only perfect method described in its effects; but, supposing Cennini's to have been the same, there was time from 1410 to 1437 for it to have reached the writer of the treatise. Lanzi treats this matter very fairly and concisely; he consulted the treatise of Andrea Cennino Cennini, and finds that he speaks of baking, "*cocendo*," linseed oil, but he did not, as Lanzi judiciously observes, add to it "those other mixtures,"

by which Van Eyck's process was rendered so perfect. Vasari asserts, that "John of Bruges found, after many experiments, that linseed and nut oils were the most drying; these then, boiled with other his mixtures, made the varnish which he, and moreover all the painters in the world, had long desired." "If long desired," adds Lanzi, "there must have been attempts to make it perfect, in which alone Van Eyck succeeded." "Gio. da Bruges dopo molte esperienze trovo che l'olio de lino e quello de noce erano i piu seccativi. Questi dunque bolliti con altre sue misture gli fecero la vernice, ch'egli, anzi tutt'i pittori del Mondo aveano lungamente desiderata;" of which again he says, "Quella perfetta, che secca non teme acqua, che accende i colori e gli fa lucidi, e gli unisce mirabilmente;" "that perfect medium (for the word varnish, it is agreed, means medium), which dry does not fear water, heightens the colours, makes them luminous, and wondrously unites them." That this vehicle or medium, discovered by Van Eyck, was modified by different painters of eminence their works clearly show; by none was it, perhaps, used in greater perfection than by Correggio. His works show a medium answering exactly to this description of the invention given by Vasari. In the absence of precise chemical experiments it is pardonable in Mérimée, with his prejudice in favour of copal varnish, to have fancied it to exist wherever he looked for it; but while he furnishes no better proof than from Armenini, who, he says "in 1587, advised the mixing of resinous substances with the oils in the colouring materials, and even in the preparation of the ground;" and Lariesse, who in fact is no authority at all, as not the author of the treatise under his name, and who lived at a period when the good old method was evidently in neglect, it will be very dangerous to take the practice upon trust, without examining his authorities; and perhaps it will be found they are not worth much; for in fact Armenini only recommends the glazing with *certain* colours, as verdigris, yellow lake, and lake, staining the varnish; as with regard to verdigris does Leonardi da Vinci; for he says if not varnished over it would evaporate, but even then "common varnish" may have been oil only, such as Leonardi da Vinci speaks of, thickened in the sun for a varnish. And the mention of these colours shows the exception of others; yet even here Mérimée misquotes his authority—"He strongly advises that it should be mixed, not only with the colours used for glazing, but also in those of the general painting." Now he says in fact (for the Italian is given in a note), quite the contrary, for he speaks only of glazing of verdigris and yellow lake, the latter evidently merely to colour the varnish, "Con veridame un poco di vernice commune e di giallo santo." So, in another place, Armenini speaks of "Mastice bianco e lustro," and that some use it, oil impregnated with it, with the azures and lakes: he adds, and with other such like colours, but says nothing of the general mixing; and Armenini himself can scarcely (1580) be said to be authority for the better practice of the fifteenth century. But it is very strange indeed that the Institute of France should have drawn up a report so favourable to M. Mérimée's process upon so slight grounds. There is one authority of great weight against this process of mixing varnish with the colours—Tingry. This celebrated professor of chemistry may be fairly admitted as evidence of the chemical effects upon pigments. He says, "the English painters, too anxious to receive the fruits of their composition, neglect these precautions; several artists even paint in varnish, and apply it with the colours. This precipitate method gives brilliancy to their compositions at the very moment of their being finished, but their lustre is temporary and of short duration: it renders it impossible for them to clean their paintings, which are besides liable to crack and lose their colour. In a word, it is not uncommon to see an artist survive his works, and to have nothing to expect from society." Mérimée indeed, takes no notice of this important passage of the Genevan professor, but passes him by with regret that he did not direct his attention to painting in its higher art! Now, the very effects which Tingry speaks of have been produced by his process: our painters, for a century back, are a lamentable proof of it. Mérimée regrets Sir Joshua Reynolds, who used varnishes with his paints, did

not leave documents of his process behind him; we know that he has left his works, or what is left of them, and if they convey no precept, they carry with them a strong warning. If the old masters used varnish at all in their work it is probable it was only in the glazing, and with very few of their colours, verdigris and lake; that is, they may have varnished with a coloured varnish, and it is still probable that varnish was not what we call varnish, gums. That the body of their pictures was so painted I cannot believe; their works have not the appearance of it, for the use of varnish with the pigments, even where the work is most brilliant, or, rather lucid, has the effect of unsubstantial flimsiness, very unlike the luminous and vigorous impasto of former days. Even if it be, or could be, proved that the best old masters used copal as one of their mixtures, there must have been other mixtures with it, much more important for the real brilliancy and durability: "Altre sue misture," as Vasari says, in describing Van Eyck's process. Let me a moment revert to the account. There is no reason to doubt the truth of the story of the "Infamous Andrea del Castagno." There seems, however, to be some error, or probable error, with regard to dates. Van Eyck's discovery was "about" 1410, generally put down at that year. In Pilkington I find that Antonello da Messina, who was so struck with admiration of the new process, that he went to Flanders to prevail upon the inventor to impart to him the secret, must have taken his journey at fifteen years of age, or probably earlier; for he is said to have worked with Van Eyck, and not to have quitted Flanders till his benefactor's death: and Van Eyck died in 1441, and Antonello da Messina was born 1426—only fifteen years between the birth of one and death of the other; and Van Eyck's discovery had been made sixteen years before the birth of Antonello. It is certainly possible that he may have gone to Flanders very young; but scarcely probable that at so early an age he should either have sufficiently appreciated the new process, or have been able to have undertaken the journey. Again, Lanzi says, that Andrea del Castagno "lived in the time the discovery of the secret became known." "Viveva a tempe che trovati il segreto del dipingere a olio comincievano a diffondersi per l'Italia." By which it would appear, that as Andrea was born 1409, one year only before the discovery, the process was many years making its way; and in that all accounts seem to agree. We certainly cannot entirely depend upon dates in the lives of painters. I have seen an exquisitely painted picture of Ruysdael, with name and date upon it; and, according to the dictionary, he could not have exceeded his twelfth year when it was painted. Still there is no reason to doubt the accuracy of the account given by Vasari, because independently of persons, he speaks of a thing known to have been discovered, and differing from all former processes.

Is there any one, who can be considered a competent judge, who doubts if Titian and Correggio, Raffaele, Fra. Bartolomeo, used a better vehicle than painters of the last century? If this be acknowledged, a great point is gained; for attention must be directed to rediscover what they did use. Surely we need not boast of our improvements in chemical knowledge, if that secret remain much longer undiscovered. One observation may here be made, that either the old masters took great pains in the preparation of their colours and medium, or did the work in their own homes, that their method might not be universally known. There are many pictures representing painters at work; and you are almost sure to see persons in the back ground preparing the colours or medium. I well remember one of Ostade's, exhibited a few years ago at the British Institution. There is a print of one from the Dresden collection. There was a caricature of a painter as a monkey, by Teniers, in which the process of preparing was going on in the same manner. It is very evident the painters then knew something about the paints and oils, &c., they used. Now, all trust to the colour-maker; their colours come in bladders, ready mixed, they know not with what oil; while, probably they use as a vehicle another oil of a different character, and add, in unequal proportions, as particular use may require, their varnishes,

which never properly amalgamate with either oils; and the consequences are, and will be, what they have been. Another observation upon the medium of the Old Masters may not be unimportant. Whatever they used, they appear all to have used the same, varying only perhaps in a trifling degree in the proportions of the "altre sue misture." It is recognized at once in their works—it is known by picture cleaners, by the chemical solvents that affect or do not affect the pictures under their hands: whereas now the very multiplicity of recipes of varnishes of all kinds, megillups, and gumptions, not only show a want of unity in professors, but an unsatisfactory looking after that *something else*, just as it is described by Vasari, that before Van Eyck's time "all the painters of the world" were looking after something they had not, till the discovery, in 1410, gave them that perfect medium. And then, when they had it, they cherished it, kept it as they could secret; one learning it from another—for we read of all the Old Masters being at one time under instructors; and they burst into that blaze and glory of Art which has given to the world inestimable treasures. And hence it is undoubtedly that, perhaps but a few hours work, from the hands of Raffaele, Titian, Correggio, will produce thousands, and command princely competition.

It is extraordinary, that while picture cleaners are well aware of the difference in the substances of old and modern vehicles, artists alone deny it. Many deny it openly, however, who secretly try all experiments; who has not occasionally met with instances of this little jealousy amongst modern painters. How many artists do we find who affect to depreciate the works of the greatest Old Masters; as if thereby they would raise their own? whereas the very jealousy, as it is inconsistent with true greatness, so must it subtract from the genius of those who are under its influence. They cannot see that supereminently beautiful texture, brilliancy, and as it were, jewellery of the old vehicle, which is yet, to other eyes, a distinct thing, *sui generis*, unapproached by any more modern attempt. There are in it two distinguishing marks. The paint of a good period never separates—it never cracks, otherwise than in hair or spider-thread lines, which perhaps are rather from the grounds than the super-laid paint. Mérimée and others say that, with the use of gum, if care be taken, separations will not take place. Very likely; but there were careless painters, doubtless, in the old time, and we do not see that such consequences ever took place; the inference is fair that they had another, and a preserving medium. Many old pictures may be shown, much cracked, in proof against this assertion, but those parts have been unfairly treated; they have been mended, and it is the new that has cracked. You may be pretty sure that if you see gashes in a so-called "old picture," it is not an original; or not an original in those parts where the gashes appear. But there is another extraordinary thing in their pigments; if subjected to the blow-pipe they fuse, vitrify—not only those parts where white lead has been used, but taken from any part. I have seen pictures put to this test, and it was so. Now, this is very remarkable, and may lead to a re-discovery most valuable. It is, therefore, worth while to prosecute inquiries in this line; and doing so we may perhaps find a medium that may be the same as that used by Titian and Correggio; or we may find one that will be so similar as to produce the same effects. I will venture a conjecture upon the subject; and, without wishing to be too confident, I would entreat Artists to try some easily-made experiments in the line in which I may direct them: and I do so the more urgently because I have no merit due to, or to be claimed by, me; but, believing that something may be offered better than gumptions and megillups, which shall produce more brilliancy and more durability than the present methods, I will proceed to state all I know upon the subject, and how I came to direct my attention to it; and this I will do, Sir, in a subsequent number of your ART-UNION, hoping that this will engage the attention of all artists whose great concern it is to establish what is perfect.

J. E.

## THE ROYAL ACADEMY.\*

THE EXHIBITION—1841.

THE SEVENTY-THIRD.

No. 539. 'The Trial of Effie Deans,' R. S. Lauder. A work of the highest merit, that cannot fail to place the producer of it in the foremost rank of fame. It is in all respects admirable—whether we regard the originality and boldness of the arrangement, the fine finish of the several parts, the skilful grouping, or the masterly completion of it as a whole. It was indeed a perilous experiment, and one that, as it is fully successful, greatly enhances the value of the performance—to place two lawyers with their unpicturesque habiliments directly in front, and, so, working up the other materials of the composition to them. The only faulty part is the portrait of Effie Deans (that which should have been the best.) She is ill-dressed, not in keeping with her position, and the figure is overstrained. This, however, is "straining at a gnat," for there are so many high qualities in the picture as to make far more than ample amends for a defect. We have watched the progress of the artist with great approbation, but with some anxiety; and at one time we were apprehensive he might fall into the extreme of delicacy—his subject from the Bride of Lammermoor inducing such a notion; but he has here come forth with a giant's strength. We may already class him with the most able and eminent of British painters.

No. 554. 'Rousseau and Madame de Warens,' J. B. Walsh. A work of much promise by an artist with whose name we are not acquainted. It manifests a fine and pure taste for the graceful; and is carefully, and with much ability, finished. How much better it would have told, nevertheless, to have given dark drapery to the male figure.

No. 571. 'Venice,' R. M'Innes. A work of very considerable merit; describing the venerable city at the period when it loses its solemn and impressive character, and becomes—

"The pleasant place of all festivity."

The characters—and a great number of them are introduced—are skilfully grouped and ably painted; the picture possesses many admirable qualities, and does honour to the Scottish school.

The room for "DRAWINGS AND MINIATURES" is by no means exclusively devoted to examples in these styles of the art; on the contrary, it contains a large number of oil paintings, and among them are some of nearly as high merit as any in the whole exhibition. We must, therefore, direct the especial attention of our readers to this apartment; as they enter it let them look upwards, and direct the eye along the line about 10 feet from the floor, and within two feet from the ceiling; they will see—but they must look closely—five or six works by artists, known to, and deserving of, fame, placed side by side, as if for the purpose of avoiding the chance of being inspected, so as to render service to their producers. They stand thus:—MÜLLER, TOWNSEND, COOKE, FRITH, WILSON, to say nothing of very creditable specimens from the pencils of Butland, Priest, and Tanneur, "clapped in" among them. Just over the door that leads to the great room, is an exceedingly clever work of the best class, by H. Le Jeune—the artist who obtained a gold medal from the Royal Academy some two years ago; and on precisely the same line, but on the south and west walls of the chamber, are excellent productions by G. E. Hering, P. F. Poole, J. Z. Bell, J. W. Carmichael, W. L. Leitch, G. W. Shephard, and another by J. Müller. We can attribute this lamentable display to but one cause—the works were overlooked,

or accidentally put aside, until every other picture—save and except those in the "Architectural-room," to which we shall presently refer—had been hung; and the mistake was not discovered until after the first sheets of the Catalogue had been "at press," when it was found totally impossible to remove pictures of a less valuable character, to make room for so many as have been condemned to oblivion, out of sight, along the walls of this apartment. Either this misfortune—a very ruinous one to the artists—must have happened, or there must have been some cause for it that cannot be, and therefore will not be, explained. To this painful and embarrassing subject we shall again have to allude; we shall first notice the pictures, and then the drawings and miniatures contained in this room.

No. 582. 'Venus Victrix,' H. Le Jeune. A bold and vigorous attempt at the higher style of art. The grouping is good; the figures are true, and carefully and accurately studied—that of the Paphian Queen who receives the gift is especially fine. This work is, as we have stated, hung above the door; it is of the class—and a creditable example of it—which the public is continually complaining meets no patronage in England. Will this be matter of marvel if the leading artists give it no better rank?

No. 609. P. F. Poole. A very beautifully painted work, with qualities of the highest and purest character, with regard both to conception and execution. The visitor will not fail to compare it with another of the same subject in the great room—placed on the line, while this is thrust almost out of sight, above a confusing mass of drawings and miniatures. Mr. Poole is rapidly making his way to the upper bench; let him not be discouraged by the untoward "accident" that may, this year, have marred his hopes—true merit cannot long be kept back. He may be assured of a better place hereafter, and that at no very great distance of time.

No. 630. 'Circassians reconnoitring a Russian Position,' J. Z. Bell. A work of much promise; and bearing evidence of considerable thought and care; it is precisely a picture that we should like to examine nearer.

No. 634. 'H.M.S. Conqueror towing H.M.S. Africa off the Shoals of Trafalgar, three days after the Battle,' J. W. Carmichael. A good example of a good class of art—one that is to England peculiarly "national." It appears to have been very minutely finished; and we have no doubt that the various parts of the picture, from the shattered hull to the torn rigging, are accurately wrought.

No. 639. 'A Ruin in the Campagna of Rome,' W. L. Leitch. A gracefully composed and ably painted picture; one of the best copies we have seen of a peculiar landscape. It has a fine and vigorous tone; and is, we feel assured, carefully made out in all its details. How disheartening it must be to a painter, returning home after, perhaps, years of travel and laborious study, to find his production estimated about as highly as it would have been if he had sent in a piece of stained paper.

No. 659. 'The Prisoner—an incident in the time of Philip and Mary,' J. A. Houston. This, although the subject is not a pleasant one, seems to possess merit of no common order; or, at least, to give good promise of the future. We are not familiar with the artist's name; but have little doubt that we shall hereafter meet his works under more propitious circumstances.

No. 698. 'View between Spoleto and Otricoli,' G. W. Shephard. This, too, we take to be a work of a right good class.

No. 701. 'Convent; Bay of Naples,' J. Müller. Mr. Müller is one of the best of British painters; he has a fine feeling for nature; his mind is evidently of a high order; and his powers to ex-

cute—the result of long study and experience—are second to very few of our living artists. We have seen his works elsewhere; or we should find it impossible to arrive at any such conclusion; his pictures in this room will be passed by, by thousands who come to look only at those that are placed for them to look at; and but that his name must be honourably known to many who can appreciate excellence, the chances would be that the connoisseur would pay to them as little homage as they will receive from the crowd. Let us, however, direct to this production, and to No. 730, 'The Sphinx,' the attention of all visitors of taste and discrimination; they are both finished with care and industry; the one is a peculiarly graceful composition, the other a striking and interesting representation of one of the world's wonders. The artist does not paint to produce broad and glaring effects; his works to be fairly judged must be closely examined; and, perhaps, there is not one of the exhibitors less able to bear a disadvantageous position far removed from the eye. We may not forget, also, that he has been a traveller in very distant lands; carried to them by a pure love of Art—and not by one of those fortuitous circumstances that, now and then, come to the painter's aid and prevent his suffering—perhaps all his life—by the sacrifice of money he has been tempted to make to obtain education. No doubt while Mr. Müller was wandering across the arid sands of the Arabian Desert; enduring "bondage" in the land of Egypt, and suffering privations of all kinds that few of us have the courage to endure voluntarily, he solaced himself in all his trials by the conviction, that he was laying in a store of intellectual wealth—out of which he was to make fame and fortune, if Providence preserved him from the dangers he was compelled, daily, to encounter. It needs no great stretch of fancy to imagine him sustaining patiently innumerable evils because of the hope that was strong within him; he was doing that which few had then done, travelling through a country comparatively new to Art—to bring its treasures home to his own country; his reward was to be—and for such men seldom calculate on any other—that his efforts would be appreciated and recompensed by general acknowledgment and admiration.\* Pity the arbiters of his fate did not consider this when they hung his two pictures, where they are as ineffectual to do him service as if they were covered with the slime of the Nile. They would confer honour upon any collection. He will make his way yet, to the seat, in any assembly, to which he is undoubtedly entitled: neither carelessness, nor ignorance, can long keep him from it.

No. 806. 'The Ballad,' G. H. Townsend. This is No. 2 ('The Sphinx' being No. 1) of the line of excellence, above the mass of miniatures. It is a sweet picture; painted with skill and judgment; but depending for its effect far more upon careful scrutiny than sudden impression. This careful scrutiny it cannot possibly have; and for another year, at least, the artist must be content to have his light hid under—or rather over—"a bushel." Still a little observation (and a little standing on tip-toe) will show the great merit of the work—its delicacy of conception and arrangement, and its high finish.

No. 810. 'Elizabeth Castle, Jersey, from the Causeway, Low Water,' E. W. Cooke. This is No. 3. (as 'The Sphinx' is No. 1., and 'The Ballad' No. 2.) of the same excellent line. It is the production—the only one he has sought to exhibit—of an artist who has gained "golden

\* We do not draw this picture from fancy; in an early number of the ART UNION, Mr. Müller published (immediately after his return) an exciting and very interesting account of his travels in Egypt;—it was written with the modesty that always accompanies true genius; but it was easy to perceive that he had frequently encountered no ordinary dangers, and had been continually subjected to severe privations.

\* Continued from page 80.

opinions" elsewhere; and to whom the Directors of the British Institution recently allotted one of their four prizes. But Mr. Cooke is known to all who know anything of art; his career has been, in all respects, honourable and creditable; the universal voice of the public—including that of the soundest critics and the safest judges—has given him great and enduring fame; his productions evidence industry as well as ability—taste and judgment in selection, and labour and care in execution. As an English landscape painter, in a department essentially English, he is surpassed by very few—if indeed he be surpassed by any. To what unhappy disease of vision in the hangers can we attribute the position he is made to occupy here? If he had contributed to this Exhibition as largely as he does to the British Gallery, it might have been just to have placed some of his works—as this is placed—out of sight; he very prudently sent but one, and he has been emphatically informed that he will hereafter act more prudently if he send none. Yet this—No. 810—gives signs that he really thought as he ought to have thought—that it was his duty as well as his interest to send his best and most carefully painted work to the Exhibition of the Royal Academy. It is, we understand, the property of the Marquis of Westminster; we have no doubt that his lordship will not hang it *quite* so near the ceiling at Eaton Hall, when it leaves its present unhappy place—which, as matter of course, its producer would rejoice to see it do to-morrow.

No. 898. 'The Parting Interview of Leicester and his Countess Amy,' W. P. Frith. This is No. 4 (as 'The Sphinx' is No. 1, 'The Ballad,' No. 2, and 'Elizabeth Castle,' No. 3) of the valuable line. It is a picture of the best class; the production we believe of a young artist, although old enough to have exhibited here on former occasions. He is certainly destined to attract more notice hereafter; for he has the right feeling for his art; *thinks* before he begins to work, and works as if conscious that his fate depended upon the result of his labour. How discouraging, disheartening, and depressing, must have been his feelings on entering the gallery in which his *one* picture is placed!

No. 901. 'Cattle Returning—Composition,' J. Wilson, jun. This is No. 5 (as 'The Sphinx' is No. 1, 'The Ballad,' No. 2, 'Elizabeth Castle,' No. 3, and 'Leicester and Amy,' No. 4), of the excellent line that ranges above the miniatures. It is of a larger size—and a better class—than the works hitherto produced by this young artist—an artist who obtained his reputation (and it is a high one) not by any sudden fit of fashion, but by the production of pictures that gave sure and certain evidence of study in the presence, and under the influence of, Nature. Few of our landscape painters have done so well—none better, at his years.

We have dwelt somewhat minutely upon the works, the placing of which we especially complain off; and we are satisfied to rest our claim to that public confidence, essential to our existence, upon the verdict that will be pronounced upon the case, by all who examine these five pictures with care and attention.

Those who think it gives us pleasure to find fault and urge objections, will be greatly mistaken; our earnest and continual desire is to "be pleased;" but we dare not

"Be pleased we know not why  
And care not wherefore."

The Miniatures we must dismiss somewhat too briefly. Those by Mr. Ross are pre-eminently excellent; one, that of his Royal Highness the Prince Albert, is a chef-d'œuvre of the art. Next in value and importance are those of Mr. Thorburn—vigorous as if painted in oils. No. 779 is a perfect example. Of a high and admirable quality are all the contributions of Mr. Lover; one frame—No. 750—containing two,

are of especial excellence. Miss M. Gilles contributes several of great merit—one 'a Portrait of J. G. Lough, Esq.,' is very boldly and vigorously wrought. No. 672, by Miss A. Cole, is beautiful, simple, graceful, and correct. A boldly and firmly painted head by C. Brocky is No. 776—the original of which is well known, and the likeness will be at once recognised by the thousands by whom he is esteemed and respected. Mr. Robertson contributes many, and all good. Two or three striking and excellently painted portraits, on marble, by "T. Carrick," will claim and merit attention. One of the most ably and carefully wrought works in the collection is No. 894 'Viscountess Milton and her Daughter,' by S. P. Denning. Among the others that demand notice are those of Sir J. W. Newton, Rochard, Mrs. Bartholomew, J. Hayter, and Miss Fanny Corboux.

There are some exquisitely beautiful drawings scattered about the walls; one of 'Children returning from the Festa of St. Antonia,' by T. Uwins, R.A., is an absolute gem; and the fine poetical conceptions of G. Jones, R.A., maintain their supremacy in a style of art in which the accomplished painter is still unapproached. There is a volume of thought in each of them.

Above the Architectural drawings—that is to say as near the roof of the National Gallery as they can be—have been hung several excellent paintings by artists whose names are known, and whose works may consequently be hunted for through the collection. We must ourselves accept as guarantees for their value the previous productions of the painters—who, we must assume, have not gone back in their art, and had no design to insult the Royal Academy by sending into it their inferior productions. In truth, our opinion must be, in a great degree, "by guess;" for the eye is rendered utterly unable to estimate them, in consequence of their ruinous admixture with the straight lines of the architect. Thus only can we judge of—

No. 984. 'Scene from Romeo and Juliet,' A. Egg. We have seen several clever works by this painter in the gallery of "the British Artists."

No. 985. 'As you like it,' N. J. Crowley. We recollect a very finely composed and admirably painted picture by Mr. Crowley in the British Institution two years ago; and we have since examined other productions of his of very great merit.

No. 986. 'Gil Blas,' J. Hollins. Mr. Hollins contributes several works; they are all disadvantageously placed.

No. 988. 'Coming from the Ball,' C. Stonehouse. This appears to be a huge step in advance for Mr. Stonehouse; it is another reading of the picture exhibited last year by Mr. Horsley; and consequently there is in it little originality of design.

No. 999. 'Cornet Joyce seizing the King (Charles 1st) at Holmby,' E. M. Ward. This also is, we have no doubt, a good picture; for the artist is one of great ability, and one who labours hard to work out the conceptions of a strong and original mind.

No. 1008. 'Childhood,' C. W. Cope. Mr. Cope is also a painter who has achieved distinction by the production of many able works from year to year.

No. 1009. 'Campagna di Roma,' G. E. Hering. We are sure this is a clever work both in composition and execution; it is not likely to be inferior to the picture by this artist we noticed in the Gallery of the British Institution.

No. 1045. 'The Young Bird,' J. N. Rhodes. A new name, we believe; and one that we imagine to give good promise.

No. 1068. 'A Scene from the Two Gentlemen of Verona,' J. E. Lauder. A picture of great merit; finely composed and skilfully painted.\*

\* There are, it seems, two artists of this name, R. S. Lauder and J. E. Lauder.

The visitor to the architectural room must look at the collection of models and "Intaglios" placed here; among them will be found some very meritorious examples; those of W. Wyon, R.A., especially; a small wax model of 'Cupid,' No. 1126, is one of the most exquisite gems that has ever been produced; a perfect example of grace and delicacy.

"THE OCTAGON ROOM" contains pictures of high merit sufficient to furnish a moderate exhibition; and several of them would do honour to any collection in Europe; unfortunately the light here is so bad that scarcely one of them can be seen to advantage. We are wearied of complaining that so many artists who deserved better have been pushed aside uncerecermoniously; and we shall not again recur to the subject, except to say that about a dozen of the best works contributed to the Royal Academy have been "shelved" in this dreary cell.

No. 1154. 'The Repose in Egypt,' W. Boxall. The subject—"a Holy Family"—is not happily chosen; genius can give to it no new feature; the picture, moreover, is evidently unfinished; nevertheless it is not unworthy of the accomplished mind that produced it. It is a rich composition in poetry; cherubs watch over the sleeping babe, and the husband reposes beside the virgin mother. There is one spot in the room from which this picture may be examined. Let the visitor go as far as he can to the left, and look upwards.

No. 1159. 'A Veteran of the Old Guard describing one of Napoleon's battles—Interior of a Farrier's shop,' F. Goodall. A work of great interest and manifesting no inconsiderable progress; it is capital both in composition and execution; full of character, and completely telling the story intended to be told. One can almost fancy to hear the words of exultation as well as to see the look of triumph with which the veteran "fights his battles o'er again." The picture has given us much pleasure, as removing some apprehension with regard to this young artist's future career—he has only to guard against completing "orders" too rapidly.

No. 1160. 'The Vineyard,' E. V. Rippingille. A clever composition; but exhibiting that cold and raw tone of colour which the majority of our artists contrive to "pick up" in Italy.

No. 1163. 'Sandwich—Kentish Coast,' J. B. Pyne. Visitors "will be good enough" to stand as near the door as possible and examine this picture—assuredly the best production of an artist who is always effective. The subject has been skilfully selected and very happily treated. It is a rich English landscape; the sea in the back ground; and in the foreground, near a stile and beside a field-pond, is a sweet group of rustic figures.

No. 1165. 'A Forest Scene,' H. Jutsum. A bold and vigorous composition—true to nature, and coloured with great power.

No. 1166. 'Charity—entrance to the Grand Altar of St. Mark, at Venice,' H. O'Neil. A very admirable work, in all respects; accurately and gracefully drawn, and coloured with great brilliancy. It relates a touching incident: aged people, widows, and orphans have gathered round the entrance, kneeling on the steps down which a fair and gentle and generous girl is descending.

No. 1167. 'Scene from Bishopsgate—Windsor Castle in the distance,' C. R. Stanley. A landscape of the best and purest class; firm and vigorous in the fore-ground, and in the back ground amazingly delicate.

No. 1171. 'Portrait of Miss de Rothschild,' F. Grant. A small portrait; but the work of a man of high genius—full of character, expression, and force.

No. 1175. 'Cardinal Wolsey leaving London after his disgrace,' S. West. A fine historical composition, giving evidence of thought, study, and labour—so far we can judge; and if the

characters are given with proportionate truth, the picture may rank among the best of its class in the exhibition. It is one of the order said to be without patronage in Great Britain; and in truth if "the grand style" is to be encouraged neither by patrons nor painters, it can scarcely excite wonder that it should be left exclusively in the hands of dead masters.

No. 1176. 'Sunday Morning,' A. Johnstone. A delicious composition, full of nature and truth; representing a touching scene beside the door of a Scottish cottage on the Sabbath morn—"From scenes like those old Scotia's grandeur springs, That makes her loved at home, revered abroad."

The painter should study colour more than he does; there is a sad variance between his conception and his execution.

No. 1187. 'Exeter, from Exwick Hill, with Ermouth, Topsham, and Powderham, in the distance,' E. Jeffrey. This is in all respects a work of the highest merit—one that has absolutely startled us; for it is the production of an artist, either unknown, or but little known, in the metropolis. Its qualities are all of the best character; we cannot call to mind an instance in which the aspect of a large city has been so skilfully and so happily conveyed—a task of more than ordinary difficulty; the painter generally contenting himself with selecting a morsel of the scene designed to be represented, and calling that "a whole," which is but a small "part." Every portion of this work has been carefully studied, and elaborately finished; although minutely wrought, however, it is executed with remarkable freedom; its high finish being apparent only when it is closely examined. Mr. Jeffrey will not be long a stranger in London; and his works will hereafter receive greater justice. Of all the "new names" in the catalogue this holds out the safest and surest promise of future excellence. On referring to the list of exhibitors, we find that Exeter is his native city, or at least that he resides there; and we are reminded of the many good artists that Devonshire has furnished to the world of Art—Reynolds, Northcote, Eastlake, Prout, Haydon, Hart, Brockedon, &c. &c.

No. 1197. 'The Bay of Baia,' S. Palmer. This also is the production of an artist with whose name we are not familiar. It is a delicious transcript of nature; and manifests a thorough acquaintance with Art.

No. 1209. 'Oberwesel on the Rhine, with the Castle of Sconberg,' H. Gritten, jun. A step in advance for a young artist, whose progress bears out the promise of future excellence he gave some two or three years back. The work has evidence of thought and study; it is in no way slighted; every part seems to have been carefully considered. The distance is especially delicate; but a little additional force in the foreground would have rendered it more effective.

No. 1210. 'A Pastoral,' T. Creswick. A work of large size, and, to the full, worthy the reputation of one of the most deservedly popular landscape painters of the age and country.

No. 1216. 'Andrea del Sarto's First Interview with Lucrezia de Baccio del Fede, whom he afterwards married,' J. Hollins. A fine and vigorous composition finely and brilliantly coloured; and altogether, one of the most striking and interesting works in the gallery.

#### SCULPTURE.

THE SCULPTURE ROOM—a most unsuitable apartment, only a degree better than the old "den" in Somerset-house—contains a collection of works highly honourable to the British school. There is scarcely one of those that aim at a loftier purpose than mere busts can do, which does not reflect credit upon its producer—this is the more creditable when we remember the disadvantages under which the sculptor labours.

That his education is, at all times, costly; and that years may pass before he can achieve the means of procuring the material necessary for the proper pursuit of his profession; even under the most propitious circumstances he must have the disheartening conviction that there are very few by whom the Art can be encouraged—for taste and wealth will not suffice unless the possessor of them has "space" in which to place the productions he may covet. Hitherto, monumental statues and groups have supplied almost the only resource for the British sculptor; the British nation is too poor or too prudent to pay for the memory of its great men more than a thousand pound or two per century, and this means of employing genius is left almost exclusively to private respect and affection. Now and then, indeed, a number of persons subscribe to render homage and honour to some mighty mind; but the less they do so the better if their monies are to be "jobbed" for the purpose of degrading the Arts and disgracing the character of their country. We hope M. Marochetti—the man who is to put to shame all the artists of Great Britain—will visit England in time to peep into this exhibition room; in order that he may himself bear testimony to the taste and judgement as well as patriotism of the Glasgow Committee who have hired him to "do" the Duke.\*

No. 1217. 'Bust, unfinished, of H. R. H. Prince Albert,' E. H. Baily, R.A. A good work; one of the truest and pleasantest copies of the Prince's "most gracious countenance"—and gracious it is, in fact, as well as by courtesy.

\* The more we think over the decision of the "Glasgow Committee," the more we are puzzled to account for it upon any of the principles that govern or direct the minds of honourable men. We say, without hesitation, if it had been demonstrated that we have no sculptor, native of Great Britain, capable of executing the national commission so well as a foreigner, even then a British artist ought to have been employed—for the person to be commemorated, THE CAUSE which it is designed to honour, the example it is intended to convey, the gratitude it is meant to express—are all essentially NATIONAL; and to hire a foreigner to do the work is, perhaps, as atrocious a crime against national honour as was ever perpetrated in any country by any set of men. But to assert that this foreigner is a man of higher genius—judging from what he has produced—than several of our British sculptors, is an utter untruth—a foul libel for which, unhappily, no satisfaction can be obtained; and the more unpardonable because its deleterious influence will be extended not only through our own country, but throughout Europe. "The Committee" will, we hope,

"Mark the marble with their names,"

that they may be handed down with scorn to posterity, as men who, as far as they could do it, rendered England contemptible in the estimation of foreign states. Doing the sort of "duty" that France might have paid Nelson for—if he had made up his mind that English sailors ought to be beaten, and very quietly yielded up his ships to ornament French harbours. Mr. Sheriff Alison is the historian of his Time—we hope he will terminate his chronicle of English triumphs by a record of the event that distinguished England in the month of April 1841. Our only hope, now, is with the Duke of Wellington: there are statues enough of him; we trust he will not permit himself to be monkified by this new candidate for the honour and glory of perpetuating his form and features—so as to make French men marvel hereafter how so poor a looking thing could have contrived to beat them at Waterloo. His Grace is now old; and a very little malice—a slight memory of the hundred fights in which he humbled "the Emperor" and his marshals—a few small exaggerations of his years and bodily weakness—will suffice to make the "Great Captain" appear anything but a hero. What a benefactor may not Marochetti be to France! How vastly will his name be honoured and glorified if he will only show to the grocers and charbonniers of "La garde Nationale" that the victorious Duke was in reality a mean and paltry looking fellow that a blanchisseuse could whip. What a prodigious weapon the sculptor may place in the hands of La Jeune France! What a capital set off against Vittoria and Waterloo!

No. 1218. 'Statue of Henry Bathurst, D.D., late Bishop of Norwich,' Sir F. Chantrey, R.A. Simple and grand; a work of the highest character; deriving no surreptitious aid; but touching to a degree by its eloquent and "gentle dignity."

No. 1219. 'Eve Listening to the Voice,' E. H. Baily, R.A. A repetition of the sculptor's far famed 'Eve at the Fountain;' but, of course, with a new reading of a new passage in the Divine Poet. It is perfectly beautiful—faultless in form; and exquisitely true in expression.

No. 1220. 'Marble Statue of Mrs. Robert Thompson; part of a Monument to be Erected in Great Malvern Church, Worcestershire,' P. Hollins. There are few examples of modern art that surpass this noble and beautiful work; the creation of a fine poetic mind, executed with thorough professional knowledge. The figure of a dying lady is partially rising from the death-couch; the countenance expresses that confiding hope which ever goes, hand in hand, with virtue; it is a statue upon which even strangers would love to look; so full is it of trusting gentleness—triumphing, and not dismayed, by the near approach of eternity. Mr. Hollins has here proved that sculpture may be applied to the most sacred of all purposes—a pleasant memory of the dead—and yet be valued for its interest and importance as a work of art. How immeasurably superior is this delicate and graceful tribute to the almost as expensive heapings of stone upon stone—and then surrounding them with massive pillars of iron—that deface so many of our church-yards.

No. 1221. 'Group of Boys with a Bird's Nest,' H. Cardwell. Accurate and true; a graceful copy from nature.

No. 1222. 'Dorothea—in marble,' J. Bell. We rejoiced to see Mr. Bell's beautiful statue carved in marble; and hope it is destined for some place that will be worthy of it.

No. 1225. 'Ariel,' R. Westmacott, A.R.A. This is an attempt—and a successful one—to combine the imaginative with the actual. The spirit is represented as issuing from the body of the pine tree, that has "gaped to let her out." The artist deserves the highest credit for his effort to step out of the beaten track.

No. 1227. 'The Grandchildren of Byron,' P. Park. A most delicious group; admirably wrought, and composed with exceeding taste, judgment, and skill. Contrasting strongly, in merit as well as in character, with a huge "plaster," by the same artist—intended to be one of five statues for a monument of Lord Nelson, and meant to represent "a warrior possessed of emulation, energy, and resolution"—it will be very difficult to trace either quality in the countenance of the figure, although he certainly stands as if it would be very difficult to knock him down.

No. 1229. 'Model of a Statue of Michael Angelo,' No. 1238. 'Model of a Statue of Raphael,' C. Smith. Two noble works; to be executed in marble for the Marquis of Lansdowne, and to grace his fine seat at Bowood.

No. 1231. 'A basso relievo in marble,' No. 1236. 'Hero and Leander—a basso relievo in marble,' J. Gibson, R.A. Two delicious productions of an artist who is unsurpassed for grace and delicacy; and whose richly poetic mind has given birth to some of the most perfect conceptions of modern Art.

No. 1232. 'Le Monde en repos,' J. De Bay. A sweet idea and very elegantly rendered. A child is blowing a circle in the stream beneath. The work is very fine; and a capital and accurate expression is thrown into the boy's features; at first sight it may appear exaggerated; but it is not so.

No. 1233. 'Poor Little Nell,' E. G. Papworth. A true and touching illustration of a character which the pen of genius has immortalized. It is

wrought with as fine a feeling as the author brought to its development. The able and accomplished sculptor exhibits a loftier effort—and is equally successful; No. 1234. 'The Contention between the Archangel and Satan for the Body of Moses,' is a production of the very highest class, and one that would confer honour upon any school.

No. 1240. 'The Wounded Clorinda,' J. Bell. A most exquisitely wrought statue. The conception of an artist of high genius, and executed with a complete knowledge of the capabilities of the Art. No. 1242. 'Statue of Her Most Gracious Majesty Queen Victoria,' is exceeding graceful; and shows what may be done even with the unpicturesque drapery of modern times.

No. 1242. 'Marble statue of a Nymph coming out of a Bath,' R. J. Wyatt. A graceful and beautiful work.

No. 1244. 'Marble statue of a Girl going to Bathe,' P. Mac Dowell. An exquisite work; full of delicacy and power; a fine and accurate copy of a perfect form.

No. 1248. 'Caractacus before Claudius,' W. C. Marshall. One of the noblest productions of modern times; completely realizing our notions of the old Briton who stood, brave and self-possessed, before the throne of the Cæsars, and redeemed his country from the charge of being barbarian. The work is of the highest order of the Art. We shall rejoice to find it executed in marble.

No. 1249. 'Marble statue of Lady Emily, infant daughter of his Grace the Duke of Beaufort,' W. Behnes. In all respects worthy the reputation of the accomplished sculptor.

No. 1250. 'Unfinished Statue, in marble, of Catherine Sarah Jenner, daughter of John Yeend Bedford, Esq.,' P. Hollins. A delicious work; simple, artless, and natural; the true copy of a sweet model. The attitude given to the figure is remarkably easy and graceful. It is very carefully executed; all the minor details are elaborately wrought; and as a whole it is one of the most successful productions in the collection.

We can proceed no further, for the present at least, with our notice of "The Exhibition." We might fill, and, perhaps, we ought to fill as many more columns, for we have passed over very many works that claim attention—it may be more attention than some to which we have referred. Our readers, however, will believe that we are weary of going over again and again the same ground—a tract less varied to us even than it is to others; for it forms no part of our plan to single out works for the sole purpose of condemning them; and, therefore, we are limited to the degrees of comparison in praise. No style of writing is so easy as "the abusive." And we might point out many who seem to visit an assemblage of the productions of men who labour hard to achieve reputations, and to live by them, with no other purpose than to show how much sarcasm can be compressed into a line. Such a principle is the more cruel, because it is entirely needless and useless. If an artist of high repute manifests an indifference to keep his position, or an artist of small merit is given undue prominence, it becomes a duty to condemn; but what possible good can arise from a habit of sneering at some unpretending or half hidden work, forced into notice by unbecoming insult. We must never lose sight of the fact, that many painters begin their career many degrees below mediocrity: (we saw a few days ago a miserable daub, the early work of an artist, whose present productions command universal praise) and, therefore, that we ought to be continually on our guard not to depress where we may not encourage. Artists are sensitive to a proverb—as all men are, indeed, who work in solitude apart from the world's eye. Critics would be more cautious where

they wound, if they could see how the wound rankles.

Having examined the collection at the Royal Academy for a fifth time, we find no reason to change our opinion as to its relative merits, and say, once more, that it is in all respects satisfactory; that it gives undoubted evidence of safe and sure progress; and that no collection in modern Europe can vie with it for excellence, taken as a whole.

The most irksome part of our duty has been discharged; we have spoken freely, and objected strongly, in reference to the careless manner in which some of the pictures have been hung; still, we are fully aware how many difficulties stand in the way of the hangers; and that some of them, under existing circumstances, cannot be overcome.

We repeat, then, that there is but one way of rendering service to, instead of inflicting injury upon, unprivileged contributors—TO AVOID THE NECESSITY OF PLACING ANY PICTURES IN A PREJUDICIAL POSITION; AND TO EXCLUDE, ALTOGETHER, SUCH AS CANNOT BE SEEN TO THE ADVANTAGE OF THE PRODUCER. What visitor would complain if the whole of the upper line of each room were removed? What artist, who finds his picture there would not be grateful for the permission to take it away? This remedy is undoubtedly easy—at least comparatively easy; but is there not a still better? We think there is. Upon this subject we recently received a very sensible letter from Mr. Pyne, which we gladly publish; and we do think that his plan is at once practicable and calculated to meet the difficulty. We allow him to speak for himself:—

#### PLAN FOR EXHIBITING THE LINE OF AN EXHIBITION.

SIR,—I send you a slight sketch of my mode of extending, to double its length, the line of an Exhibition Room.

As yet I have not searched for any of the objections which may possibly attach to this mode, which, with others on other subjects, must have its shady as well as sunny side; and feel that the object in view, if gained, would be well purchased, even if accompanied by some few objectionable

circumstances. I am not either aware of the dimensions of any of the rooms in London appropriated to the purposes of exhibition; but have here supposed one of 40 feet width and 25 feet height, to where the lantern commences. It will, I think, at once be seen, that the height of the room, connected with the width of the lantern, determines the admissible width and height of the platform; and I think that the proportions here assumed, admit a platform, No. 2, which, both as regards height (5 feet) and distance from the wall (12 feet), allows of the greatest possible facility for seeing everything in a gallery, at the same time keeping its shadows just within those bounds where light becomes necessary. It will be seen, by the lines descending from the right-hand part of the lantern, that the last shadows from the heads of a dense line of spectators, would be thrown no further than the limits of the floor. The great object of this platform is at once to convert the upper portion of the room into "a line" for the larger pictures, and so prevent the possibility of a single head passing before a person occupying a position at the rail. And, by figure 3, it will be found that, while the eye is at a right-angle with a third of the height, he is exactly 10 feet removed from a picture of 10 feet high. The single line, No. 4, shows that (such an inclination being allowed) a painting of 18 feet height may have its centre opposed at a right-angle with the eye, while it receives a light every way favourable to exhibition, and allowing a spectator to contemplate it from a distance equal to its height, as at No. 5, or to advance within 8 feet of the surface, as at No. 6. The very great difficulty, almost impossibility, of seeing a large picture on the line, with a full room, must strike every one; and I cannot but think that, to obviate this, without producing any other inconvenience, is a desideratum of the first magnitude: and if a less distance than 12 feet would serve for the promenade before the present and lower line, it is of course practicable, by reducing the dimensions of the lantern, to advance the platform towards the wall, and perhaps obtain a distance of 5, 6, or 7 feet from the surface of the upper line (see No. 7, 7, 7).

The introduction of the screen in the centre of the platform is more purely suggestive than the other points, which strike me as at once easy in application, and of the greatest value. The interior of the platform could be used, during the term of exhibition, as a store-room for packing-cases.

May 1841.

Yours, &c.

J. B. PYNE.

The suggestion here given may originate improvements; we cordially hope that some practical man will give it his serious consideration; and communicate with us on the subject.

## ART IN THE PROVINCES.

**BRISTOL.**—A society has been formed lately in Bristol and its vicinity, for the promotion of the study of Gothic Architecture, with especial reference to ecclesiastical structures; which present, as is well known, the chief field for instruction and information in the science of Mediæval Architecture; at the same time, the Baronial Edifices of Britain, those noble relics of the genius of our forefathers, are not excluded. We are happy to state, that the plan has received episcopal sanction: whilst many of the clergy, and most of the professional architects have been enrolled members of the infant Association. The hints thrown out in the prospectus of the "Oxford Society for the promoting the Study of Gothic Architecture," have proved the immediate cause of its origin. And, since the scarcity of records have, in modern times, been the chief obstacle to the correct dissemination of the true principles of the Architecture of the Middle Ages, the style confessedly best adapted for ecclesiastical erections in our northern climate, the British Society turn their attention mainly to the collection of minute surveys and descriptions of the noble buildings with which their immediate district abounds. At a time when so many new churches are fast rising in our favoured land, particularly in the suburban parishes of her large cities, the subject of Gothic Architecture becomes necessarily one of considerable interest and importance. And since the objects of the Bristol Local Association, in common with the parent societies of Oxford and Cambridge, is to diffuse correct information upon the subject; to improve the national taste by reverting to the acknowledged excellencies of ancient models: and to prevent, as far as possible, the repetition of the anomalous erections, and the barbarous mutilations of the last two centuries, we cannot but cordially wish for its success, and hold up its design for imitation.

**BIRMINGHAM.**—SOCIETY OF ARTS.—The annual general meeting of the subscribers has been held at the Society's buildings, in New-street. In moving the adoption of the report, the Rev. James Prince Lee made some eloquent remarks on the good the Society had already effected, and the further benefit that might be expected to result from the vigorous prosecution of its objects. The attention the subject of Art had received, not only in this town, but also recently in Parliament, was a proof that public attention was awakened to its importance, and that the time was come for this Society to exert itself with even increased energy. The motion was seconded by Francis Clark, Esq., who cordially concurred in the observations of the preceding speaker, and assured the subscribers, that plans were nearly matured for such an extension of the academical department, as would be at once a fulfilment of the purposes of the founders, and adequate to those exigencies of our artisans which the Fine Arts are capable of supplying in Birmingham manufactures. The honorary secretary, J. W. Unett, Esq., tendered his resignation, after a term of service of the long duration of 20 years, and received from the assembled subscribers the expression of their reluctance to part with so valued a functionary, and the cordial and unanimous expression of their gratitude to him for his anxious solicitude for the Society's welfare, and his unremitting and devoted attention to its interests. Mr. Unett, in very complimentary terms, proposed Mr. Gutteridge as his successor, which being adopted, and suitable acknowledgments made to various benefactors, the meeting elected, by an unanimous vote, Lord Wenlock president for the current year. We extract a few passages from the report:—

"With respect to the late exhibition your committees have the pleasure of reporting that it proved attractive almost beyond example. Pronounced by the public voice to have been never exceeded, if equalled, in this town in the high order and variety of talent it displayed, they cannot but impute its excellence in part to the step they took in offering a premium of £50 for the express purpose of encouraging meritorious performance. This prize your committees awarded to Mr. Sidney Cooper, whose *Cattle Piece*, marked by uncommon skill of composition and execution, places him very eminent in this class of painters. It is, however, but justice to many exhibitors whose works evinced the highest order of merit, to state, that your committees, acting upon approved precedent, made such regulations, as while they left the competi-

tion open to all, yet enabled those artists who had attained the first rank in their profession to enrich the collection with their works, and at the same time generously to forego a reward intended in a more especial manner for their rising brethren.

"It is highly gratifying to state that this exhibition received, in the unprecedented number of persons who visited it, the most unequivocal testimony of popular favour; and that it contributed, especially through the reduction of charge for admission the last three weeks of the season, to the extension of that love of the Fine Arts which opens to the middle and humbler classes a source at once of agreeable recreation and mental improvement.

"Among other successes attendant on the late exhibition, your committees have the highest delight in reporting an amount of sales great beyond any former occasion. Through the conjoint operation of the Society for the Purchase of the Works of Living Artists, and the private transactions of many noblemen and gentlemen, sales were effected in various classes of pictures, to the amount of upwards of £1800. This your committees submit alike to the public and the profession, is a proof at once of the advancement of refined taste in this community, and also of an increasing desire to patronise Art, and encourage merit by substantial remuneration."

**MANCHESTER.**—The Committee of "the Royal Manchester Association for Promoting the Fine Arts" have issued their Annual Report; we take the most important passage from it. The subscribers amounted to 800. The following pictures were selected as "prizes":—

'Market Day,' Creswick, 63*l*.; 'Italian Boy,' Hurstone, 47*l*. 5*s*.; 'Mayence on the Rhine,' Clint, 31*l*. 10*s*.; 'Fisherman's Cottage at Herne Bay,' Tennant, 31*l*. 10*s*.; 'A German Tea Garden at Dresden,' Von Holst, 26*l*. 5*s*.; 'A Sea View,' Cotman, 26*l*. 5*s*.; 'A Street in Rouen,' Tomkins, 21*l*.; 'A Scene at Lynnmouth, North Devon,' Stanley, 21*l*.; 'The Young Student,' Linnell, 21*l*.; 'Grape Gathering,' Duncan, 18*l*. 18*s*.; 'Glass Cutter,' Zeiter, 18*l*. 18*s*.; 'A Bacchante,' O'Neil, 18*l*. 18*s*.; 'Montalban's Tower at Amsterdam,' Hamerton, 15*l*. 15*s*.; 'Fruit,' Stevens, 12*l*. 12*s*.; 'Storm Clearing off, near Dorking, Surrey,' Allen, 12*l*. 12*s*.; 'River Scene—Moonlight,' Child, 12*l*. 12*s*.; 'Derwent Water,' Baker, 10*l*. 10*s*.; 'Heath Scene,' Watts, 10*l*. 10*s*.; 'Corn Field on the Midway,' Fowler, 10*l*. 10*s*.; 'Dead Game,' Stevens, 10*l*. 10*s*.; 'Military Sketch,' Martins, 10*l*. 10*s*.; 'Cottage Scene in Derbyshire,' Vickers, 10*l*. 10*s*.; 'Fishing Boats on the Sands,' Jutsum, 9*l*. 9*s*.; 'A Drawing,' Prout, 8*l*. 8*s*.; 'Mount Claret,' Naamth, 8*l*. 8*s*.; 'Scene at Ipswich—Moonlight,' Crome, 7*l*. 7*s*.; 'Fishing Boats off Broadstairs,' Watts, 7*l*. 7*s*.; 'Tooting Common,' Child, 5*l*. 5*s*.; 'A Fisherman Mending his Net,' Fuller, 5*l*. 5*s*.; 'Colais from the Sands,' Durnford, 5*l*. 5*s*.; 'Still Life,' Absolon, 5*l*. 5*s*.; 'A Scene in Derbyshire,' Vickers, 5*l*. 5*s*.

Of the sum collected, £200 was paid for impressions of a print from a picture after Constable, of which a copy was distributed to each subscriber.

**PLYMOUTH.**—The Second Annual Exhibition of Water Colour Drawings will be opened at Plymouth during the visit of the British Association, in the month of August next; and the artists of Devon and Cornwall are invited to co-operate in the endeavour to provide a display worthy of so interesting an occasion. A copy of "Fielding's Treatise on Water Colour Drawings" will be given as a prize for the best drawing exhibited by any artist of Devon or Cornwall; and a copy of "Harding's Studies for Sepia Drawings" will be given as a prize for the best amateur drawing, either in crayon or water colours. An Art-Union subscription list will be opened in connexion with the exhibition, to promote the sale of drawings exhibited. An early communication from persons intending to exhibit is requested, that arrangements may be made for the conveyance of pictures, the expense of which will be defrayed from the funds arising from the exhibition. A commission of 10 per cent. will be charged upon pictures sold at the exhibition. Communications may be addressed to Mr. E. Fry, 43, Union-street, Plymouth.

**EDINBURGH SOCIETY OF ARTISTS.**—The Exhibition by this body, which closed on Saturday, the 10th of April, cannot be regarded otherwise than as having been successful to a very considerable degree, indeed, to quite as great extent as the exhibitors had any reason to expect. It is true there were numerous meritorious works returned to the artists unsold; but it is not less true that the extent of sales effected this year is greater, both in number and in value, than they have been in any previous year. In all there were 45 pictures sold at an aggregate sum of £530 10*s*. divided in the following manner: private sales, 10 pictures at an amount of £116 5*s*.; sold to prize-holders in the new Association, 27 pictures at the sum of £277 6*s*.; and the committee of the old Association purchased eight pictures of the sum of £137. From these facts it is

obvious that the main-stay of the Society has been the prize-holders of the new Association, who have contributed considerably more than both the private purchasers and the committee of the old Association put together. It cannot be otherwise than gratifying to find a deserving institution, such as this is, meeting with a share of public favour; nor can it be doubted that, being cheered by the public countenance, is the best stimulant to exertion, while that exertion is sure, sooner or later, to be rewarded by the meed of approbation and support. Let the members make strenuous exertions during the recess to produce such an exhibition as will deserve popular attention, and they will be sure to receive it. If they have influence enough to secure the loan of one or more leading pictures from the galleries of some of our patriotic collectors, such an acquisition would greatly enhance their chances of success; and with such an object in view we can hardly doubt of their being able to procure such aid if properly applied for; but they must ever bear in mind that their own resources are their only legitimate ground of claim to public sympathy. We would humbly suggest to them a perfect union of their energies for their common good, satisfied that their individual interests will be better forwarded by the combined efforts of the body than by the desultory exertions of isolated operations acting, however vigorously, for self-aggrandizement.

Of the decision of the members of the new Association especially, in regard to their patronage of this body, it is impossible to speak in an unfavourable manner. Their exertions have been devoted—as far as it is possible for the exertions of such an institution to be—towards fostering talent and rewarding merit, and they have, undoubtedly, been productive of much good. It is impossible, however, for any human institution to be perfect; or for a large body to be so pure as to prevent the accession of some vile ingredient in its composition; and, unfortunately, this has not escaped the contamination so generally incident to humanity. A large prize-holder, it is said, whose avarice has been more prominent than his sympathy with Art, has contrived, through the unworthy connivance of an artist, to appropriate a large share of the money received as a prize, and which was devoted to the purchase of works of Art, to his own private purposes. The following statement of the subject appears in a letter addressed to the Committee of the New Association for Promoting the Fine Arts in Scotland, printed in the *Edinburgh Observer* of April 20th:—"It is currently rumoured, on good authority,—and I may also add, that the belief in its truth is as extensive as the circulation of the rumour,—that one GENTLEMAN! who was the fortunate drawer of a large prize in your Association at last distribution of prizes, having little skill in, and no sympathy with pictures, while he had a large appreciation of the value of money, was desirous of converting his money-prize into cash for his own benefit, instead of applying it, as specifically intended, for the encouragement of Art. Finding, however, that, by the rules of the Association, to do this directly was impossible, his next move was to fall in, if possible, with an artist who would connive at his greed, and sell him pictures nominally at the price of the full amount of his prize, while he, the purchaser, should receive a large *douceur* in the shape of a drawback. Having got thus far settled in his mind as to the form of procedure, his third step was to meet, if he could, with a convenient go-between, or mutual friend, as it is called, who would kindly assist him in the choice of pictures which would sell, and who would also negotiate the small affair of the drawback. Kindred spirits have a wonderful affinity! Within the short space of 24 hours, if the rumour be correct, he was so fortunate as to fall in with such a friend; and, more wonderful still, that friend was also able, in a few hours, to lay hands upon an artist suited to such a purpose. Pictures were accordingly purchased nominally to the full value of the prize; and it was quietly settled among the trio that the purchaser should receive back from 25 to 30 per cent. of the estimated amount of the purchase-money, which he pocketed, and returned home. Such is a very plain narrative of the facts as reported." Of the meanness which could prompt such a proceeding on the part of the prizeholder, ignorance or necessity may probably plead some slight extenuation; but of the conduct of the artist, in lending himself to such a deceptive arrangement, there can only be one feeling of deep and rooted execration; for him necessity can offer no plea, for he has long held a prominent and lucrative standing in the public eye; ignorance can as little avail him, for he has had a long experience

of the usages of good society; how, under these circumstances, he could lend himself to such a dishonourable traffic is unaccountable on any other ground than that of the most sordid avarice.

DUBLIN.—A general meeting of the members of the "Royal Irish Art-Union" has been held; it was attended by a large number of the noblemen and gentlemen of the kingdom.

Stewart Blacker, Esq., honorary secretary, read a most satisfactory report of the general committee of management upon resigning their trust to the committee of selection about to be appointed, congratulating the Society on the happy results of the past as well as the cheering prospects of the future, evidenced by the great increase of subscribers, and by the enrolment, as members, this year of many leading and influential personages who, on the first starting of the Society, held back until they had seen its progress, and inquired into its practical effects; and among these the Society would be glad to learn that his Excellency the Lord Lieutenant had been pleased to intimate his desire of being one of its members. At the commencement of the Society the committee felt it their duty to solicit Lord Ebrington's countenance and support as viceroy of the country, which being declined on that occasion, but given spontaneously on the present, after a careful perusal of last year's report, and a minute inquiry instituted into the method of procedure, as well as its results, comes with the highest compliment attached to it that the calm deliberation of a reflective mind can give.

In addition to this the report mentioned, that his grace the Lord Primate, the Right Hon. the Lord Chancellor, the Lord Chief Justice Bushe, and the Most Rev. Dr. Murray had become members. The report then stated that their funds were in a most prosperous and daily increasing state. At this time last year the Society had collected about £600, before the opening of the exhibition, which sum was afterwards increased to upwards of £1200. This year tickets to the amount of £1400 were already distributed, which it only required similar exertion to double before the close of the list. The report concluded with saying, "However necessary the mere collection and judicious expenditure of money, it is the lowest in our calculation of the beneficial effects arising from the formation of a Society such as ours; the good feelings engendered by uniting persons of all parties and persuasions to make common cause in forwarding the interests and upholding the character of our common country—in this we have succeeded, and to this we look as our greatest glory."

The following noblemen and gentlemen are a committee of selection from the exhibition of the Royal Hibernian Academy:—

The Earl of Charlemont, George Carr, Esq.; Robert Caldwell, Esq.; Colonel D'Aguilar, C.B.; Sir Thomas Deane; Lord Fitzgerald and Vesey; Charles Fox, Esq.; Henry Hamilton, Esq.; Sir George Hodson Bart.; Henry Kennis, Esq., Q.C.; David Charles La Touche, Esq.; Hon. and Very Rev. Dean Maude; Lord Muskerry; J. Charles Montgomery, Esq.; Alexander McCarthy, Esq.; Lieutenant-Colonel Charles Pratt; Stephen Simpson, Esq.; Aquilla Smith, Esq., M.D.; Robert Tighe, Esq.; Rev. Holt Waring, Esq.; and Isaac Weld, Esq.

The marked thanks of the Society were, amid general applause, voted to Stewart Blacker, Esq., the honorary secretary, for his very efficient services, and to the Royal Dublin Society, for the promptitude and kindness displayed by them in aid of the national objects of the Institution.

CORK.—An Art-Union is about to be established in this city—the second city in Ireland, in rank and importance, and rendered conspicuous in the annals of the Fine Arts, as the birth place of Barry, Maclise, and a number of other distinguished artists. We extract a passage from the prospectus issued by the Society,—observing that the names of its President and other officers afford a satisfactory guarantee that it will be conducted upon sound principles, and induce a confident hope that it will lead to much practical good.

"It is at once the honour and the reproach of Cork, that it has been her fate to have produced men eminent for their genius without any very beneficial or sustained appreciation of it by her. Hitherto it must be admitted that Art has not thriven in this city. The efforts which have been occasionally made here in its favour—praiseworthy as these undoubtedly were—have produced but partial and transient advantages to its cultivators and professors. The fault may have been with the public—perhaps with the artists themselves; but certain it is, that whatever may have been their merits or abilities, elsewhere too generally have they had, ultimately, to seek for those encouragements and rewards here, unfortunately, hitherto unattainable. It is time a remedy, if possible, should be provided, and an united effort made to rescue the local reputation and the interests of art from their present condition. The artists themselves, not despairing, through looking at the past, of a brighter prospect for the future, hope better things both from the more advanced and enlightened taste of the present times and their own exertions.

## WORKS IN PROGRESS.

HIGHLAND DROVERS DEPARTING FOR THE SOUTH.—The chef-d'œuvre of Edwin Landseer (for such it continues to be up to the present time) is now on the eve of completion; the painter has "touched" upon it, and the engraver, Mr. J. H. Watt, has issued a proof "all but finished." It has realized our most sanguine hopes; taken altogether in reference to its admirable qualities as a work of art, the deep interest of the subject, and the wonderful merit of its execution as an engraving, it is beyond question a triumph of the British School; and will be duly estimated by all who long for British pre-eminence in the Arts. We shall avail ourselves of an early occasion to describe it at greater length; but it is just now our duty to advise all who desire to possess it to make early applications for copies; for, assuredly, they will be eagerly sought for, and become scarce within a very short period. The work has been engraved with amazing delicacy, yet with the free and bold touch of a master; Mr. Watt has laboured at his task for several years, during which the public have heard little of him, for his attention has been devoted exclusively to this grand production. It will gain him, as it ought to do, golden opinions; and place his name high in the list of the members of his profession in Europe.

THE HIGHLAND WHISKEY STILL.—An etching of the engraving from this beautiful picture has been recently issued. It is from the burin of Mr. Robert Graves, A.R.A. Among the most popular of modern prints, it will undoubtedly class, for Mr. Landseer has rarely produced a work of greater interest; and none have proceeded from his pencil so characteristic of Highland habits, life, and character. The picture is in the collection of his Grace the Duke of Wellington; many will remember it as the gem of the exhibition in Old Somerset House some five or six years ago, and those who do, will lament that he has since devoted so much of his time and energy in producing subjects—by comparison—worthless; for though the dog is a noble creature, and worthy of all honour, respect, and esteem, a still nobler animal is man.\* Into the group employed in making and tasting "the genuine dew of the mountain"—consisting of a sportsman resting from his day's labour, an old crone who is waiting for his opinion of the liquor which he gives with evident *gusto*, and a youth busied about "the still"—the painter has introduced a touching episode that "tells" amazingly; a fair and delicate child is looking listlessly on, her shaggy terrier by her side; and a sturdy boy is gazing with wonder and admiration upon the deer stalker's magnificent hounds, and the dead stag at his feet. As a composition it is beyond all praise; the interior of the rude hut, roofed with shingle, is obviously copied from reality. We may be assured, too, that the engraving will possess merit equal to the painting; for very few of our line engravers excel Mr. Robert Graves. We may, consequently, announce this print as certain to prove a leading attraction of the season during which it will appear.

HAWKING IN THE OLDEN TIME.—Another engraving in progress from a painting by Mr. Landseer—the picture being in the small but excellent collection of Mr. Cartwright. It is undoubtedly less interesting, than either of those we have referred to; but it will prove, nevertheless, a valuable acquisition to the collectors of Mr. Landseer's works; and is a fine and vigorous description of one of the most poetical of all the old English sports—consigned to oblivion by "villainous salt-petre" and "vile guns." The heron is a noble portrait; and the hawk appears actually animated as he fixes his talons in his prey. The birds are "high in air;" and underneath is a group—"of gentle knights and ladies gay"—who have been eagerly watching the chase, and now gallop up on palfreys to mark its issue. The

\* A pleasant anecdote is in circulation of Mr. Edwin Landseer and the far-famed clerical wit, the Rev. Sidney Smith. Some of our readers may have heard it, to others it will be new. The Painter and Prebend dined together at the late Lord Holland's, when Mr. Landseer, after a long and pleasant talk, expressed a wish that the facetious clergyman would sit for his portrait. He replied instantly, and with the ready wit for which he is famous, quoting a passage of Scripture—"Is thy servant a dog that he should do this thing?"

print will be in mezzotinto, from the burin of Mr. Charles Lewis.

THE MELTON HUNT.—The epic of its class; as superior to the sporting prints with which the world has been heretofore familiar as virgin gold is to base tissue. The painting by Mr. F. Grant will be remembered as forming a leading attraction in the Exhibition of 1839, where it was purchased by his Grace the Duke of Wellington. It is now in course of engraving by Mr. W. Humphreys, and an etching of it is before us; a safer promise of excellence we have rarely examined; and sure we are that it will be worthy of the high reputation to which the accomplished engraver long since attained. It is a full subject—very full; containing some 50 or 60 portraits of noblemen and gentlemen who guide and rule "the turf." But it does not consist of the stronger sex merely; a barouche, in which there is a lady and her daughter, has been skilfully introduced into the centre of the picture. As a composition, the work has the highest merit; difficulties that would have overthrown an ordinary man have been completely overcome by Mr. Grant—he has rendered even the jockey's coat and cap absolutely picturesque; and though the heads are necessary small every one is a striking likeness—we can bear testimony to the accuracy of many of them. This is, we have heard, the last work of the class which the admirable painter will produce; it is understood that he has abandoned a walk in art in which he was without a rival. We lament his decision, and yet rejoice at it; an artist of his great mind and high capabilities is undoubtedly right to enter a worthier and more ambitious path—and where, indeed, he seems likely also to outstrip all competitors. But this work will endure for ages to come, as the most successful of its class that has ever been produced in this or in any other country. Fortunately it has been placed in the hands of an engraver competent to do it justice; copies of it will be kept not alone by those who value it for its peculiar subject, but as an admirable and a beautiful work of Art.

THE BEDALL HUNT.—The secession of Mr. Grant from this branch of Art reminds us that we have recently seen a very clever picture of the class painted by Mr. Martin, an artist, we believe, of Yorkshire. It is designed to commemorate a leading event in the sporting world, containing some 40 or 50 portraits of well known individuals; among whom are—The Master of the Hounds, Mark Milbank, Esq., on his celebrated hunter Bribery; the Duke of Leeds; Duke of Cleveland; Earl of Zetland; Sir Bellingham Graham, Bart.; Colonel Arden; J. P. Beresford, Bart.; the Hon. John Dundas; General Maister; &c. &c.

THE CORONATION OF HER MAJESTY QUEEN VICTORIA.—Mr. Ryall has issued his etching of the plate from Mr. George Hayer's justly famous picture; we have more than once referred to it as a very triumph of the art, taking into account the difficulties the artist had to encounter and overcome—the characters introduced being all real, all easy to be recognised, and all placed according to the positions they actually occupied on the morning of the memorable ceremony. Thus, therefore, no latitude was permitted to fancy or invention; for although it is strictly an historical work, it belongs also, and essentially, to the class of portraiture. We shall, however, have to describe it at greater length hereafter; our present business being exclusively with the etching. We are glad to perceive that it is not to be—as it was intended to have been—a mezzotinto plate; for many of the heads are too small to receive character and expression from this department of the art. It is to be executed in that mixed style for which the engraver has rendered himself celebrated; and this, we understand, without advancing the cost to the subscribers. Many of the portraits are already in a forward state; and Mr. Ryall has admirably, and with great skill, preserved the likenesses; the work is put in with considerable delicacy; indeed we have rarely seen an etching that holds out greater promise of excellence. In the back-ground, too, he has been very happy; and some of the more minute parts even here "tell" with the best effect. As a commemoration of the most interesting and important event of modern times, the work will be of high value; as a work of Art, too, it will be, in all respects, worthy of the age and country. We rejoice that the record is to be so worthily kept.

## FOREIGN ART.

**ITALY.—BOLOGNA.**—We have to announce an undertaking which gives us sincere pleasure as all things do which tend to place intellectual enjoyments within the reach of a greater number of persons. The treasures which the Gallery of Bologna contains are known to almost all who have visited Italy. Among them are reckoned the 'St. Cecilia' of Raffaele, the 'St. Agnes and St. Peter Martyr' of Domenichino, the 'Picta' and the 'Slaughter of the Innocents' of Guido Reni, themselves sufficient to draw pilgrims from every land; but they are but a part of the great works here collected. To a few in other countries the Gallery of Bologna is known by the admirable engravings of Rosaspina, of about seventy of its principal paintings, but necessarily from the expense of such works but to a few. We hail, therefore, the present undertaking to lithograph on a large scale the finest works of our Pinacoteca; and from the excellence to which the art of lithography has attained in this city, we do not fear they will be executed in a manner worthy of the great originals, a knowledge of which they are intended to diffuse. The size of the paper on which the above mentioned five pictures will be engraved is 89 centimetres by 61 centimetres, and portraits of the respective artists will accompany their works.

**VENICE.**—Lipparani has finished for the Grand Duchess Olga of Russia a very fine picture representing the 'Death of Titian,' with all the fine effects of chiaro scuro, brilliancy of colouring and rich composition usual in his works. In this picture these are accompanied with a great boldness and freedom of touch.

**NAPLES.**—"The Mania of Embellishing." A dissertation published here on "The Philosophy of Art," is well deserving attention. The title of this article is one of the subjects we find there very well discussed, and we shall devote a few words to its consideration. The art of discovering the beautiful, of reproducing it, and heightening it, has been the subject of the meditations of philosophers and the practical labour of artists. But the first symptom that has ever preceded the decline of the Arts, especially that of painting, has been the excess of ornament—the "mania of embellishing." So has it fallen into exaggeration, into mannerism, into absurdity, until the vitiated taste lost all sense of true beauty. The dissertation on this point is accompanied with much erudition, which, as an illustration to logical reasoning, lightens and enriches the treatise. We find in this work also some observations which appear to us excellent on the errors of young artists, who become extravagant in seeking what they call ideal beauty, and imitating those whom they imagine have found it. There appears sometimes a genius who, inspired by truth, seizes her most solemn attributes and investing them with a certain mystic grace, he presents them to us in such forms that they appear the result of an intuitive sense of the great, the sublime, and the beautiful. This revelation of the mysteries of true beauty is, as it were, a ray of heavenly light diffused into the mind of a privileged mortal; he has found that ideal beauty so confusedly defined, so deplorably abused—the true poetry of Art intellectual and material. But that this genius is gifted with a revelation of beauty becomes quickly the theme of a crowd of imitators, exaggerating and distorting; for the heavenly gift remains alone in the mind of him on whom bounteous nature had bestowed it.

**FRANCE.—PARIS.**—In reviewing the Louvre, we would recall the works of one or two of our favourites, such as M. Court—none who saw it, will forget this 'Spanish Girl,' exhibited in London, at the Royal Academy, some years since. We recognise his talent in 'St. Louis depositing the Crown of Thorns,' which he has brought from Palestine, in the Holy Chapel. 'What a rich, calm picture! well composed, well drawn, and strongly coloured.' In his portraits of the King and Queen of Denmark at their coronation at Fredericksburg—we see the painter, painting by command—all is perfectly executed—satin shoes, diamonds, pearls, gauze mantle, silk stockings—all is there an official-looking king, with his crown on his head, and an imperturbable face—a young, fair, pretty queen, who looks so

happy she can hardly contain herself—are seated on two thrones of much more solid magnificence than ours of France—marble, ivory, bronze, gilding, all sorts of ornaments go to their composition. Besides these, M. Court presents us with various portraits, which are among the best of the exhibition. We may especially note that of Karalekin, the Talma of St. Petersburg. M. Biard's 'Views of the Frozen Regions' are striking and extraordinary, the effects of light most singular; but who shall call them in question?—they inspire a painful feeling of pity, which increases as we look on them. There is such a comic spirit in M. Biard, that such sad scenes seem unnatural to him; so surely are serious ones, for he always tries to relieve himself, in a solemn scene, by some such strange fancy that you laugh, and can hardly fancy he is ever quite in earnest. See "Le gros Peché," where a priest is receiving the confession of a stupid fat monk beside him—what a look of horror he has. 'The National Guard,' who innocently lays down his musket to catch flies. 'The three Marriageable young Ladies.' M. Gué's 'Last Judgment' is an imitation of Martin; it is striking at the first glance, but a little examination makes us aware that all this immense tumult and symmetrical disorder has no reality; it is a mere phantasmagoria—another among the many examples of the error of imitating those who, from some brilliant individual talent, strike out an eccentric path fatal to those who seek to follow them. The monument to La Tour d'Auvergne, executed by M. Marchetti, has been placed in the Cour d'Honneur of the Hotel des Invalides, previous to its removal to the city of Carhaix (Finisterre), for which it is destined. The day of its inauguration there is fixed for the 27th of June, the anniversary of the death of La Tour d'Auvergne. Our readers need not be reminded of this famous soldier, called the "Grenadier of France." Though of a noble family, he would never accept any rank in the army, but always served as a private soldier; and the singular memorial of his fame was assigned to him, that his name should continue after his death to be called over at the roll-call of the regiment to which he belonged; it is so at this day, and is answered to by the oldest soldier of the corps.

**PRUSSIA.**—The "Reinische Blatt" asserts that the King intends to complete the Cathedral at Cologne, and that by his Majesty's command plans have been prepared and laid before him. Gladly should we hail the completion of this magnificent monument of architectural genius, the Gothic St. Peter's of the North, which we considered likely to become a mighty ruin rather than a completed cathedral.

**HOLLAND.—AMSTERDAM.**—The iron lion for the top of the Egmont light-house has been cast with complete success by Verseer; it weighs 6000lbs. In Holland we believe only could such masses be cast.

## THE HOUSE OF BOYDELL.

British Art has been indebted for the high position it now occupies to no one so much as to the well-remembered Alderman Boyde; indeed, to that excellent gentleman and his Majesty George the Third, may be mainly attributed the establishment of the Arts in national preeminence. Mr. Boyde was the son of a land-surveyor at Dovington, in Shropshire, where he was born in 1719. A chance sight of an engraving of Sir John Glynn's estate, at Howarden, is said to have given birth to his taste for engraving; and, fortunately, as it was encouraged by his family, he was sent to London, and placed with Mr. Toms a person of some repute as an engraver in the then defective state of the art. During the six years of his apprenticeship young Boyde produced several plates, in a style by no means inferior to that of his master; but being anxious to commence business on his own account, he bought out his remaining year, and settled in lodgings in the Strand, where he published his early prints. In 1752, his improving circumstances enabled him to take the well-known house in Cheapside; and shortly afterwards he had the good fortune to discover the merit of Woollett, and placed in his hands, works that not only brought undying fame to the engraver, but fortune to the employer. His exquisite productions, amongst which were the 'Death of General Wolfe,' the 'Battle of La Hogue,' the 'Roman Edifices in Ruins' of Claude, the 'Niobe' of Wilson, produced an era in the history

of art, from which may be dated the eminent station that the engravers of England now occupy. Until this period the market in engraving had been supplied from France—the tide now turned; and the burins of Woollett, Browne, Sharp, and Karlom outshone the productions of any other school. In 1782 Mr. Boyde was elected Alderman of Cheap ward, and in 1791-2 Lord Mayor—presiding in those offices with dignity, good sense, and integrity. Nor was his liberality to his favourite city less conspicuous. Guildhall owes its finest decorations to his munificent present of pictures, the value of which were estimated at £3000. In return, the corporation voted that his portrait, painted by Sir William Beechey, should be added to the collection. In 1786 his enthusiasm for the honour of the Arts of his country prompted him to undertake the magnificent edition of Shakspeare's Works, to be illustrated by all the eminent masters of the English school; in this he cheerfully embarked a capital of £150,000. For some time his great undertaking appeared to prosper; but the French Revolution breaking out, and its consequent circumstances deranging the whole of Europe, he suffered much; but persevered till the handsome fortune he had so meritoriously accumulated had sunk beneath the pressure. His loss was so great that he was obliged to apply to Parliament for permission to dispose of the Shakspeare Gallery and his other collections by way of lottery. He lived to receive the gratifying intelligence that every ticket was sold, but died before the drawing commenced. On December 11, 1806, he was succeeded in his business by his nephew, Josiah Boyde, who, for some years, maintained the reputation of his uncle; but age advancing, and a sufficiency of means enabling him to retire, he left the management to the late Mr. Harrison; after Josiah Boyde's death, the family being anxious to leave London, entered into negotiations with Messrs. Hurst and Robinson, booksellers, of Yorkshire, to dispose of the immense stock; to those gentlemen it was finally sold in the year 1817. For some years they carried on a most prosperous trade, but prosperity to them was ruin; for imagining that all their attempts were as likely to be profitable, they embarked in reverse speculations in hops and building, met the common fate of desperate speculators, and a failure was the consequence. To them it is but just to attribute the merit of publishing many exquisite works of Art; and had prudence guided their business, a very opposite fate would have been theirs. During their time, the business was removed to 6, Pall Mall. Upon their retirement, Messrs. Moon, Boys, and Graves succeeded, and produced many beautiful works—the celebrated portrait of 'George the Fourth,' seated on the sofa, after Sir Thomas Lawrence, engraved by Finden; the 'Chelsea Pensioners' of Wilkie, engraved by Burnet; the beautiful plate of 'Nature,' after Lawrence, by Mr. Doo; and many others being among them. After the lapse of seven years, Mr. Moon retired, having established an important business in the city; Mr. Richard Hodgson taking his place, leaving the firm, Hodgson, Boys, and Graves, during which period the beautiful lithographic works of Lewis, Roberts, Stanfield, &c., were projected. After the lapse of two years Mr. Boys retired, and fixed upon Golden-square as his place of business; the firm then bore the name of Hodgson and Graves. Within the last month Mr. Hodgson has retired; and Mr. Graves having been joined by a gentleman named Wamsley, the house is now conducted as the firm of Henry Graves and Co.

We have thought a brief notice of this establishment would interest our readers—to a large majority of whom the subject is one of no ordinary importance; for it must be one of the leading media through which the Artists of Great Britain are to be made known to the British public. Towards Mr. H. Graves, personally, we entertain sentiments of high respect, believing him to be a just and liberal, as well as a judicious and discriminating publisher; and we earnestly hope that his future career, a new era in which he now commences, will be beneficial to himself, and serviceable to the Arts of his country.

Although our main duty is to represent and protect the interests of the artists, we are also bound to uphold those of the publisher; it is most essential that he should be sustained in all his undertakings—many of which cannot be otherwise than hazardous; and upon his success must greatly depend the prosperity of the artist. It is in the power of Mr. Graves—possessing ample capital and sound judgment, the result of many years experience, for he entered the house, of which he is now the head, nearly 18 years ago—greatly to advance British Art; and we confidently believe, as well as earnestly hope, it is his determination to do that which he has the means of doing. Among his "works in progress," some of which we have noticed elsewhere, he announces many from pictures of high merit, by painters of established reputation—no fewer than 13 of them being after the productions of Mr. Edwin Landseer.

We therefore cordially wish him prosperity, and shall gladly exert our best efforts to secure it; believing that in no way can we so safely promote the interests of British Artists and British Art, as by aiding to establish a publisher disposed to act liberally towards both.

## ROYAL HIBERNIAN ACADEMY.

Our anticipations have been verified. Ireland only wanted a proper stimulus to be applied in order to take up a highly credible position with regard to the Fine Arts in the general onward march of civilization and refinement.

The Exhibition this year must be particularly gratifying to those who have taken an interest in the advance of Art, in that country as well as to the public generally.

The principal improvement perceptible on a first glance is the increase in the number of works of fancy and imagination, landscapes, &c., that have taken the place, although not yet sufficiently, of the numerous mediocre portraits with which we were formerly overwhelmed.

The first room we enter contains the Water-colour department; and, although we are most systematic personages in whom the "organ" of order is most amply developed, and scarcely ever before missed beginning at No. 1 of our catalogue, we were not able to advance into the gallery, so rivetted were we to the spot by some productions in this school, around which were congregated numerous and delighted groups. One of the most pleasing features to a genuine lover of the Arts, is to perceive, by the assembled groups and knots of admirers around particular works, the gradual advance of public opinion to the correct formation of true taste, and the just appreciation of real merit—and that before the Press could have an opportunity of directing attention to them. On the present occasion we were, instead of guides, the guided, and found ourselves before two pictures, "the cynosure of all eyes," by Frederick William Burton, R.H.A., whose production of last year, 'The Blind Girl at the Holy Well,' placed him at once in the first rank, not only in his own style, but actually advanced that style to the most honourable rank in the profession. Well deserved public approbation has not been lost upon Mr. Burton; and, instead of resting contented with what he has already obtained, it has but urged him to maintain his position; not only has he done this by these drawings, that would do honour to any school, but he has taken a step forward, and in force of colour, size, number of figures introduced in each, and interest of composition, exceeded his work of last year.

The one called the 'Connemara Toilette,' represents a number of peasant girls dressing themselves by a brook-side, before entering the fair. The highly-picturesque and characteristic garb—the varied grouping and action given to the lovely wearers—the pleasing and romantic landscape—all combine to make a highly-effective picture. The principal action in front is caused by a mischievous red-headed urchin, who has stolen, as he fancies, unperceived, and let loose a basket of ducks, prepared for market, who, in seeking their natural element, are causing a proportionate flutter among the fair Connaught Musidoras. A tall, graceful girl, with great archness of expression, however, punishes the boisterous intruder by a good pull at his ruddy chelure. Although a very effective and beautiful composition, and with a redundancy of grouping, from which half-a-dozen pictures might be taken, we think it our duty, as just critics, to say, as a whole, the subject is too scattered and broken, and the interest does not accumulate to a centre. This, however, cannot be said of the other production of Mr. Burton, 'The Arran Fisherman's Drowned Child,' which at once tells its story with the greatest simplicity, and perhaps on that very account, with the greatest force and effect. In a rude fisherman's cabin, hung round with nets and dried fish, and all the appurtenances of his hazardous vocation, with the smoke ascending, and the light descending, through an aperture in the roof, a mother is seated with her drowned infant on her lap, intensely gazing, with

"A grief that lies too deep for tears."

Sisters are around in attitudes of sorrow, beautifully conceived and well expressed; a boy behind is describing how the accident occurred. The old grandfather is viewing the scene with a mournful calmness, which seems to say, that lengthened experience has made him doubt whether an early bereavement is a misfortune, while right in front is the fisherman himself, afraid to look round on the groupe on which all else are gazing, standing stiff, and rigged in his seafaring garb; his weather-beaten features and clenched and writhing hands, showing the working of his troubled spirit within.

This forcible drawing is not yet finished, but when it is, it will reflect the highest credit on the young school

of Ireland. We are happy to understand, that the Irish Art-Union have purchased the 'Connemara Toilette' for 150 guineas; and the last described has been obtained by Robert Caldwell, Esq., a member of the committee of that Society, for the same price; private patronage thus keeping pace with the public exertions of that excellent Society,—thus showing what benefit has already accrued to the Arts in Ireland from its institution. Mr. Burton also contributes several excellent portraits.

Samuel Lover.—The 'Colleen Dhas and the Colleen Bawn,' which was so much admired at the Royal Academy last year; also a forcible miniature of an 'Egyptian Interpreter.'

George Petrie.—This delightful artist, as well as accomplished scholar, exhibits but one production this year, which is very pleasing, and, as usual, sold. It is not, however, equal in power or execution to his contributions of last year. Casting a glance round the room, we see our friends Nicholl, O'Neil, Hayes, sen. and jun., Wood, Mulrenin, &c., &c., in full feather; but must take a hasty glance at the Oils, with a promise of a closer survey on our return.

M. Cregan, P.R.H.A.—The President, in his new productions, appears to advantage. He exhibits 16 portraits of great merit, especially those of Mr. Colles, the eminent surgeon, and Mr. Moutray, painted for the Grand Jury of the Co. Tyrone. We are glad to find our suggestion as to the impropriety of occupying the whole of "the line" with Portraits, which, from their size, would be improved rather than deteriorated by being hung a little higher, has, in some degree, been acted on; but this point requires still further attention, and we think we are not mistaken in Mr. Cregan's character, when we say that any influence he may have will be in future wielded, so as not to allow the complimentary acts of others to be mistaken for selfishness on his part, and be detrimental to the profession over which he has been elected to preside. We think these remarks called for by the re-exhibition of two large full-lengths which having already been several times before the public, have no right to thrust many works of great originality and merit into the water-colour room and into the statue gallery, up to the ceiling and down to the ground.

The works we allude to are the likenesses of Mr. and Mrs. Johnston, the munificent founders of this national establishment, who have been removed from their proper places in the council-room to act a part which the worthy and estimable originals would never have consented to: the gratification of private vanity at the expense of public good.

By the way, there is an anecdote connected with these portraits afloat, that gave us anything but a pleasurable sensation on viewing them. It is pretty well known that one of the persons who took the greatest interest in the movement in favour of the Fine Arts in Ireland, caused by the munificent and public spirited conduct of the late Mr. Johnston in founding the Gallery of the Hibernian Academy, was Sir Thomas Lawrence, who, as a meed of his approbation, offered to paint and to present to this body a portrait of this gentleman to whom the country, and the Arts especially, were so much indebted. We understand that this noble compliment was declined or turned off on the following petty point of *etiquette*:—That the Academy had a Professor of Painting, and that it would lower their *dignity* to pass him over on such an occasion. The country lost a work that, as being painted *con amore*, would have been a masterpiece; but the *etiquette* and dignity of the Academy was preserved inviolate, with the additional consolation of having two of the most common-place pictures that ever proceeded even from the pencil of Mr. Cregan.

Sir Thos. Lawrence would not, however, be stopped from showing in some way his desire to uphold the Arts in Ireland, and left the choice to the directors of the Academy themselves. Will it be credited, that a *Plaster cast* was chosen from the studio of the generous offerer, and now stands a chalky memorial, very unworthy of the modern Titian, but very expressive of the hollow pretension and want of real and intrinsic merit in the selectors themselves.

We should not have noticed this matter at such length did we not think this flagrant violation of well-known rules by the re-exhibition of these large subjects, not only a great aggravation of the complaint we felt it necessary to make last year, but that it proceeds from persons whose nonsensical particularity upon trivial points is doing real injury to the Arts in Ireland, and disgusting some of the best wishers to the welfare and prosperity of the Royal Hibernian Academy.

Mr. Cregan is a man of discrimination and good feeling, and will not allow himself in future to be made a cat's-paw by any persons who may wish to pander to his vanity, at the expense of his sense of fair play and justice to others: but he will go hand-in-hand with the times, and, so far from allowing petty obstructions to be thrown in the way of public feeling, now so generally aroused in favour of the Arts, be himself foremost in lending his best influence and exertions to the movement to which the profession he is called on to preside over already owes so much.

Collier, R.H.A.—Mr. Collier has unfortunately acquired great perfection in the representation of satin; the consequence is that almost every part of his subject is sacrificed to this "trick of art." His 'Birds of a Feather,' however, representing a page with sundry gaudy-winged companions, is a great advance on his contributions of last year, but would be much better if his face, hands, hair, &c., were not made of the same glossy material as his robes.

J. Fraser, R.H.A. is also much improved. No. 93, 'Glen Scene,' is a favourable specimen of his peculiar style, but the tricks that Mr. Fraser plays with some of his works are to us incomprehensible. The sky, for instance, in his 'View near Belfast,' is freshly and beautifully painted, while the fore-ground and accessories are very carelessly managed; again, in his 'Primitive Mill, County Down,' the mill, &c., is very cleverly given, but the sky—if sky it can be called—appears laid on with a palette knife, and scraped coarsely down with a pumice-stone.

J. Kendrick.—This artist has but one work in the Exhibition, but that reflects the highest credit on him—No. 187, 'Dublin Bay and Lighthouse.' We sincerely congratulate Mr. Kendrick on a picture which must impress every observer. One almost feels "the stiff breeze" that is dashing the waves over the long, projecting sea-wall, at the far end of which stands the solitary beacon. We have seldom seen *flatness* treated with more power and interest; the distance and sky effects are also well given.

George Colcum.—A new contributor, and a most welcome one. Few pictures in this collection have been more admired than his 'Vale of Aosti.' The last gleam of sunshine on the rocks and rich foliage is poetically imagined, and most artistically treated, reminding us strongly of Glover in his best days. We are glad to observe that this, and a 'View of Patterdale,' has been purchased. No. 176, 'Hay-boat in a Calm,' is also a beautiful specimen of his powers.

S. F. Brocas.—We must also welcome the return of this very clever artist, and his brother, Mr. William Brocas, to the Exhibition. Their works are a great addition. No. 72, 'Goody Bridge,' No. 129, 'Sandy Cove; and No. 211, 'The Dargle,' please us very much, by the former; and the latter, No. 82, 'Roderick O'Connor's Castle,' and No. 130, 'Girls on the Mountain of Maugerton, County Kerry,' which are very creditable to him. We must observe, also, that the Messrs. Brocas set a good example in asking prices for their works, such as must induce and encourage the public to the acquisitions of modern art, instead of the absurd system pursued by many others, who, by their exorbitant demands, drive their well-wishers from their ateliers to the auction-room and picture-dealers.

Gillard.—This artist appears to advantage in No. 165, 'The Broken Jug'—the story very well told. 'The Christmas Present' is also good; the accessories managed with particular care and cleverness.

Foy.—No. 99, 'A Polemic of the Sixteenth Century'—clever, well-toned picture. This artist's name is new to the exhibition, but there is such performance, as well as promise in this, that we hope he will be a frequent contributor.

W. Howis.—No exhibitor of last year shows so much improvement as this artist. 'A View of Dublin from the adjacent Hills' is a difficult subject, cleverly treated, but No. 175, 'Coast Scene—Morning,' is our favourite; the aerial perspective in this charming little picture is well managed.

Nairn.—Several clever portraits of Cattle, &c. No. 92, 'A New Forest Pony' is the best.

C. Grey, A.R.H.A.—This artist has been very industrious and we perceive considerable improvement: his best are No. 1, 'Sportsman's Companions,' and a portrait of 'Miss Coote with a Noble Dog,' the latter is particularly well done.

So far for resident and Irish artists, at present, amidst these we are happy to find some choice contributions from England and Scotland; Mr. Stark sends several very clever landscapes. There are two fine subjects by Lee, especially No. 62, 'A View on the Humblewater, Crome,' No. 116, 'A Mill by Moonlight,' displaying good colouring and much pictorial effect.

We shall resume our notice next month.

## VARIETIES.

**AMATEUR ARTISTS' SOCIETY.**—Under this title a number of gentlemen have associated together during the past season for mutual instruction and entertainment, and have given a series of conversazioni, whereat have been exhibited in one room the works of amateurs, and in others choice collections of the works of modern masters. Chiefly through the zeal of their president, Mr. Edmund Antrobus, these meetings have been very successful; papers on different branches of Art have been read at each of them, and much interesting matter brought forward. Although at present the means of the Society are limited, it purposes to have for its chief object, the formation of a gallery of the works of living artists. The address delivered by the president at the closing meeting has just been published, and contains a hint on that subject which is worth consideration—namely, that the diploma pictures and statues of the Royal Academicians, at present in obscurity, might be made to form the foundation of a gallery devoted to the British School if placed in some part of the National Gallery, or in an accessible building erected purposely for them. We cordially wish the Amateur Artists success in their endeavours: we have known great things proceed from even smaller beginnings, and shall hope it may be so in this case.

**COLOGNE CATHEDRAL.**—The German papers announce that a meeting has been held to consider the best means of raising funds to complete this magnificent structure, and that a subscription has been opened for the purpose, to which both Protestants and Roman Catholics are lending their aid. We shall rejoice exceedingly to learn of the success of this endeavour. Nothing is wanting but funds to realize that which is at this time only a splendid promise: some of the original drawings being fortunately in existence, so as to afford all the necessary authorities as to the intentions of the original designers, where they could not be drawn from those parts of the building already completed.

**THE 'ART-UNION' OF LONDON.**—After strenuous endeavours on the part of the Committee to obtain some unpublished plate worthy of the Society, impressions from which might have been distributed to the subscribers of 1841, they have been compelled to abandon the intention, and to place in the hands of an eminent engraver, Hilton's beautiful picture, 'The Return of Una,' a decision which reflects upon them the highest credit, and cannot fail to give great satisfaction to the public. It is a testimony to the merit of our late distinguished countryman, which is alike honourable to the Society, and to his memory; we are glad to say too that his executor, Mr. De Wint, as well as the owner of the picture, feeling this, has placed the copyright gratuitously at the disposal of the Committee. If all that we have heard be true, the Committee have had a most laborious task in seeking for a plate, and have had some curious points brought before them. One, not the least singular, was with respect to two or three engravings by different hands, of pictures by Mr. Turner, the stipulations in regard of which, on the part of the artist, were of such a nature as to make them "sealed books." Touching the selection of works of Art by the prizeholders, several cases of attempted "jobbing" by artists have come to our knowledge, which, if known generally, would serve to degrade the artistical character considerably in the public eye. We shall not at this moment state the circumstances, although our duty may compel us to this course hereafter; and, if so, it shall unquestionably be done with an unsparing hand. To the prizeholders we say, use your best judgment in the selection, and consider, in the words of the Committee's report, you are acting as the stewards of the Association, to whom you will be responsible. In many cases apart from any underhand proceedings, prices have been named by artists for their works which are quite preposterous in amount. If such a course be persevered in by any large number of the artists, serious evils will be the result; private buyers will be discouraged; and the public will be thrown back again upon the works of the old, or of foreign modern masters. We feel very strongly on this point, and seriously urge on artists the consideration of it.

**BELGIUM.**—The National Association for the Encouragement of the Arts in Belgium, have just now distributed their prizes and published a report. It is conducted on the plan of the Art-Unions in England, and has been two years in existence. The total amount subscribed, in shares of 20 francs each, was 18,360 francs, or about £735 of our money. This was expended in the following manner:—9410 francs were consumed in the publication of a monthly work on fine arts and literature, called the *Renaissance*, embellished with 24 lithographs and of which each subscriber receives periodically a copy; 1750 francs for the purchase of fine paintings and two water-colour drawings; and the remainder for the payment of expenses, and the purchase of the same number of illustrated books, albums, lithographs, and engravings as there were subscribers, so that every one received something.

**GHEENT.**—We observe in a local paper that the *Kunstgenootschap*, or "Society of Artists," of this town, which has in its list of members the names of Felix Devigne, A. Dielens, Viette, Roelant, Nypels, &c., has elected Mr. George Godwin, the honorary secretary of the London Art-Union, corresponding member, to express their opinion of his endeavours to assist the Arts.

**ITALIAN PICTURES.**—We have been favoured, at Mr. Morris's, in Park-street, Grosvenor-square, with a view of some Italian pictures of high merit; to which attach the names of Raffaele, Correggio, and Carracci. The picture attributed to the first master is a Madonna and two children; but the dotting and stippling manner in which the flesh of this picture has been painted, had it been more careful, would have resembled rather the work of Correggio than that of Raffaele, in whose oil pictures of this kind, and of that period of his life to which this work might be ascribed, there is found not less finish than in this picture, but a greater degree of freedom. By Carracci there are two pictures, and by Correggio one, all of which are in fine preservation. In judging of pictures the mere criterion of general style is often fallacious; for every celebrated master has produced experimental works so different from his general manner, that the novelty of the style would give the work to another but for the existence of some authentic record. Maugre all anomalies of style, an indisputable voucher settles at once the authorship of a work of Art, but in the absence of such, style and character alone can be appealed to. Dealers in almost every town in Italy are prepared to supply all comers with undoubted originals by the greatest masters; but to afford an example of the manner in which such originals are got up, it is not necessary to refer to Italy. There is in the Netherlands a society of monks, which has been long in possession of a very fine Murillo, so fine, that all travellers of a certain degree of taste applied at the convent for a sight of the picture. Among others who came to see it an English gentleman presented himself, who was so charmed with the work, as to desire to purchase it; but on the part of the good fathers difficulties and objections arose, inasmuch that he almost despaired of combating them. The convent, however, was extremely poor; and it was at length agreed that the Murillo should be sold. The sum demanded for a picture of such excellence was of course very considerable; it was, however, paid, and the purchaser was requested to write his name and affix his seal to the back of it; which, being done, the monks, it was determined, were to send the work to the residence of the traveller. The contract was fulfilled to the satisfaction of the purchaser, who conveyed the picture to England. Some years afterwards, being again in the Netherlands, he called upon his friends the monks; but what was his astonishment, on finding, as brilliant as ever, his Murillo hanging precisely in the place in which he had first seen it. He was, undoubtedly, in possession of his own seal and signature; but the original picture had been fitted over a copy, and a very good one—indeed as good a Murillo as a great many we have seen.

**SALE OF THE PICTURES OF THE HON. LADY STUART.**—Since the sale of Sir Simon Clarke's pictures, there has been no sale of so choice a description as this of the Hon. Lady Stuart, sold by Messrs. Christie and Manson, on May 15. Their quality, and the genuine and unvarnished state of condition in which they were—a circum-

stance that so rarely occurs—were such that we wonder not at the somewhat extravagant prices they produced. The 80 pictures brought £13,676. The undermentioned pictures realized prices as follow:—'Atalanta and Meleager pursuing the Caledonian Boar,' Rubens, 997l. 10s.; 'A Seaport—Evening after Sunset,' Claude, 640l. 10s.; 'A Marine View—a fresh Breeze,' William Van de Velde, 1176l. 0s.; 'A View of the Entrance to a Harbour,' Ludolph Backhuysen, 462l.; 'A View on the River Maes—Sunset,' Cuyp, 1102l. 10s.; 'Melchizedec giving Bread and Wine to Abraham and his Soldiers,' Rubens, 598l. 10s.; 'Landscape,' Berghem, 168l.; 'Landscape,' Philip Wouvermans, 409l. 10s.; 'Landscape,' Both, 137l. 11s.; 'Bowl-players,' Teniers, 173l. 5s.; 'Villagers Merry-making,' Teniers, 225l. 15s.; 'Portrait,' Rubens, 430l. 10s.; 'The Companion,' 483l.; 'Landscape,' Ruysdael, 346l. 10s.; 'Travellers Halting,' Karel du Jardin, 430l. 10s.; 'Landscape,' Rubens, 304l. 10s.; 'View on the Texel,' Ludolph Backhuysen, 446l. 5s.; 'Sea View,' William Van de Velde, 619l. 10s.; 'Landscape,' Morland, 220l. 10s.; 'Landscape,' Both, 115l. 10s.; 'Boy with a Bird's-nest,' Murillo, 105l.; 'Dutch Farm,' Omeganck, 120l. 15s., &c., &c. We have heard that the Cuyps were purchased for Geo. Holford, Esq.; the great part of the prints were purchased by Mons. Neuenhuys, and of course will unhappily leave the country.

**THE SCHOOL OF DESIGN.**—We direct attention to an advertisement on this subject, upon which we shall offer some comments next month. The plan of educating teachers is a preliminary step to the establishment of schools throughout England. It is proposed not merely to furnish schools with masters and materials of study, but to provide collections of casts from the antique and other objects of art, with the view of cultivating the popular taste.

**COMMITTEE OF ARTS.**—The labours of the Committee of the House of Commons, at present sitting with a view to the adoption of the best means of embellishing the Houses of Parliament, not being sufficiently advanced, we cannot this month enter at length upon the subject; but as it is a matter of much importance, we are observing its progress narrowly; and the more so that it is said the interests of British artists are threatened by the declared opinions of some of the members of the committee.

**THE REJECTED VELASQUEZ.**—The negotiations for this beautiful picture, after having been pending for eighteen months, are at length closed, and the work is lost to the nation because the country is *too poor to purchase it*: such is the reason assigned for its rejection. We must, however, do the committee the justice to state, that the odium does not rest with them, for already three times have they declared the picture purchased, but the money was not forthcoming, and it has been removed by the proprietor or his agents, and negotiations are now pending for its purchase for a foreign collection. The beauty and fine condition of this work—its known authenticity, and the rarity of landscapes by this master—ought to have secured it to the nation; and nothing is to be more regretted than that the state of our national collection should depend upon the temporary position of the government, when works of such transcendent merit are offered for its enrichment. The picture was presented to Lord Cowley by the King of Spain, and represents the Prado, when about to become the scene of a royal hunt. We shall return to this subject when the destination of the picture is known.

**THE LUCCA GALLERY.**—Many of the finest pictures of this collection yet remain unsold, and it is now determined to bring them to the hammer. They are about to be sold by Mr. Phillips, of Bond-street, and we cannot consider it otherwise than a compliment to this country, that they should have been brought hither for disposal, although the result must greatly disappoint the proprietor. From this Gallery, our national collection receives only the addition of the Francias; the Carraccis it will be remembered were refused; they are now in course of exhibition in the provinces, and have proved, it is said, a profitable speculation. Among the remaining works is a Raffaele—'La Madonna dei Candelabri,' a perfect gem—equal to any of the works of the best time of this master, and differing but little in size from the celebrated 'Madonna della Leggia' of the

**Pitti Collection.** It has been repeatedly engraved, and formed one of the leading features of the Lucca Gallery. There is also a curiosity by Michael Angelo—"Christ on the Cross"—finished with extraordinary care, and almost as clear in its tones as when it was removed from the easel. By Sebastiano del Piombo there is a work of rare excellence, the subject of which is, 'Christ carrying his Cross.' This picture was commissioned by Charles V., and the design was sketched in by Michael Angelo. There is also an admirable work by Baroccio—"Christ appearing to the Magdalen in the Garden,"—as also works of singular merit by Domenichino, Andrea del Sarto, Guido, &c. &c., which could not be adequately described in a notice so brief as this must necessarily be; and of which the originality cannot be doubted, since the history of each picture is well known. The reasons assigned for the disposal of this collection (an event by the way in the annals of picture importation) are the embarrassments of the Duke of Lucca, arising from the loss of the large sums of money advanced by him in support of the claims of Don Carlos in the late Spanish struggle.

**ARMOUR.**—Some portion of the armour which was used at the Eglintoun tournament has recently been disposed of, at the sale rooms of Mr. Oxenham, in Oxford-street. The sale consisted principally of the property of Messrs. Pratt, of Bond-street; and has been spoken of or advertised as the "Gothic Armoury," though it is difficult to comprehend why such a term should have been applied here. The collection consisted of many varieties of plate-armour, from the full suit to that steel body defence improperly termed *cuirass*, and thence again to the steel gorget, the latest remnant of defensive armour, before the re-adoption of the modern cuirass. Some of the tilting-suits were very beautiful, and the most perfect and best conditioned in the collection; the lighter war-harness seems to have been of a date subsequent to these. The suits of mixed harness were few; that is, of those having chain-mail and plates intermixed; and these and the plate-armour seemed to be of a time subsequent to that of the adoption and perfection of the moveable vizor. Of mail, or chain-armour, there was but one specimen, and that seemed to be of Asiatic fabric. Plate-armour, as a defence for the entire frame, arrived at its utmost perfection in England about the time of Richard III.; and of this period there were one or two suits sold, which were remarkable for the rounded projection of the breast-plate. There were also buff suits, with the accompanying iron corslet of the seventeenth century, and specimens of offensive arms, of almost every description. It is much to be regretted that this is a department of study to which artists pay but little or no attention, we cannot therefore look for accuracy in a matter so lightly esteemed by them, though in reality of the utmost moment, and requiring some attention to avoid anachronisms. French and German artists bestow much care on this department of costume; errors in the warlike equipments are therefore rarely discoverable in their works; but many even of our best historical painters paint but one style of armour from the time of Edward III. down to the accession of the Stuarts. There is no tendency to amendment in this, for the absurdity of the thing is most ingeniously varied, by painting Mars in a life-guard'sman's cuirass, and going even so far as to give him a pipe-clayed sword belt! This is very much like caricature; for it has a most ridiculous effect. Many glaring errors in the works of men of high standing might here be particularized; but as our only anxiety is for a remedy to this evil, we would not wish to fall under the imputation of setting down aught in malice. Many of the suits of armour disposed of at the sale abovementioned, were sold for comparatively little or nothing; and it would have been a favourable opportunity, say for the Royal Academy, to have purchased a few suits of different dates, as studies for those artists who paint history. These suits in time might, by judicious selection, be improved into a series comprehending descriptions and specimens from the Saxon era to that of the Commonwealth. Such an addition to the objects of study of the Royal Academy would be productive of much good; for a corrective is loudly called for; yet artists who chose to paint armour ought to ensure

themselves by inquiring against glaring anachronisms.

MR. GEORGE HAYTER is at Strathfieldsaye, where his Grace the Duke of Wellington is sitting to him for his portrait, to be introduced into the picture upon which the artist is employed, commemorative of her Majesty's marriage. As it is known that his Grace objects now to sit to painters, probably this will be the last record we shall have of him.

## REVIEWS.

**THE MARQUIS OF STAFFORD AND LADY EVELYN GOWER.** Painter, EDWIN LANDSEER, R.A. Engraver, SAMUEL COUSINS, A.R.A., Publishers, HENRY GRAVES and Co.

Few modern publications surpass this in beauty and interest; it is a chef-d'œuvre of the painter, copied with corresponding excellence by the most accomplished mezzotint engraver of the country—perhaps of the age. Two graceful and lovely children are represented under the shadow of a noble tree in the park of their father, the Duke of Sutherland. A fair girl is petting a gentle fawn, and her little lap-dog is evidently jealous of the favour bestowed upon a rival; a magnificent hound stays in the back-ground, looking angrily upon the preference shown to prettier competitors. It is, indeed, a sweet story sweetly told; and the print cannot fail to be a favourite with all classes; either in reference to the touching interest of the subject, or its exceeding merit as a work of Art, Mr. Cousins has produced no engraving superior to it.

**PORTRAIT OF THE RIGHT HON. SIR ROBERT PEEL, Bart., M.P., &c., &c.** Painter, Sir THOMAS LAWRENCE, F.R.A. Engraver, F. C. LEWIS. Publishers, HENRY GRAVES and Co.

This is a fac simile of the famous sketch of Sir Thomas Lawrence, from which he painted the several portraits of the illustrious statesman. It is produced as a companion to that of the Duke of Wellington we recently noticed. The two great men have occupied, perhaps, the most prominent positions in our country, during the present age; and these records of them, in their best time, will be valuable not only to the existing generation, but to posterity. There is no likeness of Sir Robert Peel to compare with this for accuracy, blended with that fine expression which no British painter ever caught and transferred so happily as the late President. It is a true copy of the man, but a pleasant copy; taken, as it would appear, in one of his most thoughtful, and yet most cheerful, moods. Genius is evident in the work of the artist, as well as in the countenance of the sitter. At a time when the Right Hon. gentleman is "the observed of all observers," and when he is likely to become still more conspicuous than he has been in the eyes of Europe, the print comes as an acquisition of no ordinary merit. It is just the portrait his friends and admirers—personal and political—would covet to possess; for it gives good promise of a future career. High mind, great energy, and firm honesty, are the characteristics of his features; at least as they are represented here. The engraving, too, has been executed with amazing fidelity; in its peculiar style it is of rare excellence; and reflects infinite credit upon the burin that produced it.

**ZUMALACARREGUI AND THE CHRISTINO SPY.** Painter, J. F. LEWIS. Engraver, C. G. LEWIS. Publishers, HENRY GRAVES and Co.

This sterling print commemorates one of the most remarkable events in the recent Spanish war—a war without parallel for atrocity, in the history of the world; for its horrors were redeemed by very few traits of generosity, the voice of mercy being effectually drowned by the cry of bigotry. The best general in the service of Don Carlos was the famous Zumalacarregui; he was brave as a lion, active as a wild horse, but like all his compeers, cruel as a tiger. The incident here recorded describes him at the moment when he is sentencing "a spy" to death, having just signed the order for his execution: the man looks dogged and resolute; it is evident that he sees no chance of escaping his

doom; but his wretched wife is interposing with a vain prayer to save him. The composition is admirable; the grouping is managed with great skill; and the characters are evidently true: there is no mistaking the stern countenance of the guerrilla chief, or the monkish-looking secretary who sits at the table. Another person is introduced, who will claim more than common attention—the English officer who was the historian of Zumalacarregui's life. The print is especially interesting as the joint production of Mr. Lewis, the father, and his two sons, all accomplished artists, who rank high in the annals of fame; for although the name of Mr. Lewis, sen. does not accompany the publication, it is known that he has carefully and anxiously laboured to render the work perfect. As an example of British engraving it is entitled to the highest praise.

**ILLUSTRATIONS (Landscape, Historical—landscape, and Architectural), of the WORKS OF SHAKESPEARE.** A Series of Line Engravings from Original Designs by G. F. SARGENT. Executed under the superintendence of JOHN WOODS. Publishers, HOW and PARSONS.

It is somewhat singular, that when so many British authors have been largely illustrated by "Landscapes," the most immortal and universal of them all should not have received this distinction; yet none afford so ample a supply of striking and interesting subjects. There are few readers who would not desire to see pictured the scenes with the names of which the works of Shakespeare have made him familiar; as accompaniments to the text they are of great interest and value. It is highly to the credit of Mr. Sargent, that he is the first to originate a project calculated to receive a large extent of public patronage, and he is working it out in a very satisfactory manner. As works of Art, they will not take the highest rank; but their claim to consideration is of a better order. They evidence thought and industry. It is obvious that the artist has spared no pains to obtain accuracy; that he has visited all the places described, or has consulted the safest and best authorities. He has done more than this; his illustrative groups are introduced with skill and effect, and add considerably to the importance of each subject. Mr. Sargent has established a high reputation as a designer on wood; and perhaps too much of his peculiar study is perceptible in these prints; a defect that a little time and experience will no doubt remove. We shall hereafter notice the publication at greater length, when it has advanced somewhat further; but we may even now recommend it as very agreeable and useful to the illustrators of the works of Shakespeare, and as, in all respects, a desirable series of pleasant prints.

[Our time and space have been this month so largely occupied by the Royal Academy, that we are compelled to postpone notices of several other works.]

[We have made inquiries in a quarter upon which we can rely concerning the correctness of our information; and we are enabled to give the following answers to "T. F." and "A Subscriber":—"The pictures intended for exhibition in the Royal Academy, are brought before the council by the carpenters, who are afterwards employed to hang them—men who know nothing of the merits of the pictures, nor of the names of the painters. The works are considered (every one separately and minutely) by the council, who know nothing of the names of the artists. Those that are obviously good pass quickly. When a doubt arises, the president takes the votes of the council, and the majority decides. The council over, the committee begin their labours. Their only assistants are the carpenters' men. The porters of the academy are never once admitted into the rooms during the sitting of the council, nor during the arrangement of the committee. They know no more of what is doing above than the man in the moon. These men have absolutely nothing whatever to do with the pictures from the time they are received till ordered to take the dust off them, previously to the public coming to the exhibition. It will be obvious, therefore, if "T. F." or the "Subscriber" have been foolish or inconsiderate enough to attempt to bribe the porters of the Royal Academy, they might as well have thrown their money into the mud before the door. We have taken pains to procure answers to these questions, to prove our desire for truth; but we cannot help suggesting to our correspondents, that statements which are intended to call in question the honor of a public body, ought to be substantiated by the names and addresses of the authors, as well as the particular facts to which they allude.]

NEARLY READY,

## MILLER'S SKETCHES IN FRANCE, OF THE AGE OF FRANCIS I.

Price, imperial folio, tinted, £4 4s. half-bound; coloured and mounted in portfolio, £10 10s.

LATELY PUBLISHED,

HAGHE'S SKETCHES IN BELGIUM AND GERMANY;  
 PROUT'S SKETCHES IN FRANCE, SWITZERLAND, AND ITALY;  
 STANFIELD'S SKETCHES ON THE MOSELLE, THE RHINE, AND THE MEUSE;  
 ROBERTS'S PICTURESQUE SKETCHES OF SPAIN;  
 LEWIS'S SPANISH SKETCHES OF THE ALHAMBRA.

Price, each Volume, imperial folio, tinted, £4 4s. half-bound; coloured and mounted in portfolio, £10 10s.

LONDON: HENRY GRAVES &amp; COMPANY, HER MAJESTY'S PRINTSELLERS AND PUBLISHERS IN ORDINARY, 6, PALL-MALL.

ELEGANT AND ORNAMENTED PICTURE  
 FRAMES OF A SUPERIOR DESCRIPTION,  
 WARRANTED TO CLEAN.

**C. J. ECKFORD, 45, FLEET-STREET,**  
 corner of Mitre-court, Temple, opposite Fetter-  
 lane, begs leave to inform Artists, the Trade, and  
 Public, that they can obtain A LARGE AND CLEAR  
 EXPLANATORY SHEET OF DRAWINGS, with  
 numerous elegant Patterns, the Size and Prices attached  
 to the various Frames, sent gratis and free of postage to  
 any part of the United Kingdom.

Old Frames re-gilt; large and small Miniature Frames  
 at proportionate prices. Fancy-wood Frames of every  
 description. Orders from the country punctually at-  
 tended to. ESTABLISHED 1792.

TO ARTISTS AND AMATEURS. — BROWN'S PAT-  
 TENT COLLAPSIBLE COLOUR TUBES.

**THOMAS BROWN, of 163, High-Holborn,**  
 COLOURMAN TO ARTISTS IN OIL AND  
 WATER, returns his sincere thanks to his numerous  
 Patrons for the many years of patronage bestowed on  
 his late Father, and begs to inform them, that he has  
 the above New Invention for containing Oil Colours.  
 It possesses all the advantages of Bladders and Sy-  
 rings, without any of their inconveniences; and he  
 offers it at a price very little exceeding Bladder Colours:  
 it effectually prevents all waste, dirtiness, and smell;  
 and will preserve the Colour good for years, and in any  
 Climate. T. B. also begs to say, that he now manu-  
 factures Water-Colours, and sells every Material for  
 Drawing and Painting.

CHEAPEST AND BEST MANUFACTURED PIC-  
 TURE FRAMES IN THE WORLD.

**P. GARBANATI, WORKING CARVER**  
 and **GILDER, 19, St. Martin's-court, St. Mar-  
 tin's-lane,** respectfully informs Artists, &c., that as he  
 Manufactures every description of ornamented, Gilt,  
 and Fancy-wood Picture Frames entirely on his pre-  
 mises, he is enabled to offer them at such low prices,  
 that he defies competition. A most extensive assort-  
 ment of every description of Picture Frames kept  
 ready. Re-gilding, in all its branches, done in a most  
 superior manner, and cheaper than by any other Gilder  
 in the kingdom. Estimates given free of charge.

P. S. A List of the Prices of PLATE GLASS, Gilt  
 and Fancy-wood Picture Frames, Room Mouldings,  
 &c., can be had at the Manufactory (gratis), or sent  
 (pre-paid) to any part of the Kingdom.

P. G. respectfully solicits a Trial of his Work, for  
 comparison of Quality and Price, with other Manu-  
 facturers.

**CHEAP PLATE GLASS,** an entirely new  
 article by a PATENTED PROCESS. For Build-  
 ings, Drawings, and Engravings, of all sizes, up to 40  
 by 30 inches; and at about half the cost of British  
 Plate Glass!

Sheet Glass, for Glazing Houses and Conservatories,  
 thick and double thick.

Crown Window Glass.

Fluted or Ribbed Glass.

Coloured Glass, including the Ruby, equal to the  
 ancient.

Painted and Ornamented Glass.

Glass Shades for covering Clocks and Ornaments.

Sold, Wholesale and Retail, by **CLAUDET and  
 HOUGHTON,** at their Glass Warehouse, 89, HIGH  
 HOLBORN, where lists of prices of the above articles  
 may be had.

EVERY GENTLEMAN HIS OWN PICTURE  
 CLEANER.

**TWINBERROW'S INVITA MINERVA,** as  
 used by Sir F. BOURGEOIS to clean the  
 collection in the Dulwich Gallery. So simple is the  
 application, that the greatest novice may use it most  
 effectually, without the least apprehension of injuring  
 the most delicate painting.

W. T.'S NEWLY INVENTED **ÆTHERIAL MASTICK**  
**VARNISH,** of superior quality, possesses the peculiar  
 and advantageous property of not chilling; it never  
 cracks, having an elastic quality; and is as pale and  
 as transparent as crystal. Prepared by **Twinberrow,**  
 Chemist, 2, Edward-street, Portman-square.

Pure Water, twice a week, from St. Ann's Well,  
 Malvern; and Soda Water, manufactured from the  
 same spring.

SPLENDID AND SUPERIOR GILT FRAMES.

**CHARLES McLEAN, 78, Fleet-street**  
 (opposite THE DISPATCH Newspaper-office),  
 respectfully informs the Public, Artists, and the Trade,  
 that they can be supplied with PICTURE FRAMES,  
 of the very best manufacture, at prices never hitherto  
 attempted.

A LARGE SHEET OF DRAWINGS, representing  
 the exact patterns and prices of one hundred different  
 sized frames, ornamented with designs, made ex-  
 pressly for this Manufactory, may be had gratis, and  
 sent free of postage to any part of the kingdom. The  
 Trade supplied with Frames in the Compo. Fancy-  
 wood Frames and Mouldings. Old Frames repaired  
 and re-gilt.

An extensive Stock kept seasoned for immediate  
 delivery.—All goods taken back, not approved of in  
 three months.

**THE SIDDON'S MONUMENT**  
 Committee, formed for the purpose of placing  
 a Bust or Statue of the late Mrs. Siddons in West-  
 minster Abbey:—

Marquess of Lansdowne. Samuel Rogers, Esq.  
 Marq. of Northampton. Thomas Moore, Esq.  
 Marquess of Normanby. Thos. Campbell, Esq.  
 Earl of Aberdeen. R. M. Milnes, Esq., M.P.  
 Lord Leigh. C. Cockerell, Esq., R.A.  
 Lord Francis Egerton. J. G. Lockhart, Esq.  
 Lord Burghersh. Gally Knight, Esq., M.P.  
 Sir E. Lytt. Bulwer, M.P. Clark. Stanfield, Esq., R.A.  
 Sir M. A. Shee, P.R.A. B.W. Proctor, Esq.  
 Sir A. W. Calcott, R.A. C. M. Young, Esq.  
 Henry Hallam, Esq. Charles Dickens, Esq.  
 Rev. H. Hart Millman. C. Barry, Esq., A.R.A.  
 Mr. Serj. Talfourd, M.P. W. C. Macready, Esq.  
 Hon. Secretary—Wm. Bryden, Esq.,  
 4, New Palace Yard, Westminster.

At a Meeting of the Committee, held at Exeter Hall,  
 on the 22nd of March, the Most Noble the Marquess of  
 Lansdowne in the chair, the following Resolutions were  
 unanimously agreed to.

Resolved, That as Monuments have been erected in  
 Westminster Abbey to the memory of many distin-  
 guished professors of the dramatic art, it is an omission  
 on the part of those who drew delight and instruction  
 from the sublime personations of Mrs. Siddons, that  
 the name of that actress, who, by a singular union of  
 the highest intellectual and physical qualifications,  
 transcended the artists of her own, or perhaps of any  
 other time, should have so long remained without  
 public record or notice.

Resolved, That, in order to render justice to her rare  
 perfections, and convey to posterity some idea of the  
 estimation in which her surpassing powers were held  
 by her contemporaries, a Bust or Statue of Mrs. Sid-  
 dons be placed in Westminster Abbey.

Resolved, That, in order to afford the opportunity of  
 participating in this object, to those who enjoyed the  
 delight of witnessing the representations of this great  
 actress, or who have profited in the performances of  
 inferior artists, by the lessons her genius taught, the  
 expenses of the proposed monument be met by a public  
 subscription, each subscription not exceeding One  
 Guinea.

Resolved, That Sir Thomas Chantrey be requested to  
 undertake the work.

Subscriptions received by Messrs. Coutts, Strand;  
 Messrs. Drummonds, Charing-cross; the Union Bank  
 of London, Moorgate-street, and Argyle-place; the  
 Bank of Scotland, Edinburgh; the Bank of Ireland,  
 Dublin; the Bank of Liverpool, Liverpool; the Bank  
 of Manchester, Manchester; Glasgow Union Banking  
 Company, Glasgow; Messrs. Hobhouse and Co., Bath;  
 and by W. C. Macready, Esq., Hon. Treasurer, 5,  
 Clarence-terrace, Regent's-park.

Nearly ready for Publication, in One Volume, imperial folio, bound, price £4 4s.

MR. J. D. HARDING'S NEW WORK,

## THE PARK AND THE FOREST;

CONSISTING OF

TWENTY-SIX SPECIMENS OF LANDSCAPE SCENERY,

&c. &c. &c.

DRAWN ON STONE BY MR. J. D. HARDING HIMSELF,

From his Original Studies (made expressly for this work); and Printed by C. HULLMANDELL, with the advantages of his late Patent Improvements  
 in Lithography.

LONDON: PUBLISHED BY THOMAS McLEAN, 26, HAYMARKET.

## HENRY GRAVES AND COMPANY,

Her Majesty's Printsellers and Publishers, have the honour to announce the following Important Engravings, now in progress.

## WORKS BY EDWIN LANDSEER, ESQ. R.A.

## THE HIGHLAND DROVERS DEPARTING FOR THE SOUTH.

Engraved in the line manner by J. H. WARR, from the Splendid Picture exhibited at the Royal Academy, painted for J. SHEEPHANKS, Esq.

Prints . £3 3s. Proofs . £6 6s. India Proofs . £10 10s.  
India Proofs, before Letters (nearly ready) . £12 12s.

*Dedicated to Her Grace the Duchess of Sutherland,*

## LADY EVELYN GOWER AND THE MARQUIS OF STAFFORD.

Engraved in the most exquisite manner by SAMUEL COUSINS, Esq., A.R.A., from the very beautiful Picture Painted for the Duke of Sutherland, K.G.,

Prints . £2 2s. Proofs . £4 4s. Before letters, (now ready) . £6 6s.

## CHILDREN WITH RABBITS.

Engraving in the finest style of Mezzotinto by THOMAS LANDSEER, from the very interesting Picture exhibited in the Royal Academy, painted for the Hon. Mrs. Bathurst.

Prints . £2 2s. Proofs . £4 4s. Before Letters . £6 6s.

*Forming an exact Companion to the preceding Plate,*

## THE HIGHLAND WHISKEY-STILL.

Engraving in the most beautiful line manner by ROBERT GRAVES, Esq., A.R.A., from the very beautiful Picture painted for his Grace the Duke of Wellington, K.G.

Prints . £2 2s. Proofs . £4 4s. India Proofs . £6 6s.  
Before Letters . £8 8s.

## THE HAWKING PARTY IN THE OLDEN TIME.

Prints . . £4 4s. Proofs . . £7 7s. Before Letters . . £10 10s.

## WORKS OF GEORGE HAYTER, ESQ.

## THE CORONATION,

OF HER MAJESTY QUEEN VICTORIA IN WESTMINSTER ABBEY,

Engraving in the finest style of Mezzotinto, by H. T. RYALL, Esq. from Mr. HAYTER'S Grand Historical Picture.

This magnificent Picture contains, independent of the gorgeous display of the splendid pageant, the Portraits of Her Majesty, of Her Royal Highness the Duchess of Kent, and the whole of the Royal Family, of the Foreign Princes, the Archbishops of Canterbury and York, and the High Dignitaries of the Church, of the Peers and Peereses, the Ladies and Officers of State, the Lovely Trainbearers, and the other illustrious Personages who were engaged in the August Ceremonial, all of whom have (under sanction) honoured Mr. HAYTER with repeated sittings for their individual Portraits.

Prints, £4 4s. Proofs, £8 8s. Proofs before Letters, £12 12s.

## HER MAJESTY'S MARRIAGE,

PAINTED BY EXPRESS COMMAND, FOR THE QUEEN.

The Publishers are happy to announce that they will have the honour to engrave this very interesting subject of "Her Majesty's Marriage," upon the same grand scale as Mr. HAYTER'S Picture of "Her Majesty's Coronation," to which it will be in every respect a perfect companion, thus forming two of the most splendid engravings of modern times, and perpetuating the two most celebrated events in the reign of Her Most Gracious Majesty, Queen Victoria.

Prints, £4 4s. Proofs, £8 8s. Proofs before Letters, £12 12s.

## WORKS OF FRANCIS GRANT, ESQ.

## THE MELTON HUNT,

COMPANION TO THE ROYAL HUNT.

Engraving by W. H. HUMPHREYS, in the finest style of Mezzotinto, from the very beautiful Picture in the Collection of the Duke of Wellington.

This very interesting Picture contains Portraits of the most distinguished Sportsmen assembled for the enjoyment of the Chase.

Prints, £3 3s. Proofs, £5 5s. Proofs before Letters, £6 6s.

## THE RETURN FROM SHOOTING,

Containing Portraits of the Earl of Lichfield, Earl Sefton, Viscount Melbourne, Lord Molyneux, and other eminent Noblemen and Gentlemen.

Engraving by W. SIMMONS, Esq., the size of the "Ascot Hunt," in the finest style of Mezzotinto, from the very beautiful Picture painted for the Earl of Lichfield.

Prints, £3 3s. Proofs, £5 5s. Proofs before Letters, £6 6s.

*H. Graves and Co. also beg to announce the following Works in addition to those by Mr. Landseer, Mr. Grant, and Mr. Hayter.*

*The National whole-length Portrait of*

## HIS ROYAL HIGHNESS PRINCE ALBERT,

*In the Full Costume of the Robes and Jewels of the Order of the Garter.*

Engraving by H. T. RYALL, Esq., in the finest style of Mezzotinto, from the original Picture, painted in Buckingham Palace, by GEORGE PATTEN, A.R.A.

This magnificent Portrait is engraving on the same grand scale as the Portrait of Her Most Gracious Majesty, in the Robes of State, engraved by SAMUEL COUSINS, Esq. A.R.A.

Prints, £3 3s. Proofs, £5 5s. First Proofs, with Autograph, £8 8s.

## THE WATERLOO HEROES

COMMEMORATING THE ANNIVERSARY OF THE BATTLE.

Painted by J. P. KNIGHT, Esq., engraving in Mezzotinto by F. BROMLEY.

Prints, £4 4s. Proofs, £8 8s. Proofs before Letters, £12 12s.

## THE WORKS

## OF THE LATE SIR T. LAWRENCE, P.R.A.

PART IX.

Containing THE POPE, LORD LONDONDERRY, &c.

Prints, 12s. Proofs, £1 1s. First Proofs, £1 11s. 6d.

## THE BEDALE HUNT.

Engraving by W. SIMMONS, from the Original Picture painted by ANSON MARTIN, for Mark Milbank, Esq., on the same scale as the "Ascot Hunt."

Prints . £3 3s. Proofs . £5 5s. Before Letters . £6 6s.

This beautiful Plate will contain nearly Sixty authentic Portraits.

**PERSPECTIVE.** An Elementary Treatise on Perspective, with Illustrations. By the late WILLIAM RIDER, Lecturer at the Royal Institution, &c. &c.

London: Simpkin, Marshall and Co., Stationers' Hall Court.

**WORKS of THOMAS STOTHARD, Esq., R.A.**—The Public are respectfully informed that in addition to the Pictures now Exhibiting at the British Gallery, Pall Mall, several of his finest productions may be seen at No. 14, BROWNLOW-STREET, HOLBORN.

W. J. White, Ancient and Modern Printseller.

**PORTRAIT of DR. FARRE.**—A fine whole-length PORTRAIT of this highly-esteemed Physician, from a Painting by T. PHILLIPS, Esq., R.A., and engraved by Mr. F. BROMLEY, is, by the earnest desire of Dr. Farre's friends, just published. Prints, £1 1s.; Proofs, £2 2s.; Proofs, with Autograph, £3 3s.; Proofs before all letters, £4 4s.

W. J. White, 14, Brownlow-street, Holborn; and may be had of all respectable Printersellers.

**WINDSOR CASTLE, THE GENUINE EDITION.**

Now ready, Parts 1, 2, 3, and 4, of

**THE PICTORIAL and PRACTICAL ILLUSTRATIONS of WINDSOR CASTLE**, from a series of Original Drawings by Messrs. GANDY and BAUD; splendidly lithographed by HAWKINS, BOURNE, and MOORE, and the details accurately engraved on steel, forming one of the most magnificent volumes that has ever issued from the press. This beautiful volume will be delivered to the subscribers for £4 4s. plain, and £7 17s. 6d., coloured. The subscription list, honoured with the patronage of the Sovereigns of Europe, is now open, at the Library of Arts, 106, Great Russell-street, British Museum, and at all the Libraries in the Kingdom.

N.B. As in the case of all valuable works, spurious imitations have been attempted, it is absolutely necessary, when subscribing, to ask for Gandy and Baud's genuine Royal edition of Windsor Castle. The five concluding parts are nearly ready.

**A TREATISE ON PAINTING.** In Four Parts. Illustrated by One Hundred and Thirty Etchings from celebrated Pictures of the Italian, Venetian, Flemish, Dutch, and English Schools; and Wood Cuts. By JOHN BURNET, F.R.S.

The Parts may be had separate.

1. On the EDUCATION of the EYE. Second Edition. Price £1 5s.
2. On COMPOSITION. Fifth Edition. Price 15s. in boards.
3. On LIGHT and SHADE. Fifth Edition. Price 18s. in boards.
4. On COLOUR. Fourth Edition. Price £1 11s. 6d. in boards.

This Work is particularly recommended to the Student in Art in the New Edition of the Encyclopædia Britannica.—See the article on Drawing.

James Carpenter, Bond-street.

**RUBENS' PICTURE of the 'FALL OF THE DAMNED,'** in the Royal Pinacotheca, at Munich, worth 4000 guineas. The only copy of this celebrated Picture, suited for an altar-piece, or for the gallery of a nobleman, is now for SALE. It is by Jordans, the pupil, and most successful imitator of Rubens, its size is 9 feet 8 inches by 7 feet 1 inch. To be seen from Ten to Five daily, except Thursday, by tickets, to be had at Kerr's Library, 32, Duke-street, Manchester-square; or at Mortimer's, 21, Wigmore-street.

**KALORAMA.**—Under the Special Patronage of her MAJESTY and his Royal Highness Prince ALBERT.—The KALORAMA is NOW OPEN, at No. 17, Old Bond-street. Admittance, 1s. The KALORAMA consists of Pictures in the New Art of Ectemnograpy, which unites the characteristics of painting and sculpture, and combines the illusions of Chiaro-oscuro with Dioramic effects. The exhibition is enriched by a colossal Historical Painting, in the highest style of French art; a Diorama of Roslin Chapel, and select Gems by the Old Masters.

Under her Majesty's Royal Letters Patent.

**DAGUERRETYPE PORTRAITS** are taken daily at the GALLERY of PRACTICAL SCIENCE, ADLAIDE-STREET, STRAND, by the improved process of M. A. CLAUDET, which requires but a few seconds to obtain a perfect Likeness. By this process also Pictures forming groups of three to six persons can be taken, either engaged at ten, cards, chess, or in conversation, affording whole-length Family Portraits, or of Friends, arranged in any manner most agreeable to the parties.

Parties residing in Ireland or Scotland furnished with the perfect Apparatus, and instructed in the Art of taking Likenesses, by Messrs. CLAUDET and HOUGHTON, 89, High Holborn.

**TO AMATEUR SKETCHERS.**—An Artist, being about to take a Tour for a few months (the precise route not yet decided on), any Gentleman willing to join him as a TRAVELLING COMPANION, may have the advantage of his professional instruction during their trip, upon moderate terms;—or, the advertiser, who has visited great part of the Continent, and who speaks French, German, and Italian, would have no objection to accompany any Nobleman, Gentleman, or Family travelling for purposes of Art, as DRAWING TUTOR or SECRETARY.

Address, post-paid, to A. W., Mr. Parsons, No. 9, Bennett-street, Blackfriars-road.

## HENRY GRAVES &amp; COMPANY

BEG TO INFORM THE LOVERS OF THE ART OF ENGRAVING, THAT THE

## HIGHLAND DROVERS DEPARTING FOR THE SOUTH,

PAINTED BY EDWIN LANDSEER, Esq., R.A., AND ENGRAVED BY J. H. WATT, ESQ.,

IS NOW COMPLETED.

PROOFS, INDIA, BEFORE ANY LETTERS . . . . .	(not printing)	12l.	12s.	0d.
PROOFS, INDIA, WITH LETTERS . . . . .		10	10	0
PROOFS . . . . .		6	6	0
PRINTS . . . . .		3	3	0

Since the first proposals for engraving this magnificent specimen of native talent was announced for publication, nearly five years have elapsed—so long a delay can only be excused to the subscribers by one response—the perfect execution of the Plate; and such perfection, the publishers are happy to announce, has its fullest accomplishment in the exquisite production of Mr. WATT.

The 'HIGHLAND DROVERS' of Landseer has truly been considered the masterpiece of the admirable painter; for no other Picture from his hand contains so many figures, or represents so great a variety of character wherein are represented, the aged grandfather—the venerable grandmother—the full-grown man—the noble youth—the lovely girl—the playful boy—and the smiling infant. The "Ages of Shakspeare" are as truly given by the artist's pencil, as they have been described by the "observed of all observers." Nor, is the noble form of man in the composition, less beautiful than are the animals—a walk of art peculiarly Landseer's—in which, for truth to Nature, he has produced far more exquisite productions than ever came from the pencil of Rubens or Snijders. The horse—the ox—the goat—the sheep—the dog—the hen—and the young fledged chickens—are all drawn with a truth so perfect as to defy the censure of the most able judge.

If the Picture be admitted to be so admirable, equally so is the Engraving—for here is a like perfection. Mr. WATT has produced a Plate unequalled by any Print that has been executed in England, and such as may challenge the European schools to equal. In it the superiority of line Engraving is manifested over the most exquisite productions of the Mezzotinto art. Truly excellent as are 'The Bolton Abbey' and 'The Hawking Party in the Olden Time,' after the same Painter, they are outshone by the superior brilliancy, finish, and spirit, of the present work.

Messrs. Graves and Co. beg the early names of those parties who may wish for impressions, as priority of subscription ensures the earlier copies.

LONDON: MESSRS. GRAVES &amp; COMPANY, HER MAJESTY'S PRINTSELLERS AND PUBLISHERS IN ORDINARY, 6, PALL-MALL

In a small pocket volume, price half-a-crown,  
**THE EPICURE'S ALMANAC**; or, *Diary of Good Living*. Containing a choice and original Receipt or a valuable hint for every day in the year;  
**THE RESULT OF ACTUAL EXPERIENCE**, applicable to the enjoyment of the good things of this life, consistently with the views of those who study gentle economy. By BENSON E. HILL, Esq.  
London: How and Parsons, 132, Fleet-street.

Just published,  
Price £1 1s. post 8vo: £1 16s. large paper, proof plates,

**THE BRITISH ANGLER'S MANUAL**; or, the Art of Angling in England, Scotland, Wales, and Ireland. With some account of the Principal Rivers, Lakes, and Trout Streams; and Instructions in Fly-fishing, Trolling, and Angling at the Bottom, and more particularly for the Trout. The work is highly embellished with numerous Engravings, on Wood and Steel, of Landscape Scenery, Fishes, Flies, &c., from Original Pictures and Drawings by the Author. By T. C. HOFLAND, Esq. Fifty sets only of India proof impressions of the Steel Plates, before letters, have been printed, also fifty sets of India impressions of the Wood Engravings. Price One Guinea each set, in a Portfolio.

"The result of thirty years' experience, as an angler, is here given to the brethren of the 'gentle craft.' As a cicerone to the veteran and an instructor of the tyro, Mr. Hofland appears to be equally competent."—*Spectator*.

"This is the most comprehensive work on angling that has as yet appeared in this country. The author is an artist and an angler, and his pencil illustrates the descriptions and instructions given in his text."—*Bell's Life*.

"Its directions for different kinds of fishing, its descriptions of scenery and the various fishing stations, with its very beautiful illustrations, render it valuable to the class for which it was especially intended."—*Argus*.

"Mr. Hofland's own charming pictures and drawings are transferred to wood and steel, in a manner to gratify not only every brother of the angle, but every admirer of the fine arts and of nature. It is a very complete view of the art, with much practical information, and is a capital companion for every angler."—*Literary Gazette*.

"The tourist can hardly have a more elegant or agreeable companion."—*Sporting Review*.

London: How and Parsons, 132, Fleet-street.

**POOLOO'S CHINESE CEMENT.**—The extraordinary properties of this Composition make it one of the most useful articles ever presented to the public. It is perfectly impervious to hot or cold water, and will resist the effects of the most intense heat. So firm is it in its hold that a new fracture is certain to take place rather than a severance in the original. Thus it surpasses all other Cements for mending China, Glass, Ivory, the setting of Stones and Beads in Rings and Trinkets, &c.—Sold, wholesale and retail, in bottles at 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d., by the Proprietor's sole agents, BLOFELD and Co., Cutlers and Razormakers, 6, Middle-row, Holborn; and by their appointment, at the principal Chemists and Perfumers. BLOFELD'S London made Table Knives, at BLOFELD and Co.'s, 6, Middle-row, Holborn.

ELEGANT AND ORNAMENTED PICTURE FRAMES OF A SUPERIOR DESCRIPTION, WARRANTED TO CLEAN.

**C. J. ECKFORD**, 45, FLEET-STREET, corner of Mitre-court, Temple, opposite Fetter-lane, begs leave to inform Artists, the Trade, and Public, that they can obtain A LARGE AND CLEAR EXPLANATORY SHEET OF DRAWINGS, with numerous elegant Patterns, the Size and Prices attached to the various Frames, sent gratis and free of postage to any part of the United Kingdom.

Old Frames re-gilt; large and small Miniature Frames at proportionate prices. Fancy-wood Frames of every description. Orders from the country punctually attended to. ESTABLISHED 1792.

SPLENDID AND SUPERIOR GILT FRAMES.

**CHARLES McLEAN**, 78, Fleet-street (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET OF DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All goods taken back, not approved of in three months.

CHEAPEST AND BEST MANUFACTURED PICTURE FRAMES IN THE WORLD.

**P. GARBANATI, WORKING CARVER** and GILDER, 19, St. Martin's-court, St. Martin's-lane, respectfully informs Artists, &c., that as he Manufactures every description of ornamented, Gilt, and Fancy-wood Picture Frames entirely on his premises, he is enabled to offer them at such low prices, that he defies competition. A most extensive assortment of every description of Picture Frames kept ready. Re-gilding, in all its branches, done in a most superior manner, and cheaper than by any other Gilder in the kingdom. Estimates given free of charge.

P.S. A List of the Prices of PLATE GLASS, Gilt and Fancy-wood Picture Frames, Room Mouldings, &c., can be had at the Manufactory (gratis), or sent (pre-paid) to any part of the Kingdom.

P.G. respectfully solicits a Trial of his Work, for comparison of Quality and Price, with other Manufacturers.

BY HER MAJESTY'S ROYAL LETTERS PATENT.

**WINSOR AND NEWTON'S TUBES OF OIL COLOUR.**—This beautiful invention obviates the numerous imperfections attendant on the use of BLADDER COLOURS, as the bladder in which the paint is enclosed being porous, allows the oil to exude; and thus, by admitting air, the colour necessarily hardens, becomes contaminated with skins, and frequently more than half of it is rendered totally unserviceable.

The PATENT TUBES are formed of stout cylinders of glass, hermetically secured with an air-tight piston, traversing the tube, and ejecting the colour by a gentle pressure.

The colour being visible through the glass, the artist immediately perceives the one he may require, and the air being excluded, no smell can proceed from them. They are also so perfectly clean to handle, that oil pictures may be executed without the least soil on the table, or on the hands of the artist.

To be had, wholesale and retail, at their Artists' Colour Manufactory, 38, Rathbone Place, London.

Newly invented Zinc Panels for Miniatures and other highly finished Paintings in Oil, and all the new manufactures of the trade.

## THE ART-UNION.

LONDON, JULY 1, 1841.

## SIR DAVID WILKIE.

THE death of Wilkie leaves a void in British Art which will be remembered and lamented as long as there shall live any of his cotemporaries, who have been accustomed to look with anxiety for his yearly contributions on the walls of the Academy; and still more would his loss have been felt, had he never departed from that early style of art which, in addressing itself in intelligible language to the highest and the lowest, endeared his name to all. He had seceded as it were from himself, and was remembered by the world generally only in association with his characteristic works; for with respect to himself, he may assuredly be said to have descended to historical art. His voyage to the East, and its purposes, have already been mentioned in this paper. In letters to his friends, he described from time to time his course of travel in Turkey and Palestine, and his emotions on first visiting that land, the sacred history of which was amongst his earliest lessons at his father's "manse." He was also heard of through public channels; and when it was known that he was about returning home, loaded with the fruits of his enterprise, how little was it apprehended that he would be cut off before reaching that home; and how sudden and affecting to those who accompanied him must his death have been, after so brief a period of apparently serious illness! Sir David had enjoyed general good health during his sojourn in the East; and not until after the Oriental, in which vessel he was travelling, had quitted Malta, did he complain of indisposition. On the 27th of May he was suffering from an attack of fever; but of this he thought so little, that no active remedies were applied. On the 31st the Oriental entered the bay of Gibraltar, where she took on board despatches for England, and resumed her homeward course. When breakfast was announced on the following morning, Mr. Woodburn, who was Sir David's travelling companion, on going to the berth of the latter to request the pleasure of seeing him at the breakfast table, found him in a state so alarming as to require prompt medical aid. He was immediately attended by Dr. Browne and Mr. Gattie; but, despite the best endeavours of these gentlemen, the malady under which he was suffering continued to gain ground, and at eight o'clock in the morning of the 1st of June he expired. The following extract from the published account mentions briefly the circumstances of the death, and the last duties paid to the remains of David Wilkie:—"Shortly after she had got underweigh, six o'clock a.m., Mr. Woodburn went into Sir David Wilkie's berth to request that he would come up and breakfast with the company; he replied that he should probably do so, but he should like to see the doctor. Mr. Gattie, a medical gentleman, then went to him, and soon returned to Mr. Woodburn with an assurance that his friend was in a very dangerous state. Mr. Woodburn, being greatly alarmed, asked Dr. Browne (who was with Sir James Carnac), to consult Mr. Gattie as to what could be done to save his friend; and the two medical gentlemen made every exertion, and applied the usual remedies within their reach, without avail. Sir David kept gradually sinking, but did not appear to experience any bodily suffering, and became unconscious about half-past seven; and at eight o'clock he ceased to breathe, his friends and the physicians being with him all the time. The passengers assembled to consult what was best to be done, and they requested the captain to return and land the body at Gibraltar. He did return, but the orders

of the governor are so strict, that the remains could not be allowed to come on shore; and therefore the last sad office of committing his body to the deep was performed in the most solemn and impressive manner, as the Oriental stood out of the bay on her way to England."

Sir David Wilkie was a native of Culter, near Cupar, in Fifeshire, of which place his father, the Rev. David Wilkie, was the spiritual pastor. He was born in the year 1785; and at a very early age evinced that taste and talent for art which afterwards distinguished him from all artists that had preceded him, and will defy, in his own particular walk, the competition of all who shall follow him. By Wilkie, even as a boy, every object and every incident was turned to profitable account—his great field of study was nature, and its simplest workings and broadest expressions; and these he refined upon and harmonized. His study was incessant, yet, from its character, he was never weary of it. His models were sometimes his schoolfellows, and his studio the school-room; or, on other occasions, his models were some of the most striking figures of his father's congregation devoutly intent on the minister's sermon—then his studio was the church. His gatherings were universal, his school everywhere, and his studies indifferently the men and things around him; and even in the absence of fitting subjects he studied from himself.

In the year 1800, when he was in his fifteenth year, he was sent to Edinburgh, where he was entered a student of the Trustees' Academy, under Mr. John Graham, from whose instructions he profited during four years; at the expiration of which period, and in his nineteenth year, he launched into the world as an artist, and established himself in London. Under Mr. Graham, Wilkie distinguished himself so much, as to obtain a prize for his treatment of a prescribed subject; for although the Academy was not legitimately devoted to the promotion of the Fine Arts, but to the improvement of designs for manufactures, certain themes in art were proposed by Mr. Graham to those of his pupils who were studying for higher art. Before his departure from the Scottish metropolis, Wilkie had painted a few known pictures, of which the most remarkable were 'The Inside of a Public-house,' and 'Pet-lassie Fair.' If Wilkie was in anywise indebted to another for the formation of his style, it must have been to Graham, for there exist etchings from productions of the latter so much resembling in character Wilkie's works, that they might almost be exhibited among them without detection.

On his arrival in London, being unfriended and unknown, he was compelled to resort to the readiest and simplest means of disposing of his pictures, a few of which he sold through the agency of a frame-maker, in whose window at Charing-cross they were exhibited. He did not wait in the north for distinction—his name was therefore unknown, and he came in full reliance on his talent and industry; and perhaps no artist ever rose from obscurity more rapidly than Wilkie. His first contribution to the Exhibition of the Royal Academy was 'The Village Politicians,' painted in the year 1806, or at least finished and exhibited in that year; for the high finish and careful manner which distinguish his pictures, do not warrant the supposition, that this work was begun and concluded immediately before the time appointed for sending in the pictures to Somerset-house. It was painted for the late Earl of Mansfield, at the price of 30 guineas, and was engraved in 1814 by Raimbach. It may be observed here, that since Wilkie departed from his own style of art, his earliest works have been eagerly sought; and even as lately as the year 1838, one of these, 'The Recruit,' was engraved by Fox. This picture is also known as 'The Bounty Money,' and is in the possession of John Greaves, Esq., of Irlam-hall, Lancashire. 'The Blind Fiddler' was also painted in the year 1806, for Sir George Beaumont, at the price of 50 guineas. It was not, however, publicly seen before the year 1807, when it appeared on the walls of Somerset-house, and is now one of the gems of the National Gallery, to which it was bequeathed by the proprietor. 'Alfred in the Neat-herd's Hut' was likewise painted in 1806. In 1807 he produced 'The Rent Day,' for which he received 300 guineas from Lord Mulgrave. This, with other pictures of the same nobleman, was

afterwards offered for sale by Christie, but was bought in by the family at the sum of £787 10s. In 1808 he produced three pictures—'The Card Players,' painted at the price of 50 guineas, for the late Duke of Gloucester, and sold by the Duchess to Mr. Bredel for 500 guineas; 'The Jew's Harp,' originally in the possession of the Duke of Marlborough; and 'The Only Daughter,' painted for the late Dowager Marchioness of Lansdowne; and in the same year he became an associate of the Royal Academy. In 1810 were executed 'The Wardrobe Ransacked,' which was painted for the Earl of Mulgrave, and is now in the possession of the Marquis of Lansdowne, and his 'Gipsy Woman and Child,' in the possession of John Greaves, Esq., of Irlam-hall, Lancashire. In 1811 'The Village Festival' was painted for John Julius Angerstein, Esq., and was purchased with his collection for the National Gallery; in the February of the same year Wilkie was elected an Academician, and never was the honour more worthily bestowed. Every artist of eminence has had in early life a progressive period—a time when improvement was obvious in every successive work—the works of such time being feeble, in comparison with those of matured experience; but Wilkie had no period of this kind—he never was a *promising young artist*, but came at once before the world a master, and the originator of a style. For the last-named work, 'The Village Festival,' he received 900 guineas, and that in his twenty-sixth year, having been known to the world but a very few years. In 1812 his 'Blind Man's Buff' was painted for his late Majesty George the Fourth; and in 1813 'The Letter of Introduction,' and in 1814, that exquisite production, 'Duncan Grey,' so celebrated through Engleheart's engraving, and which is, we believe, in the possession of John Sheepshanks, Esq., of Blackheath, who paid £450 for it at the sale of Lord Charles Townshend's collection. 'Distraint for Rent' appeared in the Exhibition of the year 1815; it was first purchased by the governors of the British Institution for 600 guineas, and sold by them for the same sum to Raimbach for the purpose of being engraved; and by the latter it was resold to Mr. Wells, of Redleaf, for 700 guineas. 'The Rabbit on the Wall,' succeeded in 1816; and in 1817, 'The Abbotsford Family,' with other well-known works about this time, as 'The Breakfast Table,' and 'The Errand Boy.' In 1818, 'The Penny Wedding,' was painted for his late Majesty George the Fourth; the picture was originally entitled 'The Scotch Wedding,' and there were a very few impressions of the engraving taken with this title. 'Sheep Washing' was painted in the same year, and this work is remarkable as being the only large landscape which Wilkie ever painted: it is in the possession of Sir Thomas Baring, Bart. 'The Reading of the Will,' was exhibited in 1820; it was commissioned by the King of Bavaria, from whom the artist received 450 guineas for it; on the King's death it was sold, and is now in the Munich Collection. These were followed in 1821 by 'Guess my Name,' and in 1822 by 'Chelsea Pensioners Reading the Gazette of the Battle of Waterloo,' painted for the Duke of Wellington, as a commission, at the price of 1200 guineas; the house of Henry Graves and Co. paying also £1200 for the copyright. There are in existence several highly finished sketches made preparatory to, and during the progress of this grand work; one of which was sold at Messrs. Christies' with the collection of Mr. Vine for £200; another very fine one is in the collection of Sir Willoughby Gordon. In 1823, 'The Gentle Shepherd' was painted; followed in 1824 by 'The Smugglers' Intrusion,' which is in the collection of Sir Robert Peel, and was engraved by Bacon in 1838 for Finden's "Royal Gallery of Art." 'The Parish Beadle,' Illustrations of the Waverley Novels, Portraits, &c., were among the last of his works, previously to his visiting Italy and Spain.

From 1806 down to the year 1825, with but one or two exceptions, Wilkie's contributed annually to the Exhibition at Somerset-house; but for two or three consecutive seasons after the latter date, there was no contribution from his master hand. His spirit seemed to want a change, although the world would have better loved to have welcomed him yearly in the garb of past times; which, like the raiment of the Israelites in the

wilderness, had not waxed old. In the year 1826 and succeeding years he visited the Continent, and made his pilgrimage to Rome, the Mecca of the faithful in Art. From Italy he bent his course to Spain; and we cannot help expressing a wish that he had never become acquainted with the works of the Spanish masters, for beautiful as his foreign subjects are, had there been in their place substitutions in his own style, they must have been better. While absent he painted 'Pilgrims before the Madonna,' 'The Princess Doria Panfili Washing the Feet of the Pilgrims at the Hospice of Santa Trinita dei Pellegrini,' and in 1828, 'The Spanish Princess,' and afterwards 'The Maid of Saragossa,' the most celebrated of his Spanish pictures; as also 'The Guerilla's Departure' and 'The Guerilla's Return.' Several of the last-named works are in the royal collection, having been purchased by his late Majesty George IV. The year 1830 is memorable for the death of Sir Thomas Lawrence, whom Wilkie was appointed to succeed as principal painter in ordinary to the king. About this period he began to devote himself to portrait painting; and among his works of this class are those of George IV., the Duke of Sussex, the Duke of Wellington, Queen Victoria, &c. In Wilkie's portraits, generally considered, much merit is to be found and almost every demerit; he has produced portraits which will take rank with the best similar works of the greatest masters in portraiture, for instance his Lord Kelly, but the proportion which these bear to his failures is unhappily small. 'The Preaching of John Knox' is his *chef d'œuvre* in history; and the world is already familiar with it through the engraving of Doo. No word of praise from us can do justice to the wonderful power displayed in this work; which, together with 'The Chelsea Pensioners,' sufficiently demonstrates that Wilkie could paint a grand picture with a concentrated interest, although he delighted so much in compositions having various points of attraction. This picture was purchased by Sir Robert Peel at the price of £1500. The works of the last seven years of Wilkie's life are so fresh in the memory of every lover of art, as scarcely to require to be mentioned here; a few, however, of the most remarkable we cannot help adding to the list. In 1835 appeared 'Columbus,' in 1836 'The Peep-o'-day Boys' Cabin,' in 1837 'The Escape of Mary Queen of Scots,' in 1838 'Queen Victoria's First Council,' and in the following year 'Sir David Baird Finding the Body of Tippoo Saib.' In the Exhibition of last year appeared 'Benvenuto Cellini and the Pope,' equal in power to any of his works; that of the present year contains only two portraits.

Wilkie, at his death, was in his fifty-sixth year; and, remembering the works of men whom we have been accustomed to call old, and which were painted when they were in years, what might we not yet have expected from him, although his golden age, with respect to his works, was his youth? He had painted but very few pictures, before his 'Village Politicians' and 'Blind Fiddler' declared a new style in English Art. These placed him at once at the head of a school; for surely his imitators and followers are in some degree his pupils; and this imitation is not confined to English artists, but may be traced in the productions of foreigners. Like Reynolds and Hogarth, Wilkie was an originator; and his death is as deeply felt as was that of either of them. Like all really great men, he looked at nature for himself, not through the works of others; and painted so faithfully that which he saw, that his every production is a moving appeal to the heart. In that most difficult of all acquisitions—power of expression, no man ever equalled him in his style; he was the Leonardo of ordinary everyday character, which, being so faithfully represented and so generally understood, has procured for him admiration more general and real than any painter ever enjoyed. We have already declared ourselves among those who lament his change of style, although we know that there are many who do not condemn it. But this is not a question of opinion: it has been long decided—for Wilkie's fame rests upon his earlier works. Such being the case, he was wrong to risk his settled reputation by adopting another style, since in his own he was without a rival, and in that of his adoption he had many superiors. The appearance of such a man is an era in Art, and his genius in

its line will bear comparison with the powers of the greatest men that have ever lived. When the education of others was but just commenced, he was already a master; nature had laid open to him all the charms of art, and how he has employed his acquisitions all the world knows. Wilkie was in private life highly exemplary, steady and consistent in his friendships, and liberal and communicative to all who sought information of him. His manner to strangers was reserved, and devoid of that confidence which makes way in society; but inwardly he was endowed with true Christian charity of heart; and, taken altogether, "never shall we look upon his like again."

#### THE BRITISH INSTITUTION.

EXHIBITION OF ANCIENT PICTURES, AND OF THE WORKS OF THE LATE THOMAS STOTHARD, ESQ., R.A.

The annual exhibition of the works of ancient masters, and of deceased British artists, was opened on the 18th ultimo. It presents a valuable selection from all the great schools; and in characteristic specimens of our own, it may be said to be especially rich, although the works of not more than ten English painters are exhibited; yet these are distinguished by such merit as to class them (considering their styles respectively) with generally the best efforts of the best times of Art. The pictures in number amount to two hundred and twenty: seventy-two of which are by Stothard, the south room being principally occupied by his works, and although many of them are already known to us through engravings, we feel highly gratified by an opportunity of seeing the originals; and it may be observed, by the way, with respect to exhibiting the works of an individual in this manner, that the utility of such an arrangement does not terminate with this expression of respect for the memory, and of admiration of the talent, of the deceased artist; but it is a great lesson to painters of all ages, not merely to the young, but also to the old. We know of no other union of the patrons of Art in any country associated upon the principles of the British Institution and presenting a yearly reminiscence of departed excellence; but for which we might forget the amount of pictorial wealth which native talent has already given to the country.

No. 1. 'Sybilla, wife of the Elector John Frederick of Saxony, and her Son,' Luca Cranach: His Royal Highness Prince Albert, K.G. This is an excellent specimen of the dry, sharp manner of the early painters; the work is in fine condition, and the colour extremely clear, although with all the flatness of its time.

No. 2. 'The Elector John Frederick of Saxony' is by the same hand, and also the property of Prince Albert. These pictures are curiosities of the German school of the 16th, perhaps the 15th century—Cranach was born in 1472.

No. 6. 'The Magdalen,' Guercino: R. S. Holford, Esq. The expression of the countenance is extremely fine, without a shadow of affectation; she is weeping over the crown of thorns. The shadows are very opaque, and the work generally very dry, but this was the manner of the master.

No. 7. 'The Holy Family'—unfinished, Raffaele: Right Hon. Sir Augustus J. Foster, Bart. This is the commencement of what would have been a very fine picture, for the hand of a master is everywhere visible, and it may have been that of Raffaele. The figures have been sketched with a reed or wooden pen, in a very decided manner, with sepia (or something like it) such as Raffaele used; the dark back ground seems then to have been thrown in, leaving the blank canvas on which the figures were to be wrought. The infant Christ has been commenced, and the manner in which the first lay of colour has been laid in sufficiently declares a power in painting of the first order.

No. 13. 'The Virgin of the Crescent,' Murillo: Martin Tupper, Esq. This is one of the finest of the small pictures of this master we have ever

seen; it possesses all the brilliancy of his best works.

No. 15. 'The Consistory,' Tintoretto. A small picture representing the pope and cardinals assembled in ceremony. It is a mere sketch upon rough Roman canvas; but long years of study are seen in the crispness and decision which mark every touch.

No. 22. 'Head of the Virgin,' Raffaele: Right Hon. Sir Robert Gordon, G.C.B. This is a beautiful picture and in fine preservation. It is marked by the high finish of Raffaele's portraits and heads, though not so soft as his latter works.

No. 25. 'Landscape, with the Angel appearing to Hagar,' Gaspar Poussin. It is almost impossible to mistake the works of this artist; he was a close imitator of nature, and so much accustomed to copy the flat colour of the foliage of the olive trees, that all his greens partake of this character. This is a fine picture, but by no means comparable to the Poussins in the Pitti Gallery at Florence.

No. 26. 'The Infant Saviour with St. John and the Lamb,' Leonardo da Vinci: Lord Ashburton. An extraordinary work, treated, as was frequently the custom of the old masters, upon a back ground perfectly black and opaque. The heads of the children are full of expression, but there is more of life in the features of St. John than in those of the Saviour. This picture seems to have been an experiment in colour.

No. 28. 'The Virgin and Child,' Raffaele: Earl Cowper. This is an undoubted original by this master, having been long known as the Panshanger Raffaele. It is distinguished by many beauties, but will not bear comparison with this master's finer works of the same size.

No. 32. 'The Last Supper,' Andrea del Sarto, Hon. W. J. Fox Strangways. This picture is exquisite in colour, and in composition it will remind the spectator of Leonardo da Vinci.

No. 33. 'The Virgin and Child,' Fra Bartolomeo, R. S. Holford, Esq. There is some fine colouring in this picture, but it has not stood so well as in the pictures generally of this master, many of which remain as fresh in tone as if they had been but a few years painted. The head of the child has been carefully studied, and with the most perfect success.

No. 43. 'Figures and Cattle Crossing a Brook,' Berghem. A charming little picture; the touch is free and playful, showing that this is not inconsistent with high finish. This picture must have been painted when the unfortunate Berghem and his wife were not upon the best terms; she, therefore, probably made him work at it with unusual spirit; it is distinguished by some of the finest qualities of the school to which it belongs.

No. 49. 'Peasants Dancing to a Bag-pipe,' Teniers: Charles Bredel, Esq. This artist, like most men who have painted much, has worked a great deal from his old and early stock; thus continually repeating figures and characters. The dancers here are very old friends of all admirers of Teniers, who will, nevertheless, be happy to meet them again, for their life and spirit are abated not a whit.

No. 52. 'Sea-piece, View on the Coast of Holland, with Fishing-boats and a Man-of-War in the Distance,' W. Vanderveelde: Lord Crewe. Distinguished by the best points of the master, and equal in natural truth and fidelity to anything in the same style.

No. 59. 'View of Dort,' Cuyp: Charles Bredel, Esq. Cuyp has painted Dort

"By day or night,  
Or any kind of light."

It was his native place; nothing could induce him to remove from it; and his gossip said, that when he was tired of painting Dort, he looked for relief in painting Dordrecht\*. This is an excellent picture, though not so careful as those of his so esteemed best manner.

No. 63. 'The School,' Jan Steen: Lord Francis Egerton. This picture is skilful in composition and expressive in character. The "Dominie" is a fine fellow; perhaps the very man who taught Jan himself before he began his professional education under Van Goyen. It would seem that in Holland it is customary for the wife of the schoolmaster to take an active part in the school. The history of

\* Dordrecht, by abbreviation Dort.

this valuable picture is curious: its purchase proposed for the National Gallery; but the plea of national poverty set aside for the present this desirable addition to the collection. It was then suggested, in order that such a picture should not be lost, that some well-wisher to the progress of Art should purchase and hold it, until it should be convenient to add it to the national collection. It was accordingly purchased, at a high price, by Lord Francis Egerton, who has most disinterestedly declared his readiness to resign it to the nation at the price at which he purchased it.

No. 66. 'The Baroness De Viry,' Rubens: William Wells, Esq. This is a style of portrait of which Rubens was very fond of painting; it is characterized by the dimpling cheek which he has given to so many of his female portraits. The flesh-colour has that fault which is so often found in his work; it resembles too much the flesh-colours on porcelain. The lady is habited in black, which tells well against the red back-ground.

No. 68. 'Portrait of Madame Wouwerman,' Vander Helst: George Hayter, Esq. This is an admirable portrait, and reminds us much of Vandyck, with whom the painter was cotemporary.

No. 75. 'View on the Banks of the Dee,' Wilson: Sir Thomas Baring, Bart. The sky of this picture appears too green; this effect may be perhaps removed by cleaning; in all other respects it is an admirable work,—nothing can equal the light of the sun coming through the tree. The treatment is so brilliant and Claude-like, that we may say of the Dee as the Roman soldier said of the Tay—*Ecce Tiber!*

No. 76. 'Lady Jane Halliday,' Sir Joshua Reynolds: Lord Crewe. This is a full length portrait, and distinguished by much of that grace with which Sir Joshua knew so well how to endow his female figures.

No. 81. 'A Group of Family Portraits,' Hogarth: Lord Cowley. This is a small picture in which the figures are painted with a severe simplicity amounting to stiffness. The surface is extremely rough, like that of ill-primed Roman canvases. By the same hand, there are 'A Boy and Kite,' from the collection of the Marquis of Westminster; 'A Hurdy-Gurdy Player,' the property of T. Brown, Esq.; and, larger than either of these, 'The Conquest of Mexico,' a work in Hogarth's best style, representing not a scene of blood and slaughter, but a dramatic representation given by youthful amateurs to a distinguished audience, among whom is the Great Duke of Cumberland.

No. 87. 'St. Christopher,' Annibal Carracci: George Hayter, Esq. This is an extraordinary picture; the principal figure is colossal, and the light and shade most elaborately studied, which is the more obvious from the size of the figure. The flesh colours are of the powerful and decided tone which is always found in the works of this master; but this subject is neatly etched by Horatio Borgiani, that we should rather attribute it to him.

No. 93. 'The Capitol, Rome,' Canaletto: Lord Crewe. An admirable architectural picture, much more carefully painted than is usual with this master. No. 84. 'A View in Dresden,' is by the same, and also highly finished, though with much freedom of touch; the general tone however, is excessively cold. This picture, we are of opinion, ought to be attributed to Belotti, who was called also Canaletti, but a very different person from the celebrated painter.

No. 97. 'Portrait of Mrs. Cunliffe Offley,' Hoppner: Lord Crewe. This picture possesses many beauties, and may be instanced as a striking specimen of that style of art which arose after the time of Reynolds, and into which the universal imitation of him settled, as the nearest approach that his followers could make.

No. 101. 'Group of Cattle in a Landscape,' Gainborough: W. Wells, Esq. An English landscape, full of the truth which this artist sought so long and so ardently. The exhibition contains others of his works equally good, contributed by other distinguished patrons of Art.

No. 106. 'View on the Coast of Normandy,' Bonington: Marquis of Westminster. One of those charming sketchy coast scenes for which Bonington was so celebrated. It is low water, and the extent of sand and the distant sea are seen through a thin haze; the sun overhangs the horizon partly veiled in vapour, and the whole de-

scribes most poetically a misty morning, such as often precedes a sultry day.

No. 117. 'Kitty Fisher,' Sir Joshua Reynolds: Lord Crewe. Nothing can be more charming than the head in this portrait; the expression is exquisite, and its general treatment is marked by everything that is elegant and graceful; as for the so much decried costume of the time, the straight draperies, the extravagant head-dress, &c., "Look in her face, and you'll forget them all."

The collection contains many other works by Reynolds, among which may be remarked, 'The Oxford Window,' a series of small studies framed in compartments, the whole adjusted into the form of a window. The figures are made out in a thin and sketchy manner, something after the method of painting transparencies. It is the property of Sir Thomas Baring; and in looking at each study, something may be found to remind the spectator of other works of Reynolds,—something stronger than mere style; for instance, a head here, an entire figure there, &c. &c.; not of course so strong as if he had painted the figures of his 'Sacred History,' in powder and bag-wigs, but the whole is sufficiently distinct and comprehensive to form an epitome of his painting life—a brilliant table of contents, in which none of his works are forgotten. 'The Oxford Window' was painted on glass, at New College, Oxford, by Jarvis, after Reynolds.

No. 130. 'A Land Storm,' Morland: Wm. Wells, Esq. Everything here describes a dire commotion of the elements; but the picture would have been more perfect with something of a more powerful expression of human distress than is shown by the mere haste of the foreground figures to escape the rain. The two following numbers, 'Landscape with a Church,' and 'Coast scene with Fishermen,' are also by Morland, and from the same collection.

The works of the late Thomas Stothard, R.A. commence with No. 136. 'Adam and Eve,' and terminate with 207. 'Venus Reposing.' Exactly one moiety of the number has been contributed by Samuel Boddington, Esq.; and the other by various gentlemen, whose good taste has led them to enrich their collections with the works of so accomplished a master. All that could be said here in praise of Stothard is much better expressed on the walls of the Institution, now that so many of his works are there assembled. He was familiar with our best poets, novelists, and dramatists, from whose works he culled the sweetest sentiments and finest descriptions, which, in illustration, he treated in a manner that may truly be said to be grace upon grace. Among these works will be found 'The Canterbury Pilgrimage,' which was painted more than once, the original being in the possession of J. Miles, Esq., of Bristol; also 'The Shakespeare Characters,' and a 'Sketch for the Staircase at Burleigh;' but the absence of 'The Procession of the Flitch of Bacon' will be a source of disappointment. The works of no artist who has painted so much, have so few, yet such ardent, admirers as those of Stothard. It requires a mind highly cultivated in art to comprehend his finer qualities, and much judgment to discriminate between his good and his bad points. Many of his works have been executed at a low price for the illustration of books, and this has given rise to an idea that his powers were limited to this; but no one that has seen his Staircase at Burghley, will deny his claim to rank among artists of the highest grade; and who that may have seen in the collection of Mr. Windus his beautiful drawings from Robinson Crusoe and the Spectator, will not place him first among English illustrators? Sir W. Scott pronounced 'The Canterbury Pilgrimage' his favourite work of art, and had it constantly before him in his study. Mr. Rogers, the poet, has been one of his most liberal patrons. Lawrence was a great collector of his works; and surely the best eulogium which can be passed on them is to be found in the admiration which such judges have expressed.

#### ASSOCIATION FOR THE PROMOTION OF THE FINE ARTS IN SCOTLAND.

The seventh annual meeting of this body was held in the Assembly Rooms, George-street, on Saturday, the 29th of May last, for the double purpose of distributing the prizes purchased by the subscriptions placed at the disposal of the committee, and also of submitting to the meeting, the annual report of the intronisations and arrangements of the committee of management. From the report read, it would appear that the funds of the Association are still continuing to increase. The sum realized by subscriptions this year amounted to £6571, being an advance of £175 upon last year's subscriptions; showing, however, a remarkable falling off in the rate of increase which attended the Association last year: the last year's accounts exhibiting an advancement of £1726 beyond the subscriptions of the previous year—a rate of accumulation, however, the continuance of which could hardly be speculated on. The subscriptions, together with an unappropriated balance from last year's account, amounting apparently to £1808,\* in all constituted a sum of £8379; out of which they purchased, at an aggregate amount of £4800, one hundred and forty works of Art, of which the following is a selection of the most important, and nearly in the order of their merit; leaving the sum of £3579, to meet current expenses, and cover the outlay for engraving Lauder's picture of 'Italian Goatherds Entertaining a Brother of the Santissima Trinita,' &c.

No. 88. 'Scene from Romeo and Juliet,' by R. S. Lauder, 160/. No. 38. 'The Friendly Contest—Greenwich and Chelsea Pensioners Playing the Game of Draughts,' by William Kidd, 60/. No. 87. 'Highland Loch—Morning,' by Horatio McCulloch, 100/. No. 86. 'Ophelia' (Sculpture), by W. C. Marshall, 50/. No. 64. 'Edie Ochiltree in the Prison at Fairport,' by W. Bonnar, 30/. No. 66. 'Sabbath Evening,' by George Harvey, 250/. No. 56. 'John Anderson,' by William Bonnar, 50/. No. 52. 'Girl Playing the Guitar' (Sculpture), by William Scouler, 105/. No. 123. 'Ruins of Dean Castle, Ayrshire, the ancient stronghold of the Earl of Kilmarnock—Sunset,' by D. O. Hill, 80/. No. 55. 'Cambuskenneth Abbey, on the Forth—Moonlight,' by H. McCulloch, 60/. No. 10. 'Drovers,' by J. Giles, 70/. No. 108. 'An Interview between Regent Murray and Mary Queen of Scots, during her Confinement in Lochleven Castle,' by Alexander Johnstone, 70/. No. 25. 'Italian Goatherds Entertaining a Brother of the Santissima Trinita,' by R. S. Lauder, 100/. No. 24. 'Cleveland Cast Ashore on Sumburgh Head,' by John Irvine, 40/. No. 133. 'A Wandering Piper,' by A. Fraser, 35/. No. 43. 'The Regent Murray Shot by Hamilton of Bothwellhaugh—a Finished Sketch,' by W. Allan, 60/. No. 6. 'Scottish Emigrants Halting in the Prairie,' by Tavernor Knott, 70/. No. 73. 'The Wreck—Moonlight,' by M. Stanley, 80/. No. 76. 'View on the Isola Leché on the Lago di Garda,' by W. L. Leitch, 35/. No. 1. 'Noon-day—a Composition,' by J. Wilson, jun., 70/. No. 60. 'Dutch Shipping—Calm—View on the Coast of Holland,' by E. T. Crawford, 76/. No. 118. 'Mountain Scenery on Loch Shiel, Invernesshire,' by Macneill Macleay, 60/. No. 122. 'George Heriot Relieving the Widow and the Fatherless,' by W. Allan, 250/. No. 135. 'Norham Castle, on the Tweed,' by William M'Ewan, 18/. No. 127. 'The Invalid Student,' by Mungo Burton, 25/. No. 65. 'Nidpath Castle, on the Tweed,' by Henry G. Duguid, 30/. No. 59. 'Highland Burn in Glenorchy, Argyllshire,' by W. L. Leitch, 30/. No. 19. 'Moor Scene—Sunset,' by H. McCulloch, 60/.

An Association so well calculated to promote the advancement of National Art, both by the number of individuals who are immediately connected with it, and by the possession of such ample funds as have always been, by such extensive ramifications, placed at the disposal of this body, cannot be otherwise than of deep importance to every lover of Art. Nor can the transactions of its committee of management be looked on with indifference by any such individual, however

\* We say apparently, for in the bustle of a public meeting it is not very practicable to perform the duty of an accountant with accuracy in regard to a statement containing a great multiplicity of items, at the first and only time of its being submitted for consideration; and all our efforts have as yet proved unavailing in attempting to procure access to the report of the committee, although it was read in proof to the meeting; so very cautious is the committee that its transactions shall not be too easily nor probably too thoroughly understood.

personally unconnected with its operations. It is a well known and generally admitted fact, that those who act for the public have an onerous and thankless task to perform. The committee of this Association has not experienced any immunity from this generally-admitted belief; it has undoubtedly been subjected to the censure of those who, probably enough, were not sufficiently acquainted with the many difficulties and unopportunities of all sorts with which their path has been beset: but there need be no equivocation in making the statement, that their method of treating with different Artists has been characterized by anything but an uniform course of procedure. To some they have been lavish to a degree of the most inexcusable extravagance, while to others they have behaved with the most parsimonious meanness: beating down to the lowest farthing the prices of excellent pictures; while for the works of favourites, hangers on, and parasitical flatterers, they have given five, ay, or six times the prices their works would have brought at any other market in Europe, where merit, and merit alone was to constitute the criterion of value.

In making so sweeping an assertion as this, it becomes indispensable, however disagreeable and invidious the task may be, to select instances in corroboration of the statement—a course of proceeding which we would most willingly have avoided, and which no consideration could in any manner justify, short of the imperative necessity that exists for exposing, and if possible by that means of preventing, a most flagrant and abominable abuse of public patronage. In the discharge of this painful duty, we beg to say, once for all, that with the favoured artists we find no fault, unless, indeed, their success was dependant on servile importunity; our quarrel does not lie with them; their course was a perfectly clear one; to fix such prices on their works as they had reason to believe would be given for them was perfectly natural; and if they did demand higher sums for their works than they were really worth, the error lay with their patrons, not with themselves. But to those who, with a reckless prodigality, squandered the money intrusted to their management; certainly for other purposes than the gratification of private partiality, while in other and not less deserving cases they exhibited the most niggardly parsimony, a different course of proceeding becomes necessary. It is our duty to point out such conduct as unworthy of gentlemen—to say plainly, it is a way to degrade Art by instituting insulting comparisons among its professors—to stigmatize it as a gross violation of a sacred trust committed to their care.

Who that has seen the pictures, will say that the committee were guided by an honourable feeling or a sound discrimination, in beating down, as they did, Kidd's highly-talented work of the 'Friendly Contest' to £60; while, at a much earlier period, they snapped up with avidity a very inferior picture by Blackburn at £10 more? If Kidd had had friends at court, he would have found a very different estimation of the value of his works: he would, if sufficiently backed, have been treated with the same liberality which characterized their dealings with Harvey and Allan, from both of whom they purchased pictures, with not half the talent contained in his one, at prices considerably more than four times the sum they considered sufficient remuneration for his labour. Again, in the case of Mr. Binning Monro, £80 were given for two pictures, being the full sum he asked for them; while the sum of £25 was struck off from two pictures by Bonnar, although both moderately priced: the only solution of which mystery seemingly is, that, in the latter case, the pictures were very meritorious works, and depended on that recommendation alone; in the former, the artist had a relative on the committee, besides a considerable quantity of collateral interest. The peculiar excellences of a 'View of Rosyth Castle,' for which the sum of £35 was not thought too high a price, but for a similar occult influence might, probably enough, have shared the fate of many very superior works, and have had its beauties, such as they are, confined to a very narrow circle of admirers. Instances of a similar nature it would not be difficult to multiply to an extent far beyond those specified; and, what is still more unfortunate, stretching to a period nearly coeval with the existence of the Association. But surely enough has been said to establish that

"A few seem favourites of Fate,  
In Folly's lap caressed;"

and it is no part of our purpose to drag into unpleasant notoriety individual artists, against whom it cannot be charged as a crime that they have been taken under a patronage at once pleasant and profitable. Having accomplished, as we conceive, the proof of a very mis-

directed influence on the part of the committee, we have done with this portion of the subject—a portion we have treated of in this manner with great pain and much reluctance; and only because we consider such a misapplication of the funds to have a direct tendency to the degradation of Art, instead of the fostering of talent. Could we have devised another means of illustrating the charge of partial dealing, which we felt bound to prefer against the committee, assuredly we should not have resorted to this one.

The facts above narrated are certainly a very singular commentary on the statement of Mr. E. D. Sandford, who, in moving the thanks of the meeting to the members of the committee, took occasion to say that these gentlemen "had performed their duty to the admiration of all." Surely the first duty of such a committee was fair dealing, and even-handed justice. The foregoing instances may perchance be cited as examples of purity of motives and independent judgment; of that upright rectitude which cares not for the world's opinion; it may be, but if so, of a verity it is no easy matter to divine the course of the operation of such motives. With a modesty, however, which seemingly is becoming fashionable among the committee, not one, or at most only one, of those gentlemen appeared in his place to receive those thanks which, according to Mr. Sandford, their conduct had so amply merited. Verily, of these gentlemen it may be truly said, that if they "do good by stealth," they apparently "blush to find it fame."

It may be asked, and properly asked, if such conduct as that ascribed to the committee was true, why they were not arraigned by the meeting to answer for it? More reasons than one may be adduced for this omission, without impugning on the validity of the charge. First, the meeting, for all practical purposes of business, is a perfect farce; it is a show meeting, composed avowedly in equal proportions of those who are really subscribers, and those who are admitted as the friends of subscribers; but a narrow scrutiny would prove, that the proportion of the latter is much greater than that of the former: to talk, therefore, of the responsibility of any committee to such a meeting is absurd, and it would, no doubt, be instantly objected to as incompetent and *ultra vires* of the meeting, were such a question attempted to be raised. Second, the doings of this the most perfect and admirable of committees, is involved in such impenetrable mystery, that no one *further* of its body knows anything about its transactions till unfolded at this, the only public meeting of the year: so pertinacious, indeed, are they of this secrecy, that they have ere now refused some of the subscribers access to their books, and have even tendered to return the subscription rather than submit to such an inspection—at least so runs the rumour. It is obviously an impossible matter to follow a long list of prices and names read in a hurried manner, and compare it with any standard by which its propriety can be tested. Third, the committee were not present to answer, if any question as to their management had been put; so that, in fact, they did all in their power to avoid the chance of a challenge, from even so singularly constituted a tribunal as that half-and-half meeting to which their report was nominally addressed, which report will doubtless be circulated, as last year's was, at as early a period, after the transactions it alludes to are forgotten by the public, as is suitable to the convenience of its framers.

The most effectual means for remedying such a state of matters appears to be, to increase the public information as to the transactions of the committee; to have at least one meeting each year for the despatch of business, to which none but subscribers should be admitted, at which the office-bearers should be appointed, and their conduct considered, and approved of or censured, as circumstances might call for. These, together with the appointment of a small committee publicly named and appointed for purchasing, so that the responsibility appertaining to this most important branch of the Association's business might be easily and directly brought to bear upon the transactions at the instant they may be challenged—would have the effect of restoring the public confidence, which has, to a considerable extent, been shaken; and of increasing the usefulness of a very important instrument for the cultivation and improvement of Art.

NEW ASSOCIATION FOR THE PROMOTION OF THE FINE ARTS IN SCOTLAND.—The fourth annual report by the committee of this body is just published and has been put into our hands. From it we are gratified to learn that the Association is still progressing in public

estimation, and in its career of usefulness. The number of subscribers for the year ended having exceeded that of the preceding year by 217. The sum allotted for prizes amounted to £690, to which the prizeholders added £153—a sum of money which, judiciously expended, is calculated to be of material benefit to Art, and also to afford a large amount of rational individual enjoyment. There is, however, one circumstance connected with this year's transactions by no means so satisfactory as might have been desired; and that is, that while last year's income exceeded the previous year's by the sum of £228, not more than £50 out of this surplus was allotted to the purchase of pictures; it is true the committee incurred about £50 of additional expenses in a manner not likely again to arise, but which were, at the same time, calculated to advance the interests of the Association; still it is unfortunate, and deeply to be regretted, that no more than £50 should have been added to the prize-list out of a free additional income, after deducting the extraordinary expenses of £178. It is but justice, however, to add that the accounts seem perfectly fair, and none of the items extravagantly charged. The committee have been fortunate in procuring gratuitously the loan of Fraser's very clever picture of 'The Expected Penny' for the subject of their next engraving; that from Allan's picture of 'The Widow' has been finished by Mr. Bell in a style which reflects very high credit on his skill as an engraver, and in a manner which will, without doubt, contribute very effectively towards rendering the Association even more popular than it has hitherto been; it is now in the hands of the printer; and, when coupled with the fact that the engraving of Fraser's picture is entrusted to the execution of the same gentleman, it affords a guarantee that the subscribers will have an engraving equal in value to the amount of their subscription, and in every way worthy of the body and of the cause they seek to uphold and to encourage.

#### ROYAL HIBERNIAN ACADEMY.

We resume our sketch of this exhibition.

R. Rothwell, R.H.A.—No. 5, an exquisite female portrait, so life-like and so true, that every gazer, possessed of the slightest idealism, moulds its almost flexible features to suit a mental vision of some fair friend, whom to remember is pleasant—

"Quam aliquis videri."

No. 43. 'Tired out—a lovely Child overtaken in the midst of play and flowers by Sleep.' The flush so natural to the occasion, as well as the position of the child, show this work to be a first-rate transcript from life—still life though, on the present occasion. It is far superior to a very nearly similar production exhibited in the Royal Academy this year by the same painter.

J. Tracey.—No. 20, 'Coriolanus,' by this artist, although a much larger and more elaborate performance than his 'Lucretia' of last year, and a work on which much pains have been spent, we cannot call a step in advance; on the contrary, we have all the close copying of the school of Le Brun, without the charm and force of colour and originality displayed in the former production. If Mr. Tracey expects to succeed, he must have more confidence in himself; he must go to the fountain head, to Nature herself, and not give us a series of figures (however cleverly grouped, and toned down they may be), each of which we could almost restore to the original position occupied by them in works that the burin of the engraver has made very familiar to the public. Mr. Tracey also contributes some Landscapes and Cattle, drunken Faun, &c., which are highly creditable to him. The former has been purchased by the Lord Lieutenant. We are glad to find Lord Ebrington thus alive to promotion of the Arts in Ireland, and becoming not only a member of the 'Art-Union,' but a private purchaser, as no doubt his example will be liberally followed.

H. de Daubrawa.—Although the only subject contributed by this gentleman 'Two Horses Drinking at a Stream,' has good points, it is very inferior to his performances of last year.

Thos. Mulvany, R.H.A.—'View in Paris,' picturesquely conceived and carefully executed. 'Tore Cottage, Killarney,' however, some kind friend should have put in a corner.

George Mulvany, R.H.A., has only one work of fancy, for to call it historical would be a misnomer, although it is styled the first of a series, to illustrate the progress of Europeans in America; which is done by a very White Man, being represented as washed on shore, and tended by some very Red

Indians. Pray, Mr. Mulvany, stay "at home" and fulfil the promise 'The Fair Ones in a Gondola' made for you last year, with an expression and force that could not be mistaken. Mr. Mulvany has, however, some admirable portraits.

T. Bridgford.—'A Boy Sleeping,' clever, but too sketchy; and 'Blarney,' a flirtation scene, are worthy of notice. If this is the painter of 'The Masquerader' exhibited some years ago, we must have something very good next year, or we shall not rest contented.

Thos. Urry Young.—'The Fisherman's Home,' and some other works, do this artist (with whom we are not familiar) credit; he shows promise.

H. Talbot contributes some cleverly-painted dogs, especially a Blenheim Spaniel. No. 209, 'A Cobbler,' is also a characteristic sketch.

G. Sharp.—'An Irish Whiskey Still at Work,' coarsely but effectively given; also a likeness of the renowned Harry Lorrequer.

—Thompson, R.H.A.—Some good portraits.

To return to the Water-Colour-Room.

A. Nichol, A.R.H.A., contributes several highly-finished landscapes. 'A View on the Sedgy Banks of the Lagan' is particularly good.

H. Hayes.—'The Children in the Wood,' gracefully drawn and beautifully finished; also numerous portraits, chiefly military, all reflect the highest credit on this artist's industry and talent.

M. A. Hayes.—This young artist is fast making a name for himself. His contributions show originality as well as a quick perception and close-keeping to natural effects. 'The Old Soldier' representing a battered worn out old war horse, rousing up a few sparkles from the embers of his former vigour, on hearing the band and seeing his old regiment march past in all their bright array. There is a slight dash of caricature inseparable from the subject, but the subject is well conceived and admirably executed. 'Carbineers Trotting Past,' and 'An Incident on a March,' are also very good.

M. Wood.—'A Scene from the Vicar of Wakefield,' and 'An Italian Show-boy,' the latter very good.

Some beautifully finished flowers are contributed by Miss Williams and Mrs. Henry Gonne, and also by G. Evans—a name we did not notice before, but who will not allow himself to pass without notice. While on this subject we cannot but regret the loss of that highly-deserving artist, H. Murphy. There are some few choice morceaux from his pencil, which we have no doubt will be properly appreciated and secured in aid of his family.

G. Gould.—'The Hog's Tooth, Killarney,' and a sea piece: both very clever as to colouring and general effect.

H. O'Neil—we are glad to find come back to his former self; his neutral tints are particularly clear and silvery, and few artists know better how to treat an Irish sky.

B. Mubrennin, A.R.H.A.—Some very good miniatures as usual.

Amongst the Amateurs we find Sir Geo. Hodson, Bart.; J. C. Montgomery, Esq.; Capt. Hooke; Lady Torrens; Miss Clarke, &c., &c., taking a very creditable position amongst the artists by profession. Where are Mr. Cash and Col. Pratt? They are much missed.

In the Sculpture room we find 'The Young Champion,' by T. Kirke, R.H.A. This we remember exhibited in London and being much admired; but the most creditable thing to this gentleman, we think, is the design for the 'Tomb of a Young Officer,' to be erected at Windsor; it is simply the war horse led in funeral procession by some comrades in arms, hewn out of a rough rock in high bas-relief. We hope the good effect of this design will not be spoilt by the inflated and ungrammatical inscription at present appended. The simpler this is the better.

Mr. Gallagher has a good design in bas-relief from Dante, which we should like to see executed in marble.

There are some good busts, an ingenious model for widening Carlisle-bridge, and several well executed architectural designs. But why have not Hogan, Panormo, Behnes, the Smiths, &c., contributed to increase the interest of this national exhibition.

On the whole we must congratulate the Academy on their exhibition this year, and look forward with confirmed hopes for the future.

## THE ART-UNION OF LONDON.

The art-loving public naturally look with some anxiety for a list of the pictures purchased by the successful members of this Society; therefore, though all the selections are not yet made, we at once lay before our readers the names of the chief of them, and the prices understood to have been paid. From the Royal Academy have been selected, by Mr. George Fry, 'The Stolen Interview of Charles I. with the Infanta of Spain,' F. Stone, 210*l*. By the Rev. R. Roy, 'Cornet Joyce seizes the King at Holmby,' E. M. Ward, 80*l*. By Mr. W. J. Fry, 'Rivaux Abbey, Yorkshire,' J. Radford, 80*l*. By Mr. C. McKorkell, 'Charity,' from the altar-piece of St. Mark's, Venice, H. O'Neil, jun., 75*l*. By Miss E. E. Buckle, 'A Trout Stream,' J. Stark, 52*l*. 10*s*. By Mrs. Morrell, 'Winchester Tower, Windsor Castle,' W. F. Witherington, R. A., 56*l*. 10*s*. By Mr. J. Bullock, 'Landscape—Evening,' J. F. Gilbert, 40*l*. By Mr. P. Long, 'The Little Sick Scholar,' Mrs. F. McLan, 40*l*. By Mr. J. Smallman, 'Winandermere,' F. H. Henshaw, 42*l*. By the Hon. E. C. Curzon, 'A Country Alehouse,' H. J. Boddington, 30*l*. By Dr. Gardner, 'On the Coast at Fecamp, Normandy,' H. Lancaster, 29*l*. 8*s*. By Mr. T. Austin, 'Enlarging the Park, Old Windsor,' J. Stark, 26*l*. 5*s*. By Mr. J. Trapp, 'A Hostel at Castle Upon, on the Medway,' J. B. Pyne, 25*l*. By Mr. C. Adlard, 'Children Returning from the Festa of St. Antonio,' T. Uwins, R.A., 15*l*. By Mr. J. Carr, 'Composition—Cattle Returning,' John Wilson, jun., 50*l*. By Mr. H. Farrer, 'Titania Sleeping,' R. Dadd, 42*l*. By Mr. T. Greenshields, 'The Cherwell and Isis, from Christ Church Meadows, Oxford,' J. Bridges, 42*l*. By Mr. J. Thorp, 'Flowers,' W. Spry, 20*l*. By Mr. J. Thwaites, 'Open the Gate for the Squire,' H. J. Boddington, 20*l*. By Mr. W. Cropper, 'Touch and Take,' J. Bateman, 15*l*. By Mr. G. Morant, 'Bridge of Lehou, Brittany,' W. Fowler, 21*l*.

From the British Institution—by Mr. A. Cox, 'Fisherman's Cottage, Clovelly,' W. Shayer, 57*l*. 15*s*. By Mr. C. Barton, 'The Ford Farm,' J. Stark, 63*l*. By Lord Colborne, 'The Garden Terrace at Haddon,' T. Creswick, 35*l*. By Mr. R. Thackthwaite, 'View on the Valley of the Thames,' H. C. Pidgeon, 45*l*. By Mr. R. S. Cox, 'The Village Church—Sunday Morning,' C. R. Stanley, 47*l*. 5*s*. By Mr. W. Egley, 'Gil Blas Entertained by the valets of the Beaux,' J. M. Joy, 31*l*. 10*s*. By Mr. E. Benton, 'The Plain Gold Ring,' T. Clater, 42*l*. By Mr. E. Durant, 'The Bath,' Miss F. Corbux, 20*l*. By Mr. M. Heath, 'Eton College, from the River,' F. W. Watts, 15*l*. 15*s*. By Mr. R. Dawson, 'Evening—on the Sands near Hastings,' A. Clint, 23*l*.

From the Society of British Artists—by Mr. W. R. Stanton, 'An Arcadian Nymph,' E. Latilla, 100*l*. By Mr. R. Nunn, 'Hotel de Ville, Dinant,' C. F. Tomkins, 60*l*. By Mr. Jules Godet, 'Oberwesel, with the Ruins of the Castle of Schomberg,' C. F. Tomkins, 50*l*. By Miss Lovegrove, 'Beacon Vale, Dorsetshire,' W. Shayers, 50*l*. By Mr. R. Jarvis, 'View of Bellagio, Lago di Como,' T. M. Richardson, 50*l*. By Mr. C. G. Jones, 'Huy, on the Meuse,' C. F. Tomkins, 60*l*. By Mr. E. Lomax, 'Scene on the Medway,' J. Tennant, 40*l*. By Dr. M. Robertson, 'Scene from Memoirs of Count de Grammont,' E. M. Ward, 40*l*. By Mr. E. Shaw, 'Coast Scene at Havre,' H. Lancaster, 40*l*. By Mr. G. Warton, 'The Watering Place,' J. Tennant, 45*l*. By Mr. T. Cammac, 'The Outskirts of a Fair,' W. Shayer, 60*l*. By Mr. C. S. Compton, 'Distant View of Erith on the Thames,' J. Tennant, 30*l*. By Mr. G. Scamell, 'English Wild-Flowers,' Mrs. F. M'lan, 30*l*. By Mr. S. Wreford, 'A Sand-bank near Bletchingley,' J. W. Allen, 31*l*. 10*s*. By Mr. C. Goodwyn, 'The Pet Rabbit,' G. Stevens, 25*l*. By Lieut.-Colonel Robinson, 'On the Lower Road, Woolwich,' J. Tennant, 25*l*. By Mr. C. Stevens, 'The Baiting House,' E. Childe, 25*l*. By Mr. R. Clarke, 'Camilla and Gil Blas,' T. M. Joy, 20*l*. By Mr. R. E. Greenwood, 'Church of St. Pierre, Caen,' W. Fowler, 20*l*. By Mr. W. Robins, 'Woodcutters, Boxhill,' J. W. Allen, 20*l*. By Miss Stanier, 'Landscape,' Miss Radcliffe, 20*l*. By Mr. J. Davies, 'View near Erith,' E. Fowler, 20*l*. By

Mr. W. J. Newson, 'The Cat Castle, Rhine,' A. Clint, 15*l*. 15*s*. By Captain C. S. Torriano, 'Titania Sleeping,' A. J. Woolmer, 18*l*. 18*s*.

From the Old Water-Colour Society—by Mr. J. Clow, 'Raby Castle, Durham,' C. Fielding, 37*l*. 16*s*. By Mr. J. C. Bothams, 'View of Ben Lomond,' C. Fielding, 18*l*. 18*s*. By Mr. H. Brown, 'Road through a Wood, Tan y Bwlch,' D. Cox, 20*l*. By Mr. E. N. Winstanley, 'Retirement,' George Barrett, 31*l*. 10*s*. By Mr. E. M. Freer, 'Gravedona, on the Lake of Como,' W. Callow, 20*l*. By Mr. H. Johnson, 'Market-people Crossing the Lancaster Sands,' D. Cox, 21*l*. By Captain Lawrence, 'The Day Dream,' J. W. Wright, 21*l*. By Mr. R. Ellison, 'The Selected Flower,' F. Stone, 26*l*. 5*s*. By Mr. J. Proctor, 'Scene in the Via Mala,' G. A. Fripp, 15*l*. 15*s*. By Mr. J. Reid, 'Ben Venue, Perthshire,' C. Fielding, 21*l*. By Mr. B. Bernasconi, 'Composition—Landscape,' J. Varley, 52*l*.

From the New Society of Painters in Water-Colours—by Mr. T. D. Light, 'The Oath of Vargas,' L. Haghe, 210*l*. By Dr. Watmough, 'Mary, Queen of Scots' Farewell to France,' F. Rochard, 50*l*. By Mr. W. Hanley, 'Taking Leave,' E. Corbould, 26*l*. 5*s*. By Mr. J. Shaw, 'Brixham Harbour, Devon,' E. Duncan, 25*l*. By Mr. W. Gilbertson, 'Sunday Morning,' John Absalon, 21*l*. By Major Bonamy, 'Carnarvon Castle,' T. M. Richardson, 15*l*. By Mr. H. Preston, 'Blowing a Cloud,' T. Robins, 15*l*. 15*s*. By Mr. S. Relf, 'A Group of Arabs,' G. H. Laporte, 15*l*. By Mr. E. R. Tunno, 'Castle of Gonzio Friuli,' J. F. D'Egville, 21*l*. By Mr. J. Mollett, 'Winter,' E. Duncan, 15*l*. 15*s*.

We continue to receive letters touching certain attempts on the part of prize-holders to put money into their pockets instead of pictures into their houses, and of connivance by artists thereat. We reserve our remarks for the present; but cannot too strongly caution artists against being led into any arrangement with regard to the purchase of their pictures, which they would not willingly see published to the whole world. Apart from higher motives,—when discovered, as discovered it in most cases assuredly must be (the Committee of the Art-Union of London being so large and influential as it is), even the appearance of jobbing would have the effect of creating a prejudice against them hardly to be overcome, and certain to be inimical to the future sale of the artists' works in the Society. Leaving this subject, however, for the present (and it will at all times pain us to revert to it), we are glad to find that the Committee are bestirring themselves to make the Art-Union conduce even more to the advancement of the Arts than at present. We cordially wish them success, and assure them of our earnest co-operation.

Since the above was in type, Mr. Stone's picture, 'The Stolen Interview,' selected by Mr. G. Fry, has been withdrawn, in consequence of a misunderstanding as to price.

## NATIONAL GALLERY.

Sir,—Through the medium of your useful paper, I venture to throw out a thought, although probably too late for present application.

In the Marquis of Camden's collection, now for sale, there is a picture by Jan Steen of most rare quality, which would be a great ornament to the National Gallery, and a great benefit to artists; it might also commemorate, by an inscription, the noble relinquishment of a sinecure by the late generous Marquis: thus two great purposes would be answered—the reward of patriotism and the advancement of art. And it is possible that such examples might produce to us another Wilkie, if such a combination of talents can ever be found again; for with a power that equalled, and in most instances surpassed, any of the Dutch School, Wilkie never deviated from the purity and propriety what fine art always demands, and which renders it a source of moral instruction as well as mental delight.

Yours, &c.,

M.M.

# PRINCIPAL PAINTER IN ORDINARY TO HER MAJESTY.

THE London Gazette of Friday, June 18th, contains the following announcement—"The Queen has been graciously pleased to approve of the appointment of George Hayter, Esq., as Principal Painter in Ordinary to Her Majesty in the room of Sir David Wilkie, deceased." This appointment is dated from the Lord Chamberlain's Office, June 12th; and will interest not only those who watch the advancement of Art, but especially all who make the Art of Painting their profession. The situation which a Hogarth, a Lawrence, and a Wilkie have graced, is an envied post for the ambition of the most able, and to him thus honoured by his sovereign, may be attributed no small share of good fortune. We are aware that many expected that the honour would be conferred on the accomplished President of the Royal Academy, a tribute to the head of her Majesty's own school of Art, which would not have been less merited by him than satisfactory to all; but knowing, as we do, the value her Majesty places on the works of Mr. Hayter, we were in some measure prepared for the appointment. Her Majesty in childhood sat to him; in more advanced life gave him her patronage; and when the gems of the British crown shone around her brow, she aided him with every facility to depict her coronation, and afterwards to commemorate the (to her) far more interesting ceremony of her union with Prince Albert. It is a characteristic of her Majesty to attach herself to those whom circumstances have placed around her both in public and private life, and perhaps more particularly to those who have been known to her in youth. Such a feeling might lead to undue preferences, but notwithstanding all that could be urged against it, it is honourable to the source whence it springs; and by this alone we sincerely believe has the Queen been actuated in the appointment of Mr. Hayter:—nor is Mr. Hayter unworthy of it; for where shall we find the man who will venture to affirm that we have an artist who can produce a more admirable historical work than the 'Trial of that Noble Patriot and Martyr, Lord William Russell,' a picture as unlikely to be forgotten for its merit, as is the memory of that nobleman for his love of liberty? If our memory serve us well, Mr. Hayter began his profession, after studying at the Royal Academy, as a miniature painter, a branch of art ably followed by his father; but leaving England for Italy at an early age, he saw works which gave his mind the nobler desire of becoming a historical painter. There he laboured so successfully, that the Ancient Academy of St. Luke at Rome elected him a member of their body. After his return, he painted the 'Trial of Lord William Russell,' and his great work of the 'Trial of Queen Caroline.' The popularity of these works has rendered his name familiar to the public; but still feeling a wish to renew his studies in Italy, he went again abroad; and while there, was elected a member of the Academies of Parma, Florence, Bologna, and Venice. He returned in 1829, and shortly afterwards was introduced to the patronage of Prince Leopold, now King of the Belgians, and through him to that of her present Majesty, who since that time has continued to him her countenance and favour. At the time of the passing of the Reform Bill, Mr. Hayter commenced his picture of that event, a work of unequalled labour, containing four hundred portraits, which the public has yet to see exhibited, for numerous other engagements have prevented the artist from completing, to his entire satisfaction, this stupendous undertaking.

Her Majesty's accession gave him the opportunity of painting the 'Coronation,' a picture worthy the admiration of the Sovereign and of the country; and so perfectly executed to the satisfaction of her Majesty, that, upon her marriage, she commissioned him to paint the ceremony of her nuptials with Prince Albert; a work upon which he is now employed, and in which we heartily wish him success, as we congratulate him on the high and important appointment which he enjoys as historical painter to the Queen.

## FOREIGN ART.

ITALY.—BOLOGNA.—In the ancient palace of the Podestà, built by the city as a prison for Enrius, King of Sardinia, son of the Emperor Frederic II., which stands in the middle of the "Piazza Maggiore," there have recently been made some alterations in the interior structure. In the course of these operations, a quantity of pictures of extraordinary antiquity have been discovered; they are marked with the name of Lippo Dalmasio, a painter who flourished before Antonello of Messina, and before, as has been generally believed, the invention of oil painting. The analysis of the material with which these pictures are painted proves that they are in oil. The Academy of Fine Arts has instituted a committee to examine into this discovery and to make an exact report on the subject, which we shall present to our readers.—Our city is, at present, rich in one of the most splendid collections of *Majoliche dipinte*, painted stoneware, we have ever seen. They are the productions of the province of the Metauro, which includes Pesaro, Gubbio, Fermignano, Urbino, and consist principally of works of the sixteenth century. There are above eleven hundred pieces, urns, vases, large salvers, and plates of various sizes. To those to whom the work of the Abbe Giambattista Passeri on the Fossils of the Agro of Pesaro and the surrounding country is known, these specimens have a double interest, being the subject of his last interesting discourse "On the *Pittura in Majoliche* of Pesaro, and other towns of the Metaurensian province." Some are regarded by the learned Passeri as of earlier date than 1500. These are believed to have been bridal presents, the picture of the bride being introduced with divinities and surrounded by arabesques. The grounds of these show the varying tints of mother-of-pearl when a little varnish is applied. The pieces that belong to the times of Leo X. and Julius II. have grounds of gold and silver, and the reds and scarlets are of the most wonderful brilliancy. These are works of Baldassare, Vasaio of Pesaro, of Terenzio de Mattio, also of that town, of Master Georgio of Gubbio, and several artists of Urbino; among them are many copies of portraits by Perugino, pictures after Timoteo della Vite, or Maturo, and after il Fattore, and there are also by the Bolognese, Marc' Antonio Raimondi, some works after the compositions of Raffaele. Many were executed by order of Guido Ubaldo II., Duke of Urbino, as presents to sovereign princes, nobles, ecclesiastics, &c.; they bear the arms of the Duke, and the subjects are always adapted to the destination of the pieces. We have on some, David, Solomon, Augustus, &c., on others, intended as gifts for churchmen, Moses and Aaron, Paul in the Areopagus, St. Bruno in the Desert, &c.; on those destined for noble ladies we have the birth of Venus, Psyche, &c.; altogether the collection is most interesting.

FRANCE.—PARIS.—One of our most distinguished sculptors, Monsieur Antoinin Moine, has obtained the possession of an object alike interesting to art and history. Just before the tomb received the remains of the unfortunate Duke of Reichstadt, a French artist, long attached to the fortunes of the Imperial Family, took a mould of the features of the son of Napoleon. It is this original mask which our able sculptor has in his possession; and we are told, that in the youthful features attenuated by sickness and suffering, the same lines are recognised that mark the profile of the Emperor in the likeness brought by Dr. Antomarchi from St. Helena.

GERMANY.—MUNICH.—Professor Peter Hess is now employing his talents on a series of pictures representing the deepest tragedy of modern times, Napoleon's Russian campaign. The pictures are 12 in number, portraying the principal events of the campaign; and, finally, the fearful fate of the army. It seems a singular exercise of the versatility of his mind, when we remember the cheerful character of his last admired picture, representing the festive scene which greeted King Otho on his arrival in Greece.

A work of the Belgian artist Maes, which he painted at Rome, and now exhibits here, excites much interest. Like all his early works, the brilliant effects of light in this picture are wonderful. The subject is a Magdalen in penitent resignation

—a skull before her, her hands folded, and her eyes directed to heaven.

It is the wish of the Belgian Government, after the example of our King Louis, to give Art in that country a national character, and such a position that it may influence the civilization and improvement of the people. For this purpose a deputation has been sent here, M. Von Wollferr being at its head, to acquire information respecting our institutions for Art, and to consult with Cornelius and other distinguished artists, on the best manner of regulating the establishments for the same purpose in Belgium. One step was soon determined on—to send immediately from Belgium some young men to study here, especially in order to acquire the practice of fresco paintings, in the hope they may become themselves the authors of some great works in that style.

The model for the monument to be cast in bronze to the memory of the late Chancellor Baron Kreittmahr, has been completed by Swankhaler. The costume of the present day is preserved, but in part concealed by the large folds of a mantle. The wig is on his head, and it is in strict keeping with the character of the statue. On the intellectual countenance thought is enthroned, as he seems to ponder on some legal difficulty indicated by the large half-opened volume on which his arm reclines. When completed, it is the intention of his Majesty to place this work on the narrow side of the "Promenadeplatz" here. Another statue at some future period will be placed opposite.

We may also state that the model of the statue of the late Grand Duke of Hesse, and the sepulchral monuments to Mozart and Jean Paul, are in Swankhaler's work-room until the bronze for the castings is prepared. Little, indeed, is the modern costume adapted to the plastic art: all that a statuary can do, is by the attitude and movement of the figure to dispose the dress as well as possible, and conceal as much as he can its poverty. We have seen by Werner, of Dresden, lately two large water-coloured drawings: the one represents Venice in her former splendour; the other, in her present decay. All consider that in these fine works Werner has proved himself a true painter of history. In a late number we named the frescoes of Professor Henrich Hess, now being executed in the church of St. Boniface; we shall here mention a few other particulars. In the chancel where the church triumphant is represented, Christ appears in glory, surrounded by cherubim and seraphim, in the act of benediction. The attitude is not the usual one, for his arms are extended as if they would embrace the universe. John the Baptist and Mary kneel near him, as the first who received the gospel; below appear St. Benedict, Boniface, Wilibald, Sorbinus, &c. This group has relation to the establishment of Christianity in Germany, the cathedral being dedicated to St. Boniface, the apostle of the German church. Except the tribune, on the upper part of which is depicted the Four Evangelists, and below the sufferings of Christ at a sacrifice, with emblems of the priestly office, and instruments of oblation, the greater part of the frescoes are to represent the history of Christianity in Germany, with its early saints and martyrs, contained in 36 different pieces. The first 11 relate to the life and death of St. Boniface; the others are devoted to other events, or legends of ecclesiastical history, from the third until the ninth century inclusive. The execution of these frescoes, the drawings for which are entirely completed and the painting commenced, Professor Hess has entrusted to his pupils and young friends, E. Roch and Jansen, of Hamburg; Halbreiter, of Munich; Sutter, of Vienna; Claud Schraudolph and Müller. We are proud of the various talent and practical skill shown in those pictures, each being complete in itself; yet the whole is in such harmony that it seems as if the school of some master of old times were revived before us. The scholars of Hess are permitted to compose only from the beginning, the master watches over their works, correcting faults and suggesting ideas, so that one mind and manner of thinking gives life to the whole. Abstracting the choice of subjects, which do not suit every taste, those works, we think, will give universal pleasure; they represent life alike contemplative and full of feeling, expressed in noble and grand forms—through a colouring somewhat va-

poury but yet rich—that brings before us Piesolo and the great masters of the early Tuscan School.

**WEIMAR.**—The architect, Professor William Zahn, has, since his arrival here, exhibited many of his fine studies and drawings, among these none are more interesting than those which represent the discoveries made in the recent excavations at Herculaneum and Pompeii; they include the most minute details, ornaments, and pictures; sometimes giving whole walls entire. Of Pompeii we have the street of Mercury and the street of Fortune, excavated between 1830 and 1840; the "house of the Wild Boar," formerly excavated, given with every detail; and in many of the buildings, the whole house is restored. Among the pictures are, particularly remarkable, a 'Galatea,' 'Perseus and Andromeda,' and 'Genii and Groups in the Air,' from the last opened house in the street of Fortune; also, from the house of Apollo, in the street of Mercury, besides the house of the Wild Boar, and the beautiful black wall behind the Temple of Fortune, discovered in 1835. Professor Zahn has completed these works at present in the prosecution of his great work on the cities of Herculaneum, Pompeii, and Stabia. For this purpose, during his second residence in Italy, he passed his time chiefly at Pompeii, where he was permitted to copy, while they yet retained the first freshness of their colouring, beautiful pictures, and newly-excavated walls. All will appear in the above-mentioned work, which it is his intention to prepare for publication at Berlin; there, in 1828, the lithographic press was employed with the most satisfactory result for the first part of the work; and since that period the art of lithography has made great progress in Berlin.

**SPAIN.**—A. BOCANEGRA.—In preparing for an article on the genius of Art in Spain, we met with the following artistic legend, which may perhaps not prove uninteresting to our readers, embodying some criticism in a less ponderous form than usual:—

In a noble apartment, lighted by a single large window, whose rich hangings were arranged so that the light could be lessened at pleasure, a man, elegantly dressed, paced rapidly backwards and forwards. The whole furniture of the room and the house spoke the wealth and taste of its possessor: statues, vases, arms, Venetian cabinets, Flemish tapestries—all the luxuries of the period were collected there. The appearance of the proprietor, Athanasius Bocanegra, corresponded with the rest. His velvet doublet and under-dress showed to advantage his graceful figure; and his head, proudly thrown back, expressed the sense he felt of his own greatness, especially when, pausing before a large painting, he exclaimed, "Yes, it is indeed beautiful. There is truly the dying Saviour; there the mother who followed her son to Golgotha. If our youth had more knowledge of the Arts, I should not be called painter to the King, but king of painters." These words were spoken in reference to a picture just finished by him, which the King, Charles II., had ordered for the cathedral of Granada. They were hardly uttered, when they came to tell him that the King was at the gate, with a great train. Bocanegra went forth to receive him. The King had come to see the picture, and be the first to judge of its merits. He looked at it long with great attention, and then said, "This picture is indeed magnificent, and you deserve the name of divine, as well as Morales." "Your Majesty is very gracious to me, and not less so to the memory of that poor fellow, Morales, who, notwithstanding his title of 'divine,' was somewhat dry and stiff."—"You are severe," interrupted the King; "do you prefer that I should compare you to Zurbaran?" "Zurbaran," replied Bocanegra, "managed his draperies very gracefully; but in his naked figures he exaggerates the defects of Caravaggio, without possessing his qualities."—"Velasquez, perhaps, pleases you better," said the King. "Velasquez had a happy art in disposing the attitudes of his figures, and his pictures have an air of nature; but do you not find somewhat poor and dry in his 'Adoration of the Shepherds,' and his 'Water-Carrier' at Seville?"—"And Raffaele?" said the King, a little angry. The painter's face glowed at the name of Raffaele, and his eyes sparkled, as he replied, "Raffaele drew with great purity; but had he lived in our times, I doubt if we should have given him the

first place among artists."—"I rejoice," said the King, "that you think the present period so rich. Murillo, indeed, is worthy of all praise." "Murillo is not without grace and sweetness in the treatment of his pictures; but those clouds in which he places his Madonnas are like teased cotton, and his middle tints want transparency."—"You will spare, at least, your colleague, Carreno de Miranda; you know how we honour and love him." "Carreno de Miranda does not paint portraits badly. He has good qualities; but his colouring is weak, and his drawing is often not clear." Carreno de Miranda heard these words of the proud painter, but he only smiled and walked away. Not so felt the King. "Modesty," said he, "is the true companion of merit; and we know no man more modest than Carreno de Miranda. We have offered him honours and titles, all which he has declined; and when urged to accept them—if not to honour himself, in honour of his art—he answered, 'The art of painting honours all who profess it, and takes honour from none.' A mark of our affection, however, Carreno cannot refuse; he shall wear during the year the dress which the King wore on Good Friday. But it appears, Sir Bocanegra, that we have erred in our judgment of many painters; perhaps also we are mistaken in our opinion of your picture. What say you of it, Mattia Torres?" "The picture is beautiful, Sire, certainly; but it is full of reminiscences of Alonzo Cano, at whose school Bocanegra studied. If he be so great a genius, he should give us something original: I myself do not fear to paint in competition with him." We need not describe the anger of Bocanegra. The challenge was accepted; but the passion that had called it forth died away, and the trial of skill never took place. Bocanegra, however, had given so much offence to the painters of Madrid, by his arrogance and contemptuous manners, that he could no longer live happily there, and he returned to reside at his native Granada. Here he found, unhappily, a rival more persevering than Mattia Torres. The young Theodore Ardemens was ambitious of the appointment of director of the works in the cathedral, and the name of Bocanegra, who also aspired to that honour, did not intimidate him. After many efforts by their supporters on both sides, it was determined that each should paint the portrait of the other, the sittings to be in public. The day came for the great trial—the hour. All was prepared, and great was the assemblage to witness the progress of the works. Bocanegra placed himself at his easel, and Ardemens sat for his portrait. Bocanegra's true and rapid pencil soon sketched the features of his rival; but looking again, he perceived he must have erred. He had delineated a round contour for the face of Ardemens, and he perceives it is long and thin. Bocanegra effaced his work, and recommenced. The sketch is now perfect; but what a mistake! He has drawn Ardemens with an aquiline nose, and now his is somewhat turned up, and the mouth, too, is different. Again and again he effaces and corrects. The portrait never advances; for by the time the sketch is completed, he always finds something quite changed in the face of Ardemens. The patience of a quieter spirit might have been exhausted by these repeated disappointments; and Bocanegra, furious and indignant, throws down his pencil, exclaiming, "He is the devil! How can I fight against him?" He rushed to his own house, was seized with fever, and in a few days died. His disease, some said, was produced by infernal agency; others, that it was caused by wounded pride and passion. Different also were the accounts of the cause of his defeat. It was reported that Theodore Ardemens had painted a picture in which the devil was introduced; but Ardemens painted no vulgar devil, he drew the lineaments of a fallen angel, whose celestial beauty was obscured, not changed. The devil was so pleased with the flattering likeness, that he presented himself before Ardemens, and gratefully offered to do him any service he desired. It is said Ardemens called on him to sit for his portrait to Bocanegra; others will have it that the youth had great power over his features, and could change their appearance so singularly, as not to be recognised; and that of this faculty he availed himself to defeat his rival.

## VARIETIES.

**THE LATE SIR DAVID WILKIE.**—An address of condolence to the surviving relatives of the late Sir David Wilkie has been proposed, and lies for signature at the Royal Academy. The members of the Royal Academy have also voted among themselves another similar token of respect to be presented in the name of their own body exclusively. The erection of a monument is also under consideration, the proposition for which it is expected will come forward under high patronage.

**WILFUL DAMAGE OF THE PICTURES AT THE ROYAL ACADEMY.**—A wanton outrage, which has caused the greatest indignation and excitement in the world of Art, was discovered to have been perpetrated at the Royal Academy Exhibition on Friday last. Upon the porters of the institution going round the rooms, as it is their custom at dusk, to ascertain that all the visitors had left, their attention was attracted by the appearance of dust upon the picture of Mr. Simpson of 'Mary Queen of Scots returning from Hawking,' which, upon closer inspection, was found to be caused by some villain having completely scratched out the eyes of every figure portrayed on the canvass. This discovery naturally created an alarm for the safety of the other valuable pictures in the collection, and a careful inspection was made, when the same wanton and malicious attempts at destruction were found apparent upon 'The Italian Peasants' of Mr. M'Innes, and upon a 'Portrait of a Baronet,' by Mr. Corbett. A picture by Mr. M'Clise, R.A., of 'Hunt the Slipper,' in illustration of the Vicar of Wakefield, was also very seriously injured. It was at first conjectured that these rascally acts were those of a child; but, setting aside the fact that no child could have been the cause without discovery, or purposely screened by adults from the view of those who are placed in the apartments to prevent the pictures being touched, some of the outrages are higher than a child can reach, and thus places it beyond a doubt that it has been the act of one or more old enough to know better. The pictures by Mr. M'Clise, R.A., Mr. Simpson, and Mr. M'Innes, it is gratifying to add, are not beyond repair; but that of Mr. Corbett, being upon panel, is more seriously injured, and it is feared cannot be restored. A rail, it is said, is at once to be placed around each room, to prevent the too near approach of the visitors. This would certainly in some measure prevent a recurrence of malice; but nothing but the most watchful superintendence, and upon discovery, the severest punishment, will deter such miscreants as these from repeating their daring and wilful acts of villainy.

**COMMITTEE OF THE FINE ARTS.**—The evidence given before this Committee has been concluded, and we shall endeavour to lay before our readers the substance of it in our next number. Various and conflicting opinions were expressed by the gentlemen whose counsel has been sought on this occasion, and sentiments equally opposite and diverse have it is said prevailed among the committee; but whatever resolution may be final, any measure would be preferable to the disgrace of resorting to foreign artists to execute that which could be equally well done by native talent under proper encouragement. We have received a circular on this subject signed "An Artist," and addressed to the members of the committee, a portion of which we subjoin:—

"My Lords and Gentlemen, what is there in a German or a Frenchman, that, by proclaiming aloud your want, you will not find many Englishmen equally possessors? It has hitherto been the curse of this country, that a feeling emanating from a native has been crushed in its birth; while the same proceeding from any foreigner has been encouraged. How long is this to last? Are we never to tear down the laurel wreath from bows that have worn it too long already, and, I may add, undeservedly? Not on the score of merit, but, because, while every advantage has been and is held out to them, the spark of ambition is suffered to die away through bitter neglect and contempt. It is an erroneous idea that the Germans and French are alone capable of executing so great a national work as that of decorating the Houses of Parliament in a worthy manner in Fresco, which is the most suitable on account of its delicate tone of colour and effect for the decorations of a large room. I have travelled much, and studied zealously to discover the real or affected

merits of the modern schools of Art, and though humbly, I yet confidently affirm, that after stripping them of their mannerism, their affectation of grandeur, of power, and of simplicity, and their plagiarism, that there remains nothing to contradict this statement, viz., That there is more originality of thought, more real merit, and more imagination displayed in the English school, than in all the other schools of Europe put together. I grant it true that we may not as yet possess sufficient mechanical power to execute our intentions in Fresco, but that is soon learnt, while the idea and conception of a work are the result of the natural character of the Artist. Proclaim your want, my Lords and Gentlemen, and talent proportionate to that want will quickly arise;—and I pray you, my Lords and Gentlemen, do not, for the honour of your country, for one moment suppose that the land which has given birth to Shakespeare and Milton,—the land which, at the first peal of the trumpet of fame, has seen myriads arising from their apathetic slumbers to sound the war-hoop of victory, and to proclaim the name and the glory of Britain over the whole earth,—the land which, at the voice of the oppressed, has seen many a noble mind arise, which, impelled by the enthusiasm that a good cause prompts, has exerted itself to crush the tyrant and to relieve the slave. Again, I say, do not for one moment suppose that this same land, if called upon to produce minds capable of executing works of Art for a people's instruction, and for a country's honour and glory, would be found wanting in a direct and ready answer to that call. No! No! My Lords and Gentlemen, there is that importance in an undertaking of which a nation is the patron, and of which a nation is the judge, that would stimulate the weakest mind to produce something that should add largely to the honour and glory of the country."

**THE TEMPLE CHURCH.**—We have before this spoken of the restorations and adornments of this beautiful little building, commenced by the Honourable Societies to whom it belongs. The organ-screen which divided the circular portion from the choir, the pulpit, altar-piece, and other fittings totally different in style from the rest of the church, the pewing and the floor, have all been removed to restore the building to its original state. Many of the pillars with which the interior is adorned were found, when accumulated white-wash was removed, to be of Purbeck marble, and accordingly have been polished and made to play their proper part. Furthermore, it was seen that the vaultings had originally been painted with the most brilliant colours; and it was thereupon resolved that polychromatic embellishment should again be employed. The whole of the vaultings, in the choir have been, therefore, painted from a design by Mr. Willement, and preparations were ready for decorating in the same manner the circular portion. Painted glass was to fill the windows, sumptuously carved stalls against the north and south sides of the choir were to take the place of the former pews, and painted tiles and tessellated pavement were to form the floor. Suddenly, however, it was discovered that the cost of these proposed adornments had not been properly understood at starting—that a much larger sum than was intended had already been expended. The works were all stopped, the doors locked, and the accounts obtained, when it was found that instead of three thousand pounds, the amount originally contemplated, above *thirty thousand pounds* had been already expended, and that more would be required. For the present, this very noble undertaking is consequently suspended; the original architect, whether with or without good reason we are ignorant, has been displaced, and Messrs. Burton and Smirke called in to advise as to the completion of the works.

**MONUMENTAL CROSSES AT OXFORD AND ELSEWHERE.**—The first stone of the Martyrs' Monument at Oxford, commemorative of Cranmer, Ridley, and Latimer, was laid on the 19th of May; it will be completed forthwith, and bids fair to be worthy of the magnificent and interesting city in which it is to stand. Oxford is a closely connecting link between the present and the past; nowhere can the domestic and monastic architecture of our forefathers be better studied; nowhere would an indifferent specimen of modern taste and skill be less excusable. It will be remembered by most of our readers, that the committee appointed to arrange the memorial, referred the architects who competed for the honour of supplying the design, to the various crosses erected in commemoration of Queen Eleanor (that at Waltham in particular), as best exhibiting the wishes and feelings of the committee. Seven designs were sent in, from which that by Messrs. Scott and Moffatt, now in progress of execution,

was selected. It is hexagonal in plan, is raised on a flight of steps, and is formed into three stories. In height it will be 70 feet, 25 feet higher than the cross at Waltham. Sculptured figures of the three prelates will fill niches in the second story of the monument, and these will be executed in Caen-stone, under the kind superintendence of Sir Francis Chantrey. The stone selected for the body of the monument is from the Bolsover beds; a quarry near Mansfield having been opened expressly for the purpose. It is to be hoped that men of proper ability will be employed for the decorative portions of the structure, for if it be not so, skill on the part of the architects will be of little avail. In this respect the designers of our ancient buildings had much advantage, all the masons employed being more or less artists themselves, and working *con amore*. The present contract system is much opposed to excellence in this particular.

In the same city a second monumental cross is at this time in progress of execution although not intended to remain there. It is similar in character to the martyrs' memorial, 60 feet in height, and will be erected about ten miles from Derby, in memory of Mrs. Watts Russell. Mr. Derick, of Oxford, is the architect; the cost is estimated at about 1000 guineas. We hail with gratification this instance of liberal taste on the part of a private individual, and hope it may be the forerunner of a great and general improvement in sepulchral monuments. In a pamphlet on this subject, lately written by Mr. J. R. Markland, of Oxford, it is suggested that, instead of defacing the walls of our churches with ugly tablets or inappropriate sculpture, as is now too often the case, the money they would cost should be expended in the decoration or the repair of some particular portion of the building, with which the name of the deceased should be thereafter in some way connected. That some alteration in the present system is called for no person can deny; and we propose to treat the subject at some length in a future number of our paper.

Relative to the stone crosses erected in memory of Eleanor of Castile, consort of King Edward I., before referred to, some very curious information has been recently published by the Rev. Joseph Hunter in the "Archæologia" (vol. xxix.) It is drawn from king's writs and other records until this time inaccessible, and shows the names of the various builders, who were, it would seem, the architects also; and the sums of money paid for their erection. Nine of them were put up between 1291 and 1294, the remaining three probably a little later; the cost of that which remains at Waltham appears to have been in the whole £95. Concerning these crosses Mr. Hunter remarks, "We in these times view the three, which have been alone permitted to remain, by the bad spirit which has from time to time prevailed in England, warring against everything that is eminently beautiful, or that is addressed to the higher feelings and interests of man,—but as so many beautiful specimens of the combined effect of sculpture and architecture, or so many conspicuous proofs of the perfection which these arts had attained at an age which some men call dark, or at most, as affecting memorials of conjugal love. They were to attract by their beauty no doubt; but their higher purpose was to inspire the devotional sentiment: they were to call the traveller to remember the 'Reginam bonæ memoriæ,' as she is often called, even in fiscal documents, whose image stood before him, that he might there pray for her." The essay gives some curious information concerning the tomb erected to her memory in Westminster Abbey; and ascribes the beautiful metal figure of the queen still remaining there, to Master William Torell, a goldsmith, whose name deserves to rank high henceforward in the list of English artists.

**THE SCHOOL OF DESIGN.**—The Council of the Government School of Design contemplate the establishment of provincial branch schools; and with this view purpose forming a class at the parent institution in Somerset House, for the education of those persons to whom are to be confided the instruction of the pupils of these projected establishments. In furtherance of this object, ten thousand pounds have been granted by Parliament; and the council propose to found six exhi-

bitions of thirty pounds a year, each to be paid quarterly during two or three years, or to terminate at the discretion of the council. The members of the Normal class will enter the school subject to the rules of the Probationary class in addition to those of their own. They must be at least eighteen years of age, and be provided with testimonials of good conduct, disposition, &c. Specimens of their drawing will be required, and they will be held engaged to attend the school regularly during all the hours appointed for instruction, and to follow implicitly the course of study prescribed by the director. They must agree to attend regularly during the whole period deemed necessary by the council for the completion of their education, whether the term shall extend to three years or be limited to two. The council will not pledge themselves to continue the payment of the exhibitions unless justified by the progress and continued good conduct of the student: and if a student infringe without sufficient cause that rule of the institution which prescribes regularity of attendance, he will be liable to be removed from the school; which proceeding the council will also have recourse to, in cases showing a want of the exercise of that degree of attention and perseverance necessary to advancement. The council also reserve the power of discontinuing the payment of the exhibition, should it appear after a reasonable trial that they had been led to form an undue estimate of the probable qualifications of a student for the office of teacher. It gives us pleasure to add, that these schools are to be supplied with models and casts from the antique, and whatever else may serve to refine that taste which their establishment is intended to promote. An advertisement on this subject appears in another column.

**MICHAEL ANGELO.**—We have had an opportunity of inspecting a drawing, which there can be but little doubt has been a study executed by Michael Angelo for his 'Last Judgment.' It is we believe entitled 'Envy,' although the expression which amounts to fury would proclaim a passion much more active and stimulant. The head is small, just sufficiently large to admit of detail in execution, and a drawing more successfully elaborated we have never seen. It can be traced to the possession of Sir Joshua Reynolds, during whose lifetime it passed into that of Sharp the engraver, by whom it was engraved; but his work is a perfect failure, as is seen in placing the print by the side of the drawing: the manner of which resembles very much similar things that are in the collections of the Palazzo Vecchio at Florence. It would scarcely be believed that this great master could descend to the minute style of this drawing, but that he did, is nevertheless true. This interesting production is in the possession of Messrs. Colnaghi and Puckle, of Cockspur-street.

**WARD'S PICTURES.**—We have been gratified with a sight of the works of James Ward, Esq., R.A., which are exhibited in his gallery at No. 6, Newman-street. These consist of a collection of paintings, drawings, studies, &c., &c., amounting in number to upward of five hundred, the greater part of them having been executed during the last eleven years of this veteran artist's life; and their accumulation and his undiminished love of art have thrust him from his retirement at the age of seventy-two. The grand work of this collection is 'The Bull,' a cattle picture, in which the animals are of the size of life, and nothing can exceed the nature and truth with which the whole is characterized; it is unquestionably a picture to rank among the first of its class. Mr. Ward has also described the nature of the horse, in a series of twenty paintings, many of which are wonderful in expression, and by no means exaggerated; they are the result of long years spent in the study of the character of the animal. We think, however, that in some other of the series the equine character cannot be so much refined upon as Mr. Ward has endeavoured to do. To the other works and numerous drawings of the collection we cannot do the justice which they merit in a notice so brief as this must necessarily be.

**GEORGE CHAMBERS.**—The sketches, drawings, and pictures left by this lamented artist, have been disposed of by public auction, for the benefit of his widow and orphan children. They realized a greater sum than was anticipated by the picture

dealers, but less than was expected by the friends of the deceased. After payment of debts and expenses, only an inconsiderable sum will remain for the widow, who, however, has happily reserved a few of the best drawings. The private sale of these, together with the subscriptions made for her by numerous lovers of the Fine Arts, may enable her to open a small shop, or library, for her future support. Interest is being made to relieve her of the burthen of educating two sons, who, it is hoped, will be admitted into some public school.

**PUBLIC MONUMENTS.**—In the House of Commons on the 18th ult. Sir F. Burdett rose to put a question to Lord J. Russell with reference to a motion which the house would recollect that he had intended to bring before the house upon the erection of a monument to the late Sir Sidney Smith, but which he was prevented from submitting to the house by an assurance that it was the intention of the Government to take up the subject, and he was willing to leave it in their hands, conceiving them to be the fittest persons to conduct the necessary arrangements. He was, however, much surprised and disappointed when he found that amongst the supplies proposed by the Government no grant for such a purpose was mentioned, and that, in fact, no further notice was taken of the matter. He really had expected that some intimation of carrying out this object would be made by the Government, and he felt the disappointment the more because he was anxious to have said a few words respecting the gallant individual in question, with whom he had been formerly acquainted. Only the night before last he received a note from the noble lord, stating that it was not the intention of the Government to do anything in the business during the present session. He believed that there was a concurrent desire on the part of the public that a monument should be erected to the memory of Sir S. Smith, and some explanation of the intentions of Government was due to the house, to the friends and relations of that gallant person, to the profession of which he was an ornament, to the country at large, and, he might be permitted to add, to himself, because he felt that he was in rather an awkward predicament, not knowing what answers to give to those applicants who wished to be informed what had become of the project. All he knew at present was, that a promise had been made on the part of the Government, which had not been carried into effect.

Lord J. Russell said, it had been understood, certainly, that some description of monument should be erected to Sir S. Smith, and that the expense should be defrayed out of the public funds; and upon taking the matter into further consideration, it was found that there were other officers whose services to the country entitled their memory to be respected, and that two of them, Lord Exmouth and Admiral de Saumarez, had sufficiently distinguished themselves to induce the Government to erect monuments to them likewise. Had the session proceeded in the ordinary manner, he should have proposed, under the head of miscellaneous estimates, a separate vote of the house for carrying out that object. But the hon. baronet was quite aware, that the usual course of public business had been interrupted, and that Government had not asked for more supplies than were absolutely necessary to carry on the service of the country until a new Parliament should assemble. It was, therefore, thought advisable to reserve this subject, as well as others, for a future opportunity; but, it was the intention of Government to ask for a grant for the erection of monuments to the gallant individuals who had been named. There was no change of intention with respect to the regard due to Sir S. Smith, or any doubt as to the propriety of the object, or any intentional delay in its execution.

Sir F. Burdett was to understand, then, that the noble lord was of the same opinion as to the propriety of erecting a monument to the gallant admiral, though there were embarrassing circumstances which at present delayed its execution?

Lord J. Russell assented.

Sir F. Burdett.—It is not given up and abandoned?

Lord J. Russell.—No.

## REVIEWS.

**MANNERS AND CUSTOMS OF THE ANCIENT EGYPTIANS, &c. &c.** Illustrated by Drawings, Wood Cuts, &c. By Sir J. G. WILKINSON, F.R.S. 5 Vols. Publisher, MURRAY, Albemarle-street.

The History of Art and the History of Civilization are identified; for Art may be said to furnish the substantial forms in which the mind and spirit of a nation are embodied; it gives to intelligence "a local habitation and a name." Hence the artist is not less interested than the historian in tracing

the progress of humanity; the ancient records of our race furnish him with the means of tracing how the principles of taste were first developed, and through what difficulties and errors our perception of the beautiful had to work its way ere it could present itself to the soul in its pure ideality.

Egypt was the country where civilization was first developed in the sufficiency of its strength; to it the historian and the artist, the philosopher and the philanthropist turn with equal interest; because in the valley of the Nile were most efficiently trained the arts by which life is supported, and the arts which dignify human existence.

View of the Ruins and Vicinity of Philæ.

"Egypt," says the Father of History, "is a land of marvels, and abounds more than all others in wondrous works." A mere enumeration of "its cloud-capped towers, its gorgeous palaces, its solemn temples," would fill several volumes. The Egyptians built for posterity; and but for the ravages of ruthless and ignorant barbarians, their architecture would have retained its original splendour after more than a century of generations. The massive edifices, whose ruins are represented in the vignette, seem as if they had been designed to partake of the eternity of the rocks and hills that surround them; the palace-temple of Rameses the Great appears to have been erected in defiance of time, and the Pyramids still stand proud in their gigantic majesty after having triumphed over the march of ages.

There never was a nation whose moral and intellectual habits were more obviously moulded by the physical character of their country than the Egyptians: their land was the gift of the Nile; all the ground within reach of the influence of that river bloomed in fertility and loveliness; all beyond

was the abode of desolation and of death. The valley through which the Nile flows is fenced in by two ranges of hills, nearly parallel to each other, resembling barriers erected by Nature to restrain the encroachments of the sands of the desert, which, on the western side, continually press upon the cultivated land. Edifices, pyramids, and colossal sphinxes, buried to their middle in sand, plainly evince that this protection has not been in all points sufficient; along the entire western frontier of Egypt, there has been a perpetual struggle between the powers of Nature and the agencies of barrenness and destruction.

While such a prospect impressed upon the mind ideas of death and eternal stillness, the annual inundations of the Nile presented the hopes of renovation and immortality. The colossal statues of Thebes, and the lofty edifices of Luxor, were almost isolated when the waters of the river swelled above their banks, and the landscape at such a time offered to the stranger nothing but the prospect of a wide waste and destructive flood.

The two Colossi of Thebes before the temple built by Amunoph III., with the ruins of Luxor in the distance, during the inundation.

But the elements of fertility were at work beneath the surface, and the Egyptian knew that ere long the receding waters would leave the earth renewed in her strength "to scatter plenty round the smiling land."

The eastern side of Egypt, from the valley of the Nile to the Arabian Gulf, consists of mountainous ranges, composed of marble of the greatest variety of colours, of granite, porphyry, and similar species of stone, forming the inexhaustible magazines for the gigantic monuments of ancient Egypt. In these quarries the colossal statues were wrought, and thence they were transported by human strength, on a kind of railroad, to the

spot they were destined to occupy. In the accompanying wood-cut, we see the enormous mass dragged onward by its votaries; the director of their march clapping his hands to mark the time of their movements, and giving out some song which, like the "Yo, heave ho" of our sailors, directed the simultaneous exertion of energy; another standing at the base of the statue pours oil or water on the rails to facilitate the movement of the mass; while troops of priests, with palm branches in their hands, celebrate at once the new honour paid to their divinity and the triumph of human art.

Mode of transporting a Colossus from the Quarries—from a lithographic drawing, by Mr. Bankes. *In a grotto at El Bershek.*

1. The statue bound upon a sledge with ropes. It is of a private individual, not of a king, or a deity.
2. Man probably beating time with his hands, and giving out the verse of a song, to which the men responded; though 3 appears as if about to throw something which 2 is preparing to catch.
4. Pouring a liquid, perhaps grease, from a vase.
5. Egyptian soldiers.
- 6, 7, 8, 9. Men, probably captives and convicts, dragging the statue.
10. Men carrying water, or grease.
11. Some implements.
12. Taskmasters.
- 13, 14, 15, 16. Reliefs of men.

The colossal statues were generally made of the granite rock which forms the most southern part of the mountains on the east of the Nile. It appears that the master sculptor generally belonged to the sacerdotal caste, and that there were certain fixed

rules and proportions from which artists were not allowed to deviate; and to this cause we must attribute the sameness and mannerism in the existing monuments of Egyptian Art. When limestone was used in statuary it was painted to represent granite.

The accompanying representations of statuary exhibit the processes of chiselling and polishing the stone; in the second of them the painter appears following the sculptor to colour the hieroglyphics he has engraved at the back of the statue.

Part 1. Large sitting colossus of granite, which they are polishing.

Part 2. Standing figure of a king, and, like the former, painted to represent granite. Figs. 8, 10, 11, are polishing it; and figs. 6 and 7 painting and sculpturing the hieroglyphics at the back.

Of the progress made by the Egyptians in painting, apart from sculpture, no memorials have been preserved, save the drawings on the walls of the temples and tombs; but these incontestably prove that painting was a profession in Egypt anterior to the Trojan war. One of the subjects at Beni

Hassan displays two artists engaged in a picture, painted on an upright board. The painter holds his brush in one hand and his saucer of colour in the other, but there is no indication of any contrivance to steady or support the hand.

Artists painting on a board, and colouring a figure. Beni Hassan.

Sir J. G. Wilkinson, whose volumes on the "Manners of the Ancient Egyptians" are among the noblest monuments of laborious research, guided by deep learning and sound judgment, declares that "the skill of the Egyptian artists in drawing is perhaps more worthy of admiration than anything connected with this branch of Art." When a wall was about to be ornamented with paintings or reliefs, it was ruled in red squares; the position of the figure was then determined by the superior artist, who traced them roughly with a red colour; the draughtsman then sketched the outlines carefully in black, after which they were inspected by the artist, who altered those parts which he deemed erroneous in their proportions or incorrect in their attitude. In this state they were left for the brush of the painter or the chisel of the sculptor.

From the representation already given of the mode employed to transport a colossal statue, it appears that the Egyptians had no notion of perspective. The ranks of persons engaged in this labour, instead of being shown one behind the

other, are represented one above the other on the perpendicular wall.

The ornamental vases of the Egyptians were exquisite specimens of art; and it is now completely established, that they were the instructors of the Etruscans and Greeks in these elegant manufactures. Some of the earliest and most graceful in form, appear from the representations of them on the monuments and the hieroglyphics with which they are accompanied, to have been made of gold, or of silver inlaid with the more precious metal.

They were beautifully engraved and richly studded with precious stones. When an animal's head, as was common, adorned the handles, the eyes were either gems or some fine enamel employed as a substitute.

The bronze vases found at Thebes and in other parts of Egypt, are remarkable not only for their exquisite forms but for the excellence which they show the Egyptians to have attained in working and compounding metals. When struck they emit rich and sonorous tones; they are susceptible

of a very high polish; and are, for the most part, finished as exquisitely as they could be by modern artisans, "with all appliances and means to boot."

Some vases had one and others two handles, which were commonly adorned with the heads of wild animals, as the ibex, the oryx, and the gazelle; others, which an erratic fancy might suppose to have been racing-cups, display the heads of horses, and in some instances they are supported by the figures of captives.

1

2

Vases richly ornamented with animals' heads, and figures of captives.

Thebes.

On a future occasion we may discuss the principles of architecture adopted by the Egyptians; but there is one circumstance connected with the building art which, from its association with the inspired record of the Exodus, requires special notice—we allude to the early and extensive use

of bricks among the Egyptians, and the painful nature of their manufacture. Under a burning sun, the toil in moist clay and the working in mire must have been pernicious and unwholesome. Nine out of every ten engaged recently in the formation and repair of the canals fell a victim to

pestilential diseases; and the Pharaoh by whom the Israelites were persecuted, could scarcely have found a more efficient means of diminishing the Hebrew population than compelling them to engage in the manufacture of bricks.

Fig. 1. Man returning after carrying the bricks.  
Figs. 7, 9, 12, 13. Digging or mixing the clay or mud.  
Figs. 14, 15. Fetching water from the tank A.

Fig. 3, 6. Taskmasters. Figs. 4, 5. Men carrying bricks

At e the bricks (tobi) are said to be made at Thebes.

Foreign captives employed in making bricks at Thebes.

Thebes.

No one can look at the foregoing representation of the brick-manufacture, without observing the marked Jewish cast of features in the labourers; this of course is not sufficient to prove that the persons so depicted are Jews, because the Egyptian artists adopted the same type or character for all the inhabitants of Syria. But it is still a portraiture which so far confirms Scripture history, as to show that this laborious task was the usual employment of slaves and captives. The task-masters are present with the stick; for the bastinado was the ordinary punishment in ancient Egypt, as it is in modern China and in most countries of the East. Indeed the Mohammedans have a proverb, "The stick is a blessing which came down from God;" and assuredly there is no divine blessing which their rulers distribute more liberally. Before quitting this subject, we may venture to offer a solution of a difficulty in the Scripture narrative which has sometimes perplexed biblical students. It is said that Pharaoh refused to supply the labourers with straw, which is ne-

cessary as a binding material in sun-burnt bricks, and commanded them to procure it for themselves. Were the Egyptian system of farming similar to ours, the tyrannical monarch would have enjoined a physical impossibility, but in Egypt the reapers only cut off the ears of the corn and left the straw standing as a worthless material; his addition to the Israelite's toils was a crime, but it was not what Fouché declared to be worse than a crime, a blunder.

The manufacture of bricks in ancient Egypt was a royal monopoly, a fact which is not recorded by any ancient author, but which may be fairly deduced from the Mosaic narrative. It is a strong confirmation of the truth of the Pentateuch, that this minute particular of Egyptian polity is fully established, by finding that the bricks in public and private edifices are stamped with the oval of a king or the name of some public officer.

The rock-tombs of Egypt are in some respects very similar to the cave-temples of India and the sepulchres of ancient Etruria. They were

satisfactory account of the manners and customs of Egypt in the age of the Pharaohs than we possess of the social condition of England in the time of the Plantagenets, and perhaps even of the Tudors. We trust that he will be encouraged to continue his researches, and that his progress in hieroglyphic discovery will enable him to add the interpretation of the hieroglyphics to the revelations of the tombs. We cannot conclude this slight notice of a portion of his valuable volumes, without expressing a wish that the governments of Europe would unite in persuading Mehemet Ali to subject the relics of ancient Egypt to the conservancy of a body of scholars, representing the different states of the civilized world. Such a tomb-searcher as the *Fellah* woman represented in the foregoing vignette, is likely to overlook or destroy much that would throw light on the origin and progress of ancient civilization, much that would beneficially multiply the links which connect sacred with profane history.

GRAPHIC ILLUSTRATIONS, WITH HISTORICAL AND DESCRIPTIVE ACCOUNTS OF TODDINGTON, GLOUCESTERSHIRE, THE SEAT OF LORD SUDELEY. By JOHN BRITTON, F.S.A. Publisher, the Author, Burton-street.

The veteran topographer and archæologist whose name is attached to this work, affords a rare instance of successful industry and untiring energy. For more than 40 years he has been engaged in illustrating the architectural antiquities of our country, its cathedrals, churches, castles, and halls; spreading a knowledge of their beauties, and thereby leading to an improved re-use of the pointed style of architecture in England. And yet here he is still in the field, pointing out some of the best specimens of the modern adaptations of that style,—adaptations which there is every reason for believing, would not have been so good but for the influence exerted by his previous works. Within the last year or two, much malevolence has been exhibited towards Mr. Britton in various publications, the whole of which it could positively be shown has proceeded from two or at most three pens, all actuated by private pique and ill will. It is certainly much to be regretted that the constitution of the periodical press is such as to admit of the publication of one man's private opinion in so many forms and in so many places as to make it seem the general voice. Fortunately, however, in the case before us, the public, remembering what Mr. Britton has done, are not likely to be in any degree influenced by these attacks. For our own parts we have no hesitation in saying modern English architecture owes more to Mr. Britton than to any other man living; for which we tender to him gratitude and cordial support.

The mansion at Toddington was erected from the designs and under the superintendence of its owner Chas. Hanbury Tracy, Esq. (created Baron Sudeley of Toddington, in 1838), who, as our readers will remember, was a leading member of the Committee appointed to select the plan for the new Houses of Parliament. The style assumed is that of the collegiate and monastic architecture at one time universal in England, presenting a richly decorated and lofty tower, embattled parapets, bay-windows, turretted gateways, highly-enriched ceilings and crocketed pinnacles. Twenty-two engraved views exhibit the appearance presented by the various parts of the building, internally and externally, and nine lithographed drawings serve to explain the details, such as the chimney-pieces, doors, and ceilings.

Of the building as a whole, the author remarks: "Considered as the design and execution of an amateur architect, it may be said to claim the indulgent examination and comment of the professional critic: but when we have reviewed the whole edifice, and compared it with other houses which have been raised under similar circumstances, and even when put in competition with many famed buildings by veterans in the profession, we shall find that the new house of Toddington will come forth triumphantly from such an ordeal. The spirit of the olden monastic architects seems to be revived, and called into practical action on the present occasion; and whilst the whole design, as well as its subordinate details, manifest an intimate knowledge of those old buildings which command general admiration, we find the arrangements skilfully adapted to the domestic comforts and luxuries of modern life."

Exterior of a tomb cut in the rock at Beni Hassan.

equally built for immortality. It is very probable that the care which the Egyptians bestowed on the preservation of the body, arose from their belief in some connexion between the permanence of the material frame and the animating spirit. As in their entertainments they exhibited "death in the midst of life," by introducing the figure of a corpse at every feast; so in their sepulchres they displayed "life in the midst of death," by surrounding the body with representations of all that belonged to its past existence. The tombs of the Egyptians recorded minutely the history of their tenants,—their occupations, their trades, their very amusements. On the walls of the sepulchres are represented, not only the public events in which the mighty were engaged, but the pursuits of the humble artisan, husbandman, and slave. These precious records not only represent the

ordinary facts of history, but those which most histories omit—the secrets of interior economy and domestic management; wars, battles, and sieges; the mustering and divisions of the army, the triumph that rewarded the conquerors, and the mournful fate that awaited the captives. The processions of the priests, the memorials of victory and conquest, the gorgeous display of the court of the Pharaohs, might perhaps have been expected, but few could have anticipated that, after the lapse of 30 centuries, we should have found full and accurate details of the whole economy of an Egyptian kitchen and the amusements of an Egyptian nursery.

Sir J. G. Wilkinson has been, if not the Columbus, at least the Americus Vesputius to the restored world. From the pictorial records of the tombs he has deduced a more full, accurate, and

Fellah woman searching the tombs.

Prefixed to the account of the mansion, is an essay on the application of the ancient monastic style of architecture to the modern English villa, in which is traced the progress of the revival of pointed architecture in England from the time of Walpole (and his fantastic residence at Strawberry Hall), Bateman, James Wyatt, and Carter, to our own. Of Wyatt, who was employed at the Cathedrals of Salisbury, Durham, and Litchfield, at Windsor Castle, Ashridge, &c., the author stringently remarks: "It is to be lamented that in all these works he shewed not only a total disregard of all the leading beauties and merits of the Gothic architecture which he affected to imitate, but the essential spirit and principle of it in its fundamental elements. His staircase at Windsor Castle, and other parts of that famed palatial fortress, were beneath criticism. Ashridge, however, is a work of great merit, and has some fine parts; but when we consider that he was invested with almost unlimited powers and funds, and that he had the opportunity, had he possessed the talent and industry, of producing an edifice to vie in purity and beauty with the most famed cathedrals of our country and with the most distinguished palaces of Europe in splendour and grandeur, we cannot help deploring the failure and reprobating the artist. In the expensive and eccentric mansion of Fonthill he disgraced himself, his munificent patron, and his profession."

We can safely recommend to our readers the book before us, as an elegant and exceedingly useful example in domestic architecture.

**THE HIGHLAND DROVERS DEPARTING FOR THE SOUTH.** Painted by EDWIN LANDSEER, R.A. Engraved by J. H. WATT. Publishers: HENRY GRAVES and Co., 6, Pall-Mall.

We can (having but yesterday seen the finished state of this long expected and exquisite plate) only state to the lovers of the Art of Engraving its publication, and of our intention to notice it at length in our next number: suffice it to say, that it is most beautiful, we fearlessly assert, the most charming specimen that the art of line engraving has yet produced in this country. We hail its appearance, and wish the publishers much success in being instrumental in adding so perfect a gem to our collection.

**A GENERAL DICTIONARY OF PAINTERS.** By MATTHEW PILKINGTON, A.M. A new Edition, with an Introduction, Historical and Critical, and Twenty-six New Lives of Artists of the British School. By ALLAN CUNNINGHAM. Tegg.

When this dictionary was first undertaken, there existed nothing of the kind in our language. "Walpole's Anecdotes" were confined to artists of the English school, and the works of Vasari, Vanmader, Ridolphi, and Sandrart, were in the hands of a very few. Art in England was then little beyond infancy; and the enthusiastic and industrious author was unable to include more than thirty British painters, who merited the distinction of appearing in his pages. But the work was well received; it was a mine of condensed information, and though the biographies, generally speaking, showed little of the grace of style, or of taste beyond the surfaces of things, it was an addition to our works of reference, and as such it is still considered; for Wolcot, Fuseli, and now Allan Cunningham, have successively and successfully added to its pages and to its importance. Mr. Cunningham alone has contributed twenty-six new lives of artists of the British School; and has written an introduction, at once copious, yet concise, relating briefly and clearly the general history of modern painting, and describing the characters and characteristics of the various schools. All this is done with great tact, taste, and discrimination; the progress of painting is shown in one view, and made, from its criticisms and its language, even to the most erudite of our painters, a work of general and individual interest.

From an introduction so compactly written as this by Mr. Cunningham is, it is difficult to extract any series of passages that will not

suffer by dismemberment. The history of a school would be too general for our columns, and would scarce do justice to the writer; we have, therefore, preferred a few short extracts, complete of themselves. His first sentence provides food for reflection:—

"Poetry, Painting, and Sculpture, are of the same high order of genius; but, as words provide at once shape and colour to our thoughts, Poetry has ever led the way in the march of intellect: as material forms are ready made, and require but to be skillfully copied, Sculpture succeeded; and as lights and shadows demand science and experience to work them into shape, and endow them with sentiment, Painting was the last to rise into elegance and sublimity. In this order these high arts rose in ancient Greece; and in the like order they rose in modern Italy; but none of them reached true excellence, till the light of knowledge dawned on the human mind, nor before civilization, following in the steps of barbarism, prepared the world for the reception of works of polished grace and tranquil grandeur."

The British School, he says:—

"Is distinguished for colour and expression, and the variety of its excellence; but these qualities were long in coming to maturity; they struggled for many centuries with the barbarism of the people, and the coldness of the nobles; and when, at last, Art began to exhibit signs of life, and desire to rank with our Poetry, it found its worst enemy in that religion from which we have obtained civil freedom and national greatness. Who our earlier artists were, or from what school or nation they derived their knowledge, there is no account: a natural taste for delineating the human form, and shaping out remarkable deeds, both by chisel and pencil, seems common to most nations; but how much of that rude art, the remains of which may still be traced in the land, from the Stones of Stennis to Dover Cliff, belongs to the original feeling of the people, or to our intercourse with Greece and Italy, it is difficult to decide. The religious sculptures of Ely Cathedral, and others of our island churches, have the same character and sentiment of the early sculptures and pictures of Italy; and display a taste and a devout dignity, which, in the eyes of Flaxman, rank them with the works of Florentine Giotto, executed in the succeeding century. There can be no doubt, and, if there were, it can be removed, that England had her historical and her poetic pictures as early as any other of the Christian nations: this can still be proved by examining the walls of our churches, where the reformer's fire, or purifying hand, neglected, at the great change of religion, to penetrate; and better still—for most of those samples of our art are faded, or all but obliterated—by the records of the nation, where, luckily, many of our pictures are mentioned, the painters themselves named, and the very materials with which they formed their compositions recorded."

Of the materials which entered into the compositions of our island pictures:—

"In our national records it often happens, when a picture is ordered to be painted, that the various colours, for the sake of stating their various prices, are also named, which the artist employs in his work; one of these entries, of which there are many, may, for the present, suffice, to show that both oil and varnish were used in their pictures by painters in England, one hundred and eighteen years, at least, before the discovery of John Van Eyck. 'Items of the account of Walter, the painter, for repairing the painting in the King's great chamber, at Westminster, xth Edward I., A. D. 1292. For three quarts of oil, ninepence; for one quart of green colour, a penny halfpenny; for one quart of vermilion, twopence halfpenny; for sinople, twopence halfpenny; for azure, threepence halfpenny; for ochre, plaster, &c., twopence; and for one pound weight of varnish, fourpence.' We may add, that Master Walter was paid one shilling per day, or seven shillings per week, for his labour; a not unhandsome salary, and much more than historic painters of our time have earned, whose genius far transcended that of Master Walter of Westminster."

This extract confirms the position of Vertue and Walpole, that oil-painting was known long before its pretended discovery by Van Eyck. It had escaped the notice of Vertue.

By way of conclusion, Mr. Cunningham remarks that the character of the different schools of modern painting may be read in those of the nations from which they sprang. "Italy," he says, "breathed

"Through all her schools the loftiness to which popes—

Holy at Rome—here Antichrist—laid claim, and inspired her painters with that divine expression, which eclipses the glory of Pagan genius. Germany owes the first impulse of true art to Italy; but her own wild poetic fancy entered into the calm forms of the other, and gave them a touch of the strange and the fantastic. The mixed character of the Netherlands is written in their pictures as plain

as in a book—devout and voluptuous, selfish and magnificent; their saints desire to be seen of men, and their madonnas inquire how they look when they pray. The spirit of Spain exhibits the restraint of superstition; her pictures are chiefly of a religious cast, and partake of that gloom which, in spite of a bull-fight here, or a deed of chivalry there, darkens and defaces her fine genius. The martial temper of France, and her love of show and splendour, are visible in her works of art; nor does she exclude domestic joy or classic allusion: we wish her less affectation in her exuberance of spirit. The frugal and the homely, as well as the rare and the tattered character of the Dutch, is recorded in their pictures; it seldom ascends, even accidentally, into the poetic. The paintings of the British School show a very various people, in whom there is much of everything; while a part of the nation loves works which elevate the mind with chivalrous feeling and poetic sentiment, another prefers the low to the lofty, and the humble to the heroic: nor are we without men who admire a cow slumbering in clover, to ideal beauty slumbering in celestial sheets; or a pollarded tree with a magpie on it, to poetry piping in her divinest mood on the summit of Parnassus. But if Painting has not been to Britain either a mistress or a hand-maid—if she has neither interpreted religion nor illustrated history, she has, nevertheless, honoured the land by many tender, and lovely, and characteristic works of a domestic, a national, and a poetic kind: she has lent to her sister, Poesy, a halo almost as pure and bright as that of the muse: she has given form, and hue, and sentiment to our island manners, our peculiar sports, and our indoor enjoyments; nor has she failed to preserve for us the manly looks and the graceful faces of the eminent and the beautiful.

The little lives are charmingly written, in a style which conveys much and indicates more, and, if one may find such a fault, are too good for the biographies of Pilkington and his previous editors. Among our favourites we would instance the Memoirs of Hilton, "the last of a long line of artists, who, from the days of Barry, desired to restore the high historic style of painting;" of Westall, who, "before death interposed, had ceased to add his weight to our poetry;" of Stothard, "the most natural, graceful, and unaffected of British painters;" of Newton, "whose pictures abound in pathos or humour of the truest and highest kind;" and of Constable, "a true islander, both as a man and an artist." But it is time to conclude; but not without one natural little extract from the memoir of Stothard, which is as poetically beautiful as any picture he has painted; and who has painted so many? "He had been long," Mr. Cunningham writes, "in a declining way; yet his end was unlooked for by his friends, when he died at his house in Newman-street, on the 27th of April, 1834. He had been out in the fields only a few days before, looking for dragon-moths and mottled butterflies, and lamenting that they were not come." Is not this Milton's "Seasons return, but not to me return?"

To every painter, to critic and amateur, to all who feel Art, and desire to know its history, and the lives of the illustrious dead; who have embodied scenes of permanent pathos, grandeur, humour, and beauty, in short, made Art what it is, and filled our palaces and galleries, our homes and our parlours, with silent and unspeakable enjoyment, Mr. Cunningham's edition of Pilkington will be a very valuable book; and as such we unfeignedly recommend it.

#### TO CORRESPONDENTS.

The subject of a monument to Sir David Wilkie will be entertained, we trust, in the proper quarters. We have received also letters suggesting the propriety of a monument to Sir Joshua Reynolds: it may be said that his works are his best and greatest monument; but assuredly the honour that a man does himself is no proof of the regard of others. Any statues or monuments to the memory of these great men, or any erection to the memory of either of them, could not, we think, be more appropriately placed than in the open space in front of the Royal Academy.

We agree with the sentiments expressed by "A British Student;" his letter was received too late for insertion in the present number.

To our correspondent who writes on the subject of the "Italian Pictures," we beg to offer our best thanks—they have been already noticed.

The enquiries of "X. Z." shall be answered in our next number.

HENRY GRAVES & CO<sup>Y</sup>

HAVE THE SATISFACTION OF INFORMING THE LOVERS OF THE FINE ARTS, THAT

**MR. MÜLLER'S**  
**PICTURESQUE SKETCHES OF THE AGE OF FRANCIS I.**  
 ADVANCES NEAR ITS COMPLETION,  
 AND WILL BE READY FOR DELIVERY DURING THE MONTH OF JULY.

PRICE, IMPERIAL FOLIO TINTED, HALF-BOUND . . . . . 47. 4s. 0d.  
 COLOURED AND MOUNTED, IN A PORTFOLIO . . . . . 10 10 0

Messrs. GRAVES and Co., in selecting an artist for the express purpose of visiting France, to make drawings for their intended Work, had the good fortune to engage the services of Mr. WILLIAM MÜLLER, whose reputation, made originally at Bristol, had been ratified by the amateurs of London; and still further established by the admirable sketches made by him during his journey into Egypt and Greece. The choice made, has given them, and they trust it will the public, great satisfaction; for he returned laden with a portfolio so rich, that it enables them to present a volume unequalled, as yet, in the Lithographic art. No period, they felt, was so capable of affording strikingly picturesque views, as that of Francis I.; a time, not less important for its great political transactions, than it was in the splendid style of decoration which was so nobly encouraged by the chivalric monarch. Magnificent were the palaces he occupied; fit habitations for such Royal guests as Henry VIII. and Charles V. The age, also, of the splendour-loving Leo, and the powerful Wolsey. The noble encouragement that Francis gave to the arts, drew around him the admirable Leonardo da Vinci and the exquisite artists, Benvenuto Cellini and Jean Gujon. The representation of the picturesque edifices they inhabited, or adorned, is the subject of the present work; and such rich and elegant subjects, it is, without the pencil, impossible to describe.

The drawing of them, upon stone, has been confided to the judgment of Mr. Haghe, and, to him and his able assistants, they are indebted for a considerable part of the beauty of the Plates.

As only a limited number of copies are printed of the work, the publishers will feel obliged by early orders being sent.

LONDON: MESSRS. HENRY GRAVES & CO., HER MAJESTY'S PRINTSELLERS AND PUBLISHERS IN ORDINARY, 6, PALL-MALL.

## TO ARTISTS AND AMATEURS IN OIL PAINTING.

**THE** Ancient VENETIAN VEHICLE re-discovered by an eminent Artist, after ten years' assiduous experiments. This new menstruum possesses all the qualities most required by Artists. It is thinner than varnish, dries well, and affords the performance all the aid it requires in dragging and finishing, as well as giving a transparency and richness beyond any other Vehicle in present use. Pictures painted with this Vehicle undergo no change. To be had only of THOMAS MILLER, Artists' Colourman, No. 33, Rathbone-place, London.—N.B. Improved Moist Water Colours for Sketching, &c.

**GRAND SALE OF PICTURES AT COLOGNE.**—On the 19th of JULY and following Days, will be SOLD BY AUCTION at COLOGNE, the magnificent COLLECTION of PAINTINGS, belonging to the late Mr. J. G. RIEDINGER; comprising the works of Rembrandt, Wouvermans, and other celebrated Masters of the Dutch, Flemish, and Italian Schools.

Catalogues, price 6d. each, to be had of D. Nutt, Foreign Bookseller, 158, Fleet-street.

## Ancient Prints and Drawings, and Books of Prints.

**MR. PHILLIPS** respectfully announces that he has received directions from JOHN KNIGHT, Esq., to SKILL BY AUCTION, on MONDAY, JULY 12, and several subsequent days, at One precisely each day, his extensive and valuable collection of ENGRAVINGS and ETCHINGS; comprising, amongst others, the works of—

Rembrandt	Waterloo	The Ghisi
Berghem	Both	A. Durer
P. Potter	Marc Antonio	L. Van Leyden
Swaneveldt	Bonassone	Hollar, &c.

Also the important collection of ancient drawings, by the most distinguished masters of the several schools, including specimens by—

Raphael	Parmegiano	Rebens
M. Angelo	S. Rosa	Van Dyck
L. da Vinci	Claude	Berghem
Correggio	Poussin	Swaneveldt
Titian	Holbein	A. & W. Vandervele
The Caraccis	Rembrandt	Blackhuysen, &c.

The principal portion of the above has been selected from some of the most important collections dispersed during the last century and beginning of the present, particularly those of the Earl of Bute, Duke of St. Albans, Sir J. Reynolds, Barnard, Woodhouse, Rogers, &c.—May be viewed four days preceding the Sale, and Catalogues had.

## TO ARTISTS AND OTHERS.

**T. MILLER**, of 33, Rathbone-place, begs to submit to the Profession, an entirely new mode of holding the Palette, introduced by Mr. Weld Taylor. It is held in the same manner as the one in general use, but the thumb-hole is dispensed with, obviating the misery of oil and colour running through upon the hand. It is a Chinese invention; and, no doubt, will entirely supersede the old plan. To be had of T. Miller, 33, Rathbone-place; also every material for Drawing and Painting.

## TO ARTISTS AND AMATEURS.

**BROWN'S PATENT COLLAPSIBLE METALLIC TUBES, FOR COLOURS, OIL, AND VARNISH.**—THOMAS BROWN, Colourman to Artists in Oil and Water, returns his sincere thanks to his numerous Patrons for the many years of patronage bestowed on his late father, and begs to inform them that he has the above new Invention, for containing Oil Colours, &c.; it possesses all the advantages of Bladders and Syringes, without any of their inconveniences, and he offers it at a price very little exceeding Bladder Colours; it effectually prevents all waste, dirtiness, and smell, and will preserve the Colour good for years, and in any climate.

T. B. also begs to say that he now manufactures Water Colours, and sells every Material for Drawing and Painting.—Orders by post attended to immediately. 20th May, 1841. 163, High Holborn, London.

## SCOTTISH UNION INSURANCE COMPANY. Instituted in 1821, and incorporated by Royal Charter.

## LONDON BOARD.

Charles Balfour, Esq.	James Gooden, Esq.

I. L. Goldsmid, Esq. F.R.S.	Wm. Thompson, Esq., Ald. M.P.
Robert Hawthorn, Esq.	Edward Vaux, Esq.
John Hodgson, Esq.	B. G. Windus, Esq.
Boyd Miller, Esq.	

For FIRE and LIFE INSURANCE, and ANNUITIES, and the PURCHASE of REVERSIONS and LIFE CONTINGENCIES.

## CAPITAL, ONE MILLION STERLING.

The whole paid up and invested, and entirely independent of the amount of premiums received; thereby affording to persons Assured an immediate available fund for the payment of the most extensive losses, without liability of partnership, and free from uncertainty as to the result of their engagements—which the Directors consider to be highly important to those who effect Insurances in the capacity of Trustees, or otherwise in the performance of a specific trust or duty.

Insurances may be effected with this Company to the extent of £10,000, on a single life, if approved. (By Order of the Board)

JOHN CHARLES DENHAM, Sec.

Rates and Conditions of Fire and Life Insurance, or other information, may be obtained at the Offices in London, and of the Company's Agents in the Country; and where Agents are not appointed, persons in active life, and desirous of the appointment, may apply to the Secretary.

Fire Policies due at Lady Day must be paid on or before the 9th April next.  
 London, 25th March, 1841.

Crossing the Brook ..... Brandard.

The plates will be delivered in the strict order of subscription, numbered and signed by Mr. Turner himself.

## FINE ARTS.

**A SPECIMEN ETCHING** of the beautiful Engraving, now in progress of engraving, by H. T. RYALL, Engraver to the Queen, for the Members of the ROYAL IRISH ART-UNION, for 1839-40, from BURTON's celebrated picture of

'THE BLIND GIRL AT A HOLY WELL,' May be seen at Mr. Roberson's 51, Long-acre, Messrs. Hodgson and Graves, 6, Pall Mall, &c. &c., where Subscriptions for this year.

ONE POUND PER TICKET, will be received, or the same may be forwarded direct to

STEWART BLACKER, Esq., Hon. Sec.  
20, Gardiner's-place, Dublin.

N.B. Post-office orders, for remitting the amount of one or two tickets, may be obtained at any office for 3d.

**SIR DAVID WILKIE.**—The Admirers of the late Sir David Wilkie have to announce that a PUBLIC MEETING will shortly be held, of which due notice will be given, to take measures for raising a PERMANENT TRIBUTE OF RESPECT to the memory of this distinguished Artist, when

The Right Hon. Sir ROBERT PEEL, Bart., M.P., has consented to take the Chair.

At this Meeting a Committee will be appointed to carry out the object of the Subscribers; and, in the meantime, subscriptions will be received, to be announced at the Meeting, by any of the following Gentlemen, who constitute the Provisional Committee:—  
Sir Charles Forbes, Bart. Wm. Collins, Esq., R.A.  
Sir Wm. Knighton, Bart. Jas. Walker, Esq., F.R.S.  
Sir Martin A. Shee, P.R.A. J. G. Lockhart, Esq.  
Sir Peter Laurie, Ald. Peter Laurie, Esq.  
Sir A. Wall Callcott, R.A. Sir W. Newton.  
Thos. Phillips, Esq., R.A.

ALLAN CUNNINGHAM, Esq., Hon. Sec. Subscriptions may be paid to the account of Sir Peter Laurie, the Treasurer, 7, Park-square; or Allan Cunningham, Esq., the Hon. Secretary, 27, Lower Belgrave-place; at the Union Bank, No. 8, Moorgate-street, Argyll-place, Regent-street, and 4, Pall-mall East; at Messrs. Coutts and Co.'s, Strand; and Messrs. Smith, Payne, and Smith's, Mansion-house-street.

## PURE DRAWING PAPER.—TO ARTISTS

AND OTHERS.—A Pure Drawing Paper has long been a desideratum; many valuable Drawings having been seriously injured by the chemical properties of the Paper, and its unsuitableness for the purpose. A Pure Drawing Paper, made under the advice and direction of an eminent Artist, and stamped with his initials, J. D. H., may now be had. Herewith is subjoined a copy of a letter addressed to the manufacturer on the subject.

[Copy.]

Gordon-square, June 14, 1841.

During these last six months I have made many trials of the new Drawing Paper, which you have made at my suggestion, and under my advice.

By the production of this paper I do not hesitate to say that you have conferred a real benefit on the art of Painting in Water Colours; as the painter can now procure a material on which he can perfectly rely, it being pure and free from those chemical ingredients now so universally used in the manufacture of all papers, and which so seriously endanger the permanence of every work of art produced upon them. Nor are the texture and surface among the least of the advantages your new paper possesses.

You are welcome to make use of this in any way you may think proper.

(Signed) J. D. HARDING.  
Sold by all the Drawing Houses.

**MR. RAINY** respectfully begs leave to acquaint the Public that the following SALES by AUCTION will take place at this Gallery, during the month of AUGUST next, and due notice of the Days of Sale will be given:—

The valuable COLLECTION OF PICTURES of a Gentleman deceased, removed from his late residence in Pall-mall; and amongst them a charming Landscape, in his best manner, by Hobbins; a View of Dort, and a Landscape, by Cuyp; and others by distinguished masters. The Plate, some Jewels, and the Library of Books of the same gentleman.

The Library and Plate of the late Hon. Gen. Bligh. The Library, &c., of the late Hon. Col. Stopford. Some curious old Carvings, two splendid armchairs, a beautiful painted window, and miscellanies.

The Membrand Estate, situate four miles from Yeampton, seven from Modbury, and ten from Plymouth, in the county of Devon, comprising 2020 acres, all freehold; the rental upwards of £2200 per annum; with the Manor of Revelstoke and Noss Mayo, a capital mansion, gardens, grounds, woods, plantations, &c.

By order of the Directors of the Globe Insurance Company.

The Harviestoun and Castle Campbell Freehold Estates, in the county of Clackmannan, in Scotland, 30 miles from Edinburgh, 40 from Glasgow, 10 from Stirling, and 22 from Perth, and London may now be reached in 33 hours; comprising 3800 acres, with a noble stone mansion, offices, gardens, plantations, &c. The rental and estimated value upwards of £2500 per annum. Also the minerals in the lands, consisting of coal, iron-stone, lead, copper, &c. The river Devon winds through the estates for nearly three miles, and the scenery is of the most beautiful and magnificent description.

The Midgham Freehold Estate, situate on the Bath road, 11 miles from Reading and a Station on the Great Western Railway, 5 from Newbury, and 50 from London; consisting of a park, with noble timber, the manor, an excellent family mansion and offices, several capital farms, &c.; the whole 1325 acres, in a ring fence. The rental and annual value upwards of £2000 per annum.

An elegant Freehold Villa, with gardens, grounds, and park-like paddocks, near Chislehurst, in the county of Kent, about 12 miles from London.

The Maeswawr Freehold Estate, close to Welshpool, in Montgomeryshire, North Wales; comprising upwards of 2260 acres, with thriving woods, a commodious residence, &c.

The capital Mansion, No. 4, Connaught-place, commanding an uninterrupted view over Hyde-park; held for an unexpired term of about 70 years, at a small ground rent; including coach-houses and stabling.

Strode Park, near Herne Bay, in the county of Kent, and six miles from Canterbury; containing 280 acres, with fine timber, a family residence, &c.; also Rocking-grove, West-end, and Stud-hill Farms, containing upwards of 360 acres, all freehold.

14, Regent-street, August 1, 1841.

Price 7s. 6d.,

**THE STUDENTS' GUIDE, or ELEMENTS of DRAWING and PERSPECTIVE**, with directions for Drawing and Colouring from Nature, by H. M. WHITCHELO.

A work upon an entire new plan, combining the Art of Sketching and Colouring with Perspective, containing graphic examples with perspective lines attached to facilitate the acquirement of that pleasing Art.

Published by Smith, Elder, and Co., Cornhill; and may be had of Reeves and Sons, 150, Cheapside; and of all principal Booksellers.

Now ready, in One Volume, Imperial Folio, bound, Price £4 4s.,

MR. J. D. HARDING'S NEW WORK,

# THE PARK AND THE FOREST; CONSISTING OF TWENTY-SIX SPECIMENS OF LANDSCAPE, SCENERY, &c. &c. &c.

DRAWN ON STONE BY MR. J. D. HARDING HIMSELF.

FROM HIS ORIGINAL STUDIES (MADE EXPRESSLY FOR THIS WORK).

PUBLISHED BY THOMAS McLEAN, 26, HAY-MARKET.

**THE SKETCHING SEASON.**—GEORGE ROWNEY AND CO.'S PRESERVING ENVELOPES to supersede the use of the Bladder for Oil Colours.

This mode of putting up Oil Colours for the use of Artists, will be found much more cleanly and portable than the old plan of employing the bladder or weasand, besides possessing the advantage of preserving the colour for an indefinite period of time.

Also a new red, called Palladium Red, which possesses a similar tone to Chinese Vermilion, but of greater brilliancy; it is perfectly permanent with a semi-transparent body; and having neither sulphur or mercury in its composition, it is not liable to form a black sulphuret when used in combination with white or any other colour.

And a new and permanent Blue, price 4s. the oz., equal in tone and colour to Ultramarine of the best quality.

Sold, wholesale, retail, and for exportation, at the Artists' Repository, No. 51, Rathbone-place, Oxford-street; where also may be had every article connected with the Fine Arts.

**DAGUERRETYPE, or PHOTOGENIC PORTRAITS, ROYAL GALLERY OF PRACTICAL SCIENCE, ADELAIDE-STREET, WEST STRAND.**—The Injunction obtained by Mr. Beard against Mons. Claudet, having been dissolved by the Lord Chancellor, Mons. CLAUDET, the Gentleman who first introduced the invention into this country under a Licence from the original Patentee, Mons. Daguerre, is now TAKING PORTRAITS and GROUPS of FIGURES at this Institution on a greatly improved plan, to which no state of the weather offers any impediment. A performance on the New Musical Instrument, the Terpodion, daily, at Half-past Three o'clock. Microscope, Pyreictrotrope, Steam Gun, Electric Eel, Models, &c.—Admission, 1s.; Children Half-price. Open daily from Half-past Ten till Six o'clock.

**TO ARTISTS & AMATEURS.—BROWN'S PATENT COLLAPSIBLE METALLIC TUBES for Colours, Oil, and Varnish.**—THOMAS BROWN, Colourman to Artists in Oil and Water, returns his sincere thanks to his numerous Patrons for the many years of patronage bestowed on his late Father, and begs to inform them that he has the above New Invention for containing Oil Colours, &c.: it possesses all the advantages of bladders and syringes without any of their inconveniences, and he offers it at a price very little exceeding bladder colours; it effectually prevents all waste, dirtiness, and smell, and will preserve the colour good for years, and in any climate. T. B. also begs to say that he now manufactures Water Colours, and sells every Material for Drawing and Painting. Orders by post attended to immediately.—No. 163, High Holborn, London, 1841.

BY HER MAJESTY'S ROYAL LETTERS  
PATENT.

**WINSOR AND NEWTON'S TUBES OF OIL COLOUR.**—This beautiful invention obviates the numerous imperfections attendant on the use of BLADDER COLOURS, as the bladder in which the paint is enclosed being porous, allows the oil to exude; and thus, by admitting air, the colour necessarily hardens, becomes contaminated with skins, and frequently more than half of it is rendered totally unserviceable.

The PATENT TUBES are formed of stout cylinders of glass, hermetically secured with an air-tight piston, traversing the tube, and ejecting the colour by a gentle pressure.

The colour being visible through the glass, the artist immediately perceives the one he may require, and the air being excluded, no smell can proceed from them. They are also so perfectly clean to handle, that oil pictures may be executed without the least soil on the table, or on the hands of the artist.

To be had, wholesale and retail, at their Artists' Colour Manufactory, 38, Rathbone Place, London.

Newly invented Zinc Panels for Miniatures and other highly finished Paintings in Oil, and all the new manufactures of the trade.

In folio, price 21s.,  
**ELEMENTARY STUDIES**, by the late H. W. BURGESS, Landscape Painter to his late Majesty William IV. Part I. is now ready. Published by his Widow, and may be had of Reeves and Sons, 150, Cheapside; Ackermann and Co., Strand; and all the principal Booksellers.

**TO ARTISTS AND AMATEURS IN OIL PAINTING.**

**THE Ancient VENETIAN VEHICLE** re-discovered by an eminent Artist, after ten years' assiduous experiments. This new menstruum possesses all the qualities most required by Artists. It is thinner than varnish, dries well, and affords the performance all the aid it requires in dragging and finishing, as well as giving a transparency and richness beyond any other Vehicle in present use. Pictures painted with this Vehicle undergo no change. To be had only of THOMAS MILLER, Artists' Colourman, No. 56, Long Acre, London. N.B. Improved Moist Water Colours for Sketching, &c.

Published in 4to., Price £4 10s., in French Boards; and on Royal Paper, 4to., with proof impressions of the Plates, and a Portrait of the Author, Price £7 7s.

**TREATISE ON PAINTING.** In Four Parts. Illustrated by One Hundred and Thirty Etchings from celebrated Pictures of the Italian, Venetian, Flemish, Dutch, and English Schools; and Wood Cuts. By JOHN BURNET, F.R.S.

The Parts may be had separate.

1. On the EDUCATION of the EYE. Second Edition. Price £1 5s.
2. On COMPOSITION. Fifth Edition. Price 15s. in boards.
3. On LIGHT and SHADE. Fifth Edition. Price 18s. in boards.
4. On COLOUR. Fourth Edition. Price £1 11s. 6d. in boards.

This Work is particularly recommended to the Student in Art in the New Edition of the Encyclopædia Britannica.—See the article on Drawing.  
James Carpenter, Bond-street.

**SPLENDID AND SUPERIOR GILT FRAMES.**

**CHARLES McLEAN, 78, Fleet-street** (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET OF DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All goods taken back, not approved of in three months.

**CHEAPEST AND BEST MANUFACTURED PICTURE FRAMES IN THE WORLD.**

**P. GARBANATI, WORKING CARVER** P. and GILDER, 19, St. Martin's-court, St. Martin's-lane, respectfully informs Artists, &c., that as he Manufactures every description of ornamented, Gilt, and Fancy-wood Picture Frames entirely on his premises, he is enabled to offer them at such low prices, that he defies competition. A most extensive assortment of every description of Picture Frames kept ready. Re-gilding, in all its branches, done in a most superior manner, and cheaper than by any other Gilder in the kingdom. Estimates given free of charge.

P.S. A List of the Prices of PLATE GLASS, Gilt and Fancy-wood Picture Frames, Room Mouldings, &c., can be had at the Manufactory (gratis), or sent (pre-paid) to any part of the Kingdom.

P.G. respectfully solicits a Trial of his Work, for comparison of Quality and Price, with other Manufacturers.

**POOLOO'S CHINESE CEMENT.**—The extraordinary properties of this Composition make it one of the most useful articles ever presented to the public. It is perfectly impervious to hot or cold water, and will resist the effects of the most intense heat. So firm is it in its hold that a new fracture is certain to take place rather than a severance in the original. Thus it surpasses all other Cements for mending China, Glass, Ivory, the setting of Stones and Beads in Rings and Trinkets, &c.—Sold, wholesale and retail, in bottles at 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d., by the Proprietor's sole agents, BLOFELD and Co., Cutlers and Razormakers, 6, Middle-row, Holborn; and by their appointment, at the principal Chemists and Perfumers. BLOFELD's London made Table Knives, at BLOFELD and Co.'s, 6, Middle-row, Holborn.

**ELEGANT AND ORNAMENTED PICTURE FRAMES OF A SUPERIOR DESCRIPTION, WARRANTED TO CLEAN.**

**C. J. ECKFORD, 45, FLEET-STREET,** corner of Mitre-court, Temple, opposite Fetter-lane, begs leave to inform Artists, the Trade, and Public, that they can obtain A LARGE AND CLEAR EXPLANATORY SHEET OF DRAWINGS, with numerous elegant Patterns, the Size and Prices attached to the various Frames, sent gratis and free of postage to any part of the United Kingdom.

Old Frames re-gilt; large and small Miniature Frames at proportionate prices. Fancy-wood Frames of every description. Orders from the country punctually attended to. ESTABLISHED 1792.

On the 1st of each Month is published, price Sixpence, each Embellished by a figure of some new or handsome Flower, drawn expressly for the Work, and coloured from Nature.

**THE FLORIST'S JOURNAL.**—The attention of all Persons interested, either immediately or remotely, in Floricultural pursuits, is respectfully called to this JOURNAL, as a medium for information on every subject connected with this branch of study. Each number is embellished with a highly finished and accurately coloured representation of some new flower, or improved standard plant, with an ample description of its various features, peculiarities, growth, and culture; notices of all new flowers; seasonable hints, suggestions, and instructions, to amateur and practised Florists; directions for greenhouse, hothouse, and garden cultivation; reports of all flower shows and exhibitions, with lists and descriptions of the prizes; contributions from experienced and, also, from experimental Floriculturists; and every species of floricultural intelligence.

"It is with pleasure we hail the appearance of the FLORIST'S JOURNAL: it is, in every respect, worthy of its name. The articles are not merely dry, technical, or correct; but the writers, whilst evincing a solid knowledge of the subject treated, have flung round their production the mantle of eloquence, and have made their papers interesting to those not skilled in floral lore. The illustrations are admirably drawn, and exquisitely coloured. We wish this novelty the success it so richly merits."—Sunday Times.

"The cheapest botanical work, of the same pretensions, we have ever met with; each number containing, besides a beautifully coloured flower, by way of frontispiece, twenty-four pages of excellent letter-press."—United Service Gazette.

Published by How and Parsons, 132, Fleet-street.

In a Pocket Volume, price 2s. 6d.,

**THE EPICURE'S ALMANAC; or, Diary of Good Living.** Containing a choice and original receipt, or a valuable hint, for every day in the year; the Result of Actual Experience. Applicable to the Enjoyment of the Good Things of this Life, consistently with the view of those who study Genteel Economy. By BENSON HILL, Esq.

Very many of Mr. Hill's receipts are recherché affairs, that have not hitherto appeared in print; and the report of a small committee of taste, which we have directed to test them, assures us that any one of them is worth the whole price of the volume."—United Service Gazette.

## THE ART-UNION.

LONDON, AUGUST 1, 1841.

## ON VEHICLES FOR PAINTING.

TO THE EDITOR OF THE 'ART-UNION.'

SIR,—In my last letter on the subject of vehicles for painting, published in the ART-UNION for June, I showed, from the authority of Vasari, that Van Eyck about the year 1410 had discovered a "vehicle," which, in process of time, superseded all former vehicles in use. That it was "quella perfetta," &c. "That perfect medium, which dry does not fear water, heightens the colours and makes them luminous, and wonderfully unites them." I observed that this could not be the common method of "painting in oil," as that process had been known to have existed, and was in practice in Italy, and more particularly in other countries; and was a fact known to Vasari, who writes that Van Eyck was the discoverer of the "perfect medium." I showed, likewise, the previous want of such a vehicle, that "all the painters in the world had long desired" this very thing, which Van Eyck had discovered (and hence, I think, it will follow that when discovered, they, "tutt'i pittori del mondo," used it), and that it was remarkable for its brilliancy and durability. I endeavoured likewise to prove that the vehicle so praised is lost; that the difference in paint of the good old time and of modern days is perfectly well known to picture cleaners, as requiring different solvents, or a more guarded use of them. I ventured an assertion, that such separation of the paint on the surface of pictures as we commonly see, never takes place in the works of the old masters; that the cracks are mere hair-cracks. And I asserted that paint scraped off an old picture, vitrifies when subjected to the heat of the blow-pipe. If there be truth in the foregoing assertions, it will follow that a re-discovery of Van Eyck's process is very much to be desired; and that we have some direction afforded in the character and properties so clearly given of that vehicle; and in the intimation from experiment, that we must make our trial upon substances which, united with the paint, will fuse. The latter fact is perhaps the most important, as serving at least to furnish a rule of exclusion, that we should at once discard gums and substances which are lucid indeed, but will not stand the "fiery ordeal." And there will be this satisfaction in this line of experiment, that, though it may not be easy of proof that the exact substances be re-discovered, we may come to results which, as far as they go, shall answer the description of Van Eyck's invention. We know what to look for, and what to avoid. If it be said that time alone can determine some points, the durability of the paint and non-liability to crack; it may be replied to this general argument against every experiment and attempt at improvement, that even here we may have something better than conjecture; as that will be most likely to secure these advantages, which in a short time renders the paint hard, hardness being a quality of all old pictures, and the reverse of many modern, more especially those where mastic is mixed up with the oils and colours.

Before, however, proceeding to any attempt to re-discover the good medium, I would wish to engage the attention of those who think nothing is required, and who are satisfied with substances in common use, by remarking, that there have been at other times painters who have been equally well satisfied, whose works, from that very satisfaction, can be scarcely said now to be in existence. The works of many faded, and nearly disappeared in their own days; and of some it may be said almost under their hands. And

those who are well acquainted with Art and its history, as Lanzi for instance, are enabled to show the very date of the decadence of Art, when the process of Van Eyck became neglected, and subsequently lost. The troubles of Italy, the sack of Rome, and the Plague, caused the death and dispersion of artists, removed that unity of methods which all the schools practised, broke up the schools; and Art sank under disregard, and was soon degraded into becoming an accessory to inferior decorations, instead of being, as it has been, and ever should be, the chief glory of states and people. It is certain then that Art deteriorated—in design, in colour, and vehicle. So it is with everything good. Until we have acquired it, it is the one thing desired, as was Van Eyck's discovery, "by all the painters in the world;" and, when we have enjoyed for any length of time this desired good, we are apt to forget the time when we had it not, to deem component parts unnecessary, let them fall asunder, and the bad succeeds. It is quite astonishing how soon processes may be lost. Their immediate successors seem to have had as much difficulty in ascertaining the method of the Greek painters in Italy, as we have to re-discover Van Eyck's. Fresco, and some secrets in painting on glass, seem to have shared the same fate. Surely this ought to be enough to startle those who think, that what is once known is sure to be preserved. And why is it that old pictures cannot be repaired with our vehicles, if both colours and vehicles, as some assert, were the same? Why are the repairers compelled to have resort to mastic and gum-water, but that the oils or colours are without those purifying "altre mixture" which rendered the old vehicle brilliant and permanent? Indeed the decay of the Arts, consequent upon the loss of the old method, is the common complaint of writers best acquainted with the subject. Lanzi says, "The second century is fast passing away since the oral tradition of the best colourists wholly ceased; and we have been attempting to attain their method, in which we cannot succeed." He further says, that "Subsequently to 1630 and 1636, when a number of artists died, traces of the old Venetian school in the best style began to disappear; and the Venetian paintings produced after the middle of this century, display for the most part a different character." Ballestra, in a letter dated 1733 (see *Pictorial Collection*, vol. ii.), laments the decline of all the Italian schools, from their having fallen into mistaken methods." Of the Genoese school it is said that after the Plague in 1657, many masters being cut off, not a few being incapacitated by age, and others turned to mannerism, the school fell into a state of decline, and most of the young artists had recourse to other cities for instruction, and in most instances repaired to Rome.

Ligozzi, who was born in 1543 and died 1627, studied under the Venetian masters, then considered the best in Italy, embodied the spirit and colouring of the Venetians upon the Florentine school. This improved style soon fell into neglect, says Lanzi, and was succeeded by one of a sombre manner, which has rendered the pictures of that period of little or no value. "Some," he adds, "describe the fault to the method of mixing the colours, which was everywhere changed, and hence it is not peculiar to the Florentine but is found diffused over Italy." Speaking of Rutilio Manetti, he observes that "the pictures of this master at Sienna are easily recognised by invariably partaking of a sombre hue, which deranges the due balance and participation of light and shade. The objection lies against many of his contemporaries of every school; the method of purifying colours and composing vehicles had degenerated, and the injury sustained from this defect was not observed in the pictures at the time, the artist only looking to the grand effect to which the age so much aspired." So difficult was it found to repair with new vehicles injuries sustained by pictures painted with the old, that Nicolo Franchini obtained celebrity from his method of taking colours from other pictures of inferior value, to match the old paint removed in parts. From this anecdote I think it may be concluded, that even inferior pictures of the good period had a beauty arising from their vehicle only, which rendered them useful for the purpose of repairing pictures in the hands of Nicolo Franchini. We have some intimation of the sort of change spoken of in the vehi-

cles in an account given by Lanzi, of Giuseppe Maria Crespi, born 1665, and who, in 1747, was 82 years of age. "His turn for novelty (it is said) at length led this fine genius astray; wishing to exhibit novelty in his shadows and his draperies he fell into mannerism: and varying his first method of colouring, which was similar to the old masters, he adopted another more lucrative but less excellent. It consisted of few colours selected chiefly for effect, and very common and oily. Gums were applied by him to colouring, as other artists use them for a veil or varnish. Such was the method which we see pursued in so many of his pictures, or, to speak more correctly, which are no longer to be seen, the tints having decayed or disappeared, so as to require them to be newly copied by another hand." Whether this was Merimee's favourite copal, or gum-mastic, or any other "French polish," may be a matter worth the inquiry of those who give up themselves and sacrifice the Art to gums, gumptions, and megillups. It is worth observing in the above passage, as well as in many others that may be quoted, that not only is this admixture of gums spoken against; and, as a novelty, but more than a suspicion is thrown out against "oil and oily appearances," from which I think it is fair to conclude, that the process of Van Eyck included mixtures which purified the oils, and rendered them innocuous. Speaking of oil, it is remarked of Antonio Ballestra, that "his method of colouring with boiled oils has been found injurious to many of his pictures." This was a favourite practice with all the sect of the "Tenebrosi," as they are named by Boschini, whose censure it obtains. It is a startling fact, that the boiled oil of Van Eyck had no such effect; for Vasari tells us plainly that his vehicle was "composed of oils, bolliti con altre sue mixture," boiled with his other mixtures." These mixtures then, it should seem, were preservatives, the neglect of which subsequently produced the general deterioration. Does not Leonardo da Vinci speak of boiled oil? Many are the notices of deterioration after the middle of the seventeenth century. No one will question that Claude and the Poussins used the good vehicle. Claude and Gaspar were both born in the year 1600; yet we find that Orbetto, born the same year, resorted to novelties, and had a secret method by which his pictures continue to attract attention; but it is confessed that we turn away in disgust from many of his pictures, "so extremely do they," says Lanzi, "in their colouring resemble the tints made use of by coach-painters." It appears that this painter was not contented with the good medium known certainly in his time, or that he was unacquainted with it; for we are told he consulted chemists, who very probably directed him to copal or other gums. It is said also of Nuzzi, a flower painter, born 1603, and who gained celebrity during the same period, that he resorted to present brilliancy, but that his pictures changed. Yet we know that the brilliancy acquired a century before was that of the old Venetian method; for it is remarked of Giacomo Bassan, a man of limited ideas, but a copier of Titian and Correggio, that his colours everywhere shine like gems, particularly his greens, like the emerald. This gem-like lustre, the thing above all others to be sought for in a new medium, or in the re-discovery of the old, is thus described by Lanzi, in speaking of Correggio: "There prevails, likewise, in his colouring, a clearness of light, a brilliancy rarely to be met with in the works of others; the objects appear as if viewed through a glass; and towards evening, when the clearness of other paintings begins to fade with the decay of light, his are to be seen, as it were, in greater vividness; and like phosphoric beams 'shining through the darkness.'" If a vehicle so described be the object our search, and we add to this description hardness and great durability, the artist may be led to Nature's mines to examine the composition of her most lustrous gems; and it may, perhaps, be possible that they may be rendered soluble to his use, and enable him to paint as it were with liquid light.

I would here venture a conjecture, that Van Eyck was induced to try the experiment of mixing with oil a medium at his time actually in use, and applied to painting, but neither on panels, walls, or cloth. In his day the art of painting on glass was greatly encouraged, and brought to perfection; and I think I have somewhere seen it stated, that Van Eyck himself was a painter on glass. Be

that, however, as it may, it is a curious fact, that the very places noted for glass were those in which painting in oil was first discovered, and first brought into use—Flanders and Venice. I would suppose, then, that *the fuse* in use in glass painting was by Van Eyck blended with oil, as an experiment; the result would have been a vehicle, the power of which would very much answer the description given by Vasari of that actually invented in 1410. This he may likewise have improved by somewhat varying the proportions, until he had satisfied himself. M. Vigné has published the following results of his experiments and inquiries on the composition of the colours of ancient stained glass:—

"General Fuse—Litharge, or minium, 5; fine sand, 1; borax, from '3 to 1'5."

Now, it may be very strongly asserted, that this fuse, with which glass in the time of Van Eyck was coloured, if vitrified (and possibly even without undergoing that process) and well ground in oil, will form a better medium, both as to brilliancy and durability, than any of those numerous combinations of gums and oils commonly resorted to. It may even be possible, if the daring conjecture may be allowed, that something of this medium was that spoken of by Theophilus in the tenth century, as the "Glassa Romana," Roman glass, which Merimée conjectured to have been copal. For may not the "Roman glass" mean those artificial gems so common amongst the Romans, even at an early period, and the composition of which had never been lost, the precise manufacture in all its detail being to be found in many authors? Nor may it be very much out of the way to suppose, that the words "Gummi fornix" of Theophilus, may mean the pasta which formed the substance of the artificial gems—the pasta from the *furnace*, or the pasta varnish, the German word, in allusion to its translucent quality; and we actually find the word *gum*, even in modern times, applied to a metallic substance, "plombe-gomme." It is not, however, intended to lay much stress on these conjectures; nor, if probable in their aim, may they be of much value; our business being to look rather to Van Eyck and his processes, than to any of an earlier date, however recommended. It may be proper in this place to notice the curious fact, that the purification of borax, one of the substances used in the general fuse spoken of, was long kept a secret in those very places, Venice and Holland, where painting in oil was invented and brought to perfection—a fact noted by Ure and other chemical writers, who mention it without any reference to the applicability of borax to the Arts.

A valued friend of mine, the late P. Rainier, Esq., of the Albany, an accurate and scientific man, and member of the College of Physicians, during many years directed his attention to the subject of the vehicles used by the old masters. He was admirably qualified for such inquiry; he had leisure, and knowledge of Art; was possessed of a collection of very valuable pictures; was indefatigable in making experiments, and most patient and correct in investigation. I was in communication with him very many years, learned from him many curious results of his examination and experiments, and received from him frequently both vehicles and colours, with descriptions of their properties, which I invariably found according to his statements. He had a method, which I regret that I am unable to make known, of preventing the change which usually and so shortly takes place in verditer blue when mixed with oil; I only remember that he told me it was not the oil which affected the colour, but the colour the oil. I have now by me several specimens of vehicles prepared by him, which I believe he at last greatly simplified. His object was not to invent *new*, but to rediscover the old; so that he worked with a knowledge from what he found in the works of the old masters. It was to my great sorrow that a failure of his health, and consequent total inability to pursue the subject, and to bring before the public the facts which he had ascertained, deprived the Arts of the more extensive services of a benefactor; and I regret that his papers and experiments were at his death out of my reach. I found, however, among my own, a memorandum from his dictation, and I am indebted to my able friend Mr. Coathurpe, of Bristol, for being enabled to make it intelligible. Mr. Coathurpe, too,

kindly analyzed the materials I was in possession of, which corresponded with the recipe of the memorandum. The vehicle made by it was delightful to work with; it enabled me to dip my brush in water if I pleased, the colours having been mixed up with the vehicle. It seemed to offer facilities of imitating the Venetian school, as well as others, and I invariably found that it imparted great hardness to the paint; so much so, that on one occasion, being desirous of scraping down the surface of a picture painted a few months before, I could scarcely touch the paint with a razor; and the texture was so much like that of an old master, that when the subject was nearly obliterated, the picture was taken for a destroyed old picture, and that too by an experienced artist.

Take two pounds two ounces and a half of borax, and one pound of acetate of lead—dissolve each in at least a pint of hot water; mix together the two solutions, and allow the precipitate to subside. Pour off the supernatant liquor as soon as it is clear; add some fresh water (rain water is preferable) to the precipitate, and agitate. Then pour the precipitate, whilst it is distributed throughout this last addition of water, upon a filter of white blotting-paper; and when the water has passed through the filter, add more water. These fresh additions of water must be repeated three or four times, merely for the purpose of washing away all traces of the liquor which was retained by the first precipitate, and which was formed by the first admixture of the two solutions. The precipitate, when well washed, is to be placed in a Hessian crucible, and exposed to a red heat for half-an-hour. A clear glass will be formed, which must be reduced to a very fine powder.

The manner of using this, as recommended by my late friend, was to grind up the powder very freely with every colour, that is, not to be afraid of it in any quantity, and to mix a portion with oil, as the fluid vehicle in which to dip the brushes. The idea of water was from a suggestion made by me, that if this was the old vehicle, it was not unlikely that it might be miscible in water, as the Venetian painters appear to have used water with *their* medium. Upon experiment we found that the oil and water would thus unite.

Having published some remarks on painting, in which the subject of vehicles was treated of, the attention of many was directed to the use of borax; and I fear, from the imperfect manner, or I might be right in saying, ignorant manner, in which I had recommended its use, may have prevented many from ascertaining the proper way of applying it. I have reason to think that *uncalcined* borax, if used in excess, will, like sugar of lead, effloresce, and appear in spots on the surface; but I have also found that they may be, generally, all removed by a little warm water, until no more appear. This, however, is a defect, arising from an excess, and from the borax being uncalcined, whereas, in fact, according to the above formula, it ought to be vitrified. In that state I am not aware of any ill effect arising from its use; on the contrary, I believe it to be a drier—a great purifier of the oil, taking away its bad colour very speedily, making it both white and clear. It has been mentioned, that my notice of borax attracted some attention among those curious upon this subject. It was very fortunate that it attracted the notice of a gentleman, then a stranger to me, who, with a sufficient knowledge of chemistry, and an ardent desire to promote the Arts, most skillfully made many experiments, which, through the publisher, he communicated to me. I have many very interesting letters on Art from this gentleman, R. W. H. Hardy, Esq., R.N., F.M.B.S., of Walerton, near Arundel, and a more recent personal acquaintance and oral communication has put me in possession of the results of many of his experiments. Here, however, it is only my purpose to speak of a most important addition which he has made to the medium above given. He found that silica, in however small proportion, had the astonishing effect of rendering the vehicle as rich as if the best varnishes were mixed with it, with advantages not possessed by any gums. He has likewise found it unnecessary to mix the powder with the colours in the quantities previously recommended by Mr. Rainier, having ascertained that a very small portion would give the colours a magical effect, and that the colours should be ground merely with the vehicle of the powder

mixed with the oil, without the addition of any dry powder. So that, in fact, those who object to the trouble of grinding colours in powder, may use the bladder colours, adding to each, on the palate, a very small quantity of the vehicle. I will here insert his formulas, which, there is every reason to believe, will produce a perfect medium, and not improbably that of Van Eyck, or one very similar to it. It is somewhat curious that the manner of mixing this vehicle (that is, the not necessary, but most advantageous manner) seems to throw some light on the passage in Vasari, wherein he describes Van Eyck's process—"Che secca non teme acqua"—"which, when dry, does not fear water;" which might perhaps be paraphrased thus,—that although you use water with this mixture, it is not again soluble in water after it has once dried. I do not insist that this was the meaning of Vasari, but the coincidence of the fact and the expression is curious, and not unworthy a notice. The following are the formulas of Mr. Hardy:—

*First Experiment.*—Silica medium.—R. litharge, 30 grains; pure silica, 5 grains; calcined borax, 10 grains—melt in a crucible, pulverize, wash, and keep for use.

*Second Experiment.*—Calcined borax, 50 grains; litharge, 40 grains; pure silica, 10 grains—to be treated as above.

*Third Experiment.*—Litharge, 60 grains; borax, 20 grains; pure silica, 2'5 grains—ditto.

*Fourth Experiment.*—Metallic lead, 3 drachms; borax, 1'5 drachm—melt. It was observed that only a minute quantity of lead was taken up by the borax.

*Fifth Experiment.*—Calcined borax, 2 drachms; alumina, '5 drachm—this gave a dark-coloured glass.

*Sixth Experiment.*—Litharge, 24 drachms; calcined borax, 12 drachms; pure silica, 4 drachms—melt, and pulverize, as in first experiment.

*Seventh Experiment.*—Litharge, 24 drachms; borax, 12 drachms; pure silica, 2 drachms—melt, &c. as in first experiment.

*Eighth Experiment.*—Carbonate of lead, 12 ounces; glass of borax, 6 ounces; pure silica, 1 ounce—ditto. Here the quantity of borax was insufficient, a portion of the lead having been set free.

*Ninth Experiment.*—Litharge, 9 drachms; calcined borax, 4'5 drachms—melt. This experiment was made to ascertain the necessary proportion of borax to lead.

The result of the sixth and seventh experiments were the most satisfactory; the seventh giving the less varnish appearance, if the colours are ground up stiff; the sixth, being richer, but less fluid, enabling the colours to stand up thick, and piled colour upon colour, if required. It will be therefore seen, that those who work with colours very fluid will prefer No. 7.

*Mode of preparing the Vehicle for use.*—For the sake of greater accuracy, I give the following formula:—

14 grains of glass powder, No. 6 and No. 7; 2 drachms of water; add by degrees, 2 drachms of oil;—mix well together with palette-knife on glass slab; stir well together, till they make a thick, creamy substance. If dry colours are used, grind them up with this; if bladder colours, add to each a small proportion of the medium; in which case it will follow, that less oil and water should be used in making the medium.

For general use, however, such accuracy is not necessary; it will be sufficient to take a small quantity of the powder on the palette-knife, and add on the slab about ten times the quantity of water; make a cream of this, and add as much oil as water. More oil or more water may be added when the medium is put into a cup, and well stirred together, according to the fancy of the painter; or the water may be altogether omitted, though its use is strongly recommended, for reasons which every painter will readily ascertain. The varnish quality seems entirely to be owing to the presence of silica, which is not itself a drier, and therefore requires to be combined with lead and borax, which are driers. The proportion of silica must be, therefore, suited to the quantity of driers with which it is to be combined. With regard to oils, it may be observed, that linseed and nut oil have only been tried, because Vasari

tells us that Van Eyck found these the most siccativ. It need scarcely be remarked, that, for whatever medium may be used, it is of the utmost importance to have pure and unadulterated oils. With good linseed oil, this vehicle will form a perfectly white cream; and the older the oil is, the better it will be. I have some nut oil, which has been kept a long time without a stopper in the bottle, and with this the vehicle forms a very thick, buttery, transparent substance, most delightful in use; but it does not dry rapidly, requiring, probably, a drier previously to be put to it. I have found oils which would run, when used with this vehicle, stand firm. Mr. Hardy, taking the recipe of Mr. Rainier as the basis, has been induced to substitute litharge, because it was the ingredient in the general fusc which might have been used by Van Eyck. He has taken pure silica in preference, though that may not have been so easily obtained in the time of Van Eyck. It may here be remarked against this method, that we have not followed the directions of the old recipe; as Vasari says, the oils were "boiled with his (Van Eyck's) other mixtures." It is only to be answered, that the experiment of boiling the mixtures (before being melted and powdered) with oils has been made, and there is every reason to believe that it answers perfectly; so that, after all, this *may* save the trouble of melting and grinding. Let the artist try this method, if he pleases; he may adopt which he likes best. For my own part, knowing the other method, and that Nos. 6 and 7 make as nearly a perfect vehicle as I can conceive to be required, I strongly recommend the use. In these recipes, the silica is the pure: there is some difficulty in obtaining it in this state. The impure or pulverized flint may answer the purpose, and fuse very well; but as it contains other matters, which may be injurious, it has been thought best to adhere to the pure silica. China clay\* has been tried; but in our experiments it did not melt. We were induced to try it because it contains more than half silica. An expeditious method of extracting the silica would be very desirable.

I have given, Sir, at some length, an account of the actual state of the question as to the old vehicle, and ventured a conjecture as to the materials of which it was composed; and I have added the experiments by which either that vehicle has been re-discovered, or one which may, at least, better answer all the purposes of Art than others in use. Those who greatly admire the old masters, and would seek such a vehicle as they used, will be the more pleased with this offered, if they see any probability of its being Van Eyck's. Those who entertain no such respect for the old masters, may use this or any other vehicle they please; and many, doubtless, will persist in the use of mastic varnish. But it may be safely asserted, that those who are not satisfied that they can at present attain with their vehicles all they would desire, will find an increase of power in the use of experiments No. 6 and No. 7.†

I would conclude by addressing every artist individually in the words of Horace; for if the Arts be liberal, let there be a liberal communication:—

"Si quid novisti rectius istis  
Candidus imperti, si non his utere mecum."

J. E.

\* In a conversation with Mr. Coathurpe, whose chemical knowledge, acute and accurate reasoning, I have often endeavoured to divert into the channel of Art, and from whom I have ever acquired valuable information, and obtained much help, I learned that he had recommended the use of China clay, to form a medium with oil; and that the consequence was, extreme hardness in the paint. He thought that one of the powders of my late friend's medium was vitrified borax only.

† The more these are worked in with the paint on the picture, the more clean and brilliant is the effect; in the common methods, the more worked the more muddy the colours become. This, in a remarkable manner, seems to correspond with Vasari's expression—"gli anisce mirabilmente."

## ON NATIONAL MONUMENTS AND WORKS OF ART.

At the meeting of the Society for obtaining free access to public Monuments, held in the early part of the year 1839, and reported in No. 3 of the ART-UNION, Mr. George Godwin suggested that the Society should extend its purposes to the preservation of national monuments with a view to excite the public mind to the protection of numerous fine specimens of ancient architecture, which were scattered over England. Mr. Hume, who was in the chair, stated his conviction that this desirable object could be effected only through a government Commission such as had just been issued in France; and informed the meeting he had moved in the House of Commons for copies of certain papers connected with the subject, in order to bring it under the notice of ministers. These papers were obtained; several conversations ensued; and ultimately, namely, on the 6th of April, 1841, a select committee was appointed, "to inquire into the present state of the national monuments and works of art in Westminster Abbey, in St. Paul's Cathedral, and in other public edifices; to consider the best means for their protection; and for affording facilities to the public for their inspection, as a means of moral and intellectual improvement for the people." The committee consisted of Mr. Hume, Mr. Ewart, Mr. Goulburn, Mr. Mackinnon, Mr. Cowper, Mr. Gally Knight, Mr. T. Duncombe, Mr. Broadwood, Sir De Lacy Evans, Lord Granville Somerset, Mr. E. J. Stanley, Mr. H. T. Hope, Mr. Slaney, Col. Salwey, and Mr. Milnes, who met ten times during the months of April, May, and June, examined thirty-two witnesses, and although prevented by the unexpected termination of the session from completing their investigation, have just now published a report on the matter with the minutes of evidence, containing a great quantity of valuable and interesting information.

The subject brought forward by Mr. Godwin, namely, the necessity of some immediate steps for the preservation of ancient architectural and monumental remains, so valuable as historical evidences, and in many cases as models for our guidance, is not however touched by the report in question, although Mr. Britton, in evidence which he gave before the committee, dwelt strongly on the want which existed of some supervising board, or government regulations, for their protection in their original integrity. We trust seriously that the subject will be taken up with the zeal which its importance demands the moment the new House re-assembles, and that means will be taken to obtain a perfect register of every ancient building remaining in England, and to aid in increasing the growing taste for their study, and care for their protection, now happily in many cases beginning to be apparent. Truly, as M. Guizot said, when, in 1831, he proposed to the King of the French the appointment of a select committee for the investigation of the history of the Arts, "No study, perhaps, reveals more vividly to us the social state, and the true spirit which animated by-gone generations, than that of their monuments, civil, religious, public, and domestic,—than that of the ideas and various laws which regulated their construction, in short of all the works and all the varieties of architecture which is at once the beginning and the climax of the Arts." The sub-committee, which was in consequence appointed in France, was formed by M. de Salvandy, Minister of public instruction, into the "Comité des arts et monuments." The objects given to it were, the publication of all inedited documents relating to the history of the fine arts amongst the French; to render known monuments of art in France, whether religious, military, or civil; to hand to posterity, by means of drawings and engravings, remarkable works in architecture, painting, and sculpture in stone, marble, and wood; to give instructions regarding the conservation of ruins, statues, towers, cathedrals, and all things which are connected with religion and the arts; in short, to prepare materials for a complete history of the Arts in France. These objects they seem to be carrying out with efficiency and zeal,—the certainty of good effects must be apparent to all. Returning, however, to the report before us, it is highly gratifying to observe the success which has attended the experiment of throwing

open exhibitions to the English public. It appears from Sir Henry Ellis's evidence, that from 16,000 to upwards 32,000 persons have passed through the rooms of the British Museum in one day without any accident or mischief, and that during a period of three or four years police interference has never been required. The number of visitors to the National Gallery increased between 1837 and 1840, from 125,000 to upwards of 500,000. The visitors to the pictures, &c., at Hampton Court Palace amounted in 1840, to 122,339. The number of those who visit the painted hall at Greenwich is about 100,000 annually; sufficiently proving the general disposition of the people to appreciate exhibitions of this nature, and to avail themselves of these means of instruction.

Of the order and decorum with which the public conduct themselves, all give the most satisfactory evidence. "You think," said the committee to Mr. Allan Cunningham, "that frequent access to sculpture and other works of Art, is the best means of making the public careful of them?" "Decidedly," he replied; "I think that question is solved by the National Gallery being opened; you see a great number of poor mechanics there, sitting wondering and marvelling over those fine works, and having no other feeling but that of pleasure or astonishment; they have no notion of destroying them; I was very much delighted to see them."

Mr. John Lingard, one of the vergers of St. Paul's, when asked, "What instances during the last 20 years have you had of any of the monuments being defaced?" replies, "I do not know of a single instance where a monument has been defaced." In Westminster Abbey serious injury has been done to the monuments in times past; but the inquiries of the committee show that this proceeded not from any mischievous disposition on the part of the public, but from the erection of galleries and rooms within the Abbey on the occasion of coronations and other public ceremonies. Mr. Allan Cunningham states that after the last coronation, he counted twenty-four toes, fingers, and bits of drapery which had been knocked off.

Mr. C. R. Cockerell, the architect, was examined, and was asked, "What do you consider to be the effect of admitting the mass of the people at proper seasons to see the works of Art, the fine productions of our painters?" "Undoubtedly, very beneficial."—"Does it not tend to humanize them?" "It is most beneficial."—"Would not the visiting the monuments of great men, themselves works of great art, have the same effect, or the same tendency?" "Undoubtedly, as humanizing or improving the human mind, but also as an immense incentive to public service."

As bearing immediately on what we stated at the commencement of this article on the subject of ancient architectural remains, we extract the following from the evidence of Mr. Britton.

"In relation to the examination which you have had, have you any observation to make?" "The principal observation would be, that if a Commission, such as has been alluded to, was established, further dilapidations and destruction of the interesting buildings in the country would be prevented: one object that I should recommend for the attention of such a committee would be, to publish cheap guides and short descriptions of the various buildings and objects of antiquity in the country; thereby following out the example which has been so laudably set by the Institute of Paris."—"Do you not think that in the present cheap state of engraving it would be beneficial to have cuts and engravings of all those different monuments to accompany those cheap publications?" "Certainly, it would be of infinite value."—"Do you consider that any advantage has been derived to architecture in France by the publication of parts, and of the entire buildings in the reports of the Minister of Public Instruction?" "This is an illustration (handing a portion of the French publication) of the effect that that Institute has produced in France, whereby they have obtained much and varied information from the different provinces; and the Institute has published a part of that information at a very cheap rate to disseminate a knowledge of the present state of buildings, as well as architectural details; and they are now still proceeding to illustrate the finest buildings of the country in a very efficient manner and at a very cheap rate."—"Will not the result of that proceeding be to disseminate

a knowledge of what is valuable in architecture and art in Europe generally, and prevent further dilapidations of those valuable remains which now exist?" "I should say that most unquestionably it is producing that effect in some measure, and must produce it to a still greater extent."

### THE BEAU IDEAL.

TO THE EDITOR OF THE 'ART-UNION.'

SIR,—Being at Florence during the spring of last year, I was surprised at noticing a renewal of the old controversy on the subject of "the Beau Ideal," against which school the chief director of the academy had taken a conspicuous part, in order to impress upon the pupils an exclusive attention to *nature* as their only true guide. His zeal elicited an article in one of the papers there, which appears to me to give so fair an account of the question, that I have been induced to translate it for insertion in your interesting journal if you think it worthy of a place, and not too long nor too learned. There is little doubt that those who have credit for the highest efforts of art in the *beau ideal*, spare no expence in procuring living models for their studies. The case cited of Raphael, seems an exception both to the practice, and the inference drawn from it, and if it were not almost treason to find fault with that prince of painters, I should submit that the fact quoted accounts for a certain sameness of features observable in many of his female heads. Certain it is, that inferior artists, by neglecting the boundless varieties in nature (by an attention to which, as Reynolds remarks, she is brought to correct herself), fall into the great defect of mannerism and general poverty, both of conception and execution. With many, however, it is more the subject of regret than censure, for want of the means and leisure to pursue their studies in the only effectual way.—Yours, &c., Z.

### ON THE BEAU IDEAL.

As it has fallen to our lot to hear much declamation from a celebrated Tuscan sculptor, against what in art is called the *ideal*, which he would have the world believe to be a false and corrupt school, we are induced, by that zeal which has always animated us on behalf of the Arts, to offer a few considerations on the subject.

Finesse, or beauty, is the main scope of the Arts, on which account they are styled 'the Fine Arts.' To attain this prize, young artists have three roads before them; the theories of those philosophers who presumed to fix the canons and principles of beauty; the example of the naturalists, or imitators of simple nature, who aspire to the mere portraying of what is visible; and the school of the *ideal*, which seeks the perfection of beauty.

With respect to the philosophers, by a certain refinement, which would fain abstract the mind from the senses, a hundred writers from Polycletus down to Webb, have reasoned on "the beautiful," but defined nothing really sound, useful, or practical. Aristotle held that beauty was a substance; others, a quality. Plato, instead of telling us what beauty is, shews us rather what it is *not*, in order to dissipate the fancies of Hippias. Some called the beautiful a pleasing sensation, a sentiment of love, taking effect for cause; others said it was that which at once pleases the senses, the intellect, the imagination, and the heart; but these are all vague words, teaching nothing. Others, again, appeared with pretensions to dictate: Albert Durer prescribed immutable proportions; depriving genius of variety, and approaching too much to mechanism. Leon Battista Alberti improved upon this system; still he neither warmed the heart, nor excited that inspiration, which alone is capable of conducting us to the degree of beauty, characterized as splendid, inexplicable, celestial.

Others, finally, did worse; they circumscribed beauty. By Parent, it was an elliptical line; by Hogarth, a waving line; by Mengs, a serpentine line. These metaphysics failed to guide a single artist, even to the correct drawing of an eye. The most excusable of these decrees was that which remained to define beauty, a certain harmony, a proportion, a charm, a something, I know not what, which is felt and cannot be explained.

With respect to the imitators of nature, their school is excellent; because, if it does not always reach the highest point of beauty, it contributes something towards it, when cultivated by a judicious and clever artist. It is difficult, however, to find in nature a type that has no need of correction. We are aware of its being said by Arnobius that Praxiteles discoursed much upon that prodigy of his, the Cnydian, formed upon the model of his Cratina; as also that it was main-

tained by Atheneus that in his time there was to be seen a form from which a Cypris might have been moulded. Even Xenophon speaks of one Theodota, as a perpetual model for artists; and it is recorded of the Greek Mercury cited by Lucian, that it had been modelled from Alcibiades—but these instances are rare.

Who does not know that Rome, among other distinctions, was renowned for the beauty of her citizens of both sexes? Nevertheless, the divine Raffaele, when he was about painting the Galatea alla Farnesina, wrote to Castiglioni thus:—"In such a scarcity of fine women, I avail myself of a certain idea that enters my mind, whether with any excellence of art, I know not, but I try hard to obtain it." Here then is Raphael himself compelled to have recourse to the *ideal*, which, as before observed, has been so much calumniated.

Many who have no fundamental knowledge of the arts, fall into this grand mistake concerning the *beau ideal*; they consider the working out of the idea as conducted by caprice, without any foundation in reality, whereas it requires the nicest discrimination and reasoning. Reynolds calls it a central form, composed of all the beautiful forms in nature. According to Artega, it is the mental model of perfection; and according to Bellori, Sulzer, and Winkelmann, it is the collecting, as far as possible, into one single form, of that beauty which in nature is scattered and divided. "The beautiful" becomes thus examined and united into one whole by the penetrating and talented artist, who first paints it in his mind, then ponders it over, and sets up before him, as it were, his well-proportioned idol. This image he now transfers to paper, or canvass, or clay, and proceeds gradually to perfect it with a skilful hand, directed by the intellect, and invigorated by the heart, as the great Buonarroti was wont to express it.

Hence it appears that the *ideal* is no other than the fruit, the result of what is seen, noted, and collected in nature. It has its foundation always in nature, whether she present a perfect model, which, as before observed, is rare: or furnish all the different parts, the union of which, placed in harmony, forms the idea. It was well remarked by a great master, respecting "the ideal," that it ought to be perfection so studied that there may never be a divorce between Nature and Art. Nature furnishes the materials, Art makes the selection. By means of this celestial union, the offspring becomes a race distinguished, and, as far as possible, perfect.

The Greeks were renowned masters in this school, by virtue of certain favourable combinations, which it would occupy too much time now to trace. Hence the great professors of Art, in order to arrive at the truly beautiful, have diligently examined the Greek monuments, and this for two purposes: the one, to mark the *beau ideal* in the forms they displayed, their unity, proportion, and manner of graft and execution: the other, to accustom themselves to observe nature with the eyes with which the Greeks saw her, and to note well the portions which they stole from her, and how these thefts were effected, so as from the collection of various beauties to form almost new creations.

### THE LATE SIR DAVID WILKIE.

THE following Address from the President and Council of the Royal Academy has been presented to the brother and sister of the late Sir David Wilkie:—"To Thomas Wilkie, Esq., the brother, and Miss Helen Wilkie, the sister, of the late Sir David Wilkie, R.A. The President and Council of the Royal Academy, although reluctant to obtrude on sorrows too recent and severe to admit of present alleviation, yet cannot resist the anxious desire they feel respectfully to manifest to the family of the late Sir David Wilkie, how deeply they sympathize in the loss they have sustained by the lamentable and untimely death of that great painter. Connected with him for many years, socially and professionally, as an important member of their body, the Academy are fully sensible how much they have been indebted to his valuable services as a man and an artist; they largely participate therefore in the grief and regret, which have been so generally excited by an event which has deprived the arts and his country of one of their most distinguished ornaments. The President and Council are well aware that time alone can assuage the sufferings of affection under such a bereavement; but they sincerely hope that, when calmer feelings shall succeed to more acute emotions, the relatives and friends of this eminent man will derive much consolation

from the reflection, that although he has been unhappily cut off in the full vigour of his powers, he lived long enough for his fame—that his works are known and admired wherever the Arts are appreciated—and that he has achieved a celebrity unsurpassed in modern times." We alluded to this address last month, as also to another from the profession generally, which has been presented through the Royal Academy.

The letter subjoined was addressed by Sir W. J. Newton, to the Editor of the *Times*, from which paper it is extracted.

"SIR,—Will you allow me (through the medium of your journal) to state to the numerous friends and admirers of the late Sir David Wilkie, that a public meeting would have taken place immediately, with a view to consider the best mode of offering some tribute of respect to his memory, but that it was deemed better to postpone it, until the meeting of Parliament in August next, when an early day will be appointed, and at which meeting Sir R. Peel has, in the kindest manner, consented to preside.

"As this is, strictly speaking, a national object, it is therefore hoped that all the London newspapers, as well as those throughout the United Kingdom, will kindly insert this communication, as if addressed to each.

"Should any persons (who will not be able to visit London at the time of the meeting) be desirous of making any private communication upon this subject, I shall be happy to be the bearer of it to the proper quarter.—I am, Sir, &c.,

"W. J. NEWTON.

"6, Argyll-street, July 10."

### OBITUARY.

MR. T. L. GRUNDY.—We have to record the death of Mr. Thomas Leeming Grundy, of Brecknock Terrace, Camden Town, one of the class of engravers termed line engravers. Mr. Grundy was born at Bolton, Lancashire, on the 6th of January, 1808, and served an apprenticeship to a large mercantile engraver in Manchester; and during this period he executed several plates far beyond the style of art to which his master pretended. But this style of business engraving was too contracted a sphere for him to pursue; and accordingly, when his indentures were fulfilled, he went to London, there to pursue what he had so anxiously aspired to—line engraving. Here he engraved several works which appeared in the annuals; amongst which was the 'Orphan,' after Liverseege, and others after Stanfield, &c., displaying great talent. He then became an assistant pupil to Mr. G. J. Doo, the celebrated line engraver, with whom he remained some time. He afterwards engaged with Mr. Goodall, the beautiful landscape engraver, with whom he remained a considerable time; and afterwards engraved, on his own account, various plates for the annuals and other illustrated works. He also engraved a large plate in the mixed style of line, stipple, and mezzotint, from a picture by Bradley, called 'The Lancashire Witch.' This picture, painted much in the style of Sir Joshua, was engraved in a very artistic manner, and reminded one very much of the fine plates produced in the time of Sir Joshua, displaying great feeling, and conveying the texture and freedom peculiar to that style. His health now began to decline, and though many large works were offered to him, he could undertake but little. One of the last works upon which he was engaged was 'The Duke (of Wellington) revisiting the Plains of Waterloo,' the etching of which he completed for Mr. Lupton, who is now finishing the plate. He also completed an etching of a full length of Lord Durham, after Lawrence, and others after Faulkner, &c. He was at length attacked with inflammation, which finally terminated his existence on the 10th of March last. Thus, after years of indefatigable study and perseverance, at a time when the greatest difficulties of his profession had been surmounted, and he was apparently about to reap the benefit of his labours, he was suddenly cut off. Had he lived, there is little doubt he would have taken a high rank in his profession. He was interred in Old St. Pancras church-yard, and has left a widow and one child.

## ON HANGING PICTURES.

TO THE EDITOR OF THE 'ART-UNION.'

SIR,—I rejoice that in your notice of Mr. Müller's picture of the 'Convent—Bay of Naples,' you take occasion to animadvert upon the injustice done to him and many other artists in the hanging of their pictures. It well becomes the ART-UNION to protect artists, and if unworthily assailed to rescue their fame, which is their estate, and more than their estate, from degradation. Upon this subject I would not wish to bring forward the name of any one sufferer; for it would seem only to condemn him to a repetition of the injury, and at any rate inflict another wound upon the modesty of genius, of real genius—which is ever the more sensitive as it is the more unobtrusive. But as you have instanced a work of Mr. Müller's, and given a slight sketch of his labours, talents, and love of Art, I may say that I am the more indignant, knowing that you have not said one word too much of an artist who is sure, first or last, to make his way to the highest public estimation. Why should I say I am indignant? Does it imply an accusation of partiality to some, and a wish to depress others? The feeling arises—and there is no occasion of following it to its source—it always arises from a sense of injustice, whether the injustice be the effect of carelessness or of design. I have not seen the picture upon which you found your remarks; but last year I noticed the same thing in respect of the same artist; when, having formerly seen in a private room some of his works, I took some pains to abstract my mind and my eye from the position and pictures around one of his works, and was surprised to find the sentiment, the poetry of the subject, arise from the canvas.

The members of the Academy stand in an inviolable position: that they have difficulties to overcome cannot be denied—from some of which they should be rescued by the public taste, and from others they should rescue themselves. It will ever be suspected that they give preference to their own works, with respect to advantageous position; and there will always be artists to complain that they are neglected when the consciences of the committee may be most pure. It is more than possible, that the committee themselves may become very inadequate judges of the works before them. Fatigue of mind and eye in the multitudinous survey must confound the judgment; and herein the modesty that ever is stamped upon the works of true genius is most likely to suffer. Ten to one but it is overlooked. The committee, oversatiated, surfeited with gew-gaw glare and pretension, stimulated even to disgust, perhaps, cannot recover the quiescent mood in which alone judgment is safe. Without charging them with any intention to offend or injure, I can readily believe that such was the case in the instance you single out for animadversion. Here is a difficulty from which the Academy should rescue themselves, by having several committees, admitting works at an earlier period, and seeing them separately—that is, in a room apart from the show and glitter of other pictures—and not too many at a time. These several committees may then form one for the general purpose of hanging, when the weight of each section would be thrown into the scale in favour of such works as had been previously pronounced works of genius. Or, it would be better still, if the Academy would request certain unprofessional men of known taste, to form themselves into committees to examine the pictures, these committees subsequently being admitted to form a part of the general one. As it is, there must often be a judgment without evidence—without the evidence of the senses, which are, as it were, corrupted by the display of bad taste. It would be well if every member of the hanging committee would duly weigh the importance of what he has to do, what he owes to the public, what he owes to individuals, and what he owes to himself. He is to cater for the public, so as to lead their taste to what is best and of highest character, while he seems only to please their eyes. He is to treat individuals most justly,

to suffer no bias, no acquaintance, no friendship, no *esprit de corps*, to induce him to give a preference independent of merit. And he owes it to himself to be thus upright in purpose, and in right simplicity of character to deem a request for favour, an offence. That the hanging committee do not always so seriously consider their position, the walls of the Exhibition annually show: for it is impossible, if they seriously reflected, and acted upon the reflection, that they should crowd the walls as they do with pictures in positions in which some cannot be seen at all, and what is worse some are seen to a disadvantage.

Precedent and example, by little and little, admit mischiefs, till the mass becomes great, and people sleep under the habit, which would be ridiculous if it were not grievous, until they are awakened, and then stare in wonderment that they did not see what was before them. It is the province of the ART-UNION to cry aloud and to awaken the Academy, from the bewilderment of their exhibitional habits, to a sense of official justice, that Arts may be benefited and Artists uninjured. Now much of this mischief is perpetrated under the plea of pleasing the public: I am persuaded if the plea have any real force, that the public will be easily induced to rescue the Academy from this difficulty. Let them publicly, at the head of their catalogues, declare that they can no longer consent to pile up works for their gratification in senseless order—that the Exhibition is intended to be an exhibition of pictures where *things represented* are to be seen, and not merely the frames and canvasses. Let them convey to the public, that the glare and confusion that have been usually "on view" would be better transferred to the bazaar and the fair, and that the rooms of one academical exhibition shall no longer vie with splendid "furnishing establishments," which after all will have this advantage over them, that the works of the latter can be brought down to the eye, if required, and therefore may be sold. It can answer no purpose but a malevolent one,—and of that I acquit the Academy, and will therefore say an injurious one—to hang pictures out of sight. How few ever cast their eyes to this top-mast height, not of fame but of infamy, where more than mast-high over head, in a reeking cloudy vapour not their own, may be sailing, for aught the spectator knows to the contrary, the whole "Spanish fleet," which

"Thou canst not see,  
Because it is not yet in sight."

Thus the higher the station the poorer the distinction: and the humble aspirant finds in the committee so many Hamans preparing to hang him fifty cubits high. And it is a cruel distinction indeed, thus writing his disgrace upon the walls about him and below him; for if it be to be understood, that every performance in more visible station is so placed for its superior merit, it helps to make a scale of disgrace, and the public must conceive the upper tier to be bad indeed. At the Academy, men are not *raised* to honour, but must stoop to conquer.

I would have the ART-UNION remonstrate till this evil be cured. The academy have no right, but an assumed one, to condemn an unoffending artist, to "d-n" him "with faint praise," the faint praise of hanging his pictures, where no pictures can be, but in disgrace. Reject them they may, and they ought, if they are undeserving of being seen; but if they admit them, they virtually contract at least to show them, not as they do now—to *show them up*. The consequence of a continuance of this bad habit must be, if artists consent to it from the advantage of the name of being exhibitors, that they will learn to paint for the positions, and nothing from their easels will be fit for, face to face, sober acquaintanceship; they will overdo every thing, as in minor theatres, or in infant schools, where nothing is to be done or learned but by antics for natural gesture. And in truth our Academy is too much of the great infant school already. The big infants below, and the little ones piled above them for multitudinous effect, all acting the same childish presumption, "how very clever we are!" A painter must now paint for the Exhibition, as dramatists must write for the actors. If he conceives in his mind a fine subject, to be treated poetically strong in its moral sentiment, he is told at once "it won't do," "it

won't be seen." There is no splash and dash about it, no vividness of colour, no daring juxtaposition of reds, blues, yellows, greens, orange, pink, and purple. Well, he would say, they would ruin the sentiment. "So much the better," would be the reply, "we don't want sentiment, we want display. We want millinery and upholstery brought into the Art." And so what is the painter to do? he must paint for himself and starve, and so "go to the dogs" that way, or "go to the dogs" the other, and paint staring, flaring hunts and such like things "for the Exhibition." I am not stepping out of my way to point out evils which do not arise from the vice of the Academy as an exhibition; they do arise from the whole system and procedure of "making the exhibition, and the hanging the pictures." It is this very thing that has driven modest, quiet, unobtrusive Art, full only of the intensity of its purpose, out of the painter's practice and the world's feeling. Artists are, therefore, made presumptuous except in subject, there they are low enough. The whole "divina comedia" of poetry must necessarily be prohibited, as unfit to face the glare of exhibitional perfection. I have often in my "mind's eye" transferred the finest pictures in in the world, the Raffaelles, Correggios, and Titians, and interspersed them in one of our exhibition-rooms, our "show-rooms," and wondered how their sobriety, their "calmness," "in the very whirlwind of their passion," would be lost, sunk in their own dull obscure, and overlooked as non-existent. Painters must paint up to the "show" or it will not do—the taste runs that way—as in our streets flimsy goods and plate-glass windows display the fashion and carry the day.

There seems to have been an original misconception in the minds of *all* architects, which may be the fountain-head of the mischief. Picture Galleries appear to have been an after-thought (if thought can be said to have been employed about them). Architects seem to have considered it their business to build rooms, any purpose being quite out of their scope. They study only proportions for the eye, and the show of the room, where the Liliputian admirers of their skill may walk under an architectural atmosphere. They have not the slightest regard to pictures how *they* will look. This has been perpetrated from the days of the revival of the Art, and justified by it; at which time palaces had been built, and the Arts were, too, meanly employed to ornament them, subservient to the builder; and it may be questioned whether, notwithstanding all their gorgeousness and great merit of the works in the Venetian palaces, which gave rise to ornamental Art has not suffered rather than gained by the style and taste engendered. But since the Arts have confessedly become of consequence *per se*, and for what they can do independent and apart from ornament (though bringing the best ornament with them), surely they ought to engage the minds of architects to erect for them proper buildings, where they shall be everything, dominant, principals, not accessories—where the painter is to be thought of, not the architect, and where the latter will have the genius to sink himself in the consideration of the one great purpose. I was much pleased with Mr. Pyne's idea—there is good sense in his plan—it may at least give a hint to architects, and I hope will thus turn out to be "a word to the wise." But these observations require other progression than may be now given them; they arise, it is true, out of the fault, the academical fault, the subject of animadversion in the ART-UNION: but it would be taking too wide and inconvenient a range, so I will forbear—merely content, in conclusion, to recommend to the Hanging Committee of the Royal Academy, a merciful consideration for the victims whom they suspend annually. If they harshly maintain with old Polonius, that they must treat them "according to their desert," they should hear the answer of Hamlet—"Odd bodsikins, man, much better use every man after his desert, and who shall 'scape whipping? Use them after your own honour and dignity. The less they deserve, the more merit is in your bounty. Take them in;" and I will venture, Sir, to add to this recommendation of Hamlet's, what I am sure he meant, when you "take them in," use them kindly.

Yours, &amp;c.,

J. E.

## ENGRAVING ON WOOD.

A SERIES of very comprehensive lectures have lately been delivered at the Royal Institution by Mr. A. J. Mason, on the history and practice of wood-engraving. The lecturer introduced his subject by a consideration of the causes of the low estimation in which wood-engraving had been held, before the art began to be marked by improvements which have raised it to its present perfection. After describing the tools employed by the engraver, and practically demonstrating their uses, he spoke of the various woods which have been at different periods in request, before box-wood recommended itself to notice from the solidity of its texture and other qualities which were not found in any wood employed in the early practice of wood-engraving. The method of preparing the wood was described, and the manner of making the drawing on the block before it was cut; and this was followed by a particular description of the entire process of the art in its improved state, and comparisons between wood and copper-plate engraving, with illustrations of the comparative difficulties and facilities, advantages and disadvantages, of each. Mr. Mason attributes the discovery of the practice of engraving on wood to the Chinese, whose method of conveying the drawing or design to the block is extremely curious. It was first made out upon paper, so thin as to be transparent; then pasted on the wood with the face downwards, and so engraved by cutting through the paper into the wood, leaving of course only the surfaces which appeared black in the subject; and when finished these portions of the paper drawings left on the lines were carefully washed off. The lecturer exhibited some curious Chinese engravings, which had been lent to him as examples of illustration from among specimens in possession of the East India Company. Much controversy has arisen among writers on ancient Art as to when and by whom engraving on wood was first practised in Europe; though all agree in making it the earliest medium of procuring printed impressions. The Germans, desirous of settling the invention upon their own countrymen, affect to discredit every statement tending to attribute the discovery to another nation; but the Cunio story, very generally quoted by all historians of wood-engraving, ascribes to Italy the earliest knowledge of the art in Europe. Papillon gives an account of eight subjects 'The Heroic Actions of Alexander the Great,' which were engraved on wood by twins, brother and sister, of the name of Cunio. These were executed at Ravenna as early as the year 1285, and the circumstances of his knowledge of the existence of such works, Papillon describes. He was employed by his father about the year 1719, to arrange some paper hangings for a Swiss officer of the name of De Greder who showed him three ancient volumes in which were impressions of cuts by Cunio and his sister. Two of the books were illustrated with figures of prophets, kings, and heroes; and the third celebrated the achievements of Alexander. Papillon immediately wrote a description of the whole; but this he unfortunately mislaid, and it was not until after a lapse of 35 years that he again found it. He was busy in the meantime on his history of the Art, in which he had determined to say nothing of the Cunio cuts, not being able to recall to memory the substance of what he had written about them: but before the publication of his work he discovered the long-lost MS., and thence gave the account which is found in his work. De Greder, who had shown him the volumes, died in the interval, and Papillon was unable to trace the engravings; there remains, therefore, no clue to this important series, the date of which is nearly ascertainable from the dedication of the work to Pope Honorius, who occupied the papal chair only from the year 1285 until 1287. As early as the 14th century wood-engraving was employed in printing playing cards; and it is a matter of dispute whether it was first applied thus, or to printing the figures of saints. The traffic both in cards and printed figures arose first in Italy, and spread rapidly over Germany, the Low Countries, and France; and these prints were frequently purchased as original drawings, because the method of their execution was a secret known only to the craft of MS. illuminators. There is very little doubt of blocks having been

adopted for cards about the year 1370. There are in the British Museum specimens of Venetian cards made at that period, if the date may be presumed from the circumstance of the dress of the kings and queens according with the costume of that time. Cards are said to have been invented for the amusement of Charles VI. of France: but this could not be, since they were in use in Italy and Germany long before his reign, which commenced in 1380; he occupied the throne forty-two years, and instead of cards having been invented for his amusement, it is more probable that they were only introduced into France during his reign.

On the adoption of wood-engraving by the Germans the application of it began to be extended. They executed scriptural subjects containing several figures, which were accompanied by texts cut on the block, because moveable types were then unknown. These were impressed only on one side of the paper, and two of the prints were frequently pasted together so as to form one leaf with a picture on each side. Afterwards whole sets were bound up; and thus were formed the first complete printed books, which being produced entirely from wood-cuts are known by the name of block-books. These first made their appearance in Germany and the Low Countries, soon after the year 1420. Earl Spencer is in possession of original editions of many of these, one of the earliest of which is called the Apocalypse of St. John, and consists of 48 pages of illustration and text cut together on wood. The same nobleman has also one of the identical blocks cut for the second leaf of this book, which was executed probably between the years 1420 and 1430. It was shown by these and other examples, that printing was first effected by means of wooden blocks, which about 1438 were succeeded by separate wooden letters; type cut in metal was used in 1450, and the final improvement as now practised, took place in 1459. Lawrence Coster, of Haerlem, is stated by some writers to have been the first to use moveable wooden types, which were suggested to him by accident. He cut some letters on a beach-tree in relief, and took impressions of them on paper for the amusement of his grandchildren. The effect of this led to further experiments, in the course of which he procured a thick glutinous ink and used the letters separately. Among others to whom the application of wooden types for printing was attributed, the lecturer mentioned the Guttenbergs and John Faust; the latter of whom in conjunction with Peter Schœffer brought out in 1462 a beautiful edition of the Bible in two folio volumes. This work was richly embellished by woodcut initials, and others manually executed; the whole illuminated in colours mixed with gold and silver. Faust took a number of these bibles to Paris, where printing was as yet unknown, and disposed of them as original and elaborate MSS. The King of France purchased one for which he gave 750 crowns; this copy is now preserved in the Royal Library at Paris. The first volume of this extraordinary work contains 234 leaves, and ends with the Psalms; the second volume consists of 227 leaves. Faust sold another copy to the Archbishop of Paris for 300 crowns; and others he sold for 500 crowns, the price usually paid to the scribes of the time. In order to dispose as soon as possible of his stock, he reduced his price gradually to 30 crowns, by which means his sales multiplied. The perfect uniformity of all the copies in the typographic parts, which were supposed to have been written, was, upon comparison, discovered to the general horror and dismay of the purchasers; for as the manual execution and transcription of only two copies of this marvellous work would have occupied the entire life of the writer, it was immediately pronounced that the task which Faust had accomplished was one beyond all human power; he was therefore seized as a magician his lodging was searched, and a few remaining bibles found. The red ink used in the printing was said to be his blood, as an article of his compact with Satan, without whose aid it was decided he could not have executed so stupendous and so extraordinary a work: hence most probably the German story of Faustus.

Printing was introduced into England by William Caxton, who, in 1483, produced his great work, *The Golden Legend*, of which the British Museum contains a fine copy. It is a history of persons named in the Bible, and is illus-

trated by many cuts in the early German style. Caxton printed upwards of 60 books, most of them ornamented with cuts, of which many, from fac-similes exhibited, must have been as low in the scale of merit as the rudest and most untutored efforts in the art. On the continent, Michael Wohlgemuth was successful in increasing the value of wood engraving; but his pupil, Albert Durer, effected greater improvements, inasmuch that the art began to be considered the best means of perpetuating the conceptions of the painter. Early in the 16th century, the latter published his *Madonna* in a set of 20 cuts, and in such repute were his works, that Marco Antonio Raimondi, a Venetian artist, counterfeited upon copper, 17 out of the 20 of this series. Putting to his plates Durer's monogram, the impressions were sold in Italy as original works. In order to suppress such an injurious system of piracy, he instituted proceedings at law against Raimondi, but the only redress he obtained was an injunction against the latter prohibiting him the use of Durer's mark and initials. This master did not confine his experiments and improvements to wood engraving. He published in 1512, a *Passion of Christ* in small copper plates, exhibited impressions of which are distinguished by a delicacy in some subjects and a boldness in others really surprising for a period so early. Durer had several pupils, the most celebrated of whom was Hans Burghmaier, who designed and partly cut the set of 140 blocks for the *Triumph of Maximilian*. This work was in progress during four successive years, and was then abandoned in consequence of the death of the Emperor, which took place in 1519.

It has been thought that the highly finished works of the Old Masters, particularly those which exhibit cross-hatchings, could not have been produced by blocks of wood, but that such workmanship must have been effected by corrosion or some other means on metal plates; but corrosion for the purpose of producing lines in relief is of recent discovery; the zinc plates tried about twenty years ago were imperfect without retouching, and even then had the appearance of decay. Mr. Mason considers the Art of wood engraving to have been at its highest perfection during the 16th century. The example of the German school produced artists of talent in many parts of the continent. In examining the works of the old masters, it may here be observed that the monogram found in them sometimes referred to the designer only, for Durer, Burghmaier, and others who drew the subjects on the blocks themselves probably cut no more than the most important parts. It was impossible that Durer could himself have engraved all the parts of his immense series of works. Some of the initials on prints of this period are those of persons who never engraved at all, but only furnished the designs and superintended the cutting; for the known masters of the period employed numerous assistants; hence many persons have supposed that they never cut the wood themselves; but this is as erroneous as the conclusion that they personally executed every work bearing their monogram. In England, during the 16th century, some valuable publications were issued, the most important of which was the celebrated Protestant Bible, by Coverdale, which appeared in 1535. A new edition appeared in 1537, ornamented with many large and small cuts, executed by various persons. In 1563 appeared the first edition of the "Acts and Monuments of John Fox," commonly called the "Book of Martyrs," also enriched with many good engravings. Some of the engravings of this date have much merit, but it is probable that they were executed by foreign artists.

Thos. Bewick, the founder of the Bewick-school, began to engrave on wood in 1768, and his first cuts were diagrams for Dr. Hutton's "Mensuration;" in cutting which he used a graver with a divided point, so constructed that he could cut very accurately on both sides at once of the straight mathematical lines. The lecturer, after particularizing some of his most celebrated works, spoke of the merits of Thurston and others, who assisted in forwarding the art to its present state of perfection, and the works of all of whom are so well known as to require no mention here. Want of space prevents us doing justice to wood-engraving in its present state, and compels us to close our notice of these very interesting lectures, how anxious soever to join the lecturer in his tribute of praise to the living professors of the art.

## FOREIGN ART.

**ITALY.—ROME.**—A new theatre has been erected on the spot once the Campus Martius, and it is dedicated to the poet Metastasio. It is, from the foundation, the work of two friends, Pietro Baracchini and Felice Quadrari. The architecture is fine and elegant, and the decorations brilliant, being everywhere adorned with *bassirilievi*, paintings, and gilding. The architect is a youth of much promise, Niccola Carnevali. The ornamental paintings are perfect as to style: they are friezes with allegorical pictures dedicated to Tragedy, Comedy, and the Lyric Drama; they are the work of Enrico Marini. The sculpture by Giacomo Fumagallo, also deserves much praise. The ceiling, painted by E. Anieni, represents the poetical apotheosis of Metastasio; it is rich in figures, and finely composed. The Muses are in varied and beautiful attitudes. Two of the figures are by severe critics pronounced incorrect as to drawing. The painting on the drop scene is classical and pleasing: the subject is the triumph of Veturia over the indignant spirit of Coriolanus, when he approached Rome as leader of the Volscians. It is treated in a manner that does honour to the artist, Nicolo Consoni. The new scenery also deserves attention, painted by Scarabellotto and Bazzani.

**BOLOGNA.**—The restoration of the ancient building which was the celebrated Archigymnasium, is completed, and it has now become the library of the city. This edifice, indeed, deserves the name of historical; it contains a collection of pictures, with specimens of every epoch, beginning from the Bolognese painter who was the rival of Giotto, down to the Gandolfi. We may also remind our readers that in this famous Archigymnasium was founded the first university of the world, anterior to that of Paris. Here Azzo, Bartolo, Accursio, called "Lights of Law," and many others, taught; and here Dante, Petrarca, Boccaccio, with a long list of other great men, came to study. In modern times it is enough to name among its students the Bolognese Galvani, the discoverer of the physical principle which bears his name (Galvanism); and which has so largely contributed to the progress of science. We need not say how interesting and important the restoration of such a building is. We may add, that the library is open to the public without the smallest reservation; and that the paintings, with which the staircase, arcades, and halls are covered, are in themselves a historical study, presenting the works or portraits, with the dates of their periods of study, and coats of arms, of many of the eminent men whose Alma Mater was this university.

**RAVENNA.**—The Exhibition of Works of Art was opened here on the 9th of June. Among the speeches made at this solemnity, one of the most interesting was that of the Professor Giuseppe Ignazio Montanari, who chose for his subject the Roman sculptor, Giuseppe Ceracchi, an artist whose high promise of excellence was closed by an early death. Those acquainted with his works saw in him the future rival of the glory of Canova, while his singularly amiable and engaging character made his loss the source of the deepest grief to his family and friends. Of the works of Art exhibited we may especially notice, in sculpture, 'King Entius made Prisoner by the Bolognese,' in marble, alto-relievo, a group of four figures, by Signor Raffaele Sarti; 'Death of Du Foix,' in marble, alto-relievo, five figures and two horses, by Ferdinando Sarti; an historical landscape from the 'Black Dwarf of Walter Scott,' a fine composition, and well painted by Signor Antonio Porcelli, of Rome; and a 'Madonna,' by the Countess Rasponi (daughter of Murat, King of Naples).

**PESARO.**—Her majesty the Queen of Greece, travelling *incognito* under the name of the Countess of Athens, passed through this place, and examined attentively all the monuments of Art and antiquity which it possesses. She visited last the small but well-chosen gallery of pictures belonging to the Cavalier Mazza; among these she especially admired a 'Pieta,' by Alessandro Tiarini, and a 'Galatea,' by Lazzarini. (In England, unfortunately, these artists are among the many admirable Italian painters whose works are

unknown.) The splendid collection of vases in Macolica, belonging also to the Cavalier Mazza, greatly excited her admiration, especially a vase on which is painted the 'Toilette of Venus,' from a design by Raffaele. At parting her Majesty presented the Cavalier Mazza with a gold snuff-box, on which is painted a beautiful miniature of the King of Greece.

**FRANCE.—PARIS.**—The following artists have been named officers of the Legion of Honour:—M. Gudin, painter of marine subjects; M. Alaux, historical painter; M. Couderc, painter; and M. Fontaine, architect, a commander of the same order. The following artists have been named Knights of the Legion of Honour:—Messrs. Delorme, Grenier, Signol, painters; and M. Etex, sculptor.

**MONUMENT OF MOLIERE.**—The municipal council of Paris have voted the 140,000 francs necessary for executing the monument to be raised to Moliere; of the subscriptions already collected, and the credits voted, 140,000 francs have been expended in the purchase of a house whose site forms part of the ground destined for the monument. The principal figure is to be of bronze; the two accessory ones of marble; the artist is M. Visconti. The municipal council at its last sitting voted the sum of 25,000 francs for the erection of a monumental fountain in the garden at the church of Notre Dame. The style of the construction to be similar to that of the metropolitan, and the proportion so light as not to injure the perspective of the church.

**MONUMENT OF NAPOLEON.**—The Director of Fine Arts has announced that the architects and sculptors who mean to compete for the erection of the monument to Napoleon, to be placed under the dome of the Invalides, may present their designs to the Minister of the Interior until the 1st of September, 1841. The plans must be calculated not to exceed the credit opened by the law of the 25th of June, 1841. The scale of 0 m. 5 c. per metre is to be adopted for plans and drawings, and that of 0 m. 10 c. per metre for models in bas-relief.

**QUEEN VICTORIA'S GIFT.**—The cabinet of medals of the Bibliotheque Royale has been lately enriched by a present from the Queen of England, of 195 coins of pure silver, Anglo-Saxon and Carolingian; they are in high preservation, and among other treasures, contain two of Charlemagne, one of Louis le Debonnaire, nine of Charles the Bald, struck in different towns; and among the Anglo-Saxon coins are seven of Alfred the Great and six of St. Edmund.

**PRIZES TO ARTISTS.**—The following artists have received gold medals as premiums for the excellence of their works, except where mentioned as otherwise, the premiums are for paintings exhibited at the Louvre in 1841:—M. Benedict Masson, for his painting of 'Mary Anointing the Wounds of Jesus Christ.' This picture was bought by the Minister of the Interior. M. E. Hosten, landscape painter. M. Louis Rochet, for his group of 'Christ with the Young Children.' M. Laurent Detouche, for his pictures of the 'Execution of Joan of Arc' and of 'St. Elizabeth of Hungary.' To M. Augustus Baril, for several pictures, especially one of 'The Benediction of the Pope,' exhibited in 1840. M. Wyld, for several pictures, especially those two representing the 'Departure of the Jews from Algiers' and 'A Marine View of Naples,' which have placed him in the first rank of our painters. M. Olivier, for four pictures of domestic scenes, in regard to whom it may be interesting to mention the following circumstances. The celebrated painter called Claude Lorraine, was born in a little village of the department of the Vosges. Some years ago, a child in the same village became remarkable for a surprising talent in copying every object he saw. The director of the Musée Epinal, informed of the singular talent displayed by the boy, brought him to Paris, and gave him lessons; and afterwards he received further instructions from M. Paul Delaroche. This year the Minister has decreed a gold medal to this village artist, M. Olivier, for four small full-length portraits, or rather domestic scenes, in which connoisseurs are alike struck by a degree of vigour and delicacy well deserving encouragement.—The King has purchased the small picture of M. Jules

Jollivet, representing the 'Interior of an Artist's Work-room.' The Minister of the Interior has purchased a 'Christ at the Tomb,' by the same artist: both these pictures were exhibited in 1841. The Minister of the Interior has purchased the fine picture of the 'Resurrection of Lazarus,' by M. Vanderberghe, exhibited in 1841: it is intended for the Cathedral of Perigueux.

**ARTISTIC LIBERALITY.**—Messrs. Nelaton and Carlin, two young artists, visited, in 1839, the Grand St. Bernard, and were received by the monks in the convent at its summit with their usual kindness and hospitality. In visiting the church, they remarked that it was without pictures, and asked the monks why it was so? They replied, that they were too poor to pay for pictures. "That shall be no objection," said the young men; "we will paint your church for you, and require no payment." The offer was most thankfully accepted, and the young painters returned to Paris, where, during a year, they were occupied in preparing the Cartoons for their work, the subjects being selected by the monks. On the 2nd of May, 1841, they set out on their return to St. Bernard, and there they still continue their labours.

Thadeus Kralewski, a Polish exile, has just completed a very fine statue of his brother, the celebrated Archbishop of Posen.

Carlo Bovi, the artist of the well-known medals of Napoleon, of Cuvier, of Paganini, and Gothe, has finished one of Listz, in which his pure drawing and good taste in the antique style is very apparent.

**CARHAIX.—INAUGURATION OF THE STATUE OF LA TOUR D'Auvergne.**—We mentioned that this ceremony was to take place on the 25th of June, being the anniversary of the death of this famous grenadier. The ceremony failed in the degree of interest and grandeur expected, from the circumstance that the influence of the clergy had been exerted to prevent the people attending it, by predictions of evil, &c. &c.; and the Bishop of Finisterre, who was to have assisted at the ceremony, did not appear. Five or six hundred grenadiers of the regular army attended, and the national guards of many neighbouring towns. An old soldier, retired since the year 1800 from the army on account of severe wounds which he received by the side of La Tour d'Auvergne, was brought from the mountains of Arrée to receive a decoration at the foot of the statue of his comrade. The surprise of the old man was great; and this incident, from the simplicity with which the decoration was received, formed one of the most touching scenes of the day. One part of the ceremony fully realized all that was expected—that in which the statue was uncovered, accompanied by a salute of artillery and two military bands, shouts of applause mingling with the *vivats*. The general effect of the statue, by Marochetti, is very fine: the attitude is natural and noble. The site where it is placed commands the magnificent amphitheatre of the mountains of La Cornouailles; and at the distance of five leagues may be discerned the statue on its pedestal of granite, standing forward from the grove of trees which appears like its frame. The figure fronts the open field of the battle of Carhaix, and all contributes to the impression it was the object of the artist to produce, and which he has effected with so much talent.

**BELGIUM.—BRUXELLES.**—Monsieur Gallait, one of our best artists, author of the picture, 'The Abdication of Charles V.,' exhibited at the Louvre last year, has been named, by command of the King of the French, a Knight of the Legion of Honour.

**PRUSSIA.—BERLIN.**—Our celebrated artist, Perseus, first architect of the King of Prussia, is now in Paris by order of our government, for the purpose of examining the public edifices there; especially, it is said, the Museum at Versailles, with the intention that a similar building should be erected at Berlin.

The group of Amazons, by Ris, is to be placed in the "Lust Garten" of this place, which it will greatly adorn.

## WORKS IN PROGRESS.

**THE BATTLE OF LANGSIDE.**—The etching of this picture of Landseer's promises fair that the finished work will sustain the character of our school. It is in progress by J. G. Murray, and will be published by Mrs. Parkes. The figures and objects are everywhere perfectly and most successfully made out, preparatory to graduating the shadows to their ultimate strength; and nothing can be more beautiful than portions of the drawing so clearly exhibited in the outlines. The immediate subject is the death of George Douglas, whose untimely fate, met in ardent devotion to the cause of the queen, Mary laments while bending over him. According to the powerful description of the artist, life is ebbing fast away; and, although surrounded by a crowd, the sufferer seems to acknowledge no presence but that of Mary, upon whom his closing eye is fixed. The battle may be supposed to be raging in the valley below, for the position of the queen was a high ground overlooking the scene of action. The other figures grouped round the principals represent some of the Seaton's, Hamiltons, and other personal attendants of the queen, all clad in their war-harness, but now moved by the death of Douglas. The subject is one replete with the deepest interest; the issue of the battle of Langside darkened the horizon of Mary's fortunes, which, during the few days preceding this event, had put on a favourable aspect. The manner in which this engraving has been commenced and brought up to its present state, must, in the end, do ample justice to the picture.

**THE WELLINGTON TESTIMONIAL.**—On the occasion of a late assembly of the committee superintending the execution of the Wellington monument, certain changes in the model of the horse were determined upon, which have been carried into effect by Mr. Wyatt. Since our last notice of this work, no other portions than those then mentioned (the head and legs of the rider) have been cast in bronze.

**THE MALCOLM MONUMENT.**—The cast of this statue has been perfected. It will be remembered that the execution of it was intrusted to Mr. Bailey, and that it is intended for St. Paul's. The figure is of the heroic stature, and stands in a position easy yet dignified, holding a spy-glass sufficiently large to typify the quarter-deck. The attire is a simple uniform, with a cloak loosely thrown on the shoulders, whence it flows without interfering with the front of the figure.

**THE LATE BARON JOY.**—The colossal statue of this eminent lawyer, the execution of which was confided to Mr. Behnes, is in a state of advancement; and when completed is to be sent to Dublin. The figure is attired in legal costume, and is represented sitting in court: the features unite in an expression of deep and searching attention; and although the work be posthumous, the resemblance it bears to the life is said to be perfect. We have been gratified with a view of another work by the same artist, the subject of which is derived from the Coventry story of the Lady Godiva. The composition consists of a female figure seated on a palfrey, which she may be supposed to have just mounted, with a view to the performance of the famed equestrian progress through the town. Nothing can exceed the ease and grace of the figure, the interest of which, by a most felicitous arrangement, is maintained entire. The horse is not yet in motion, but stands with one of his legs somewhat advanced, and against which he is in the act of rubbing his nose; a position in which the animal is often seen when freed from the bit, and which, in this case, is of the utmost value. The conception and execution of this beautiful work are equally original.

**MADLE. RACHEL.**—We have been favoured with a view of a portrait of this accomplished actress, which is about to pass into the hands of R. J. Lane, A.R.A., for the purpose of being lithographed. It is in water-colour by Mr. E. D. Smith, and represents Madlle. Rachel in her well-known character in *Les Horaces*. The artist has treated his work with consummate skill; his method of disposing of the contingents with which he has had to deal, is in the very best taste; and the resemblance perfect. This portrait is to be viewed by her Majesty during her sojourn at Woburn.

## VARIETIES.

**ART-UNION OF LONDON.**—The committee of this widely spreading Society, anxious to carry out the intention expressed in their last report of obtaining some unpublished plate from which impressions might be distributed forthwith to the subscribers, have purchased an engraving, now in process of execution by Mr. W. Chevalier, from 'The Saint's Day,' a picture by Mr. J. P. Knight, A.R.A., which was exhibited two or three seasons ago at the Royal Academy. It will be completed in the present year, and will be printed for the subscribers of 1841. Impressions from an engraving of Hilton's picture, 'The Return of Una,' which, as we stated in our June number, the committee had entrusted to Mr. Watt, will be appropriated to the subscribers of the forthcoming year 1842. So certain a return for the guinea subscribed will doubtless have the effect of increasing very greatly the already large list of members. Mr. Shenton's engraving of Mr. C. Landseer's 'Tired Huntsman,' is fast approaching to completion: this belongs to the subscribers of the year 1840. The exhibition of the pictures selected by prizeholders in the present year, promises to be one of much interest. It will take place at the Suffolk-street Gallery early in this month. Since the publication of our last number, Mr. Kearney's picture 'The Warning at Linlithgow,' at the New Water-Colour Society, selected by Mr. Gandell; Mr. Boddington's picture 'Felbrigge Heath, Norfolk,' at the Society of British Artists; and some others, have been added to the list. Mr. Macleise's painting 'The Sleeping Beauty,' selected from the Royal Academy by Mr. Fry, at the price of £300.

**EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.**—The following pictures have been sold from this exhibition:—

'The Guardians of the Flock,' F. Y. Hurlstone: Wynn Ellis, Esq., 200*l*. 'Sketch of the Opium-seller at Moufaloot,' W. Müller, Esq., 12*l*. 12*s*. 'Tower at Andernach, on the Rhine,' C. F. Tomkins: L. Pocock, Esq., 8*l*. 'A Trout Stream,' J. Barnicle: T. E. Johnson, Esq., 5*l*. 'Composition,' J. W. Allen: S. Naylor, Esq., 10*l*. 10*s*. 'Hudibras,' J. Holmes: J. Taylor, Esq., 150*l*. 'Western Jetty, Calais,' J. Wilson: B. Webster, Esq., 5*l*. 5*s*. 'Gli Amanti,' A. Egg: H.R.H. Prince Albert, 42*l*. 'The Poultry Cross, Salisbury,' E. Hassell: W. T. Copeland, Esq., 15*l*. 15*s*. 'Rustic Conduit,' J. W. Allen: Col. Sibthorp, 12*l*. 12*s*. 'Water Carrier,' P. F. Poole: Col. Sibthorp, 35*l*. 15*s*. 'View in the Isle of Wight,' C. F. Tomkins: Col. Sibthorp, 10*l*. 10*s*. 'On the Thames, off Purfleet,' A. Vickers: L. Pocock, Esq., 10*l*. 10*s*. 'The Frozen Ferry,' W. Müller: Sir G. Crew, 73*l*. 10*s*. 'Near Scarborough, Yorkshire,' T. Tennant: H.R.H. Prince Albert, 15*l*. 15*s*. 'R. Dadd: H. Farrer, 15*l*. 15*s*. 'On the Sands at Honfleur,' H. Lancaster: H.R.H. Prince Albert, 15*l*. 15*s*. 'View in Stirlingshire,' Miss C. Nasmyth: Sir G. Crew, Bart., 26*l*. 5*s*. 'Dancing Dolls,' A. Montague: Sir G. Crew, 26*l*. 5*s*. 'A Mail Coach in the reign of George the Fourth,' J. F. Herri- nger: Major Hussey, 40*l*. 'Gil Blas,' T. M. Joy: H.R.H. Prince Albert, 10*l*. 10*s*. 'Crossing the Brook,' E. Latilla: Sir W. Martyn, 60*l*. 'The Forum, Pompeii,' T. C. Hoffman: Earl of Egremont, 'Crossing the Heath,' E. Latilla: T. Campbell, Esq., 45*l*. 'English Wild Flowers,' Mrs. F. M'lan: G. Scamell, Esq., 30*l*. 'Scene from the Memoirs of the Count de Grammont,' E. M. Ward: Dr. M. Robertson, 40*l*. 'Water-mill,' J. Radford: Rev. R. Roy, 15*l*. 'Scheveling from the Sea,' J. Wilson: S. Angell, 26*l*. 5*s*. 'The Watering-place,' W. Shayer: S. Angell, 62*l*. 'Fish Girl of New Holland,' A. J. Woolmer: C. Dolman, 10*l*. 'Gil Blas and Camilla,' T. M. Joy: R. Clarke, 20*l*. 'View of Bellaggio, Lago di Como,' T. M. Richardson: R. Jarvis, Esq., 50*l*. 'On the Thames,' W. Fowler: J. Davis, 20*l*. 'The Baiting House,' E. Childs: C. Stevens, 25*l*. 'Huy, on the Meuse,' C. F. Tomkins: C. G. Jones, 60*l*. 'On the Lower Road to Woolwich,' J. Tennant: Lieut.-Col. Robinson, 25*l*. 'On the Coast, at Havre,' H. Lancaster: E. Shaw, Esq., 40*l*. 'The Cat Castle,' A. Clint: W. J. Newton, 15*l*. 'Oberwesel,' C. F. Tomkins: J. Godet, 50*l*. 'Napoleon in the act of addressing a British Sailor,' E. Latilla: Rev. D. Moore, 10*l*. 'Distant View of Erith,' J. Tennant: C. S. Compton, 35*l*. 'Landscape,' Miss Radcliff: G. Pilcher, 10*l*. 'Rembrandt's Daughter,' A. J. Woolmer: W. Brodrip, 30*l*. 'A Sand-bank, near Bletchingly,' J. W. Allen: J. S. Wreford, 30*l*. 'Moonlight,' E. Child: Major Turner, 35*l*. 'Outskirts of a Fair,' W. Shayer: T. Cammacc, 60*l*. 'Church of St. Pierre,' W. Fowler: E. R. Greenwood, 20*l*. 'On the River Bure,' J. B. Crome: F. R. Bray, 10*l*. 'The Pass of Llanberis,' W. C. Smith: J. Iliffe, 10*l*. 'On the Beach, near St. Leonard's,' A. Clint: C. Haghe, Esq., 30*l*. 'An Arcadian Nymph,' E. Latilla: W. R. Stanton, 100*l*. 'Landscape—Early Morning,' H. Cooke: J. P. Berkeley, Esq., 25*l*. 'Landscape—Evening,' H. Cooke: H. Sole, Esq., 15*l*. 'The Mort, or Death-Blast,' W. P.

Frith: H. Gritten, Esq., 15*l*. 15*s*. 'A Day Dream,' W. P. Frith: J. Alexander, Esq., 10*l*. 'Loitering,' W. Shayer: S. Hollyer, Esq., 12*l*. 'Waiting for Hire,' W. Shayer: — Wells, Esq., 21*l*. 'Fruit Girl,' A. J. Woolmer: R. Keeley, Esq., 10*l*. 'A French Fishwife,' R. J. Hamerton: F. I. Delafosse, Esq., 11*l*. 11*s*. 'Moyse Tower, on the Rhine,' C. F. Tomkins: F. I. Delafosse, Esq., 5*l*. 5*s*. 'Southampton, from below Itchen Ferry,' T. Deamer: F. I. Delafosse, Esq., 2*l*. 2*s*. 'Cowes, Isle of Wight,' T. Deamer: F. I. Delafosse, Esq., 2*l*. 2*s*. 'Twilight,' A. J. Woolmer: W. Hammond, Esq., 8*l*. 'A Girl Knitting,' R. J. Hamerton: W. Hammond, Esq., 10*l*. 10*s*. 'The Mother,' J. W. King: S. Hollyer, Esq., 10*l*. 10*s*. 'The Witch of Datchworth Green,' T. Clater: Miss Borough, 30*l*. 'A Magdalen,' H. Le June: T. Smith, Esq., 10*l*. 10*s*. 'Boy blowing Bubbles,' G. Stevens: J. Taylor, Esq., 15*l*. 15*s*. 'At Sunning-hill,' J. W. Allen: T. M'Dougal, 10*l*. 'Melun, on the Seine,' H. M. Anthony: — M'Gowran, 3*l*. 'On the River Maas,' J. B. Crome: E. Cotton, 10*l*. 'A Welsh Mill,' A. Montague: Mrs. T. Cook, 10*l*. 10*s*. 'The Watering-place,' J. Tennant: G. Wartonby, 45*l*. 'Summer,' H. Jutsum: C. Ainsworth, 10*l*. 'Titania Sleeping,' A. J. Woolmer: Captain Toriano, 18*l*. 18*s*. 'Hotel de Ville,' C. F. Tomkins: R. Nunn, Esq., 60*l*. 'Woodcutters, Boshill,' J. W. Allen: W. Robins, 20*l*. 'Beacon Vale,' W. Shayer: Miss Lovegrove, 50*l*. 'The Pet Rabbit,' G. Stevens: C. Goodwyn, Esq., 25*l*. 'On the Medway,' J. Tennant: E. Lomax, 40*l*. 'The Novel-reading Housemaid,' T. Smart: B. Bernasconi, Esq., 29*l*. 5*s*. 'The Interior of Gloucester Cathedral,' E. Hassell: H. G. King, 50*l*. 'The Orphan Girl,' G. Stevens: Earl of Coventry, 70*l*. 'The Forsaken,' E. Latilla: Earl of Coventry, 40*l*. 'Happy Infant Boy,' G. Stevens: Earl of Coventry, 70*l*. 'Study of Flowers,' Mrs. Withers: D. R. Watts, 15*l*. 15*s*. 'Love's Young Dream,' W. S. P. Henderson: J. Scoones, 10*l*. 'Working Common,' J. W. Allen: R. Sale, 25*l*. 'Scene from "As You Like It,"' A. J. Woolmer: J. Ball, 60*l*. 'Bala Lake,' A. Clint: C. Lucy, 15*l*. 'At Tynewmouth,' T. H. Hair: A. Dawson, 20*l*. 'At Havre,' H. Lancaster: S. Gent, Esq., 4*l*. 'Brisk Gale,' W. C. Smith: T. Harper, 25*l*. 'Landscape,' Miss Radcliff: Miss Stanier, 20*l*. 'Felbrigge Heath,' H. J. Boddington: S. W. Brown, 20*l*.

**THE TWO FRANCIS.**—These pictures have been lately placed in the National Gallery. It will be remembered that they were selected from the Lucca collection, and purchased by Government for £3500. Both pictures are in a high state of preservation, and are distinguished in many parts by much brilliancy and power; but their manner in other respects carries us back to that period in Art when the prevailing timidity of execution had not yet been overcome by a knowledge of that truth which afterwards gave a general freedom and promptitude of touch: they are, however, most valuable specimens of early art. Francesco Francia, or Raibolini, may be termed the Quentino of Italy. He was born at Bologna in 1450, and in the early part of his life he followed the business of a goldsmith and medallist; and Vasari says that some of his coins were equal to those of the celebrated Caradosi of Milan. At what precise period he commenced the study of painting is not known; but he is said to have received his instruction in the art from Marco Zoppo, when he had already attained the age of virility, and in a few years made such progress that he was able to compete with the ablest painters of Ferrara and Modena. It is probable that he continued the profession of a goldsmith for some years after he began the practice of painting, as many of his works at Bologna are inscribed *Franciscus Francia Aurifex*, and on one of the pictures above described is written *Francis Aurifex Boldonensis*. His first style resembled that of Perugino in composition and colouring so much, that some of his pictures have been ascribed to him; but his style was afterwards aggrandized by studying the works of Andrea Mantegna. Cavazzoni, who has written a treatise on the pictures at Bologna, asserts that Raffaele profited by the works of Francia; the probability of this is set aside by the earliest works of Raffaele at Perugia, which are already superior to those of Francia. Vasari says that Raffaele having painted his celebrated picture of 'St. Cecilia,' for the church of St. Giovanni in Monte, at Bologna, addressed it, in 1518, to the care of F. Francia, requesting him to correct any defect he might discover in it, previous to its being fixed in the place for which it was intended; and attributes the death of Francia in that year to the mortification and chagrin he felt at the sight of a performance so superior to everything he had seen. Malvasia, however, detects the falsity of this statement, by proving that he lived several years after that period; and in 1522 painted his most celebrated picture of 'St. Sebastian,' which became the

model of study to the Caracci and their school. The precise time of his death is not known.

In addition to the 'Francias,' the Gallery has been further enriched by two other valuable pictures, the one by Pietro Perugino, the subject of which is the 'Virgin, Child, and St. John,' from the collection of Mr. Beckford; and the other the well-known group of Angels' Heads, the portrait, in varied positions, of the infant daughter of Lady W. Gordon.

**THE ROYAL INSTITUTE OF BRITISH ARCHITECTS.**—The closing meeting of the session was held on the 19th of July, when the essay by Mr. E. Hall on "Iron Roofs," to which the medal of the Institute has been awarded, was read. The medal was presented to the author of the paper in question by the president, Earl de Grey, at the previous meeting, on which occasion a very valuable paper on the mechanical construction of the vaults of the middle ages was read by the Rev. R. Willis, Jacksonian professor in the University of Cambridge. Several very interesting papers have been read since we last noticed the proceedings of the Institute, especially those on the state of Windsor Castle previously to the Fourteenth Century, by Mr. Poynter; on the temples of Greece and Rome by the Rev. R. Burgess, B.D.; and on the timber roofs of the middle ages by Mr. Thos. Morris: still we are compelled to observe that there has not been apparent that degree of energy and spirit which used formerly to characterize the meetings of this Society. Whether it be the fault of the officers or of the members at large we will not pretend to say, but strongly urge on all the necessity of cordial co-operation to this end, if they would maintain for the Institute the distinguished position which it at present holds, both at home and abroad. The publication of the second part of the transactions has been long delayed; it is to be hoped, however, that its contents when it does appear will compensate for the procrastination.

**THE LATE SIR DAVID WILKIE.**—The directors of the Artists' General Benevolent Institution, on holding their half-yearly meeting, passed the following resolution, a copy of which was forwarded to T. Wilkie, Esq.:—"That this meeting receive the melancholy announcement of the death of their valued friend and vice-president, Sir David Wilkie, R.A., with the greatest regret, and they most deeply sympathize with his bereaved relatives and the nation in general, for the irreparable loss of so distinguished an artist and so excellent a man; at the same time the directors desire to record their high and grateful sense of the eminent services rendered to this Institution by Sir David Wilkie as one of its vice-presidents, both by his liberal contributions and by his zealous efforts upon all occasions to promote its interest and prosperity." The meeting then proceeded to consider 20 cases from distressed artists, their widows, and orphans, which they relieved by sums amounting to £261, independent of £150 which had been granted to six urgent cases during the last six months.

The various sketches of the late Sir David Wilkie, including those which he made during his tour in the East, have been consigned to Messrs. Christie and Manson, and will probably be brought to the hammer early in the next spring. The portraits of the distinguished personages which he painted during his absence, will be copied in this country, and returned to the respective sitters. A meeting of his friends and admirers will shortly be called for the purpose of considering the erection of some permanent mark of the estimation in which that lamented artist was held. (See advertisement.)

**MR. KNIGHT'S COLLECTION OF ENGRAVINGS.**—On Monday the 19th ult. and the five following days, an extensive and valuable assemblage of ancient engravings and drawings, the property of John Knight, Esq., was sold by auction by Mr. Phillips, at his rooms in Bond-street. This collection was formed during the latter part of the last century by the proprietor himself, the brother of Payne Knight, Esq., who left his collection to the British Museum. Among the drawings by the masters of the Dutch and Flemish schools, were many by Rembrandt, Vandyke, and others the most celebrated; and to the specimens of the Italian and French schools the names of the first masters attach. A drawing by Claude, 'St. John Preaching,' a landscape from the collections

of Richardson and Hillier, was sold for £22 1s.; a classical landscape by the same hand, for £42; 'The Sermon on the Mount,' containing numerous figures, from the collection of Sir Joshua Reynolds, realized £24 3s.; and a landscape with figures shooting with the bow, £54 12s. The two latter were also by Claude. The prices at which some of the works of this collection were sold were so high, that it is the wish of several of the purchasers that their names should not be given. Of the etchings of Rembrandt, 'The Hundred Guilder' realized £27 6s.; 'St. Jerome,' unfinished, £26 5s.; 'Renier Anso,' in the first state, with the original white margin at bottom (purchased by Messrs. Graves), £100; and 'Utenbogaert, the Minister,' £25. A set of the Passion of our Lord, among the rarest of the engravings of Lucas Van Leyden, was sold for £12. A pair of oval drawings by S. Rosa, for £23 2s. Some of the engravings of Marc Antonio returned considerable prices, as 'The Israelites gathering Manna,' £22 1s.; a 'Descent from the Cross,' £36 15s.; 'St. Paul Preaching at Athens' (although damaged), £31 10s.; 'St. Cecilia,' £29; 'The Martyrdom of St. Felicitas' (from Sir P. Lely's collection), £68 5s.; and 'Mount Parnassus,' £63. Many of the drawings ascribed to Raffaele were remarkably beautiful, and some of undoubted originality.—The Madonna and Infant was sold for £26 5s.; 'Christ Disputing with the Doctors,' for £21; and a study for part of the celebrated composition of the 'Dead Christ,' £120 15s.; 'Christ Crowning the Virgin,' £46 4s.; 'One of the Sybils,' £29 8s.; and a portfolio containing the paintings and decorations of the Loggia of the Vatican, engraved by Ottaviani and Volpato, for £76. The collection has been principally disposed of to dealers, who purchased by commission.

**THE UNIQUE BIBLE.**—The ultimate possession of the 'Unique Bible' is not yet determined. But for the unexpected dissolution of Parliament the subscription list would have been, perhaps, already full; it is, however, gradually on the increase, and, when completed, ten days' notice will be given to the subscribers of the day fixed upon for determining to which of them this valuable prize shall fall.

**THE BRITISH MUSEUM.**—The trustees of the Museum have authorized the purchase of some of the finest prints of the collection of Mr. Harding, of Finchley; a collector of much taste, and well-grounded experience in the works of the ancient masters. £2300 is the price at which this acquisition has been made.

**PHOTOGRAPHIC PORTRAITS.—BEARD V. CLAUDET.**—On the 15th ult. a motion was made in the Vice-Chancellor's Court for an injunction to restrain the defendant, Antoine Claudet, from using or exercising any portion of the apparatus or instruments called the "Daguerreotype," which the plaintiff claimed to be entitled to by assignment from Miles Berry, the trustee and agent of Messrs. Daguerre and Niepce, in whose name a patent had been granted for the protection of the invention in England. The patent was granted to Berry in August 1839, for a "new and improved method of obtaining the spontaneous reproduction of all images received on the focus of the camera obscura," and soon afterwards Berry granted a licence to the defendant to use a limited portion of the apparatus in consideration of the sum of £200. The licence, which was by indenture, contained a clause that if at any time during the continuance of the letters patent and the licence, any contract or arrangement should be entered into by or on behalf of Daguerre and Niepce with the Government or any other person for the purchase of the letters patent, it should be compulsory on them to repurchase the interest of Claudet on paying him the amount of the consideration money originally paid. In June last Berry assigned the whole of the patent to the plaintiff Beard, including the interest licensed to Claudet, and tendered him £200 for the repurchase of his licence, and called upon him to assign it to Beard. Claudet, however, refused, contending the clause did not make it compulsory upon him to resell his interest, though it imposed an obligation on the patentee to repurchase it in the event of assigning the whole. The plaintiff, therefore, instituted the present suit, insisting the obligation to purchase and to sell was mutual, and now moved for an injunction to restrain the defendant from using the invention.

Some affidavits were read to show the intention of the parties, but the question turned solely upon the construction of the licence.—Mr. Bruce and Mr. Torriano moved for the injunction, and Mr. Stuart and Mr. Dewry were counsel for Claudet. The Vice-Chancellor said, the matter must be decided upon the construction of the instrument, though he admitted, if a bill had been filed to rectify a mistake, the Court might have entered into the consideration of the circumstances of the mistake and the intention of the parties. Upon the question of construction, his Honour was of opinion there was no foundation for holding that the term "compulsory" meant that it should be compulsory only on the patentee to purchase if the licentiate wished it. If the parties had such a meaning floating in their minds, they had not so expressed it. In this opinion, therefore, it was a case for an injunction.

**FIRE AT THE KINEORAMA EXHIBITION.**—On the evening of the 20th ult., at about 20 minutes before five o'clock, considerable sensation was produced amongst the inhabitants of Pall-mall by a fire breaking out in the Kineorama, or pictorial exhibition, the property of Mr. Charles Marshall, the artist, situate on the south side of the mall, near the Senior United Service Club-house. It happened just at the commencement of the afternoon exhibition, when there was, fortunately, plenty of assistance at hand, and but for that circumstance, the destruction of the premises, which are very extensive, would inevitably have taken place. It appears that the views, which are exhibited in a panoramic form, were illuminated by 150 jets of gas from the top of the stage; and for the purpose of throwing the proper shades of light on the views, a piece of machinery called a medium acted underneath the gas by means of pulleys, being comprised of several large frames of coloured oiled silk. By some means unknown one of these frames came in contact with the gas-burners, and by the time it was discovered the whole were in flames. The utmost confusion ensued amongst those employed on the premises, as well as amongst the audience seated in front of the stage, which consisted only of ladies, amongst whom was the Countess of Blessington; but fortunately they escaped into the street without sustaining any injury. For some time the fire presented a most alarming aspect, and it was thought impossible that it could be checked, for the gallery was in a blaze from top to bottom. Messengers were sent for the assistance of the engines, and in the course of a few minutes those belonging to the brigade from the stations in Chandos-street, King-street, Wells-street, and Holborn, arrived, and were got in readiness; but their aid was not brought into requisition, the workmen belonging to the exhibition succeeding in extinguishing the fire. The damage is wholly confined to the gallery; and though the drapery, &c., is entirely consumed, the pictures have fortunately escaped injury.

**YORK HOUSE.**—This noble mansion, the residence of his Grace the Duke of Sutherland, is one of the first class town palaces of our nobility; and in the taste which has prescribed the interior decorations, and the regal magnificence with which they have been carried out, York House excels every other dwelling of its own class, and vies on a small scale with some of the most celebrated Royal palaces of Europe. Many alterations and improvements have been lately effected, and the embellishments of the dining-room are still in progress. The furniture generally, is of no particular style, but in the whole there is to be found a mingling of everything in the best manner of the best epochs of taste. There is much novelty and elegance of design in many objects that are familiar to us in set forms: for instance, the ottomans, couches, *causeuses*, &c., besides being made of the most costly materials, are of new and uncommon patterns; and some of them, in the place of plain or carved rosewood or mahogany, are ornamented in white enamel with classical subjects in bas-relief of perfect execution. The ceilings of some of the rooms, particularly of the banquet-room, are enriched with gilt mouldings of a florid character, generally devised and disposed with much lightness and grace, notwithstanding the profusion of gilt-work. The gallery, which extends the length of the house, is lighted from above, and by windows at the extremities; the flooring is a *parquet* of English

oak, equal in solidity and compactness to anything of the kind to be met with either in the Tuileries or at Versailles. The pictures are not numerous, but they are of first-rate excellence. Among those of the Italian schools, is a singular work by Correggio, exhibiting, in its want of finish, as well as in style, a powerful contrast with those pictures by which his fame was achieved: its history is singular, for it is said to have been used as a sign-board. There is also one of the most perfect candlelight effects we have ever seen, by Gherardo della Notte; some portraits and other works by Vandyke, Morone, Paul Veronese, Rubens, Guido, Andrea del Sarto, &c. The productions of the English school are very few, but they are well known: as for instance, Danby's 'Pillar of Light,' Wilkie's 'Breakfast Table,' and some others.

**SIR THOMAS LAWRENCE'S PICTURE OF HAMLET.**—About the year 1812 the above celebrated picture was exhibited, and for sale, at the European Museum, King-street, St. James's, London. Mr. Robert Ashby the engraver, of Lombard-street, on visiting the gallery was surprised to see so fine a specimen of modern art so situated, and inquired of the keeper as to the circumstance which led to its degradation; from whom he learnt that Mr. Maddocks, M.P., had previously purchased it with the intention of placing it as an altar-piece in a church, which he had recently erected in a village called Tre Madoc, in Wales; but the Bishop of the diocese having expressed his disapproval of its being placed in the church, the purpose of Mr. Maddocks was defeated, and he sent the picture for sale as above. The price demanded was 200 guineas, which Mr. Ashby agreed to give; at the same time observing that if any other purchaser offered, during the time of the gallery remaining open, he would relinquish his right; his motive being solely intended to prevent the picture being returned unsold: the result was that Mr. Ashby became the purchaser at the price stated, and retained it in his possession for a time, when Mr. Lawrence (afterwards Sir Thomas), wrote to him (Mr. A.); inquiring whether he would part with the picture, he (Mr. L.), being desirous of obtaining it for the then Marquis of Abercorn; who had designed to place it in the saloon at his seat at Stanmore. Mr. Ashby immediately consented to the re-sale, at the same sum which he had paid; much gratified at the prospect of its being so suitably placed. Here another interruption occurred: the Marquis of Abercorn died, and with him the project of removing the Hamlet to Stanmore; from this time it remained in the possession of Mr. Lawrence, until he obtained the patronage of George IV.; who displayed his liberality and fine taste by purchasing it for 1000 guineas; and it now forms a distinguished place in the National Gallery. [From a correspondent.]

**BUSTS OF THE TWELVE CÆSARS.**—About the year 1518 twelve busts of the Roman Emperors were sent by Pope Leo X. to Cardinal Wolsey, to decorate his palace of Hampton Court. These works, which are the size of life, were executed in *terra cotta* and finished with a beautiful enamel. Eight of them have always stood in the first and second courts of the palace, but the remaining four, necessary to complete the series, have been for many years missing; and it is not until recently that three of them have been recovered, notwithstanding every exertion on the part of the authorities of the palace, before and during the late reigns, particularly that of George IV. Accident, however, discovered a few months ago one of the four lost busts, in a good state of preservation, in a back room which is attached to one of the private apartments at Hampton Court. Since the discovery of the first, a second has been found, by mere chance also, but not on this occasion at Hampton Court; but in a small cottage close to the stag-paddocks in Windsor Great Park, which has just been placed in a state of repair for the occupation of one of Prince Albert's gamekeepers. The workmen in the course of their labours found a bust fixed in the wall, about ten feet from the ground; and upon this discovery being made known to a gentleman attached to the Court, he repaired to the cottage, and found that it was one of the four long-lost busts, perfectly free from injury, and otherwise very well preserved. It was immediately removed and sent to Hampton Court. Still more recently, another

of these busts has been found by Mr. Jesse, the surveyor of woods and works at one of the Royal lodges in the Great Park, known as World's-end Lodge, and inhabited by one of the park-keepers. This must have occupied the place in which it was found for upwards of a century. It had been let into the outer-wall, at a height of about ten or twelve feet from the ground, and has always been considered by the persons living at the lodge to be a bust of Queen Anne! Being esteemed of no more value than any common freestone ornament, it was frequently made a mark by idle boys, and pelted with stones and clay. It has, however, suffered but little from this exposure, and the neglect and rough usage to which it has been so long subjected, the extent of the mischief being confined to this partial damage of the face of the enamel, which is here and there chipped and broken. In all other respects it is perfect. It has been carefully removed from the building, and forwarded to Hampton-court Palace, where, with the others above alluded to, it will be placed in a niche in one of the courts. As it may be conceived, the recovery of three of the lost busts has given a new stimulus to the search for perfecting the series; and it is confidently hoped, from the inquiries that are instituted, that the last will not be long wanting to complete the number. A high value is set upon these works, even imperfect as the set is; and this of course will be much enhanced should the present inquiry terminate so successfully as to restore that which is still missing.

## CORRESPONDENCE.

### ART-UNION PRIZES.

**SIR,**—The last number of your very useful periodical contains a just denunciation of those shareholders in the Art-Union who are more anxious to put money in their purses than pictures on their walls; and of those artists who abet a species of jobbing, which, unless checked, must in the end be absolutely fatal to the objects for which that excellent Institution was established. But will you allow me to suggest, that such jobbing is a natural consequence of the rule laid down by the Art-Union, which restricts the shareholder to the purchase of a single picture. Take for example the case of a winner of a £75 share. It happens (and nothing is more likely) that no one of the exhibitions contains a picture at that price, or that the prize-holder prefers to all others a picture for which the artist asks but £50. But if he selects his picture under the present regulation, he loses £25—a whole third of his prize. Now as he may subscribe all his life to the Union and never again have the good luck to obtain any prize whatever, he naturally winces under the idea of such a loss, and sets about thinking how he may avert it. He goes accordingly to the artist whose picture he desires to possess, acquaints him with his dilemma; and the artist, a man not sufficiently employed to afford to lose a customer for his picture, agrees to ask £75 for his work from the Union upon the understanding that the £25 difference is handed over to the shareholder. It is useless to declaim against the unhand-someness (not to use a harsher term) of this proceeding. The selfishness of our nature on the one hand, and necessity on the other, will outweigh the finest homily that ever was written; and the only real remedy is not to subject either shareholder or artist to their influence.

I know it will be answered that the object of the Institution is the promotion of the higher classes of Art. But it seems to me that the same end would be equally well attained, by permitting the shareholder to select not more than two pictures, and that such a permission would in effect be carrying out the views of the Institution, in extending the patronage of Art and dispersing more widely works calculated to create a healthy taste. A £75 shareholder might then either expend the whole of his prize in a single picture, or he might take a large one at £50, and a smaller at £25. I need hardly tell you Sir, that price is not an inevitable test of merit; and it is surely hard that, because I may have discovered the worth of an obscure, and therefore a low-priced picture, I should be made to smart for my judgment by the lopping off a third or more of my lawful prize.

Allow me, before I close my letter, to point out one other ill-effect which I think the present rule likely to have. The standard of price among artists will be the amount of the prizes offered by the Art-Union. A picture in one of the exhibitions takes my fancy, and I make application to the painter for his price. He takes

me, erroneously, for a shareholder in the Art-Union, and instead of asking me £50, the sum which he would otherwise set upon his work, he demands £75. As the sum is either more than I can afford to lay out, or more than the picture seems to me to be fairly worth, I walk away, and the sale of the picture is lost.

These are arguments I really think of some weight; and as nobody can doubt that the committee of the Union are influenced by the best motives, and will readily change any rule which they may be satisfied is calculated to obstruct their excellent object, you will perhaps allow me to submit this letter to their consideration, through the medium of your columns.

Yours, &c. VANDYKE BROWN.

### A HINT TO THE COMMITTEE OF THE LONDON ART-UNION.

**SIR,**—Will you allow a member of the Art-Union of London a corner in your valuable Magazine, to suggest a new appropriation of a certain portion of the funds not arising from the annual subscription? such as the following:—

1. *The value of unclaimed prizes* (such as Lord Prudhoe's £15 prize last year), or the balance when pictures are chosen below the value of the prize.

2. Sums received from new subscribers for copies of back engravings (amounting last year to £25).

3. (This year). Profits of 'Denint,' a lithograph presented to the Society.

These sums have been hitherto added to the common stock; I would suggest that they should form a separate fund, and be allowed to accumulate till they are sufficient to purchase some valuable modern picture to be presented to the national collection: there would be no injustice in this to any subscriber; it would prove that the Society is not of a mercenary character. The object of the Society, the encouragement of Art, would be carried out; and it would be a gratification to many prize-holders, who might not feel disposed to select pictures, to feel that by giving up their right to choose, they were promoting such an object instead of, perhaps next year, enabling somebody of taste to purchase some second-rate picture. Yours, &c.

A PRIZE-HOLDER IN THE ART-UNION.

### PIRACY OF WORKS IN SCULPTURE.

**SIR,**—In a late number of the 'ART-UNION,' you advocated the cause of an artist (a painter) whose works had been copied and sold to his detriment. May I be so bold as to call your attention to the injury sculptors also receive by the same means, and with equal (if not greater) need of redress, by reason of the more frequent and easy opportunities that offer for their works being pirated and multiplied.

In our case, I believe, an act exists, by which compensation may be obtained by action; but, unfortunately, the parties generally engaged in pirating the works of sculptors, are too poor to admit of artists risking the expence of law proceedings, and this being generally known amongst "the trade," gives a kind of independence and fearlessness in appropriating the works of artists to their own profit.

Painting and its means are doubtless far better understood than the putting up of chalk figures; it will, therefore, I hope, not be out of place if I attempt to explain the means by which sculpture is so likely to be pirated, and the mode that might be adopted to prevent, or, to a very great degree, diminish, it.

Sculptors, in almost every case, are obliged to trust their works with the moulder, for transferring the clay to plaster; and, again, when a repetition of the model is required, both of which (particularly the latter) require time, sufficient opportunity offers for a dishonest person to procure for himself, and convey from the studio, a cast or impression of any work he may be engaged upon; and, if a skilful, as well as dishonest man, any other work of small dimensions he may think worthy his notice; besides which, it not unfrequently happens that, for convenience, the moulder is required to proceed with the work at his own residence, and then the opportunity for reserving a cast is tenfold more easy. No doubt the publication of works by this means may do good in some cases, and prove a kind of advertisement; but it generally happens when works by younger and less known artists are pirated, they are sold as the productions of some foreign artist, such as Thorwaldsen, or some absent English artist, such as Gibson, &c., doubtless injuring their fame and at once destroying the advantage popularity might give the artist; besides which, it not unfrequently occurs, that sculptors are requested, by purchasers, to keep the models private, and the injury may then (by piracy) be considerable, as the artist might possibly be considered to participate in the profit. Under these

circumstances, I think some power should be given to the owner to stop the publication of his works, should he think proper, without the certainty of being put to great expense by so doing, which the present act compels, unless the pirating party be sufficiently wealthy to pay damages; and the best mode of avoiding this, I believe, would be an act empowering magistrates to summon the offending party, and, on the oath of the artist, or some other sufficient evidence, cause the mould to be destroyed, or inflict a slight punishment sufficient to deter others. In other words, I would say, let a more speedy and less expensive mode be adopted for preventing the pirating both of pictures and sculptures.—I have the honour to be, &c.

Jan. 23, 1841.

E. G. P.

## NATIONAL GALLERY.

SIR,—I have just seen a notice in one of your late numbers respecting the insects in the paste used in securing the 'Sebastian del Piombo' in the National Gallery; and a remark by Mr. Westwood, doubting the propriety of using corrosive sublimate in the paste, lest it should prove detrimental to the picture. Allow me Sir, to suggest the use of quassia instead of the sublimate, which would not be in the least prejudicial to the picture, and would effectually prevent the attacks complained of.

Yours, &amp;c.

July 12.

G. M. J.

## MATOO VARNISH.

SIR,—In the number of your journal for August 1840, a correspondent, who signs himself "A Student," in advocating the use of *Matoo Varnish* in painting, says:—"I have used it for these eight years, and can safely assert that none of my pictures done with it have turned yellow or cracked; and that the surface has never been chilled in all this time. Possessing the advantages of elasticity and the absence of colouring matter in it, it is peculiarly suitable to the purposes of the painter; and though it makes magyallup with common drying oil slowly, it nevertheless does make it." I was induced by this eulogium to get some of it sent to me from London, as it is utterly unknown in this part of the world, and have made several attempts to use it. I have not been able, however, to get it to form magyallup with drying oil. The compound has merely skinned over, and on breaking this skin it has remained perfected liquid beneath. Perhaps there is some peculiarity in the process, or some precautions may require to be attended to.

Might I ask the favour of the insertion of this communication in a corner of your valuable paper, in the hope that it may meet the eye of "A Student," and that he may have the kindness to communicate the particulars of the process for forming magyallup.

Yours, &amp;c.

Edinburgh, June 26.

A FELLOW-STUDENT.

## THE LATE G. CHAMBERS.

SIR,—You will greatly oblige me by stating that the passage in the work entitled "The Life of G. Chambers," relating to a subscription having been made for the widow of my late lamented son, Mr. Alfred G. Vickers, is utterly false and without a shadow of foundation.

Yours, &amp;c.,

ALFRED VICKERS.

7, Islington-green, July 12.

## NEGLECTED ENGRAVERS.

SIR,—Having chanced to see a copper-plate, still in an excellent state of preservation, although bearing the date of 1798, signed "James Stow, Hammersmith;" and having been struck with the bold, classical, and beautiful style in which it was executed, I searched for the engraver's name in Strutt's, Bryan's, and Gould's dictionaries, but in vain. What I had considered at first as an unaccountable negligence was soon explained to me by a similar omission of names, such as those of Meadows, Howard, Sharp, Collier, &c., whose works rank among the *chef-d'œuvres* of modern engraving. Although my opinion of the care with which the last of the above named catalogues was compiled, had been settled by this discovery, my curiosity as to the artistical life and labours of Stow remained still unsatisfied; and I therefore resolved to apply for information to your valuable journal, whose able contributors cannot be ignorant of the existence and works of an artist, whom I consider as having been one of the ornaments of the Fine Arts in England. The revival of an undeservedly forgotten name, of an extinct ray of the aureola with which the Fine Arts crown the proud head of Great Britain, cannot be uninteresting to the British public; and I shall not be the only one grateful for the publication of such information as you may happen to possess respecting the late James Stow, line engraver, and—as I understand—pupil of your great Bartolozzi.—Yours, &c.

A FOREIGN ADMIRER OF BRITISH ENGRAVING.

## REVIEWS.

THE HIGHLAND DROVERS DEPARTING FOR THE SOUTH. Painted by EDWIN LANDSEER, R.A. Engraved by J. H. WATT. Publishers, HENRY GRAVES and Co.

The completion of this admirable engraving having been accomplished only immediately before the publication of the last number of the ART-UNION, we had but just an opportunity of announcing its appearance; it remains for us, therefore, to do it justice this month. The plate has been four years in the hands of the engraver; we have from time to time noted with the utmost satisfaction the progress of the work, and the result has justified our best hopes. Next to his "canine intelligences," Edwin Landseer's strength lies in scenes like these; and this is one of the very best of its kind that he ever painted. The whole consists of a wonderfully powerful foreground group, in direct relation with a landscape background; the painter has therefore presented his figures under that daylight effect, in the management of which he so eminently excels. There is no interior; yet the home of the departing herds is sufficiently made out. Home is clearly the first chapter of the story; departure is the next; and the conclusion of the well-told tale is—absence. It is one of those works which can afford to dispense with the title given to it by the author; for every circumstance of the composition speaks of "the departure." The grouping is constituted of an assemblage of figures, comprehending every period of human life, from infancy to extreme old age. The artist has been a keen observer of the habits of the people whom he has here painted, as is evinced by the occupation in which he has busied the presiding matron—that of filling the flagon of the wayfarer with the accustomed "mountain dew," that the *deuch an dorroch* may yet be forthcoming, though not from the hand of native hospitality. The eye rests upon the stalwart figure of a drover, whose volume of thigh and muscle is, in appearance, augmented by the national plaid which he bears so stoutly athwart him: he is a well-grown sample of these neatherds of the north country, who, with the unknown tongue prevalent among themselves, so generally excite the wonder of the southern far within the border counties. The athletic mould of this man contrasts forcibly with the wasted and feeble grandire, who sits absorbed in the enjoyment of his gew-gaw pipe, and unmoved by the bustle around him. Nothing can exceed the truth and reality of the latter figure, whose eye the lustre of youth has forsaken, and to whose limbs an unusually protracted life has brought its inevitable rigidity. The morning is chill, and a careful daughter of the *clachan* is covering the shoulders of the deaf old man, whom it becomes not to be in the house upon the momentous occasion of a departure for the south. Although there is no incident in the entire engraving which does not aid—which does not throw in its proverb, to help the history, we must yet especially mention two figures sitting a little aside, and occupied with each other. The one is a young drover, and the other his affianced mistress; and so skilfully are they circumstanced, that we are at no loss to understand the subject of the conversation just before the final leave-taking. Nothing, we repeat, that has ever been done in its particular style of Art, can surpass the interest of "The Highland Drovers;" and this we are assuredly justified in saying of one of the best works of Landseer, executed in the very best style of line engraving. Mr. Watt has succeeded to a miracle in his versions of every object in the composition, each being represented so happily with its own peculiar texture, as to enhance the truth of the entire effect. The herds are already on the move, and the eye is carried into the fading distance by the extended lines of black cattle. We may confidently affirm, that this is the most beautiful production of the burin we have ever seen.

HER MAJESTY QUEEN ADELAIDE. Painter, ROSS. Engraver, RYALL. Publisher, McLEAN.

This is a portrait engraved from a miniature by Mr. Ross, and, as one of the best engravings of its class, does ample justice to the eminent ability of the painter. Her Majesty is represented seated,

and is plainly attired in black, having the head covered, and the hair arranged at the sides in simple plaits. As a resemblance the work is perfect; there is nothing to detract from the chief interest, which is as it should be—settled in the face. The play of the features, and their perfect coincidence and harmony, have produced a refined and faithful expression of that benevolence which is known to be unwearied in the exercise of good works. The general management of the portrait is in the best taste—it is full of character, one of the great perfections of Art; and in its particular character we read the many virtues which shone scarcely more brilliantly on a throne than in private life.

AN ILLUSTRATIVE KEY TO THE POLITICAL SKETCHES OF H. B. Publisher, McLEAN.

This volume will be a most acceptable and amusing accompaniment to the sketches of this highly-gifted artist, who continues, even after a series of years, to deal forth with yet unseared freshness, his pictured wit, in pun, fable, allegory, and better than all, parody, classical and also vulgar, but not the less excellent and apposite. This book contains explanations of not less than 600 caricatures, and the cry is, still "they come!" We have been for years accustomed to look periodically for these sketches (it is true they are numbered, but who looks at the number?), yet the announcement of the sum of H. B.'s labours, at least the enumeration thus far—600 political sketches, distinct from each other in subject, generally equal in excellence, and of a never-flagging public interest—declares a power of imagination of which no similar example has ever existed in his own vein, and but few in any other. Since the commencement of H. B.'s game, he has been deprived by that sure winner, Death, of some of the most remarkable of the pieces that originally figured on his board; but another king and queen, and other knights, bishops, and pawns are supplied, and his moves are as ingenious as ever, and bid fair to continue so until finally check-mated by the above grim antagonist, unless, before this event, he should gracefully finish, as Hogarth did, with a tail-piece. These sketches have now long delighted the world, and none more than those who figure in them; they are distinguished by an especial twofold excellence—first, the subjects themselves, and the piquancy of their treatment;—and again, the singular fidelity of portraiture preserved throughout the series; for the artist has brought his models carefully down the stream of time, as must strike all who may have an opportunity of comparing his portraits of living statesmen with those of their former selves executed ten or eleven years ago. To persons possessed of those sketches they will now be much more valuable since the publication of this key; for, of course, those who play second and third-rate parts in them are not so well known as the stars who play the leading characters. H. B. has extinguished all that which formerly used to be known as "caricature," for assuredly nothing so flat and vapid can ever again be relished after these sketches.

ENGRAVINGS AFTER THE BEST PICTURES OF THE GREAT MASTERS. Part III. London: COLNAGHI and PUCKLE, and ACKERMANN and Co. Edinburgh: ALEXANDER HILL.

The third part of this work contains, like its predecessors, three engravings of three excellent subjects; viz., 'Paul Preaching at Athens,' after Raphael; 'Æneas Landing in Italy,' after Claude; and the 'Conversion of St. Paul,' after Reubens. These are well known and highly-appreciated subjects, and as such cannot fail to be interesting to all lovers of Art. It so happens, however, that from some accident we suppose, the only copy we have seen seems rather less carefully got up than the former ones: a circumstance which we deeply regret, feeling as we do a lively desire for the success the work. We sincerely hope that this fault appertains only to the single copy which we have seen, and is rather to be accounted for by supposing that that copy was unfinished, and had accidentally come to our hands than that it fairly represented the work. Under almost any circumstances the publication has our best wishes for its success.

**THE PARK AND THE FOREST.** Drawn on Stone by J. D. HARDING. Published by M'LEAN.

This long expected work by Mr. Harding has at length appeared, and it will be found to exceed everything that has gone before it, as well by its own author, as by every other artist who has attempted to delineate with the point, that kind of scenery of which trees constitute the prime objects. The work in size is what is termed imperial folio, and consists of a series of 26 landscape plates, subservient in effect to a perfect development of the respective characters of the noble trees which are presented as their main features. With a few exceptions the scenery is English, and much as we have seen of late of the landscape of other countries, there is yet none possessing a charm so potent as those home scenes to which all real love of simple nature must unconditionally yield. We find here no attempt at a minute definition of foliage, which is the province rather of the botanist than of the artist; but the trees are described by a most successful imitation of their natural massing, in that breadth of treatment and freedom of handling, for which Mr. Harding has been so long celebrated. In these superb lithographs, trees of different kinds are occasionally found grouped together, and then the fidelity and success with which nature has been followed are strikingly apparent in the contrast. Ordinary lithography is in this production far outdone; the chalk being so skillfully blended in the work, that every plate has the appearance of a highly wrought bistre drawing, for it must be understood that the whole are finished with a tint. An inspection of the work shows a style of lithography different from everything that has before been seen in this department of Art, since there are everywhere apparently distinct traces of a finish with a hair brush. This is communicated by an impression after the subject has been in substance committed to the paper, and it unites the drawing in a manner not to be effected by the chalk alone. This is a patented invention of Mr. Hullmandell; and we believe the work before us is the first to which it has been applied. After the subject has been duly impressed on the paper in the ordinary way, the tint remains to be communicated; but the stone which conveys it, instead of being subjected to the tracery of the chalk point, is prepared by a brush and a composition, with which it is pencilled in a manner to correspond with the previous lithographic impression. This matter dries readily upon the stone, which, when charged with the wash, conveys the same to the lithograph according to the manner of its treatment.

This work must be the perfection of the style in which it is executed; we cannot persuade ourselves that anything can ever surpass it. Mr. Harding has been long known to the world as a most accomplished artist, but this series leaves far behind every other of his publications. No instructions are given how others may follow in his footsteps; it is not therefore an elementary production, but the matured result of long and persevering study. Trees may be portrayed with much fidelity, but long experience and refined taste are necessary to select examples with such accompaniments of landscape as are here presented. This department of art is as essentially English as are the subject matter to which it is devoted; and this specimen of its excellence will add abundantly to the already extended reputation of the artist.

**THE DUKE OF WELLINGTON WRITING THE DESPATCH OF THE BATTLE OF WATERLOO.** Painted by Lady BURGHESH. Engraved by FREDERICK BROMLEY. Published by WELCH and GWYNNE.

This is an excellent mezzotinto engraving from a picture describing an incident which would be deeply interesting even independently of the great event out of which it arose.

On the night of the 18th June, the Duke of Wellington returned to the small inn, in the village of Waterloo, where he had lodged the night before. He found the bed in which he had slept occupied by his aide-de-camp, Sir Alexander Gordon, who had been brought there severely wounded. The duke went into an adjoining room, spread his cloak upon some unthreshed corn which he found there, and laid down to rest: at three o'clock on the morning of the 19th, he was awakened by the

intelligence of the death of Sir Alexander Gordon; and feeling he could no longer continue to rest, he rose and began to write his despatch describing the battle of Waterloo, which he afterwards finished at and forwarded from Brussels.

His Grace has given her ladyship several sittings for the portrait; and all the accessories of the picture, the duke's sword, hat, &c., and the articles upon the table, are exact representations of those used on that memorable occasion. The back ground represents the room where the remains of Sir Alexander Gordon were lying, with the morning light breaking.

**AN EPITOME, HISTORICAL AND STATISTICAL, DESCRIPTIVE OF THE ROYAL NAVAL SERVICE OF ENGLAND.** By E. MILES. Publishers, ACKERMAN, and Co., Strand.

There are many works in which the growth and progress of the British navy are described, but none have we ever met with at once so concise and instructive as the work before us. The author does not describe himself as in the service, but acknowledges the assistance of a naval officer, Lieutenant Lawford Miles; and their joint labours have produced a book which will not only be a valuable companion to the Navy List, but, as the information it contains must in some shape be possessed by every officer in the British navy, it will, we think, be found that that knowledge could not be presented in a form more acceptable or intelligible than in this volume. After a brief but comprehensive review of the state of our navy, from its earliest annals down to the present day, the author proceeds to describe the equipment of every class of vessel in the service, from the first-rate of 110 guns down to the man-of-war cutter, with a simplicity of arrangement and clearness of detail, such as to be understood at a glance. This is done with the aid of well-executed illustrations, affording specimens of ships and vessels of various classes and denominations. Under the head "Civil Department," is an interesting account of those establishments of which our nation is so justly proud—the Government dock-yards; and under that of "Personal," is a statement of the duties of officers from the highest grade to the lowest. The book, in short, independently of its utility to naval men, will afford to the general reader a key to much of the interesting nautical matter continually found in the daily papers; and it is to us a matter of surprise that such a work has not before appeared.

**ADMIRAL LORD VISCOUNT NELSON, K. B.** Drawn on Stone by C. COUSENS. Publisher, HENRY BROOKS.

This is a very spirited lithograph after the sketch in the library of the United Service Club. The figure is given half length, and seated in an easy position on a common chair, on the back of which the hero's remaining arm rests with the hand brought to the front. The head is seen almost in profile, and the eyes are directed slightly upwards with that keen attention which bespeaks the active relation of the senses with outward objects. This has all the appearance of being a sketch for which Nelson never sat formally, it seems to have been made upon some happy and fitting occasion; if, however, such feeling has been imparted to it by the artist it has been most judiciously managed. The style of lithography is light and graceful to a degree, and without one superfluous touch—a nice point to stop at when an artist has a stone before him.

**STUDIES OF PARK TREES AND RUSTIC SCENES.** Drawn from Nature and on Stone by GEORGE BARNARD. Publishers, GEORGE ROWNEY and Co.

This is the first number of a lithographic work, "to be continued;" it contains four large and generally well-executed lithographs of trees; describing the method of drawing the oak, the ash, the chestnut, and the beech. This department of drawing on stone is essentially English, and that in which our artists excel those of all other nations. In the work before us, the characters of the trees named are very well expressed by a touch appropriate to the particular foliage of each. The pencilling is free and decided; and the drawing has every appearance of having been faithfully made out from nature.

**THE GENTLE SHEPHERD.** Painted by ALEXANDER JOHNSTON. Engraved by FREDERICK BROMLEY. Publishers, WELCH and GWYNNE. The immediate subject of this admirable engraving, is found in the lines:—

"Last morning I was gay and early out;  
Upon a dyke I leaned, glowing about;  
I saw Meg come linkin o'er the lee;  
I saw my Meg, but Meggy saw na me."

It is executed in mezzotinto; and with a decision in the general detail, and a clearness in the more distant effect which can only be produced by a master of this style of engraving. The hero stands shaded in the foreground watching the approach of his mistress; and the repose of the former contrasted with the joyous movement of the latter, is most skillfully managed. The best powers of mezzotinto are exhibited in this work; and the engraver has acquitted himself under a perfect apprehension of the spirit of the subject.

**POLISH EXILES CONDUCTED BY BASHKIERS ON THEIR WAY TO SIBERIA.** Painter, W. ALLAN, R.A. Engraver, W. HOWISON, A.R. S.A. Publishers, Messrs. HILL, Edinburgh.

That this print is full of truth the modern history of Northern Europe too fatally proclaims. A Polish family on its way to the place of exile, has, it seems, been compelled to halt under the pressure of accumulated woes, and one of its members, a delicate female, worn out by suffering, is unable to resume the march. The profound despair of the mother and the fervent appeal to Heaven on the part of the father, are affecting expressed. The party is escorted by two mounted bashkiars, one of whom expresses his impatience by pointing forward with his lance into the bleak and barren distance at another party in advance, as if to signify that they are already far behind. The artist has given the utmost interest to his subject by having stopped nothing short of the sum of affliction endured by Siberian exiles on their weary progress. There is truth in every touch of the picture; for it is known that the scene is one of daily occurrence, although the wailing echoes of the wastes through which the exiles pass reach not the ears of humanity.

**THE ESCAPE OF ALASTER MACDONALD WITH HIS WIFE AND CHILD FROM THE MASSACRE AT GLENCOE.** Painted by FANNY MC IAN. Engraved by W. BROMLEY. Published by ACKERMAN, Strand.

This is a charming mezzotinto engraving from an excellent and spirited picture, in a style of art in which ladies rarely attain to the degree of excellence by which every part of this work is distinguished. The subject of the picture is an incident, about the only one, affording a little relief to one of the direst tragedies that blot the page of modern history. The figure of Macdonald is an admirably conceived representation of one of that "iron race" of mountaineers whose military fame has spread throughout Europe. He has just got beyond the reach of his pursuers by having mounted a bank, and in defence of his wife and child, has turned upon them, although fighting at fearful odds, with the determination of a wolf at bay. The terror of the wife, who is but just beyond the reach of the soldiers, contrasts strongly with the fierce determination of the husband, who has nerved himself for such a struggle as might seal the fate of many of his enemies. The engraving is skillfully accomplished, and free from a certain heaviness of effect of which we have sometimes to complain in mezzotinto.

#### TO CORRESPONDENTS.

A Well Wisher to the Arts is thanked for his communication—but his name should have been given. On the subject of his note he will observe a letter in another part of the paper.

For the information of several correspondents, the following extract is made from Sect. 5 of the laws of the Royal Academy:—"The Royal Academy will, in times of peace, enable a student from among those who have obtained Gold Medals, to pursue his studies in the Continent for the term of three years. He shall be elected from each of the classes—painting, sculpture, and architecture—in rotation; and shall be allowed the sum of £80 for his journey and return, and the sum of £130 annually for his expenditure."

Many other works which have been received for review shall receive due justice next month.

# THE BURY HUNT.

J. ZANETTI begs leave to state, that he has NOW READY the PROOFS BEFORE THE LETTERS of the ENGRAVING of "THE BURY HUNT;" Engraved by F. BROMLEY, from a Picture painted by CHARLES AGAR and JOSEPH MAIDEN, and containing Portraits of the following Gentlemen, viz. :—

EDMUND GRUNDY, Esq., The Wylde.  
 RICHARD ASHTON, Esq., Limefield.  
 JOHN GRANT, Esq., Nuttall Hall.  
 THOMAS CALROW, Esq., Wood Hill.  
 JOHN GRUNDY, Esq., the Wylde.  
 JOHN GRUNDY, Jun., Esq., Redvales.  
 EDMUND GRUNDY, Esq., Bridge Hall.  
 EDMUND GRUNDY TERTIUS, Esq.

SAMUEL GRUNDY, Esq., Silver-street, Bury.  
 JOHN HUTCHINSON, Esq., Bury.  
 JOHN SCHOLLES WALKER, Esq., Woodhill.  
 GEORGE ALLANSON, Esq., Birtles.  
 RICHARD ROBINSON, Esq., Bury.  
 JOHN WOODCOCK, Esq., Bury.  
 THOMAS PARKER, Esq., Bury.  
 SAMUEL HEYWOOD, Esq., Walshaw Hall.

The size of the Engraving is Twenty-six Inches by Nineteen.

Price to Subscribers: Prints . . . £2 2s.

Proofs . . . £3 3s.

Proofs before the Letters . . . £5 5s.

Manchester: Published by J. ZANETTI, 100, King-street; and by ACKERMANN and Co., 96, Strand, London; also may be had of Mr. CHARLES AGAR, Bury.

HENRY GRAVES & CO<sup>YS</sup>

BEG TO INFORM THE LOVERS OF THE ART OF ENGRAVING, THAT THE

**HIGHLAND DROVERS DEPARTING FOR THE SOUTH,**

PAINTED BY EDWIN LANDSEER, Esq., R.A., AND ENGRAVED BY J. H. WATT, ESQ.,

*IS NOW COMPLETED.*

PROOFS, INDIA, BEFORE ANY LETTERS . . . . .	(now printing)	12l.	12s.	0d.
PROOFS, INDIA, WITH LETTERS . . . . .		10	10	0
PROOFS . . . . .		6	6	0
PRINTS . . . . .		3	3	0

Since the first proposals for engraving this magnificent specimen of native talent was announced for publication, nearly five years have elapsed—so long a delay can only be excused to the subscribers by one response—the perfect execution of the Plate; and such perfection, the publishers are happy to announce, has its fullest accomplishment in the exquisite production of Mr. WATT.

The 'HIGHLAND DROVERS' of Landseer has truly been considered the masterpiece of the admirable painter; for no other Picture from his hand contains so many figures, or represents so great a variety of character wherein are represented, the aged grandfather—the venerable grandmother—the full-grown man—the noble youth—the lovely girl—the playful boy—and the smiling infant. The "Ages of Shakspeare" are as truly given by the artist's pencil, as they have been described by the "observed of all observers." Nor, is the noble form of man in the composition, less beautiful than are the animals—a walk of art peculiarly Landseer's—in which, for truth to Nature, he has produced far more exquisite productions than ever came from the pencil of Rubens or Snyders. The horse—the ox—the goat—the sheep—the dog—the hen—and the young fledged chickens—are all drawn with a truth so perfect as to defy the censure of the most able judge.

If the Picture be admitted to be so admirable, equally so is the Engraving—for here is a like perfection. Mr. WATT has produced a Plate unequalled by any Print that has been executed in England, and such as may challenge the European schools to equal. In it the superiority of line Engraving is manifested over the most exquisite productions of the Mezzotinto art. Truly excellent as are 'The Bolton Abbey' and 'The Hawking Party in the Olden Times,' after the same Painter, they are outshone by the superior brilliancy, finish, and spirit, of the present work.

Messrs. Graves and Co. beg the early names of those parties who may wish for impressions, as priority of subscription ensures the earlier copies.

**MR. MÜLLER'S****PICTURESQUE SKETCHES OF THE AGE OF FRANCIS I.**

ADVANCES NEAR ITS COMPLETION,

*AND WILL BE READY FOR DELIVERY DURING THE MONTH OF JULY.*

PRICE, IMPERIAL FOLIO TINTED, HALF-BOUND . . . . .	4l.	4s.	0d.
COLOURED AND MOUNTED, IN A PORTFOLIO . . . . .	10	10	0

Messrs. GRAVES and Co., in selecting an artist for the express purpose of visiting France, to make drawings for their intended Work, had the good fortune to engage the services of Mr. WILLIAM MÜLLER, whose reputation, made originally at Bristol, had been ratified by the amateurs of London; and still further established by the admirable sketches made by him during his journey into Egypt and Greece. The choice made, has given them, and they trust it will the public, great satisfaction; for he returned laden with a portfolio so rich, that it enables them to present a volume unequalled, as yet, in the Lithographic art. No period, they felt, was so capable of affording strikingly picturesque views, as that of Francis I.; a time, not less important for its great political transactions, than it was in the splendid style of decoration which was so nobly encouraged by the chivalric monarch. Magnificent were the palaces he occupied; fit habitations for such Royal guests as Henry VIII. and Charles V. The age, also, of the splendour-loving Leo, and the powerful Wolsey. The noble encouragement that Francis gave to the arts, drew around him the admirable Leonardo da Vinci and the exquisite artists, Benvenuto Cellini and Jean Gujon. The representation of the picturesque edifices they inhabited, or adorned, is the subject of the present work; and such rich and elegant subjects, it is, without the pencil, impossible to describe.

The drawing of them, upon stone, has been confided to the judgment of Mr. Haghe, and, to him and his able assistants, they are indebted for a considerable part of the beauty of the Plates.

As only a limited number of copies are printed of the work, the publishers will feel obliged by early orders being sent.

## SCHOOL OF DESIGN, SOMERSET HOUSE.

18th April 1841.

THE COUNCIL of the GOVERNMENT SCHOOL of DESIGN, with the sanction of the Right Honourable the President of the Board of Trade, have determined to educate a class of persons for the purpose of qualifying them to become TEACHERS in Branch Schools of Design, and propose to found Six Exhibitions of £30 a year each, to be paid for two or three years, as may hereafter be determined, to Six Students to be selected by the Council.

A Probationary Class will be opened on the first of NOVEMBER NEXT for all who may wish to become Candidates for the Exhibitions, and those who are admitted will be taught gratuitously for three months, at the end of which time the six successful Candidates will be chosen.

The qualifications necessary for admission to the Probationary Class may be learned on application either by letter or personally, between the hours of Twelve and Three, to Mr. DYCK, Director of the School of Design, Somerset House.

## ROYAL IRISH ART-UNION.

PRESIDENT—The Marquis of Ormonde.  
Subscription—One Pound per Share.

N.B.—Post Office orders, for remitting the Price of One or Two Shares, may be obtained of any Postmaster in the United Kingdom, for Three Pence, and up to Five Shares for Six Pence.

Ladies and Gentlemen desirous to become Subscribers, will please to send whatever amount they wish to contribute, without delay, to STEWART BLACKER, Esq., Honorary Secretary, 20, Gardeners'-place, Dublin; and the proper vouchers, entitling them to share in the next Distribution of Prizes, will be forwarded to them immediately. — Impressions of the engravings issued strictly in the order that Subscriptions are paid in.

Subscriptions in London will be received by Messrs. Henry Graves and Co., 6, Pall-Mall; by Mr. Roberson, 51, Long Acre; or the London and Westminster Bank.

STEWART BLACKER, Hon. Sec.  
20, Gardeners'-place, Dublin.

### FINE ARTS.

A SPECIMEN ETCHING of the beautiful Engraving, now in progress of engraving, by H. T. RYALL, Engraver to the Queen, for the Members of the ROYAL IRISH ART-UNION, for 1839-40, from BUARON's celebrated picture of

'THE BLIND GIRL AT A HOLY WELL,'

May be seen at Mr. Roberson's 51, Long-acre, Messrs. Hodgson and Graves, 6, Pall Mall, &c. &c., where Subscriptions for this year,

ONE POUND PER TICKET, will be received, or the same may be forwarded direct to

STEWART BLACKER, Esq., Hon. Sec.  
20, Gardiner's-place, Dublin.

N.B. Post-office orders, for remitting the amount of one or two tickets, may be obtained at any office for 3d.

### VAN EYCK'S GLASS MEDIUM.

ARTISTS in OIL-PAINTING are respectfully informed, that the GLASS MEDIUM, as described in an article "On Vehicles for Painting," in the ART-UNION for last month, may be obtained at THOMAS MILLER'S, Artists' Colour Manufactory, 56, Long-acre, London.

This day, price half-a-crown, Part I. of THE SONGS of CHARLES DIBDIN, now for the first time collected and arranged chronologically: with notes, historical, biographical, and critical; and the music of the best and most popular of the melodies, with new piano-forte accompaniments, written expressly for this work.

This will be a more complete edition of the productions of the immortal Charles Dibdin than has ever hitherto been published, either by himself or others; and will contain an original and authenticated memoir, with a portrait, a copious index, &c. It will be completed in eight monthly parts, forming one handsome volume, medium 8vo.

How and Parsons, 132, Fleet-street.

Published in 4to., Price £4 10s., in French Boards; and on Royal Paper, 4to., with proof impressions of the Plates, and a Portrait of the Author, Price £7 7s.,

A TREATISE ON PAINTING. In Four Parts. Illustrated by One Hundred and Thirty Etchings from celebrated Pictures of the Italian, Venetian, Flemish, Dutch, and English Schools; and Wood Cuts. By JOHN BURNET, F.R.S.

The Parts may be had separate.

1. On the EDUCATION of the EYE. Second Edition. Price £1 5s.
2. On COMPOSITION. Fifth Edition. Price 15s. in boards.
3. On LIGHT and SHADE. Fifth Edition. Price 18s. in boards.
4. On COLOUR. Fourth Edition. Price £1 11s. 6d. in boards.

This Work is particularly recommended to the Student in Art in the New Edition of the Encyclopædia Britannica.—See the article on Drawing.  
James Carpenter, Bond-street.

### UNDER HER MAJESTY'S ROYAL LETTERS PATENT.

DAGUERREOTYPE.—Royal Adelaide Gallery, Lowther Arcade, West Strand.—Mr. CLAUDET is now taking PORTRAITS and GROUPS of Figures at this Institution, upon a greatly improved plan. In addition to which, by a new application, Mr. Claudet is enabled, without any additional charge, to fix the Portraits, and render them so durable that they will not fade or turn black. The state of the weather offers no impediment to the process, and parties are not expected to take their Portraits, unless perfectly satisfied with the likeness. A performance on the new musical instrument the Terpodion; Microscope, Pyreidiotrope, Steam Gun, Electric Eel, &c.—Admission, 1s. Children half-price.—Open daily from half-past ten till six o'clock.

### SPLENDID AND SUPERIOR GILT FRAMES.

CHARLES McLEAN, 78, Fleet-street (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET OF DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All goods taken back, not approved of in three months.

### MOIST WATER-COLOURS FOR SKETCHING, &c.

T. MILLER begs to call the attention of WATER-COLOUR PAINTERS to his great improvements in the above Colours, since his first introduction of them into this country ten years back. — Artists' Colour Manufactory, 56, Long-acre, London.

### ELEGANT AND ORNAMENTED PICTURE FRAMES OF A SUPERIOR DESCRIPTION, WARRANTED TO CLEAN.

C. J. ECKFORD, 45, FLEET-STREET, corner of Mitre-court, Temple, opposite Fetter-lane, begs leave to inform Artists, the Trade, and Public, that they can obtain A LARGE AND CLEAR EXPLANATORY SHEET OF DRAWINGS, with numerous elegant Patterns, the Size and Prices attached to the various Frames, sent gratis and free of postage to any part of the United Kingdom.

Old Frames re-gilt; large and small Miniature Frames at proportionate prices. Fancy-wood Frames of every description. Orders from the country punctually attended to. ESTABLISHED 1792.

VITRIFIED SILICA MEDIUM, discovered by Lieutenant R. W. H. HARDY, R.N. and F.M.B.S.—ACKERMANN and CO. have the satisfaction to offer this valuable Preparation made according to the Recipe of the Discoverer, and fully approved by him. They feel convinced that every Artist and Amateur will acknowledge its superiority to every Medium hitherto in use, and to those who admire in the old Masters the vehicle they used, it will be gratifying to learn that there is every probability of the Medium, now submitted to the Public, being the same as that of Van Eyck, and the effect of any Painting, of the Fifteenth Century, may be completely obtained by the VITRIFIED SILICA MEDIUM. Among other important advantages, it adds permanency to the colours. Even Naples yellow, when used with it, undergoes no change by the action of a steel knife. More oil or water may be added, according to the fancy of the painter. It adds such a brilliancy and lustre to the colours, that no varnish is requisite for a Picture painted with it. A small quantity of the Vitrified Medium, rubbed up with the colour, will enable the Artist, according to his pleasure, to dip his brush into water or oil. The Medium may also be rubbed up with equal quantities of water and oil, using a palette-knife, or a mortar, to work them together till they become of the consistency and appearance of cream. In this state it may be used like any other Medium. For those who desire to work in a more solid manner, the Vitrified Medium is made up in the form of powder, and sold in packets. In the "ART-UNION" of August, is an account of this desirable Medium, to which we refer Artists and Amateurs; and we heartily join in best acknowledgments to Lieutenant Hardy for his valuable discovery, and, further, for kindly consenting to superintend for us the Preparation.—Price 1s. per Bottle, or the Powder 1s. per packet.

London: Ackermann and Co., 96, Strand.

"Walberton, near Arundel, Sussex.  
14th August, 1841.

"GENTLEMEN,—I have tried the sample of Vitrified Medium which you sent me. I find that it has been prepared most accurately according to my Formula, and it therefore meets with my perfect approval.

"If this testimony is of any value, I beg you will make what use of it you please.

"I am, Gentlemen,

"Your most obedient Servant,

"R. W. H. HARDY.

"To Messrs. Ackermann, 96, Strand, London."

TO BE DISPOSED OF UPON THE PLAN ADOPTED BY THE "ART UNION," IN THE DISPOSAL OF THEIR PRIZES.

## BOWYER'S UNIQUE ILLUMINATED BIBLE,

Price: Prints . . . £1 1s.

Proofs with Autograph . . . £2 2s.

LONDON: H. GRAVES & CO., PRINTSELLERS AND PUBLISHERS, BY SPECIAL APPOINTMENT, TO HER MAJESTY AND H. R. H. PRINCE ALBERT, 6, PALL-MALL.

SCHOOL FOR DRAWING AND PAINTING, No. 6, CHARLOTTE-STREET, BLOOMSBURY, LONDON.

THIS School has been many Years established for the Education of Artists, and the Instruction of Amateurs in Drawing, Painting, Modelling, &c., and possesses the most complete arrangements as a Probationary School to the Royal Academy. The Gallery and Studios are at all times open for inspection, and contain an extensive Collection of Casts from the Antique; also Drawings and Paintings. In the Library are Books on Art, and Folios of Prints from the Works of the Old Masters. There is a separate Establishment for Ladies, and private Studios for those who may desire them.—Prospectuses may be obtained at the above Address.

A Vacancy for a Pupil in the House.

**POOLOO'S CHINESE CEMENT.**—The extraordinary properties of this Composition make it one of the most useful articles ever presented to the public. It is perfectly impervious to hot or cold water, and will resist the effects of the most intense heat. So firm is it in its hold that a new fracture is certain to take place rather than a severance in the original. Thus it surpasses all other Cements for mending China, Glass, Ivory, the setting of Stones and Beads in Rings and Trinkets, &c.—Sold, wholesale and retail, in bottles at 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d., by the Proprietor's sole agents, BLOFELD and Co., Cutlers and Razormakers, 6, Middle-row, Holborn; and by their appointment, at the principal Chemists and Perfumers. BLOFELD'S London made Table Knives, at BLOFELD and Co.'s, 6, Middle-row, Holborn.

**TO ARTISTS & AMATEURS—BROWN'S PATENT COLLAPSIBLE METALLIC TUBES** for Colours, Oil, and Varnish.—THOMAS BROWN, Colourman to Artists in Oil and Water, returns his sincere thanks to his numerous Patrons for the many years of patronage bestowed on his late Father, and begs to inform them that he has the above New Invention for containing Oil Colours, &c.: it possesses all the advantages of bladders and syringes without any of their inconveniences, and he offers it at a price very little exceeding bladder colours; it effectually prevents all waste, dirtiness, and smell, and will preserve the colour good for years, and in any climate. T. B. also begs to say that he now manufactures Water Colours, and sells every Material for Drawing and Painting. Orders by post attended to immediately.—No. 163, High Holborn, London, 1841.

CHEAPEST AND BEST MANUFACTURED PICTURE FRAMES IN THE WORLD.

**P. GARBANATI, WORKING CARVER** and GILDER, 19, St. Martin's-court, St. Martin's-lane, respectfully informs Artists, &c., that as he manufactures every description of ornamented, Gilt, and Fancy-wood Picture Frames entirely on his premises, he is enabled to offer them at such low prices, that he defies competition. A most extensive assortment of every description of Picture Frames kept ready. Re-gilding, in all its branches, done in a most superior manner, and cheaper than by any other Gilder in the kingdom. Estimates given free of charge.

P. S. A List of the Prices of PLATE GLASS, Gilt and Fancy-wood Picture Frames, Room Mouldings, &c., can be had at the Manufactory (gratis), or sent (pre-paid) to any part of the Kingdom.

P. G. respectfully solicits a Trial of his Work, for comparison of Quality and Price, with other Manufacturers.

BY HER MAJESTY'S ROYAL LETTERS  
PATENT.

**WINSOR AND NEWTON'S TUBES OF OIL COLOUR.**—This beautiful invention obviates the numerous imperfections attendant on the use of BLADDER COLOURS, as the bladder in which the paint is enclosed being porous, allows the oil to exude; and thus, by admitting air, the colour necessarily hardens, becomes contaminated with skins, and frequently more than half of it is rendered totally unserviceable.

The PATENT TUBES are formed of stout cylinders of glass, hermetically secured with an air-tight piston, traversing the tube, and ejecting the colour by a gentle pressure.

The colour being visible through the glass, the artist immediately perceives the one he may require, and the air being excluded, no smell can proceed from them. They are also so perfectly clean to handle, that oil pictures may be executed without the least soil on the table, or on the hands of the artist.

To be had, wholesale and retail, at their Artists' Colour Manufactory, 38, Rathbone-place, London.

Newly invented Zinc Panels for Miniatures and other highly finished Paintings in Oil, and all the new manufactures of the trade.

TO ARCHITECTS, BUILDERS, &c.

**PAPIER MACHE' WORKS, 15, WELLINGTON-STREET NORTH, STRAND.**—CHARLES F. BIELEFELD begs to inform Architects, Builders, &c., that in addition to the Volume of Patterns already published, he has now produced 40 New Engravings, which may be had separately at 6d. each. The complete work now comprises nearly 850 patterns of works in every style, actually manufactured in Papier Mâché, and on sale: consisting of Picture and Glass Frames, Cornices, Mouldings, Flowers, and every species of decoration for ceilings, walls, &c. The excellence of the improved Papier Mâché Ornaments in architecture is now fully understood and admitted by the first architects, and by the most eminent builders in London and the provinces.—The above folio volume is sold, bound complete, with a tariff of prices, at Three Guineas, which will be remitted to persons ordering goods to the amount of £50 or upwards.

**THE SKETCHING SEASON.—GEORGE ROWNEY and CO.'S PRESERVING ENVELOPES** to supersede the use of the Bladder for Oil Colours.

This mode of putting up Oil Colours for the use of Artists, will be found much more cleanly and portable than the old plan of employing the bladder or waxed, besides possessing the advantage of preserving the colour for an indefinite period of time.

Also a new red, called Palladium Red, which possesses a similar tone to Chinese Vermilion, but of greater brilliancy; it is perfectly permanent with a semi-transparent body; and having neither sulphur or mercury in its composition, it is not liable to form a black sulphuret when used in combination with white or any other colour.

And a new and permanent Blue, price 4s. the oz., equal in tone and colour to Ultramarine of the best quality.

Canvases prepared with Indian Rubber, Flemish, and other grounds. Panels, Millboards, and all other articles connected with the Fine Arts, at the lowest possible prices, and of first-rate qualities.

Sold, wholesale, retail, and for exportation, at the Artists' Repository, No. 51, Rathbone-place, Oxford-street.

## THE ART-UNION.

LONDON, SEPTEMBER 1, 1841.

## REMARKS ON PICTURES AND VEHICLES.

SIR,—In former letters I had given a summary of the History of Painting in Oil, as an invention, and endeavoured to show that the method of Van Eyck was the true and good method which had enabled the great painters to execute works, the admiration of every age. I do not mean here at any length to resume the subject; but as the public has recently had the opportunity of examining a picture by Van Eyck himself, in the British Institution, Pall Mall, and as it is possible the opportunity may not have passed away at the time of the next appearance of the ART-UNION, I would direct attention to that curious painting, and make a few observations upon the effects of the vehicles with which some other works in that exhibition have been executed. Van Eyck's performance is dated 1434, twenty-four years after his discovery; we may, therefore, be pretty sure that it was painted in oil; it is in the catalogue of the British Institution, No. 14. 'Portraits of a Gentleman and Lady,' John Van Eyck, the property of Colonel Hay. It is quaint and strange as a composition, with more formality and stiffness in the figures than would seem to be justified, taking into consideration the wonderful power of execution shown by the artist in the subordinate parts; which are so surprisingly done, as even in our days to constitute Van Eyck as the Prince of Painters of still life. There is a most perfect representation of a metallic lamp. The metal shines; and there was evidently no difficulty to be overcome in the medium, as if it had at any time been too liquid or too dry; it looks painted up at once, a perfect transcript from nature, and that is the more wonderful, as it has complicated drawing and great changes in lights and shadows. There is a mirror, too, as perfectly represented. You see no visible medium, no unctuous character, as should lead you to say, this is oil, or this is varnish; it looks pure as water, as if the luminous character was in the paint, which is clear and brilliant to the greatest degree, as if it had undergone no change whatever. You have a hard substance before you, and you seem to be looking through water that had been by sudden magic hardened and made palpable upon substances brilliantly illuminated. In the foreground are some clogs with their dark straps. At first sight they appear as if painted off hand with the rapid execution of Teniers, whose manner and style of colour they much represent; but on examination they have more minute finish than Gerard Dow: the very grain of the wood is so worked in as to bear the magnifying glass. There is not a picture in this collection of Old and Modern Masters that is so pure and so luminous as this curious picture by the inventor of painting in oil, and twenty-four years after his discovery. That is not the only picture in this collection from which we may learn something in respect of medium. There are some by Canaletti, or as the present fashion is Canaletto, which are so different to each other, that it is worth while to examine the cause of the difference. Those painted in Italy are remarkable for their force and clearness, while those painted in England are remarkable for their dullness, weakness, and loss of colour, besides which they are slightly cracking. There was probably a mixture of mastic varnish in the latter,

which has lost its temporary brilliancy; and the colour has gone with it. The picture of the 'Capitol' is still fresh, the colour as when put on. If the texture and execution of these be examined, they will be found very different, the former retaining an oily character, with its weakness; the latter more of the distemper appearance, free from that uncomfortable dry and chalky effect distemper alone produces. There is little doubt but that the 'Capitol at Rome' was painted with water in some way or other mixed with the oil, and probably with very little oil. This is more discernible in the figures, which are very curious; they are thus painted: a thin outline of brown generally slightly worked in the shadows, the lights are as it were dropped on, with a fluid pencil, and fall, so as when the evaporation of the water took place, to leave a raised and opaque body—in this mode he could not pay much attention to minute drawings of feature; and so it is perceptible that there is not an attempt, if anything, but the general effect of a face. Examined with a glass this effect is very curious, and the dabs of paint thus dropped on, are like the raised embossed imitation of Chinese work. This peculiar manner of Canaletto was well suited to his subjects, and by it he escaped the injury which mere oil inflicts. His pictures done in this manner have great atmosphere and clean colour, are broad and simple in their effects; there is nothing of varnish about them. It is not improbable that this master took the idea of his method from some of the old Venetian school, who certainly blended the two methods of distemper and oil; and which circumstance renders the pictures of that school more difficult to clean, for it is often found that when the glazings are removed, the under paint will be more or less liable to wash off. And we know that the Venetian Government very early found the necessity of appointing proper restorers to take care of the great works in their possession. It would be extremely dangerous to clean this picture of the 'Capitol.' I remember many years ago to have seen in the hands of a restorer two large Canaletti's; the varnish had been removed; they were to all appearance in distemper, and were in fact unlike any other pictures by any other master. It may not, however, be difficult to ascertain his method, for his date is recent; he was born in 1697, and died in 1768. It is said that Tiepolo frequently put in his figures. In this of the 'Capitol' they are excellent in effect, judicious position, and in setting off by their colour and strength the more simple and broad colouring of the architecture.

Tiepolo, whom Canaletto is said to have imitated, is called by Lanzi, "L'Ultimo de' Veneti," and he describes his manner in a passage, which I here translate, because it seems so much to resemble that of Canaletto: and it should be observed that Tiepolo was more especially excellent in fresco. "Nor did he," says Lanzi, "at any time omit the study of what is natural, in observing the accidents of lights and shadows, and in the contraposition of colours, so adapted as to strike with the greater force. In this respect he succeeded to admiration, especially in his works in fresco-painting, for which it appeared that nature had formed him so expeditious, so ready, so facile in great things. Where others seek the most vivid colours, he availed himself of low tints, and even, it is said, dirty; and by putting near them others somewhat gay and clean, but nevertheless common tints, he introduced in his frescos such an effect, a charm, and a sun, that may be probably without example." I cannot resist the opportunity so fairly offered by this quotation from Lanzi, to press upon the consideration of our English artists the great utility of these "tinte basse" low tints, the effect of which was illumination and brightness—a very sun, says Lanzi. It is a practice totally neglected by our painters, who indeed, on the contrary, seem to make the highest lights the scale to begin with and work from them, by which means illumination is missed, and raw and opaque whiteness substituted; nay, which more or less pervades the tints which should be most free from it; whereas working up from a low scale, from low tones, there must evidently be a greater power of heightening. Sir Joshua remarks upon the contrast and its effect upon him, between the white paper of his note-book and the colouring of the old masters. At a modern exhibition there is no such contrast; the aim, indeed, is too often to

rival the whitest paper. Now take, for instance, some of the most sunny and bright pictures of the most brilliant painter of light and atmosphere that ever lived, of Claude—put to such a test his two pictures in the National Gallery, his sea-ports, the best he ever painted, you will find them of an exceedingly low tone or scale. So is it with every brilliant picture that ever was painted. We are deficient in low scale and half tones, and most fail when we most think we are imitating daylight. This has partly arisen from an erroneous idea that the works of Claude and other great masters were not painted on so low a tone, but that it is the effect of time; a little more study of these great painters would show clearly that it was a true principle of Art, and not time, which made their works so powerful and so brilliant. But to return.

It may not be amiss to notice in this same exhibition two pictures by Paolo Panini, because though the subjects be similar the manner is so opposite, opposites well in colouring as in vehicle—"St. Peter's, Rome—with Procession of the French Ambassador," and 'A Gallery of Painting and Sculpture, with Portrait of the Artist.' If Canaletto imitated fresco even bordering on distemper, these pictures by Panini appear to have been painted with a certain admixture of varnish; not to the degree of modern practice, but to a degree that is injurious. Panini lived in the time when the good old method came into disuse, at the period when gums were introduced, and the "altre sue misture," which chemically affected the oils, were omitted: the oily look is therefore very visible. The pictures are well coloured and painted, and highly finished, infinitely more so indeed than those of Canaletto; but how weak are they in comparison? There is more attention to variety and nicety of colour, but the unsubdued oily varnish wash pervades them. I mean not to depreciate them—they are beautiful pictures, but are unlike and opposite to those of Canaletto. Canaletto could have improved Panini; Panini could have done little for Canaletto. These painters were of the same time; Panini having been born in 1691. He is blamed for the size of his figures. I have said that Panini lived at a time when the good old method came into disuse. He was born nearly a century after Claude and Gaspar Poussin, whose vehicle was perfect for their styles; and even then, perhaps, novelties had been introduced by many artists. In so short time as thirty-five years after them we have a proof of a deterioration and its cause, in the account given of Sebastiano Bombelli, who had been a scholar of Guercino. "It is to be lamented," says Lanzi, "that a great part of those pictures which he did have been obscured (offuscata) by a certain varnish, or vehicle of his own, of pitch and gums; and that some by the more ancient masters were destroyed by it, which he, by wishing to restore to a better condition, had spoiled to an equality with his own." To this Lanzi attaches a note, which is curious for its admission, and is confirmatory of much that has been said in these papers upon the subject. "Niuno per questo esempio condannò l'uso delle Vernice nel riattare i quadri servendosi di mastice e di acqua di ragia, secondo le più recenti osservazioni, il colore non si danneggia; l'olio e dannevole a quadri antichi, il moderno non s'incorpora mai coll'antico, e dopo qualche tempo ogni ritocco trasfigurasi in una macchia." "Let no one for this example condemn the use of varnishes in the restoring of pictures. By making use of mastic and rosin water according to the most recent observations, the colour is not damaged. Oil is hurtful to old pictures, the new does not incorporate with the old: and after some time every retouching turns to a spot (stain or blemish—macchia)." This is worth enquiring into, why, upon an old picture, our oils change and effect blemishes to so great a degree as to become very conspicuous; whereas there is no such very violent change where our oils have not been used upon surfaces covered with the old.

Great changes took place in the methods of painting, as I stated, soon after 1600. Zanetti observes, "In this time there were seen in Venice as many manners as there were painters." "In Venezia si videro tante maniere quanti erano quelli che dipingevano." "In such a state," adds Lanzi, "was painting in the latter of the seventeenth century." And these latter years gave birth to Panini and Canaletto. The latter, it should seem, disgusted with the use of gums, &c., then in use, resorted to a method more similar to distemper and fresco;

and, perhaps, he was led to this by an examination of the works of the old Venetians, who certainly, in passing from distemper to oil, occasionally used both separately, and blended both. Lanzi, however, thinks the style of Canaletto more original; and I think, in illusion to his medium, for it is that which chiefly forms the style of this painter, and the others whom he classes with him—as Ricci and Tiepolo. Speaking of that particular epoch, he says, “In Venice, and in the State, were seen to arise various styles, if not perfect, certainly original and valued in their kind; if all Europe has not been deceived in esteeming and purchasing at great price, the pictures of Ricci, of Tiepolo, of Canaletto, of Rotari, and other such artificers of this age.” “In Venezia e nello Stato, si vider sorgere vari stili se non perfetti originali certamente, e pregiati in lor genere; se già non si è ingannata l’Europa tutta, stimando, e comparandosi a gran somme le pitture de Recci, del Tiepolo, del Canaletto, del Rotari, e de altri tali artefici di questa età.” I have been led to greater length in noticing these pictures, commencing with Van Eyck, because there seem to be thus brought together the first and the last; as Tiepolo, whom Canaletto imitated, and whom Lanzi admits that he did imitate, (which he seems to have forgotten when he used the expression, “originali certamente”) is called “l’ultimo de Veneti,” and Van Eyck was, undoubtedly, the first discoverer of the Art.

There is an exquisitely painted portrait in the Institution by Van Helst; it is very much in the manner of Rembrandt; it has many excellent qualities; but my object now is to look to the artist’s vehicle, which, in this instance, appears to be perfectly pure, and to have left everything as the brush put it on; there is no after-melting of parts into each other, all is firm or soft, blended or made distinct, as the artist executed it. Now, Van Helst was born in 1613, only seven years before Rembrandt, and fourteen before Van Dyck. The better method seems to have been continued more universally among the Flemish and Dutch painters, after it had been deteriorated in the hands of the Italian. Wonderful indeed is the difference between the vehicles used by Correggio and Carlo Maratta, and great between Maratta and some of his own time. Claude and Poussin were then painting their best pictures. Maratta was born 1625. Varnishes were then in use in Italy, though not generally. Salvator Rosa, born 1614, does not seem to have used them; though there is not that perfect luscious medium discernible in his pictures, which we see in Gaspar and Claude. It is very probable he painted much in a mixture of oil and distemper. The preservation of his pictures shows that he did not, however, use gums. There appears to have been in Italy about this time a greater variety; in the Flemish and Dutch very little. Having instanced Van Helst, who was born the same year as Salvator Rosa, it may be worth while to compare their pictures (only for the vehicles used). They are very different. But there is no such difference if he be compared with Teniers, born 1610; with Rembrandt, 1606; with Hobbima, born 1611; with Bergham, 1624; with Wouerman, 1620; with the younger William Vanderveelde, 1633; with Backhuysen, 1631; with Jacob Ruysdael, 1636; with Francis Mieris, 1635. Different as these painters were in their manner and subject, there is the same apparent medium, the same absence of that harshness, and at the same time greasiness of unsubdued oil. There was even more or less richness in them, but it was not a richness acquired by mastic, or any gums. Wouerman, for instance, delighted in a more varnishy quality; but his oil was cured by the original mixture, “altre sue mixture” of Van Eyck; but mark how free and playful, if the expression be allowed, was the handling his vehicle enabled Wouerman to employ. It was driven by his brushes as he pleased, made thin or substantial, and every working made permanent, fixed and set as it were at the moment unchangeable. Teniers again was less varnishy in appearance, he had more execution, and less finish, every touch is as when put on, all is fresh and clean, the colours less mixed and worked about; his style was more simple, but the materials are the same. There is the same difference between Vanderveelde and Backhuysen, as between Teniers and Wouerman, the latter used more of that which gave

the varnishy appearance—the materials the same. Hobbima again seems to have used his medium more thick than Ruysdael. Rembrandt, according to his genius, to have used it under various modifications, and to have gone over and over again parts of his pictures—a great trial for any medium. Yet, in all these, is there not observable the same purity, the same absence of harsh and greasy oils? Do you not recognise at once, amidst all this great variety of subjects and manner of workings, the same permanently lucid medium, the result substantially of the same mixtures, perhaps very slightly altered; while, in the later Italian, there is evidently a change of substances.

I cannot but think that the great value the Flemish and Dutch schools have attained, is mainly owing to this their pure medium, not only from the peculiar gem-like beauty it produces, but from the certainty and assurance it gives of the masters, at once discernible; for it is perfectly impossible to imitate them with any chance of success, with any other materials than such as they themselves used. It is this which enabled Teniers to paint his celebrated ‘Pastici’ so admirably, imitating all other masters worth imitating, while there is not now one painter, however eminent (and I would not be thought to detract from great merits in other respects), who could venture to imitate or copy Teniers, and to pass off the work as from the hand of that celebrated painter of Antwerp. It appears then that at this very period, during which the best works of these Flemish and Dutch schools were executed, we have proof of a deterioration of the Italian in the complaint against Sebastiano Bombelli, born at Bologna, 1635, the very year of Francis Mieris, that he used “certa sua vernice de pece a gomme,” “a medium of pitch and gums.” As the British Institution has furnished an opportunity for making these remarks, it may not be out of the way to continue to notice some other pictures there exhibited, for there we shall find specimens from Van Eyck to our own day. Those who love strong contrasts and to compare antipodes, may do so, in noting the difference of paint and texture, in other words the medium, between the Van Eyck first noticed, and Morland—luckily for such purpose there are four in this exhibition.

It is not my object to speak of the detestable vulgarities of this painter, who degraded the Arts to such a degree in this country, as to keep them back many years, and which degradation too many would-be Cognoscenti would perpetuate by the favour they still bestow upon his works; which should be consigned to the pot-house, or the pigsty, the more congenial place, if even that would not be an unjust infliction. I only now speak of his medium. His pictures look as if painted with sloppy road-dirt. His pencil, like his pigs, delighted in the mire. “Amicus luto,” Morland, as “Amica luto sus.” A good medium could have been very ill-bestowed upon him, and so he had it not, it would have been but the “jewel in a swine’s snout.” Filth and jewellery ill-assort, and even, in comparison, are odious—and I pass on. Here are many of Sir Joshua Reynolds’s. Perhaps, for the present purpose, there is none more worthy of notice than his portrait of ‘Sterne.’ It is firm and rich in comparison to many others; but these pictures show that he did vary his medium, some, from the too free use of varnish, have assumed a leathery look, where was once, doubtless, beautiful colour; some have assumed a sombre, dingy hue; some are still fresh. There are two pictures by his hand, so differently painted, that they are the more worthy of notice; one, however, is not in the British Institution, the other, ‘Kitty Fisher,’ is. And this is not only a beautiful picture, though, at first sight, it looks faded, and possibly may be so, but it is remarkable also for its total absence of any attempt of richness, of texture and colour, which Sir Joshua so generally aimed at—the simplicity of character, of attitude, and whole style, is well set off, without those richer graces of the pencil. It has less of that oily look, so disagreeable, than any picture I have seen of his hand, or of modern times. It has more of the purity of water. It was, probably, painted with very little oil, nor does any varnish appear. The other picture is that presented to the National Gallery by Lady William Gordon, being ‘Five Heads painted from Frances Isabella Ker Gordon, daughter of Lord and Lady William

Gordon.’ This is very luminous, and clear—and though it does show both the oil and varnish to a certain degree, not strikingly so, and has less suffered on account of its vehicle than any other pictures by Sir Joshua. I should conjecture that the varnish here used was copal. This very beautiful picture, if it must be treated as in a degree an imitation, is imitative of Correggio; but there can be no comparison between the vehicles of the two painters. I would not say that of Sir Joshua is here bad, but that of Correggio is perfect, “quella perfetta;” and, perhaps, Sir Joshua’s in this picture was more adapted to that somewhat too flashy, one-painting, and not suitable to a more corrected and finished manner. Still, as to vehicle, I even prefer the more modest method with which that of ‘Kitty Fisher’ is executed to the richer one of the ‘Five Heads.’

Though Sir Joshua’s pictures frequently crack, and lose their brilliancy, they retain this quality much more than those of Gainsborough and Wilson; those of the latter even crack much more. Such is the consequence of megilps. The Gainsborough’s and Wilson’s, in the British Institution, do not raise the reputation of those masters of the English school. I purposely avoid here criticising them at any length with regard to their subjects, and the Art shown in them as compositions, content with remarking that their merit in these respects is of a very low order, and that that of Gainsborough the inferior; but looking at them for the quality of the medium they used, I do not hesitate to say it was, in both, very bad. The beauty of Wilson’s pictures lay in their colour, which they are losing. The aerial tones are becoming dirty. Such too, but in a less degree, is the case with those of Gainsborough; and, unfortunately, when their freshness goes, and a certain charm where his colour is very deep, the uncomfortable splash of his pencilling, utterly inconsistent with the character of his subjects, will be more conspicuous; and at all times there is little for the mind to dwell upon in his pictures. He often used, in his shadows particularly, a weak scumbling manner, which did not agree with the plastered manner with which he laid on other parts; and whatever of brilliancy those parts may once have had, they are daily losing. The best large landscape by him, is that in the National Gallery—not the abominable unlimited vulgarity the ‘Market-cart’—but the ‘Watering-place.’ He is said to have been much addicted to the use of asphaltum, and to have boasted that with it he could have painted a pit as deep as the infernal regions; if he said it, his notion of depth, and his general practice, may be combated. The depths by those very transparent colours, such as asphaltum, are, after all, not great. They are too rotten, and show a surface not very far in: the greater depth has an atmosphere in it—a sort of bloom, an aerial mass, interposing and intercepting lower depths. This asphaltum depth of colour, of which Gainsborough was fond, has very much from his day infected the English school, and is still in use. It is the parent of weakness, not force. We see it not in the old masters: not even in Rembrandt, where it might be most suspected. He was a great painter of mystery, of wonderful depths, and knew they were not to be so attained. His exquisite ‘Adoration of the Shepherds,’ in the National Gallery, has none of these asphaltum depths. But, as I was speaking of Gainsborough, it would be more fair to compare him with a landscape-painter, and with one who produced greater depths upon another principle. Observe the deep woody dells of that great master of the relative powers of transparent and opaque bodies. Look at the large picture in the National Gallery representing ‘Abraham preparing to sacrifice his son Isaac.’ The wooded valley below is very deep, and of dark semi-transparent tones, that have a thousand times more force and power, and give greater scope to the imagination, than could the stronger, more violent, but more flimsy transparency of asphaltum. Gainsborough I consider to have been, if not the first, very nearly the first, in fame of the English school. He will live while and where Arts are valued, but not as a landscape-painter. In portrait he was excellent. Yet, by a strange infatuation on his own part, or of an indiscreet encouragement, his genius was turned aside to landscape, for which he really had but little feeling and less taste. Not so Wilson. His taste and

his powers lay decidedly in landscape, in which, too, he was original; but he wanted knowledge, particularly of composition. He was a better master of effect and colour. He had the art of making his subject, such as it was in composition, tell; it was one and simple, executed with a full and free pencil, dealing much in generals, with a vigorous boldness overlooking minute detail. His pictures, too, must have had, when fresh from the easel, a very luminous quality, for there is a good deal of that about them still. He threw into them the charm of a lucid atmosphere, which hid, or or rather made beauty of many a part defective in composition, and of very inadequate execution. Imitating partly Claude in his colouring, he ran into quite an opposite handling. His works show the vigour of genius, and but little learning. His subjects are few, and repeated with slight variations, so that he took but little delight in invention. Perhaps the multiplication of little bits and distances in the pictures of Smith, of Chichester, gave to that artist a favour above Wilson. So imperfect was the taste in those days. Wilson certainly used varnish with his paint, and his pictures consequently have suffered, and will suffer more.

Why is it we have no picture by Vernet in our National Gallery? He was a pleasing painter. He always treated his subjects tastefully, and with a gracefulness of pencil. His vehicle, though not of the best kind, does not offend, and is very superior to the megilps of our school. There are but two pictures, by his hand, this year in the Institution, and those by no means good. They have probably undergone a change.

There is Louthenbourg's celebrated picture of 'The Fire of London, seen from one of the arches of Old London Bridge.' Louthenbourg was a man of great genius, perhaps not made the most of. He was very unequal. This picture has been greatly admired; but, for Louthenbourg, whose talent was a power of portraying the elements, it is far from a successful attempt. I have seen fires by him very superior. There is a great fault in this; there is too much red, the red dresses of the figures are most injudicious, they almost put out the fires; greater force might have been attained by contrasts. Many of Louthenbourg's pictures were, when fresh, extremely beautiful in effect and colour, and in a certain boldness in the treatment of his compositions, which was original; and though some of his pictures have lamentably cracked, others still retain firmness and a considerable brilliancy. A really good and permanent vehicle would have been a very great thing for his future fame. I cannot but think he is very much under-rated, and judged of from his every day pictures, too many of which his necessities, perhaps, compelled him to perpetrate, and not from those works which prove his genius—a genius in many respects superior to that of any painter of his day.

Stothard's Works in the Institution make quite an exhibition of themselves; there are a great number; full of character, great taste, and feeling, but their texture and colour are not agreeable. Oil everywhere, uncured of its evil qualities, and varnish are conspicuous. Stothard had a method of mixing water with his oil by means of gum mastic, but when the water evaporated, the greasiness of the oil, the impurity I would add, was still there, and it was not improved by the mastic. On the contrary, some of these pictures now have that leathery look which, where mastic is used, first or last takes the place of brilliancy. It is lamentable daily to witness a practice so injurious as painting in the abominable mixtures of these soft gums, under the names of balsams and megilps, and the resort to asphaltum, and such cracking and changing substances. Who has not seen pictures cracking upon the very exhibition walls, even when scarcely dry from the easel? And there is now a false taste in some artists, whatever they paint, whether figures, rocks, trees, or ruins, to cover all with a varnishy glaze, untrue to nature, and far from pleasing to the eye: borrowing the copal pot from the ornamental painter of door panels, as if the "coach painter's and varnisher's guide" were the "vade mecum" with which our artists travel. Mr. Roberts sadly transgresses this way; it is a pity, for he has high talents, that should be under the regulation of a more sound taste. For the gratification of my own eye, I had rather see all Egypt rough-cast than the ancient monuments

thus furniture-rubbed out of all antiquity, and into a resemblance to Tunbridge-ware.

To revert to the subject of the true medium of Van Eyck: it cannot, I think, be understood that I claim for the recipe I have given the full credit of being a re-discovery of his invention. There may be arguments in its favour—I have stated them—but I am as solicitous as any one can be, to find any defects it may have, or to throw it by if any one will publish one that shall prove better. It is worth trying and experimenting upon in every way; and I find it good, and chiefly like it, for that it is a varnish without gums. But I would by all means direct the attention of those whom it mostly concerns, and it does concern both artists and the public, more decidedly to the subject. Rubens is said to have left a MS. account of painting in Latin. If it be known, and in what library, why not have it translated? Information may be obtained from it, and it is sure to be of value.

The Venetian Government established, and liberally paid, a society of persons solely to preserve the pictures of their great masters which were suffering from the climate of Venice. Their studio was opened in 1778, and an Englishman, Peter Edwards, was the president. Incredible care was taken in the prosecution of their object: their labours are stated to have been long, and their aim the greatest accuracy. Is it improbable that some documentary account of their labours may be still in existence, and deposited within the reach of curious and scientific persons? And why should not a Society be now formed, either by the Academy or by the Government, or even by any number of artists, the sole object of which shall be to ascertain both the vehicles and pigments and other matters connected with the practice of painting of the best masters of the best times. Such a Society might select and sufficiently remunerate a person qualified by accurate chemical knowledge, who should devote his time to such experiments and tests as would be suggested by the object. It would be highly creditable to the academy if they would devote a portion of their receipts for one year (say £300) for the purpose, appoint a committee to assist and to report. It cannot be but that every process that has been in use would be accurately discovered—what is every body's business is not any one's. Many work in secret, and with inadequate means and knowledge; and if they discover anything keep it secret. Artists too are often deterred from the pursuit lest the reputation of trying experiments should be injurious to them professionally. But such fear could not affect the whole Academy. They are the proper persons to do it; it would redound to their honour, and in the end render their works, according to the present system perishable, immortal. And one very great good it would effect for the English school, it would tend to remove in due time that fastidiousness with which the *Cognoscenti* distinguish the old from the modern masters.

—Since writing the above, I find there is a probability that our artists will be employed to paint pictures for the two Houses of Parliament. It will, as a matter of course, be under discussion whether the pictures are to be painted in oil, fresco, or any other method. There cannot, then, be a more fit time to recommend most earnestly the formation of a committee to examine into the state of the Arts, with respect to medium and materials only, and that they be empowered to obtain the services of some really eminent chemist, one thoroughly competent to investigate accurately; it will not do to put this matter into the hands of any mere dabbler in chemistry. It is now most important; for if British genius is to be employed, let the works be durable, and good in the material as well as design. The genius of a Raffaele might be thrown away without this care. And if every artist employed is to use his own vehicle, there will be a strange medley of gump-tions and megilps; and, hereafter, necessity of cleaning and repairing, and, it may be added, ruining. In such a work the nation are greatly interested; and if oil-colours be determined upon, as there must be a considerable time before the subjects can be selected, and the sketches made and approved of, the Houses of Parliament should take advantage of this interim for the purpose recommended. I should not be sorry if the Royal Academy applied themselves to the subject independently. They cannot better employ a small

portion of their funds; and the very circumstance that two distinct committees are at work at the same time may stimulate both, and be the means of preventing anything important being overlooked. There are building committees who make reports upon the nature of the stone to be used in public structures; and sure I am, that the artists' work, if there be real genius called forth by the public, will be far more important, and, hereafter, of infinitely higher value than the whole structure of the buildings they are called to adorn. For this idea of a committee, empowered to employ and liberally reward some eminent person or persons sufficiently qualified, I am indebted to my very valued friend, Charles Thornton Corthurpe, Esq., of Bristol (whom I have mentioned in my former letter), and who enabled me to lay down the formula of the borax medium. He tells me, it is not possible but that a good chemist would ascertain the medium employed by any master; and strongly recommended that a given number of artists and amateurs should draw up a statement of what is required to be ascertained with regard to what has been in use, and of such other matters relating to pigments and oils, as our advance in chemical knowledge may render desirable: and that a subscription be made for the purpose of chemical experiments.

It will be seen by the above remarks and recommendation, that I do not insist that the formulas I have given are those of Van Eyck; I would shun such arrogance, and would gladly subject them to every test. It is possible, perhaps more than possible, they may be such as that first discoverer of painting in oil used: and the medium may be, and I believe it is, very good. I have no interest and no desire but to establish truth, and recommend what may be of real service; but I am sure something is wanted, and I shall be content if these remarks lead the way to some other discoverer; that, at least, we may get rid of what is positively bad and injurious, both to colour and durability of body of the pigments. There is too great a readiness to turn everything into a sort of quackery, and this operates prejudicially with the many who have been continually deceived. The word "*nostrum*" is easily applied, and too often the artist shrinks in disgust from every new attempt, however he may be dissatisfied with his own materials. There seems to be an endeavour to appropriate, with some little quackery, the vehicle which has been freely offered to the Arts in my last letter: for I find it advertised; and, as the advertiser's improved medium, there can be no objection to colourmen making it and selling it; but it is somewhat exceeding due bounds to call it their own. J. E.

#### REPORT OF THE COMMITTEE ON FINE ARTS.

The report of the Select Committee of the House of Commons, appointed to take into consideration the promotion of the Fine Arts in this country, in connexion with the rebuilding of the Houses of Parliament, has at length appeared; but as it details the proceedings no farther than the interruption which the sittings suffered from the dissolution of Parliament, it is to be expected that a committee of the new House of Commons will be appointed to prosecute this most important subject to a satisfactory issue, as much valuable evidence remains to be heard. The members appointed for this inquiry were—Mr. Hawes, Mr. Labouchere, Sir Robert Peel, Mr. Gally Knight, Mr. Hume, Mr. Wyse, Mr. Blake, Sir Robert Harry Inglis, Lord Brabazon, Lord Francis Egerton, Mr. Ewart, Mr. Milnes, Colonel Rawdon, Mr. Henry Thomas Hope, and Mr. Pusey; and the witnesses examined were Mr. Charles Barry, Sir Martin Archer Shee, Mr. Dyce, Mr. Vyvyan, Mr. Eastlake, Mr. W. J. Banks, Mr. Bellenden Ker, Mr. Wyse (M.P.), Mr. Fradelle, and Mr. Richard Mitchell.

The report commences by stating that the committee have obtained the opinions of some very distinguished professors and admirers of Art, who are unanimous upon one point, viz., that so important and national a work as the erection of the two Houses of Parliament affords an opportunity which ought not to be neglected, of encouraging not only the higher, but every subordinate branch of Fine Art in this country. In this opinion the committee concur, but at the same time they ex-

press a decided conviction that to accomplish this object successfully, a plan should, as soon as practicable, be laid down, according to which the architect and the artists to be employed should co-operate to this great end. At the present stage of the inquiry the details of such a plan could not be suggested, but a commission might with much advantage be appointed to counsel and assist some department of the Government which should be charged with, and considered solely responsible for, the execution of such plan as might be ultimately adopted as the best calculated to realize the proposed object. But whether a commission be, or be not, appointed, the committee think it necessary that the advice of persons perfectly acquainted with the state of Art at home and abroad should be sought, for the better fulfilment of the purpose under consideration. During this investigation the attention of the committee has been called to a branch of Art but little known and practised in this country, viz., to fresco-painting. This method of painting has lately been revived on the Continent, especially at Munich, where it has been employed in the decoration of public buildings; for to public patronage alone must fresco-painting owe encouragement in any country: therefore, having carefully considered the evidence, the committee are disposed to recommend that this mode of painting be adopted; and they concur in an opinion expressed by Mr. Eastlake in a valuable paper on the subject which is appended to the evidence, that the nation possesses artists perfectly competent to realise the proposed objects, whose genius only requires for its development such an opportunity as is now offered by the decoration of the Houses of Parliament. It is suggested, however, in the event of this mode being adopted, that British artists not having had sufficient practice in fresco, it would be safe and judicious to afford them, in the first instance, opportunities for some experimental efforts. The opinion alluded to as expressed by Mr. Eastlake, is contained in the following passage:—

"We should dwell on the fact, that the Arts in England, under Henry the Third, in the thirteenth century, were as much advanced as in Italy itself; that our architecture was even more characteristic and freer from classic influence; that sculpture, to judge from Wells Cathedral, bade fair to rival the contemporary efforts in Tuscany, and that our painting of the same period might fairly compete with that of Siena and Florence. Specimens of early English painting were lately to be seen,—some very important relics still exist on the walls of the edifices at Westminster. The undertaking now proposed might be the more interesting, since, after a lapse of six centuries, it would renew the same style of decoration on the same spot. The painters employed in the time of Henry the Third were English; their names are preserved."... "The first conviction that should press upon us should be, that our own country and our own English feelings are sufficient to produce and foster a characteristic style of art; that although we might share much of the spirit of the Germanic nations, this spirit would be modified, perhaps refined, by our peculiar habits; above all, we should entirely agree with the Germans in concluding, that we are as little in want of foreign artists to represent our history and express our feelings, as of foreign soldiers to defend our liberties. Even the question of ability (although that ability is not doubted) is unimportant; for, to trust to our own resources should be, under any circumstances, the only course. Ability, if wanting, would of necessity follow. In the Arts, as in arms, discipline, practice, and opportunity are necessary to the acquisition of skill and confidence; in both a beginning is to be made, and want of experience may occasion failure at first; but nothing could lead to failure in both more effectually than the absence of sympathy and moral support on the part of the country. Other nations, it may be observed, think their artists, whatever may be their real claims, the first in the world, and this partiality is unquestionably one of the chief causes of whatever excellence they attain. It is sometimes mortifying to find that foreigners are more just to English artists than the English themselves are. Many of our artists who have settled or occasionally painted in Italy, Germany, Russia, and even in France, have been highly esteemed and employed. The Germans

especially are great admirers of English Art, and a picture by Wilkie has long graced the Gallery of Munich."

With respect to the cost of an extensive and well-devised plan for the public patronage and encouragement of Art, the committee are aware that an impression is entertained by many that a large expenditure of public money for such a purpose would be wasteful; they are however of opinion, that all instances of the outlay of the public money of the purpose of forming or extending collections of works of Art in this country, have been directly productive of new objects of industry and of enjoyment, and have, therefore, at the same time added to the wealth of the country. In support of this opinion the collection of vases made by Sir W. Hamilton is instanced. These, through the instrumentality of Mr. Wedgwood, were the means of creating a new branch of manufacture which gave extensive employment to artists and artisans, improved a great staple trade and the particular branch of industry to which this manufacture appertains to such a degree, that productions almost rivalling the originals in their execution were the result of this acquisition. In a pamphlet on the "State of Learning and the Fine Arts," by Mr. Millingen, these vases are thus spoken of:—"A few objects, and those of little value, were contained in the British Museum till the year 1778, when Parliament granted a sum of £8400 for the purchase of Sir W. Hamilton's collection of ancient Greek vases, and various other objects of Art. This collection, perhaps the finest ever known at that period, was a great acquisition to the country, and ought to have opened the eyes of the Government to the utility arising from similar acquisitions. In fact, the discovery of these vases and their communication to the public by engravings, coinciding with the discoveries of Herculaneum and Pompeii may be considered an essential epoch in the history of the Arts, and which contributed greatly to their revival. The spirited designs which ornamented them, were studied by artists, and contributed singularly to improve the public taste. Their elegant forms, as well as the perfect quality of the clay and varnish, were analyzed and imitated by Wedgwood, and other chemists and manufacturers. The public was so much pleased with these imitations, that our potteries were improved, and became an object of extensive demand in foreign countries. In a fiscal point of view, there can be no doubt that the money expended for the purchase of the collection in question, has been repaid a hundred-fold to the nation at large, and proportionally to the revenue."

The Library of the British Museum and the National Gallery of Paintings afford instances of incalculable benefit to every department of literature and Art. As, therefore, the collection and exhibition of works of Art have not only promoted the moral elevation of the people, but have also stimulated in a great degree their industry, it is the opinion of the Committee, that upon this occasion a direct patronage of high Art will yield a proportionably higher influence.

"In the instance of Munich," says Mr. Wyse in his evidence, "fresco painting has been applied to almost every class of Art and every department of history, beginning with the very earliest Greek history, and going down to the history of the present day. In the King's palace, for instance, you meet with illustrations of the Iliad, passages from the Greek and Roman mythologies; from the earlier and later Greek and Roman histories; from the early legends of the Germans, and continued from thence onward a series of the most important historical events, especially from the history of Bavaria; finally, in the apartments of the Queen particularly, you have illustrations of the most remarkable poets of modern times, but especially of the poets of Germany."... "There is thus an opportunity for the display of every description of talent and every description of knowledge. The effect upon the public at large is equally diversified; the higher class has an opportunity of judging of the propriety of the classic illustrations, while I have seen the peasants of the mountains of Tyrol holding up their children, and explaining to them the scenes of the Bavarian history almost every Sunday. This fact strikingly illustrates an observation I heard from Cornelius himself, that it was a difficult thing to impress upon the mind of a nation at large a general love of Art, unless

you were to use as an instrument painting upon a large scale, and fresco was particularly suited for this purpose; it was not to be expected that the lower classes of the community should have any just appreciation of the delicacies and finer characteristics of painting in oil, and that they required large and simple forms, very direct action, and, in some instances, exaggerated expression. These paintings carry down the history of Bavaria to a recent period."

The following passage, also from the evidence of Mr. Wyse, instances the employment of fresco in the decoration of a private dwelling:—

"I would direct the attention of the Committee to one instance among many, which I had the opportunity of observing with considerable attention. The house to which I allude, is a castle belonging to Professor Bothmann Holweg, upon the left bank of the Rhine. The castle is a restoration from very inconsiderable fragments in the Byzantine, or early German style of architecture; between both, indeed; the internal decorations are a mixture of the early Greek, with additions of the early German architecture, and at intervals are introduced portions of sculpture and paintings from the Dusseldorf school generally, in reference to the early history of Germany. The whole effect is extremely light and pleasing, and, as far as I understood from the Professor himself, the expense was, from the number of artists at present engaged in that department in Germany, not very considerable. I have seen houses in Frankfort where a similar application, though not to the same extent, of fresco painting has been used; and I collected from those who were well acquainted with the Arts, that every day it was extending, particularly in Prussia."

The evidence of the same gentleman shows the influence of the encouragement of Art upon trade and manufactures:—"With reference to subordinate branches of the Fine Arts, painting on glass, enamel painting, and casting in bronze, will you have the goodness to give the Committee the result of your observations?—It has been found that the encouragement of fresco painting has led to a parallel encouragement in other branches of Art; for instance, to the introduction of encaustic painting, which is quite new in Germany, though practised for about half a century in Rome. The advantages of encaustic painting are, greater brilliancy and greater durability. Under the direction of the King, a series of landscapes are in the course of execution for the decoration of the arcades. A branch of Art also little known till lately, at Munich, is porcelain painting: it has reached a high degree of excellence, emulating, if not surpassing, in many particulars, the other celebrated manufactures of Europe."

The Committee have not been able, from the abrupt termination of the session of Parliament, and consequently of their inquiry, to deliver an opinion as to the probable amount of the expense of carrying out a sufficient plan for the encouragement of Art; but they are of opinion, that in pursuing a well-directed system, a moderate annual expenditure would accomplish very important results, if not all that could be desired.

"Whilst the Committee, in conclusion, regret that they could not investigate the whole subject so fully as they desired, and as its importance demanded, they unanimously recommend the evidence herewith presented to the House to its favourable consideration, with a view to its receiving the immediate attention of the Government; and in the hope that our new Houses of Parliament may hand down to posterity a memorial as well of the genius of our artists as of the importance attached by the country to the nobler productions of Art; and that the subjects embodied in such representations, whether by painting or sculpture, may serve to perpetuate the events of our past history, and the persons of our public benefactors, in grateful remembrance of the people."

This is the substance of the Report; and what style of Art soever be ultimately adopted, all must concur in an opinion expressed by Sir M. A. Shee, that this is "a most favourable opportunity for calling forth the genius of our country, and promoting the Fine Arts to the utmost extent of which they are capable; it is the only opportunity that has occurred for many years, and if it be suffered to pass unheeded, it may be said that there is no hope in this country for artists in the higher department of the Arts."

## EMPLOYMENT OF FOREIGN ARTISTS.

It will be seen with surprise that, in a plan professedly for the encouragement of high Art in England, some of the witnesses examined before the committee of Fine Arts, are favourable to the employment of foreign artists for the decoration of the Houses of Parliament. Upon the presumption that fresco-painting is to be adopted, we are recommended to have recourse to the fresco school of Munich, for the execution of that which must, in main points, be better done by our own. In Germany, but especially in Bavaria, this method of painting has been lately revived; and, if its adoption be determined for the interior embellishment of the Houses of Parliament, the same sources are open to English artists, whence the painters of Munich have derived improvement. We are precisely now in that position in which were German artists, when this method of painting was less common among themselves; and, since it is known that their works in this manner are much inferior to those of their Italian models, there would be something extremely humiliating in being schooled by the disciple, while we may yet commune at Rome with the spirit of the master. Those who would blindly advocate the introduction of foreign artists for the execution of works so essentially English, have not—cannot have—duly weighed the extent of the mischief they are desirous of promoting. German artists might do something for us in the mechanical process of the Art, though not more than English artists could do for themselves; but it is impossible that they could so far denationalize themselves as to paint English history in English character and feeling. Were they to be chosen for the decoration of the Houses of Parliament, it is not to be expected that they could be otherwise than national in everything; thus, all that they did would be for themselves and their school. We must all admire, on the one hand, the patriotism of the King of Bavaria, and, on the other, the energy and perseverance of Bavarian artists; but, at the same time, we feel that, if historical Art had among ourselves received similar countenance, we should, at least, have rivalled the school of Munich; and now, therefore, that the occasion has arisen, were it not better to hold out the premium to native talent—to follow that example which in Germany has been productive of such useful results? The cry has been loud against the drawing of our school, but it has been by no means so bad as to justify the clamour raised against it. Since the introduction of fresco, the school of Munich has much improved in this particular, and our own is not less prepared than was that school formerly, for such ameliorations as may give full value to any fresco works which its members may be commissioned to execute. The colour of German fresco is inferior—so much so as to be surpassed by that of the French school, which has not professed this method so extensively as the former: wherefore then, are English artists who excel in purity and sweetness of tone all modern colourists, to have recourse to an imitative school, which at best, in colour, can be no more than third-rate, for the purpose of acquiring that which half a century must be well employed to unlearn? Fresco-painting is undoubtedly advancing at Munich to a high degree of perfection; but that it is the opinion of competent judges, that under similar encouragement it would advance equally in England, has been declared before the committee. We are content to date our school from the time of Reynolds. In Germany a School of Art existed under Durer, who, though a very celebrated master, was by no means the only remarkable genius of early German Art, for there were the Behams, uncle and nephew; the Holbeins, father and son; Luca Cranach, Giusto di Alemagna, and others, as well known in Italy and elsewhere as in Germany. The French date their Art from the time of Vouet, but they might almost, without question, fix it at an earlier period. However, we would ask, what our School—all circumstances considered—has to fear, in a comparison of progress, with either of these; and why the embellishments of the Houses of Parliament should not be entrusted to native genius, many of the works of which, “would do honour to any age or any nation?”

## ART IN SPAIN.

## OLD SCHOOL OF PAINTING.

In this and other countries Velasquez and Murillo are celebrated by all amateurs, but not really known by many. Cano, Gonzalez, Zurbaran, Coello, and Morales are quoted by many, known to few; the other artists of the great school of painting in Spain are quoted by few, known by almost none. When, therefore, a Spanish picture is presented to some pseudo-connoisseur, it is, according to some prominent quality, baptized for one of the above-mentioned great names, or it is rejected and despised,—such is the fate of works of Tristan, Espinosa, El Mudo, &c.—for the great reason that the master is unknown. “*I don't know him*,” this is the wise and eternal reply with which the works of many a great master are proscribed, and pictures possessing in themselves intrinsic excellence. But this sentence, “*I don't know him*,” while it gives the measure of the connoisseur's knowledge or ignorance, does not measure the merit of an artist nor of a picture. But our self-love acts always so; we are prompt to under-rate what we do not understand and do not seek to understand. Let us repeat the words of Rousseau, which we cannot too often remember: “*Discutons ce que nous connoissons—respectons ce que nous ne connoissons pas*.” Spain, engrossed by political vicissitudes, and so long the theatre of war, has for ages possessed in her churches, convents, and palaces, vast treasures of Art; paintings the most varied and interesting. Some of these she has allowed, from time to time, foreigners to purchase and carry away; and recently, in consequence, there have been formed, both in France and Germany, galleries entirely consisting of Spanish pictures. These have led to a wish in many to study the history of Art in that country; and hence we have now re-publications and translations in various languages of the works of CÉPERES, of A. PONZ: “*The Art of Painting*,” by PACHECO; “*El Museo Pictorico*,” “*Y Escala Optica*,” “*Parnaso Espanol Pintoresco Leu- reado*,” by PALOMINO, who, like Vasari and Da Vinci, was himself both an artist and a man of letters, and like them loved to write of Art and its professors. The “*Diccionario Historico*,” by CEAN BERMUDEZ, is also reprinting, with various other works. The Spanish Gallery Aguado at Paris and the Spanish Gallery in the Louvre, have furnished materials for two works on Spanish Art—the first is the subject of the interesting book of M. Viardot; the second of the judicious observations of Monsieur H. F.—We cite both these works with praise, and shall occasionally avail ourselves of them; but without implicitly following any one, we shall select the opinions of those who have, by long and patient study and comparison of specimens of different masters, acquired, according to our judgment, the best claim to decide on their merits. We know the task requires much study and thought, nor do we hope entirely to accomplish it; but our attempt may lead others to study the Spanish masters, and may diminish the number of those who reject them with the freezing “*I do not know him*.”

According to the usual custom, in writing histories of Art in all countries, the Spanish historians seek to trace its origin, displaying much erudition, and disputing much with each other, but leaving the subject as dark as they found it—having only lost a little time and made their readers lose their patience. In the present slight sketch we shall first glance over the progressive history of Art in Spain, and subsequently shall make some abstract observations on the philosophy of Art as characterized in the Spanish school—giving first the details, and lastly the commentary.

We agree with M. Viardot, that in marking the dawn of Art in Spain, we must neither trace back to the Romans, because theirs was the Art of the ancients; nor to the Goths, the instruments of destruction to painting; nor to the Arabs, who, though they had a period of high civilization, were yet by the first iconoclastic principle of their religion, forbidden to admit images in their temples, or even to attempt the imitation of the human form. It is consequently needless to seek in the period of Arabian greatness for traces either of painting or statuary, though we are by them initiated into a new style of architecture. We must, therefore, approach the slow development of the

middle age, an epoch justly called “*La Renaissance*,” for then refined and elegant ideas began again to flourish on the face of the earth. We do not mean to indicate by this expression, the abuse of the meaning of this word, which now is applied to all modern works that have no true style; they are called in the style of “*La Renaissance*.” We mean to indicate that period in the history of Art after the fall of the Greek and Roman Empires, when the elements of the Fine Arts, dispersed by ages succeeding them, were re-collected.

Man requires shelter from the intemperance of climate, and from the attacks of animals, and even of his fellow man. The art of architecture, therefore, from its usefulness, is the first to spring up among a people, being alike required for security, for comfort in family and social life, for religious worship; first for use, then for luxury. Thus in Spain, after many vicissitudes, architecture arose before sculpture or painting had shown themselves; nor were the middle ages of barbarism past, ere there were seen to arise, gloriously pointing towards heaven a hundred towers, a hundred magnificent cathedrals; Leon, Burgos, Tarragona, Toledo, and many other cities show interesting examples belonging to that period. Sculpture, as has been often observed, appears soon after architecture, and using the same materials, marble, stone, clay, or wood, places ornaments to embellish her. Thus, Cean Bermudez observes, and every amateur may observe for himself, many attempts, more or less successful in sculpture of the fourteenth century. It is sufficient here to mention, among many specimens at Taragona, the statues in its famous cathedral, which are the works of the sculptor, T. Castells, who is mentioned with the title of “*Maestro*,” a name common in early times to all artists, especially in Spain and Italy; but which now is only applied to musical composers, “*Maestro GOMEZ, Maestro ROSSINI*,” &c. But to return to our subject: Toledo possesses many interesting and beautiful works of this period; such as the mausoleum of Henry II., and that of Don Pietro Tenorio; the one by *Maestro Anrique*, in 1386; the other by *Maestro Fernan Gonzalez*, in 1399. Immediately afterwards, in the successive space of twenty years, there flourished, in the single city of Toledo, more than thirty “*Maestros*” sculptors, who laboured on the front of its Basilica. Among these, as peculiarly worthy of mention, we may note *Maestro Ruiz* and *Alvarez Gomez*. Cean Bermudez, Viardot, and others observe, that towards the close of the epoch called Gothic, we find Spanish artists employed as sculptors in other countries. The most remarkable instance among those quoted is the mausoleum of Jean-sans-peur, Duke of Burgundy, erected about the year 1450, by J. de Huerta, which may now be seen in the Museum at Dijon. Room may here be found for discussion as to whether these Spaniards went to foreign countries to learn or to teach. We know that in the following century, G. Becerra, Diego de Siloe, and many others, went to Italy to study sculpture, which had there formed itself so gloriously on the models of the antique. But such discussions would retard too much our little historical sketch; at a future time we may have occasion to return to the subject. We now hasten to reach the epoch of painting in Spain, to which branch of Art this article is especially devoted.

After sculpture there appeared later and slowly the art of painting in Spain. Antiquaries show in Toledo certain monstrous representations of the human form, painted in 1400, by the *Maestro Fernan Gonzalez*, which do not deserve the name of pictures; still less those of Rodriguez Estaban de Castilla, who lived about 1290. These show the endeavour rather than the power to paint, in the same manner as Lanzi remarks, and as may be still seen at Bologna in the attempts at painting of Guido, Ventura, and Ursone, until 1248. These early works in Spain deserve to be noticed, but not dwelt on. The most ancient paintings that we find worthy of the name, are after the arrival in Castile of a Florentine painter called Gerardo Starnina, about 1416. Then Juan Alfons painted the chapel “*de los Reyes Nuevos*” at Toledo; and we see works somewhat advanced under *Maestro DELLO*, a Florentine painter, and *ROGEL*, a Fleming, men whom King John II. had brought to the country to stimulate the study of painting, which was a little later more fully developed by Juan Sanchez de Castro. He may be called the founder of the school of painting in

Seville, which, in after times, became the glory of Spain.

This century had not closed before Antonio del Rincon returned from Italy, where he had studied under Andrea del Castagno and Ghirlandajo, and by his example gave a further impulse to Art, and with his title of painter to the king, excited the emulation of others. Pedro Beruguete at Toledo, Louis de Medina at Alcala, and some others, produced various works in the somewhat dry style of Luke of Leyden, Albert Durer, and many of the painters of Umbria. But such painting, as Viardot already quoted observes, is properly called gothic, or, better to mark its parentage, *sculptural*. The figures are tall and straight like columns isolated, or placed in regular order, not forming groups, without composition, anatomical drawing, perspective, or chiaro scuro; and frequently the expression or passion they are meant to express, can only be gathered from a paper which issues from their mouths. In Spain, Art produced one only great generation, or rather one only population, of painters great indeed, and abundant in masters, but all included in the space of a century and a half. The impulsion of this happy period seems to have been given when Charles V. placed under one sceptre Madrid, Naples, part of Italy, and Antwerp—the three nations where Art was destined to be cultivated with the highest enthusiasm.

Thus, while in Italy, Leonardo, Michael Angelo, Raffaele, Correggio, Titian, shone in their free masterpieces, Flanders boasted her minutely finished and richly coloured labours. Then also did the discovery of the new world by Columbus, the taking of Grenada, and other conquests, excite in Spain a general movement of intelligence, and quickened the love of glory, which, according to individual disposition, is directed differently. Then many young artists directed their steps from the Peninsula to study and emulate the greatest men of their age. There was at this period a real pilgrimage of Spanish architects, sculptors, and painters, who went mostly to Italy, a country that in itself presented to their ardent minds treasures far more precious than those with which Peru tempted the adventurers of those times greedy of gold. We have here only to follow exactly the historians, who name especially among the illustrious painters who went to study in Italy, from Valencia, F. Ribalta, and he who became afterwards the prince of its school, and is by many authors called the true Raffaele of Spain—we mean Vincente JUAN DE JUANES. From Aragon there went Pablo Esquarte; from Cordova, the learned Pablo de Cespedes; from Catalonia, Theodosio Mingot; from Grenada, Pedro de Raxis; from La Mancha, Hernan Janex; from Seville, Luis de Vargas and Pedro de Villegas, Marmolejo.

These, and many other painters, returning to their country, came rich in the inspiration of Italy and in the resources of Art acquired under those great masters, whose merits they almost equalled. At the same time many foreign artists visited Spain, called there by its kings, prelates, and nobles. As always happens in such cases, these strangers excited emulation, and promulgated new methods, forming and perfecting the taste of Spain.

We shall mention a few names among these. First come those of Titian and Rubens, who made short but triumphal journeys through Spain. Among sculptors, Ph. de Borgogna, at Burgos; and at Grenada, Torrigiani, the illustrious but unfortunate rival of Michael Angelo, and other strangers, ornamented with their labours the churches and royal sepulchres; while painters in almost equal number were established, and liberally paid, in the principal cities. At Seville was Pierre de Champagne, with his brothers, Julius and Alexander; at Toledo, Isacco de Kelle and Domenico Theotocopoli, called "*El Greco*," in Aragon, Lupicini; at Madrid, the Flemish Antonio Moro, Patrizio Caxesi, Castello from Bergamo, Antonio Ricci from Venice, Bartolomeo Carducci from Florence, Pellegrino Tibaldi, a painter, sculptor, and architect, from Bologna.

Amidst this mutual commerce between foreign and native artists, painting arose, and the four schools of Spain were formed. At first, humble and timid imitators of their Italian masters, they began by degrees to be free; then they entirely emancipated themselves, became nationalized,

adopted many of the good and evil qualities of their country, attained independence, originality, and spirit in their style; then advanced to boldness, to impetuosity—the latter sometimes pushed beyond reasonable limits. The march of Art was almost the same as it had been in Italy. At Rome it acquired form; at Venice, colouring; at Bologna, effects; at Naples, a mixture and imitation of the other three. In Spain, four schools formed themselves, but not successively, as in Italy; they arose simultaneously—namely, the schools of Valencia, Toledo, Seville, and Madrid.

The first of these was renewed, and gloriously reformed, after the return of Juan de Juanes from Rome, as before-mentioned—an artist to whom we may hereafter devote a separate notice, because he is a painter of high merit individually, and as highly connected with the history of Art. The school of Valencia is further made illustrious by Ribera, who here learned the rudiments of Art, and by many others, among whom we shall only name the two Ribaltas, the two Espinosas, Esteban March, the family of the Zarina, of whom the Aguado Gallery possesses some remarkable specimens.

The school of Valencia, after having, by Juan de Juanes, reformed the school of Seville, became after no long period fused into it, as were the other small subdivisions of the schools of Murcia, Grenada, and Cordova, whose chief was the illustrious Cespedes, called "Michael Angelo de Cordova." The school of Toledo had for its first reformer the above-mentioned "*El Greco*," and among its clever masters we may place Blas de Prado, Sanchez Cotan, Mayno, Orrente, and the celebrated Tristan, studied by Velasquez before and after his journey into Italy. This school, illustrated by the "divine" Morales, with the other small schools of Saragossa and Valladolid, was finally also transfused into that of Seville; so that the Spanish school may be placed in two great divisions—Seville and Madrid—that is, Andalusia and Castile.

Luis de Vargas, Villegas, Marmolejo, Pierre de Champagne, all pupils of Italy, commenced nobly the reform of the school of Seville, which perfected itself by the example of the great Juan de Juanes. Increasing, its character became wholly Spanish in the works of Castillo, Herrera, the elder Pacheco, and Pedro di Moya, who brought to it, from London, the lessons of Vandyke. The school of Seville reached the acme of its strength and glory, and the number of great artists it produced seem almost fabulous—Gomez, Antolinez, Tobar, Alonzo, Zurbaran, Palomino, Velasquez, and Murillo, who, during a laborious artistic existence of thirty-six years, may be said at last to have centred all in himself by the variety of his three famous styles, "*frigido, calido y vaporoso*," but who left for future times only faint copyists, who had no pupils nor successors of much force, with the single exception, perhaps, of Tobar.

At Madrid we have the same phases of a school—"Founded, flourish, and decay"—Berreguete and Becerra were rather sculptors than painters. We have then F. NAVARETTE, called "*El Mudo*" (the dumb), a great painter, the pupil of Titian, and often called "*the Titian of Spain*." These three were the founders of the school of Madrid. "*El Mudo*" is worthy of high praise, and has been greatly eulogized. We quote a passage in his praise from Lopez de Vega:—

"No quiso el cielo que hablase,  
Parque con mi entendimiento  
Diese may sentimiento  
A las cosas que pintase;  
Y tanta vida les di  
Con el pincel singular,  
Que como no puede hablar,  
Hice que hablasen por mi."

Which may be thus translated:—

"Heaven would not that I spoke,  
That I might pour my soul—all in these works of mine,  
And such life my pencil woke,  
That for me who cannot speak—they speak with voice divine."

Besides these founders of the school of Castile, whose centre was Madrid, we must add other names of those who co-operated for its glory; such as the families of the Castelli, Caxesi, Carducci, Ricci, Tibaldi, all Italians originally, by whom were formed Sanchez, Coello, Pantoja de la Cruz, two Pereda, and Colantes, Martinez, Solis, and others. The arrival of Velasquez in

Madrid brought into its school a portion of the elements of the Andalusian style; and from this mixture arose the manner of painting of Parejo and Carreno, who, though living in Madrid, says Viardot, seemed sons of Seville. Finally, Claudio Coello was the last of this generation of painters: he died about the time of the arrival of Lucca Giordano at Madrid.

The history of letters and Arts is often coincident in their rise and decline with the political history of a nation: of this we might find many examples in ancient history; but we shall confine ourselves to Spain, where it was so. By a series of disasters, this nation lost its high examples and its heroes; it ceased to reign by the sword, the pen, and the pencil. After the unfortunate reigns of Philip II., of Charles II., the war of the succession, and after Philip V., the Spanish nationality began to be eclipsed; what was decline, become abandonment, ruin, and death. After master-pieces came middling pictures, and then none were painted at all. The theatres were closed; no books were printed; the Spanish mind seemed asleep. When a people fall into this state, all efforts appear vain to excite it. Thus vainly did Philip V. bring painters from France and Italy into Spain: Vanloo, Hovasse, Procaccini, Buonavia, Vanvitelli; in vain did Ferdinand VII. create the "*Academy of San Fernando*," equally vain that of "*St. Luis*" at Saragossa, of "*San Carlos*" at Valencia: not one great painter was produced by them. Charles II. had in vain called Lucca Giordano from Naples, who was himself too much a mannerist. Charles III., that he might have a painter, brought from Rome Raphael Mengs, originally a German: all was vain. The school of Spain ceased to shine, except, perhaps, in the works of Francesco Goya, whose light was but individual and fantastic. Spain, at the close of the fifteenth century, was all powerful; during the sixteenth she struggled to support herself in the two worlds; in the seventeenth she became so weak, that she was almost forgotten, and her name nearly cancelled alike in the world of politics, letters, and Arts. Spain, after many changes, has now re-acquired national independence, and we see arise again her poets, as in Luzan, Iglesias, Cadalso; her learned men, as in Llorente, Masdieu, Conde; translators, such as Isla and Marchena; dramatic authors, such as Cienfuegos, Moratin, Ramon de la Cruz; political writers, like Campomenas, Josellanas; and authors, like Quintana, Martinez de la Rosa, Torreno, &c. In the golden age of Spain, literature followed the political movement, and the Arts followed literature. The two first phases have been renewed in Spain; let us hope the third will follow—a hope strengthened by the care has been taken to increase and classify the magnificent gallery and museum of Spanish pictures at Madrid, and which becomes almost certainty, by the promise the young painter Esquivel gives, that he will become the head of the present school of painting in Spain.

P.

## THE ART-UNION OF LONDON.

### EXHIBITION OF THE PRIZES.

A MORE gratifying sight than that now presented in the large room at the Suffolk-street Gallery, where the exhibition of the prizes is this year held, we never saw,—showing as it does the importance to which this Society has attained, and the good which must inevitably result from it. The exhibition consists of 132 pictures, and one piece of sculpture, selected by those members who were fortunate enough to obtain prizes at the last distribution; and we do not hesitate to say that, with some few exceptions, they reflect great credit on the taste of the members generally. There can be no doubt, that the plan pursued by the London Art-Union, of leaving the choice of the pictures to the prize-gainers is the right one, and must in the end, tend greatly to the improvement of taste, and the advancement of the arts, provided always that a public exhibition take place as now, so as to enforce from the selectors some degrees of examination and inquiry; and act as a check on ill disposed individuals (for ill disposed individuals there will always be amongst so large a body), who might otherwise seek their own advantage without care for the interests of art. Responsibility is seldom cared for by a committee,

the onus being divided, but by an individual it is necessarily more strongly felt. Of course, in some few instances, pictures of doubtful merit will be bought; but the evil of this will be much more than counterbalanced by the general advantages of the mode.

The present collection contains a picture selected by a peer of the realm, 'The Garden Terrace at Haddon,' by T. Creswick (one of those delightful pieces of nature produced by this artist, where one can see the leaves flutter in the breeze, and hear its sighing); and one chosen by a journeyman carpenter, namely, 'Drawing Tears,' by A. H. Taylor. Furthermore (and more important to our purpose), it presents what may be regarded as the chief oil painting of the season (so far as the public exhibitions were concerned) 'The Sleeping Beauty,' by D. Maclise, and the best water-colour drawing, namely, 'The Oath of Vargas in the *Conseil des Troubles*, 1567,' by L. Haghe. In our notice of the exhibition at the Royal Academy, we spoke at some length of 'The Sleeping Beauty,'—the invention and imagination displayed in it, the variety of materials introduced, and the consummate skill with which each object is finished. Where it is now placed, however, it is seen to more advantage than before; and its claims to the title of a wonderful work of Art will be more universally recognised and admitted. The foreign servant in the foreground on the left side, the girl before the glass, the old jester to the right of the picture,—grumpy in his sleep when his vocation no longer operates, the boy's head on the drum, the exquisite variety of character in the fairy train, and a dozen other striking points, come upon us as fresh things, and aid in extorting unlimited praise in spite of the general bad tone of the picture as a whole. The departure of the Bad influences (typified by figures of a doubtful mien) on the entrance of the prince who is fated to dissolve the charm, and the ascendancy of the Good, is a touch of poetry that gives elevation to the whole. 'The Oath of Vargas' is a very remarkable piece of colouring, as we elsewhere said when noticing it at the Gallery of the New Society of Painters in Water-Colours. The sitting figure in the foreground is especially beautiful. 'Cornet Joyce Seizes the King at Holmby,' by E. M. Ward, an incident in the romantic life of King Charles I., has a hardness about it which at present mars the general effect. Should time cure it this will be a nice picture. 'The Warning at Linnithgow,' by W. H. Kearney, from Scott's 'Marmion,' and wherein James IV. and his chivalrous court play the principal parts, is a clever composition. Its selection does credit to the Society. 'Charity; Entrance to the Grand Altar of St. Mark at Venice,' by H. O'Neil, gives evidence of a great advance on the part of the artist. Judging from the colouring, it would seem that he had been studying Eastlake closely. A fault in this picture is the over prevalence of red colour, nevertheless it is a work of great merit. 'The Little Sick Scholar,' by Mrs. McLan, from 'Humphrey's Clock,' has been improved since we saw it at the Academy. It is a most charming little picture,—if anything, too true to nature. 'Gil Blas Entertained by the Valets of the Beaux, who Sup at their Master's Cost,' by T. M. Joy, has some vigorous, firm painting, and is altogether a most creditable production. 'Children Returning from the Festa of St. Antonio, and Chanting a Hymn in praise of the Saint,' is a graceful sketch by T. Uwins, R.A. Tomkins has three large landscapes, 'Oberwesel, with the Ruins of the Castle of Schomburg,' 'Huy, on the Meuse,' and 'Hotel de Ville, Dinant,'—all very nice pictures, perhaps the best he has ever painted. J. W. Allen has also several very excellently coloured landscapes, amongst which may be pointed out 'A Sand-bank near Bletchingley,' and 'Woking Common.' 'Touch and Take,' by J. Bateman, a terrier releasing a rat from a trap shews a more than ordinary study of animals; the rat in particular is excellently well painted. 'Titania Sleeping,' by A. J. Woolmer, should come in for a share of praise. 'View of Bellagio, Lago di Como,' by T. M. Richardson, jun.: 'On the Medway,' by Tennant; 'Cottage from Nature,' by F. R. Lee, R.A.; and 'Cattle Returning,' by J. Wilson, jun., are all landscapes to be coveted. The latter, especially, is a piece of rich and harmonious colouring.

Of the Water-Colour drawings, some of which

we have already pointed out, we may almost say there is not one without merit, as indeed might be expected when we find S. Prout, Copley Fielding, J. Varley, D. Cox, T. S. Robins, F. Stone, De Wint, and E. Duncan, the chief contributors. 'St. Etienne du Mont, Paris,' and 'Brixham Harbour, Devon,' both by this latter artist have high claims for careful drawing yet sparkling effect. 'Scene in the Via Mala, Pass of the Splügen,' by G. A. Fripp; 'Gravedona, on the Lake of Como,' by W. Callow; and Rochard's 'Mary, Queen of Scots' Farewell to France,' are all clever drawings.

The sculpture selected is a small statue by F. Thrupp called 'A Magdalene,' the expression of which is very charming. The attitude of the figure is easy, the drapery well marked, but some trifling defects might be pointed out in the hands and neck.

We hope the example thus meritoriously set of encouraging this elevated department of art will not be lost sight of.

In concluding this notice, we repeat what we have already said, that the exhibition is a highly creditable one, and cannot fail to increase largely the means of this most useful and admirably conducted association. The greatest praise is due to the committee for the zeal and ability which they manifest in its government; indeed we hardly know how artists, as a body, can sufficiently thank them for their continued exertions.

The exhibition, since it was opened, has been visited by about eight hundred persons daily.

#### SCHOOL OF DESIGN.

On Monday, the 23rd ult., the annual distribution of prizes awarded to successful students in this School took place in the apartments occupied by the Institution in Somerset-house. His Royal Highness Prince Albert was conducted to the chair a little after twelve o'clock by the Right Hon. H. Labouchere, M.P., President of the Board of Trade; Viscount Duncannon, and Lord Portman. There was a numerous assemblage of visitors, among whom were—The Bishop of Norwich, Lord Colborne, Sir R. H. Inglis, M.P.; Sir A. W. Calcott, R.A.; Mr. Gladstone, M.P.; Mr. F. Maule, M.P.; Mr. Ewart, M.P.; Mr. Wyse, M.P.; Mr. G. Knight, M.P.; Mr. B. Hawes, M.P.; Mr. Rogers (the poet); Mr. Etty, R.A.; Mr. Haydon, &c. &c.

Mr. Dyce, the director of the institution, commenced the business of the morning by reading the following statement:—

"I have been requested by the Council to commence the business of this day by stating the result of their deliberations on the comparative merits of the drawings and models submitted by the students, competitors for the prizes. But before doing so, it may be necessary to offer some few words explanatory of the principle on which the selection of subjects for competition has been made, not only to remove any impression that the designs generally give an adequate notion of the extent and versatility of talent possessed by all the competitors, but to account for a deficiency of skill that may be observed in some of the drawings to which prizes have been awarded. At each of the three competitions which have hitherto taken place, the selection of subjects, with one or two exceptions, has been varied. On the first occasion, about a year after the foundation of the School, prizes were offered for designs for certain important branches of industry dependent on taste, without much reference to the capabilities of students, and not so much in the hope that, considering the very short period during which they have been engaged in preparatory study, a great amount of skill would be displayed, as to obtain a reasonable ground for anticipating the future success and efficiency of the School. Two years were then suffered to elapse before the Council thought it again advisable to offer rewards for designs; and during this period the condition of the School had considerably changed. On the first opening of the establishment a certain amount of skill in drawing was required to qualify a student for admission to the advantages of tuition, because it was thought that a restriction of this kind would tend to maintain the superior character which it was proposed the central establishment should possess. Experience, however, soon showed that the almost absolute want of elementary education in Art among the classes likely to avail themselves of instruction in the School of Design, would be an insuperable obstacle to its efficiency, unless this restriction was removed; and it proceeded to deal with its pupils as mere beginners. The removal of the restriction, it is hardly necessary to state, had the effect of converting the institution for a time into a mere elementary drawing-school. When the distribution of prizes took place last year, the great majority of students were engaged in learning the very

first rudiments of Art, and very few indeed were really capable of producing designs for manufacture; and those had either attended the School since its commencement, or had been previously engaged in branches of industrial design, by which they were enabled without difficulty to turn their Study in the School to account. The subjects of competition last year, accordingly, were selected with immediate reference to the talents and capabilities of a few more advanced students; while, on the other hand, numerous rewards were bestowed without competition on the pupils of the elementary classes. This year a new selection of subjects for competition has naturally arisen out of the progress that has been made since the last distribution. A considerable number of those who on the last occasion were mere beginners, have now advanced to the higher elementary exercises, and are capable, to a certain extent, of commencing the practice of design. It was desirable therefore to endeavour to stimulate their talents by offering rewards either for specimens of original design of the simpler sort, or for the kind of work which, though not ranking as original design, constitutes the step immediately preparatory to it. Of the nine prizes now to be awarded, four are of this description—one being for the best painting of flowers or fruit from nature; one for the best model in plaster from flowers or leaves; and the other two for original design in outline merely. Of the remaining five prizes, two are intended to encourage the right preparation of patterns for branches of industry which it must always be the business of the school more or less to attend to—namely, calico printing and paper staining. Two for decorative design, have been selected with reference to the growing public taste for a revival of the ancient arts of glass-staining and the painting of arabesques; and one for specimens of lithography, to reward the zeal, assiduity, and talent of the pupils who are preparing themselves to assist in the execution of the elementary drawing-book for schools, which is about to be published under the sanction of the Council. It only remains to be added, as one of the most favourable symptoms of the progress of the school, that the number of competitors is much greater this year than on the former occasion; and that if the instances of remarkable excellence are less numerous, it is due to the fact, that the prizes have been intended for the most part rather to elicit the rising talent of the younger students than to afford scope for the skill of those who are more advanced; and consequently that the majority of the specimens are really the production of beginners."

Mr. Cockerell, R.A., then rose, and begged permission to offer, as an artist and a member of the Council of the School, his testimony as to the care with which those designs had been selected, which were pronounced worthy of reward. This gentleman having spoken at some length on the present progress and the prospective advantages of the School, the prizes were delivered, in order as follows, by his Royal Highness Prince Albert, to whom they were handed by Mr. Labouchere.

1. To Mr. G. F. Lambart, for the best lithograph from nature. Given by the Right Hon. the President of the Board of Trade—5*l.* 5*s.*
2. To Mr. J. Patterson, for the best painting of a group of flowers from nature. Given by the Right Hon. the President of the Board of Trade—5*l.* 5*s.*
3. To Master C. King, for the best design for a salver. Given by Mr. J. G. Bridge—3*l.* 3*s.*
4. To Master G. Dyer, for the best design for a silver tankard. Given by Mr. J. G. Bridge—2*l.* 2*s.*
5. To Mr. O. Hudson, for a large design for painted glass. Offered by Mr. Alderman Copeland, M.P.—5*l.* 5*s.*
6. To Mr. G. Thompson, for a specimen of arabesque painting. Given by Mr. H. T. Hope—5*l.* 5*s.*
7. To Mr. J. Evans, for the best design for Mouseline de Laine. Given by Mr. J. Thomson—5*l.* 5*s.*
8. To Mr. W. C. Wild, for the best design of a drawing-room paper. Given by Mr. J. Thomson—3*l.* 3*s.*
9. To Mr. H. Durrant, for the best plaster model of leaves and flowers from nature. Given by the Council—3*l.* 3*s.*

Rewards of books for good conduct, regularity of attendance, and general attention to study, were then presented to Masters Barton, Stewart, O'Neil, Arnold, Gibaud, Beckwith, Findon, Dessurne, Haswell, Taylor, Tiffin, W. West, Wadhams, and Wright.

Mr. Labouchere then, in a neat speech, proposed that the most grateful thanks of the meeting should be presented to his Royal Highness, for his kindness and condescension in attending there that day; which proposal was seconded by Sir R. H. Inglis. On the motion being put, it was carried by acclamation, his Royal Highness acknowledging the compliment by bowing; after which he dismissed the assembly with expressions of his warmest wishes for the prosperity of the Institution.

## THE CARTOONS.

IN a late number was announced the rescue of these treasures of Art from destruction by fire. The circumstance is too recent to justify any censure that might be passed upon the non-adoption of immediate measures for their better security, since this is a national question which could not be determined without some consideration. The minutes of the evidence offered before the Committee of the House of Commons, the proceedings of which are noticed in a late number, throw some light upon the origin of the threatened calamity; the whole, therefore, of the passages having reference to the Cartoons we lay before our readers. The fragile and destructible nature of the material upon which these drawings are wrought cannot be forgotten; and it should also be remembered in the perusal of the following answers, that they are framed in, or in close contact with, the wainscot, which it seems is in every direction backed by flues. The assertion that the Cartoons are safe in their present situation is directly discountenanced by this evidence, if even that were necessary to prove the contrary fact after the occurrence alluded to. It will never surely be said that,—because the Cartoons are not yet destroyed, they are secure; that because they have so many years been where they are, they may, as hitherto, remain unscathed for a period indefinite; or that since the evil has not been consummated within a given number of years, the imminent danger is disproved. In the examination of John Grundy, who has the care of the apartments and pictures at Hampton Court, the following questions and answers occur:—

“Q. Has there been any accident lately to any of the flues in the palace? A. Yes.—Q. What was the nature of that? A. A flue caught fire at the back of the Cartoon Gallery.—Q. Was it an old flue? A. Yes.—Q. Was any damage done? A. Not any in the least.—Q. Have the flues generally been examined since that period? A. I cannot say.—Q. Did they ascertain the cause of the flue being set on fire? A. I should say it was from the want of being swept: but I would not give any opinion on that.—Q. Has there been no general examination of the flues since that accident? A. Not to my knowledge.—Q. Do you not, as the keeper of the gallery, think it is proper that there should be an examination of the flues near that gallery, so as to preserve the pictures? A. Decidedly.—Q. Is it not more necessary at Hampton Court, because those flues are connected with buildings inhabited by a great variety of persons, and therefore any single person who happened to light a fire in one of those flues in a separate apartment may endanger the whole building? A. Most certainly.—Q. Are we to understand that there are a great number of persons having apartments in the palace under the same room with the pictures in which parties live, and in which there are fires? A. Yes.—Q. If a fire were to happen in any one of those rooms, the whole collection might be destroyed? A. Yes, certainly. \* \* \* \* \*

Q. Were the paintings and cartoons in good condition before the stoves and warmth were applied? A. There was always a fire in the Cartoon Gallery ever since I have known it; we have more flues now than at that time.—Q. Have they suffered, in fact, from damp? A. Not in the least.—Q. But you have now a regular fire? A. Yes, always.”

“Mr. SEGUIER examined.—Q. Do you consider the National Gallery large enough to admit of Raffaele's Cartoons? A. No, certainly not.—Q. What is your opinion with respect to the advantage of bringing them to the metropolis, if proper accommodation could be afforded? A. I think they would be of the greatest use possible to the students; but I am of opinion that if they are brought here they will be destroyed in a very few years.—Q. In what way? A. By the smoke of London; they are water-colour, and of course when the smoke has fallen upon them there is no means of removing it.—Q. You consider them much safer where they are? A. I have known them where they are for nearly 50 years, and I see no alteration whatever in them; Hampton Court is the driest place that can be found in the country.—Q. Have you the charge of the pictures in Hampton Gallery? A. I have, as surveyor of the pictures.—Q. As such it is your duty to ex-

amine them from time to time? A. Certainly.

—Q. You are able to state, from your official examination, that the Cartoons are in good order at the present time? A. Yes.—Q. And you think they would not be so well in London as they are there? A. Certainly not.—Q. Though you admit that they would be of great use here? A. I think that they would be of the greatest service, if it was possible to preserve them here; many improvements have been made lately in plate glass, and if it was possible to glaze them and bring them to London, I think it might be desirable; but without such a protection, I think that they must be destroyed in the course of 20 or 30 years.—Q. Do you consider that glazing would be a sufficient protection against the smoke and dirt that exist in London? A. I think it might.—Q. In that case would not their utility as works of Art be very much increased to artists generally? A. They would be the finest things possible; they are the finest examples of Art in the world; if a gallery could have been made at Kensington Palace for them, I have no doubt that even at that short distance from London they would be preserved; the situation of the National Gallery is certainly bad, for it is in the very centre of London, very near the Thames, where the number of steam-engines and chimneys are increasing every day.—Q. You have mentioned Kensington; would Chelsea be free from the inconvenience which you state the gallery now suffers from its being in the heart of London? A. I think it would; that situation would certainly be preferable to the present one.—Q. You know the buildings called the Duke of York's School at Chelsea? A. Yes, I know the buildings, but I have never been in them, though I live in the neighbourhood; I think the first consideration in respect to all these works of Art is their preservation.—Q. In what condition are the pictures of the National Gallery? A. They are in excellent condition.—Q. Notwithstanding the smoke and dust, you find them dry and in good condition? A. Occasionally we wipe the dust off, and, by the pictures leaning forward, they do not get so much smoke; but even if they did, on an oil picture it would be easily taken off.”

This evidence clearly shows a pressing necessity for the removal of the Cartoons, if any place were known, at once fitted for their secure keeping and adapted to their advantageous exhibition. The National Gallery being fire-proof, would very well answer the purpose of safety; but a location there cannot, it seems, be contemplated; and even if additions were proposed, there are difficulties to be overcome which appear insurmountable. As regards place and distance, Kensington, as suggested by Mr. Seguiér, would afford many advantages over Hampton Court; and if temporary circumstances condemn them to a place in building which is not proof against fire, they could not well there, be in greater peril than at Hampton Court. Chelsea is also spoken of in the minutes; but if ever, under a serious consideration of the removal of these works, the alternative of the two places was determined upon, Chelsea, from its proximity to the Thames, would, if injury from smoke be apprehended, possess but little advantage over a more densely populated neighbourhood, in consequence of the increase of manufactories on both shores of the river, and the growing traffic of steam-boats above the bridges.

These works of the “divine master” are now associated with the refuse of the Royal collections. What a contrast does our appreciation of them afford when weighed against that of other nations! When the French effected the purchase of those portions of the Elgin marbles, which, at any cost, ought to have been added to our own Museum, hats were thrown into the air in exultation that these invaluable antiques had been secured to them at all: and their self-congratulation was the greater, that they came into their possession so easily. What then would be the pride of all lovers of Art in France, were that nation possessed—we will not say of works such as the Cartoons, for there are none others like them—but of the Cartoons themselves? Would they place them where they would be liable to destruction by fire, and at such a distance from their school of Art as to be useless to students? Such queries do not require answers. We by no means entertain such fears of the atmosphere of London as to apprehend the rapid destruction of the Cartoons when exposed

to it as other pictures are; but at the same time, in a question of such incalculable importance, nothing can justify the exposure of the Cartoons to the slightest risk from casual injury of any kind. The progress of natural decay, under which all human works suffer change, nothing of course can retard; but every means ought to be used to secure these inestimable works from any mischief with which they might be threatened from the foul matter with which the air of London is so abundantly charged. The question of the safe removal of the Cartoons has already been considered by a Committee of the House of Commons, on which occasion many opinions were taken on the propriety of placing them in London: and as the necessity of securing them against all ordinary sources of mischief was never more impressively felt than now, the quotation of some of the opinions delivered before this former Committee cannot be otherwise than interesting.

“Mr. S. WOODBURN examined.—Q. Do you think it desirable that the Cartoons should be removed from Hampton Court to the National Gallery? A. I should like to see it very much; I think it is very desirable if it can be done without injury. It should be first ascertained whether there would be any risk run; I should myself think that there would not.”

“Mr. SOLLY.—Q. Can you give an opinion on the practicability of removing safely the Cartoons of Raffaele from Hampton Court to London, to be exhibited in the National Gallery? A. I am not aware of any difficulty or any objection there can be to so doing.—Q. Might they be protected from the bad effects of the atmosphere of London? A. I am not aware that they would be more affected by it than other pictures are.”

“Mr. HAYDON.—Q. Do you think the Cartoons might be safely removed to London? A. Yes, I do, with perfect safety; and perhaps with more safety remain in London than at Hampton Court, because there is a fountain that scatters damp all around.”

“Mr. WILKINS, Architect of the New National Gallery.—Q. Might not the Cartoons from Hampton Court be exhibited in the National Gallery? A. Certainly.—Q. Do you think they would be injured much by the atmosphere of London? A. It would depend upon whether the rooms were heated with heated air or with hot water.—Q. Is it not very desirable that these Cartoons should be brought to London for the benefit of artists? A. Yes.

“Mr. STANLEY.—The atmosphere of London is not more inimical to pictures than that of the Hague, Amsterdam, and Antwerp. If the gallery be well ventilated, I should have little apprehension of injury resulting from our winter's smoke for centuries to come. I should prefer the gallery for the sake of the pictures, as their preservation would be more likely to be attended to there. We are laughed at for lack of judgment in some recent purchases of third-rate old masters at enormous prices. Let us have the consolation of pointing to the Cartoons, as a proof that we can appreciate excellence; but, above all, let us have them at the gallery, that young artists may have before them models worthy of their study.”

Mr. FIELD, the author of a work on chemistry as applied to the Arts, was examined on this occasion; and a portion of his evidence is as follows:—“With respect to their removal from Hampton Court to the National Gallery, the choice is between fog and smoke; but my opinion is that in a fixed state they might endure longer at the latter place, more especially if we measure by a moral duration according the numbers who will there see them, and the additional honour they will confer on the country. Seen as they are at present, they seem to me rather to magnify ignorance than afford instruction. Considering, further, that the light, temperature, ventilation, and security from fire, would be greater at the National Gallery than at Hampton Court, there could be no objection on these various grounds to their removal.”

In the minutes of the evidence before us, the glazing of the Cartoons is proposed; and this has long appeared the only means which could satisfactorily secure them against injury. In such case, they might without scruple be placed permanently in London. They would, perhaps, not be seen to such advantage when glazed, but this is a trifling inconvenience when weighed against the evil of their total absence.

## THE NATIONAL GALLERY.

We cannot help remarking how very soon the apartments containing the National Collection are proved to be insufficient, as well for an advantageous exhibition of the very next first class pictures that may be purchased or presented, as for the accommodation of the increased number of visitors that resort thither at particular periods. Although there was little cause for apprehension of mischief, there is yet reason for congratulation in the proof that valuable works of Art are safe amid the thousands attracted to visit them. In building for the reception of these pictures and future additions to their number, the hidden wealth of the country in Art has been overlooked; we mean the many and rich private collections comparatively little known, and from which and other sources frequent presentations to the National Gallery might have been calculated upon. The following is extracted from the evidence offered before the Committee on National Monuments and Works of Art:—

“Mr. W. SEGUIER Examined.—Q. Is the gallery nearly full now? A. The best situations in the gallery are nearly full.—Q. Has the number of presentations of pictures been equal to your expectations? A. I think it has. I think the presentations have been very liberal?—Q. How many days in the week is the gallery opened, and what hours? A. It is open from ten in the morning till five in the winter, and till six in the summer; and on the first four days in the week for the public, and on the Fridays and Saturdays for the artist.—Q. Do you see any objection to another day being given to the public in the National Gallery? A. Then they must take it from the artist.—Q. Is the crowd such as would interfere with the artist? A. Decidedly; the dust would spoil all their work.—Q. Are you aware that at Louvre, in Paris, the artists are sitting all day while the public are present? A. Yes; but the Louvre is a quarter of mile long.—Q. Can you give to the committee a statement of the number of artists who attend the National Gallery on the days when it is not open to the public? A. I can.—Q. Will you state what the number on the average is? A. I should think there are about 100 every day that it is opened.—Q. What is the greatest number of visitors you have had in one day? A. We have upwards of 10,000. \* \* Q. You consider the two days in the week on which the gallery is now shut so valuable for artists, that you would not recommend any interference with those? A. No.”

“Lieutenant-Colonel THWAITES Examined.—Q. Are you assistant keeper and secretary to the National Gallery? A. I am.—Q. How long have you been appointed? A. Since the first formation of the gallery, 17 years.—Q. Can you state what number of persons have visited the gallery in the last year? A. For the year ending the 31st December, 1840, 503,011.—Q. What were the numbers in the preceding year? A. 466,850.—Q. Will you prepare a statement of the number that have attended in each year, in order to show the gradual increase from the time for which you have kept an account? A. Certainly.—Q. What number have visited the gallery in this year, up to this period? A. Up to the 27th day of May, 227,885.—Q. Do you attend daily? A. I do.—Q. Have you had an opportunity of seeing what the conduct and behaviour of the parties attending is? A. When I am not engaged with my duties as secretary, or when I am not employed upon the books or correspondence, I am always in the gallery, and have an opportunity of observing the conduct of the public; their conduct has been, as far as relates to the safety of the pictures, quite unexceptionable, and in other respects it has been quite as satisfactory as we could have wished and expected.—Q. Have they shown much interest in the pictures? A. A considerable interest is shown by a few individuals, but I do not think that the mass of people who attend, particularly on holidays, take any particular interest in them; they come and go without paying very much attention to the pictures.—Q. Conducting themselves quietly? A. Yes, conducting themselves peaceably and orderly.—Q. You have heard what Mr.

Seguier said as to the number; what is the greatest number that have ever been in the gallery on one day? A. The greatest number, except, I think, once, would touch upon 10,000, but there was one day last year, if I recollect right it was Whit-Monday, when we had reason to believe that there was more than that; I think nearly 14,000 people.—Q. Did the usual attendants suffice to maintain order? A. Order was maintained certainly, but it was with considerable difficulty; the rooms are small, and the crowd was very great.—Q. They are obliged to enter at one door and come out at the same door? A. Yes.—Q. If there was a place for entering at one end and a door to go out at another, would not that prevent the inconvenience which is found where a great crowd assemble? A. I do not think it would, because the crowd is in the rooms themselves, not in the avenues. I am not aware that there is any inconvenience there; I would add, that it would do away with one of the greatest safeguards of the pictures, that of visitors leaving their sticks, umbrellas, &c., in the entrance hall.—Q. How many should you suppose at one time could be present in the rooms? A. We were originally instructed not to admit more than 200, but that was in the old gallery; we have not any instructions upon that head at present; at that time we were allowed, in case there was a great pressure of people, to close the door till part had left, but we have never had occasion to act upon that.”

We could wish that there was less occasion for being so tender of the copying privileges of students, for a continued desire for making elaborate and servile copies of entire grouped subjects, betrays a want of certain leading qualifications, without which an artist cannot rise to distinction. Every esteemed master has levelled his own path to eminence, in doing which he imitated no one that had preceded him, farther than by employing the same mechanical means, for the alphabet of all who have been great in Art has been the same, though it seems to have been one of many languages; yet their different versions of nature read equally well, none less true than the others. At the present day we are struck by no surprise at the already countless varieties of method in the mere application of colour; but the fact that paint could be wrought into so many surfaces, distinct in character, would have been incomprehensible to the early fathers of oil painting on mere assertion. It was thought that the Italian masters had left nothing to be done; but daily experience teaches us that they are only the school classics who, in time, must be wrought up to, and equalled even among ourselves, for nothing has yet been done for history in England. Besides the many textures representing flesh, there is an interminable series of items, which in varied combinations constitute new and distinct phases of character in painting; the student, therefore, who devotes much of his time to copying, on which side soever he may turn, is yet treading a path which cannot, with equal distinction, be twice pursued. To a judicious artist practical copying to any extent is not necessary; he can, by means of a slight memorandum, retain, even for years, enough of an admired master to enable him to correct any foibles which may vitiate his style. It is universally allowed that Art in England is but yet in its infancy, which implies that entire schools of distinguished artists have yet to arise among us; if there be any just grounds for such a presumption, and there is something yet left to be done, students will benefit themselves but little by that indiscriminate and wholesale copying, so generally practised where opportunity exists. If copying were valuable to the degree of estimation in which it is so often held, the modern Italian school ought yet to maintain that superiority which the early masters gave to it; and this is far from the case. All the Italian cities, which are yet the treasuries of their lost Art, abound with painters, who subsist by making copies of such pictures as are most admired by the crowd of

English and American travellers that throng the galleries; and yet most of these men have studied regularly, first from the antique, and afterwards from the life. There is at Florence a well-known picture, a St. Cecilia, or a Magdalen, by Carlo Dolce (!) always surrounded by easels, and of which we heard one artist say, that he had never been without a commission for a copy during ten years. In the evidence it is stated that a hundred students work in the gallery on the appointed days; but on looking round at such pictures, as it would really be serviceable to work from, we cannot see how that number can be conveniently accommodated; we may, therefore, conclude that many must make copies, which, instead of being hereafter useful, will, if imitated, tend rather to their undoing. Copying as we have seen it followed, leads artists frequently into the error of administering one recipe of colour to all flesh; and a host of living celebrities might be named, who are so entirely given over to this vice, that any work of theirs, better painted than usual, may, in after years, without very conclusive evidence, be rejected as spurious. Copying is to a certain extent productive of benefit, but English students generally commence it too soon; they visit Paris, and sketch after Rubens, Poussin, and many other masters that may strike them, but without any clear purpose to answer; they then proceed to Rome, Venice, Florence, and Bologna, where they work perhaps years after Raffaele, Titian, Guido, Andrea, &c.; and on their return home, settle for life to paint after Lawrence. Such we entreat to take as their working text, the following observation of Reynolds:—“How incapable those are of producing anything of their own who have spent much of their time in making finished copies, is well known to all who are conversant with our Art.”

## ARCHITECTURAL COMPETITIONS.

ONCE more we return to the present seemingly incurable mal-administration of public competitions for architectural designs, convinced that the only chance of obtaining for artists honest conduct and due consideration, lies in the forcible exposure by the press of every case where unjust decisions have been made and undue influence exerted. The treatment which architects now receive at the hands of Committees, the shameful indifference with which, simply as a blind, they are seduced to prepare plans and designs for buildings, the execution of which it is never for one moment contemplated should be entrusted to them, are disgraceful to the age and prejudicial in the highest degree to Art.

The following case which has just now come under our notice brings the matter home, and will be of more service in exciting universal indignation against the system than any general remarks we could make, however well intentioned or powerfully worded they might be. The Committee of the “Benevolent Institution for the Relief of Infirm Journeyman Tailors,” requiring designs for Alms-houses which they were about to build, invited Mr. Vulliamy, Messrs. Winterbottom and Sands, Mr. George Godwin, Mr. Jones, Messrs. Lee and Duesbury, Mr. Thomas Meyer, and Mr. E. H. Browne, to submit plans for the same, with the clear understanding that the author of the best design would be appointed their architect. When the seven designs were received, they nominated a Building Committee to do what, it was quite certain, they could not do properly themselves (from the number of the General Committee and its miscellaneous character), namely to examine the same *seriatim*, and select the plan best fitted for their purpose. After a lengthened examination and much discussion, the Building Committee arrived at the conclusion that Mr. Godwin's plan was the best; and accordingly submitted a report to that effect to the General Committee. Mr. Godwin being informed of this in various quarters, and hearing nothing officially from the Society, applied to be told the result of the competition. In answer to this application, he received simply a short note stating that Mr. Meyer had been appointed the architect.—Mr. Meyer, let it be understood, being the brother of a member of the General Committee. Surprised, but still not in the least disposed to cavil, Mr. Godwin immediately fetched away his design, probably thinking, in his innocence, that a much better plan than his own had been selected, and that he had no cause to complain. An accident, however, gave him the opportunity of examining the whole of the designs sent in; and finding then to his astonishment that Mr. Meyer's plans had not the slightest pre-

tensions to be deemed the best, he addressed a strong but temperate letter to the Committee, and called on them to reconsider the injustice they were about to commit. In consequence of this letter the Committee at their next meeting would not confirm the appointment of the architect; but resolved to re-examine the drawings with the assistance of professional men. An effort, however, was afterwards made on the part of the selected architect's friends, and at the following meeting this resolution was rescinded and the former vote confirmed.

With regard to the preferred plans we do not hesitate to say they are the least carefully considered, the least effective of any that were sent in; in fact, we do not suppose any one of the Committee would have the hardihood to say they were the best submitted, or even that they were as good as most of the others. It may clearly be seen from the little care bestowed on them, and their imperfect execution, that their author was quite satisfied of what would be the result of the competition, and deemed any extra exertion unnecessary. We have not yet done with this matter, and shall watch the proceedings narrowly.

### FINE ARTS IN IRELAND.

**ROYAL IRISH ART-UNION.**—This Society has made a most successful progress, and is about to close its second year of active existence with upwards of 2000 subscribers, thus nearly doubling its first year's resources, which were, as our readers may remember, upwards of £1200, shewing a zeal, ardour, and perseverance, most creditable to the managers of this valuable National Society, as well as the revival of good taste and feeling on the part of the public; a sure presage of happier days and better times for this highly gifted and beautiful country.

We understand that the following works of Art have been selected from the recent highly creditable exhibition of the Royal Hibernian Academy, with the addition of two or three from that of the Royal Dublin Society, which were too late for the former. 'The Connemara Toilette,' F. W. Burton, £168. 'The Young Champion' (group in marble), T. Kirk, £90. 'Coriolanus,' T. Tracy, £50. 'Tired out,' R. Rothwell, £42. 'Coleen Bawn and Coleen Uhu,' S. Lover, £40. 'Eton College,' J. Stark, £36 15s. 'Dublin Bay,' M. Kendrick, £36 15s. 'The Sportsman's Companions,' C. Grey, £35. 'Cattle Reposing,' T. S. Cooper, £30. 'Roderick O'Connor's Castle,' W. Brocas, £30. 'The Limerick Piper,' J. Haverty, £25. 'View from the Dublin Mountains,' W. Howis, £25. 'Eel Baskets near Windsor,' J. Stark, £24. 'Flowers from Nature,' Miss E. Williams, £21. 'Scene from Rob Roy,' W. Kidd, £20. 'Polemia,' W. Foy, £21. 'Christmas Present,' W. Gellard, £20. 'The Dargle,' S. F. Brocas, £20. 'Bray Head,' S. F. Brocas, £20. 'Carabineers,' M. A. Hayes, £16 16s. 'An Old Soldier,' M. A. Hayes, £16 16s. 'Coast Scene,' G. Colomb, £15 15s. 'The Sketcher,' B. Mulrennin, £12 12s. 'Hags tooth, Killarney,' J. G. Gould, £12 12s. 'The Pig Driver,' H. Talbot, £12. 'Careening a Boat,' J. Wilson, £10. 'Sandy Cove,' S. F. Brocas, £10 10s. 'Rathmullen,' A. Nicholl, £10 10s. 'Italian Boy,' M. Wood, £10 10s. 'Flowers from Nature,' Mrs. H. Gonna, £15. Do. Do. G. Evans, £20. 'Incident on a March,' M. A. Hayes, £9 9s. 'Baydole Strand,' M. Kendrick, £10. 'Flax Mill,' H. Fraser, £8 8s. 'Landscape,' W. Gellard, £8. 'Leix Castle,' W. Howis, £7. 'Old Pier, Calais,' J. Wilson, £6. 'Interior,' G. Sharp, £6. 'Preparing for Market,' G. Sharp, £12. 'Peasant Boy Asleep,' T. Bridgeford, £3. 'Blarney,' T. Bridgeford, £6. 'Old Mill,' D. K. Smith, £4. 'Christ Church Ruins,' E. H. Murphy, £5 5s. 'Woodland Scenery,' T. U. Young, £5. 'Fisherman's Home,' Do. £7. 'Prestbury,' Do., £5. 'The Cobler,' H. Talbot, £7.

The distribution by ballot is to take place on the 1st of September, at a public meeting to be held in the Theatre of the Royal Dublin Society. The Engraving, we believe, is to be taken from that exquisitely natural production of Mr. Rothwell's, 'Tired out,' representing a very beautiful child overtaken by sleep while gathering flowers. It will, of course, be executed by a first rate engraver in line, and be in itself a valuable prize to the members for last year. We congratulate Mr. Rothwell on this highly honourable distinction, and have no doubt it will stimulate him to maintain the high position he appears to hold in the good opinion of his countryman.

### FOREIGN ART.

**ITALY.—FLORENCE.**—"Galleria of Florence."—*Artistic Festival.*—A strong and agreeable impression has been produced here among amateurs and others interested, by the reception Mr. Joseph Ambron has met with in France and elsewhere, as a director and treasurer of the Society now publishing the magnificent editions in French and Italian of the Florence Gallery, called "*Galleria degli Uffizi*." The King and Queen of France, all the Princes of the Royal Family, and the Ministers have become subscribers to this magnificent undertaking, privately, as well as for the principal public libraries. Their example has been followed by the Kings of Greece, Belgium, Naples, Sardinia, &c. This is, we believe, the most splendid work now in progress in Europe. The most celebrated artists are employed in the engravings: the French letter-press is the work of Alexandre Dumas, the Italian of F. Ranalli; within it is included the History of Painting from Giotto to Hayez and Bezzuoli, and the lives of above four hundred artists will be reproduced, accompanied by their portraits engraved from likenesses painted by themselves. The directing Committee consisting of N. Bartolini, sculptor, I. Bezzuoli, painter, S. Jesi, engraver, J. Tubino, designer, have given a banquet to the contributing artists within their reach, and to the noblemen and other persons distinguished by talent or fortune who share in the management of this truly classic enterprise.

This pictorial banquet was held in a large hall, whose walls were adorned with appropriate subjects, allusive to the object of the festival. There were the portraits of Giotto, Masaccio, Ghirlandajo, Perugino, Leonardo, Michael Angelo, Raffaele, taken from the originals painted by themselves, being the drawings destined to be engraved for this work. A gay and poetic spirit characterized the whole entertainment, and we may here note some of the toasts. Professor Bartolini proposed, "The Grand Duke of Tuscany, who had opened his gallery for the purposes of the undertaking, the kings and princes who patronized it, the Council of Administration, the Artistic and Superintending Committees." The learned Marquis de Bagno replied for the Committees, and proposed, "The five hundred Subscribers, the absent-treasurer, Mr. J. Ambron, whose good reception in foreign countries gives such hope of the success of the enterprise;" this was received with three rounds of applause. Professor Jesi, the engraver, pronounced a discourse on the utility of the art of engraving, considering it as the pictorial telegraph of communication with all nations, concluding with "Prosperity to the art of Engraving and the fraternization of artists all over the world, as represented by the present publication of the Gallery of Florence. To the artists Toschi of Parma, Anderloni of Milan, Peretti of Florence, Rosaspina and Guadagnini of Bologna, Granara of Genoa, Marri of Faenza, Calamata, and Mercuri, and other Italians; to Richomme and Martinet of Paris; Felsing of Darmstadt, Stainla of Dresden; to the English Raimbach, Rolls, Hatfield, Wilmore, Robinson, &c. To these artists and to art as a cosmopolitan language, and means of fraternal intercourse between all the nations of the universe"—huzza! huzza! huzza! This, and the last toast of the evening were alike received with the greatest applause; the last was "Honour and prosperity to whatever lover of art, shall, at last, become possessor of the finest Album in the world, that which shall contain the collection of splendid drawings made from the *Galleria degli Uffizi* for this work." Our correspondent adds that the twenty engravings already published were distributed to each subscriber present.

This banquet was, to a certain degree, a private one; but it is said a public artistic banquet is soon to be given at *Le Cascine*, of which we hope to be able to give an account to our readers.

**BOLOGNA.**—"Prizes for the year 1842."—Competition for prizes given annually by two different bodies is open to artists of all nations—namely, the prizes given by the Bolognese Academy of Fine Arts, and those distributed by the City. The following is the programme of the subjects proposed for the year 1842. The works of the competitors must be completed and consigned to the secretary of the Academy, and to the secre-

tary of the "*senatore*" (Lord Mayor) of Bologna respectively before the 30th of June, 1842.

Programme of the prize subjects given by the Academy:—

#### "ARCHITECTURE."

Plan of a University to contain large halls for Public Solemnities, for Lectures and Classes, for the Schools of Science, Library, Museum, Observatory, a Chapel, Botanic and Agricultural Garden, Apartments for the Librarian, Astronomer, President, &c.

#### "SCULPTURE."

Group in "*Alto Rilievo*"—Hamilcar leading Hannibal to the Altar, to swear eternal enmity to the Romans. —(See *Dacier, Vie d'Annibale*.)

#### "HISTORICAL LANDSCAPE."

The Vale of Tempé, in Thessaly, between Mount Olympus and Mount Ossa.—(See *Barthelemy, Vie du Jeune Anacarsis*.)

#### "DRAWING OF FIGURES."

Eneas, guided by the Sibyl to the Regions of Dis, meets Dido.

#### "ORNAMENTAL DESIGN."

A Pontifical Throne, with a richly ornamented chair, to be executed in gilt Bronze.

#### "PAINTING"—(Prize from the City.)

Themistocles, banished, presents himself to the Persian King.

"General Regulations."—Every work must be marked with an epigraph, or *motto*—which must be repeated outside a sealed letter containing the name and residence, and country of the author. The prizes are adjudged by the votes, accompanied by written opinions, of the Academicians of the Fine Arts; the letters with the mottoes of the prize works are opened; those of the rejected are scrupulously restored unopened with the works belonging to them to the persons by whom they were consigned to the respective secretaries of the Academy and *senatore*. The prize works are exhibited with a laurel crown; the prizes are gold medals struck for the occasion.

**PARMA.**—"Monument to Petrarch."—Among the solitary abodes beloved by Petrarch there is one in the village of Selva Piana, near Parma—in regard to it Petrarch wrote the memorable Latin epistle to his friend Barbato di Solmona. A warm admirer of Petrarch has purchased the site of the house and grounds in which Petrarch lived, and has presented it to a literary society, who propose, by subscription, to erect on the site of this house a monument to Petrarch, a building within which shall be placed his bust, and on the walls around shall be inscribed the lines above mentioned with other poems of Petrarch. The edifice is designed by M. Bettoli, Professor of Architecture in the Royal Academy of Parma—it is to be of marble, and is characterized by elegance and simplicity. Subscribers, for whatever sum, are entitled to have an engraving of the building, and their names will be preserved in a register within it. The treasurer is the celebrated Angelo Pezzana, Librarian of the Royal Public Library at Parma.

**VENICE.**—"Cyclopean Marble-bridge."—Public attention is at present chiefly directed to the Cyclopean labours now proceeding here; we allude to the marble-bridge, which is to unite Venice to the main land adjoining the railroad to Milan. The person, under whose direction this gigantic work proceeds, is the engineer, Antonio Busetti; within the bridge an aqueduct is led, to bring fresh water to the city. Venice is without wells or fountains, and has few cisterns; hitherto, the water used for drinking has been transported from the main land.

**FRANCE.—PARIS.**—"PHOTOGRAPHY."—*New Advance in Discovery by M. Daguerre; Instantaneous Formation of Images.*—It is almost six months since M. Arago, ever ready to assist with his powerful influence whatever promises to add to the general progress of knowledge in all departments, announced to the academy and the public that M. Daguerre would render his discovery a yet greater prodigy by extending its power to the instantaneous formation of images, and that we should soon be informed of the means by which this is to be accomplished. But the communications on the subject with which M. Daguerre has as yet favoured the public are quite incomplete. M. Arago, at the last meeting but one of the academy, said that M. Daguerre had told him in conversation, that the principal novelty in his dis-

covery consisted in applying electricity in single sparks instead of keeping the plate of metal constantly under its influence; by the latter process the impregnation of light being so sudden, that even in the act of raising and lowering the diaphragm, however quickly accomplished, which is interposed between the faggot of luminous rays and the metal, a sort of general veil was produced. This is obviated by the new method; also a new medium has been employed to prevent the disturbing modifications which produce an unequal distribution of light, but what this body is we are not informed. Let us consider but a moment apart from science the new world which is thus opened up to us, which but a few days since would have appeared a dream of fancy. The vast horizon, heaven, earth, and all around us can be represented in an instant, for the luminous impression corresponds to the act of irradiation, and that is almost the quickest we can conceive. Advance a little further in this magic path, and consider how many bodies exist which from the excessive quickness of their motion, pass the retina without making sufficient impression to be conveyed to the brain, and are thus lost to our sense of sight. Of the presence of these we may be made conscious, and to this inexorable power of vision now opened on the universe, even the movements of now invisible heavenly bodies may be disclosed, and their most accelerated movements in space be traced by man. The passing vapour, the dazzling meteor, the oscillations of lofty buildings, the most delicate and rapid changes in outward objects, the physiognomy of living being, the movements of crowds—there is no end to all that may be saved to futurity from oblivion. The scenes of history will become realities; we shall be the spectators of the most important events, and be hereafter the contemporaries, as it were, also of the past. At present we may notice, that on the morning of the 15th, at eight o'clock, an artillery officer in the king's service daguerrotyped all the guards then at the Castle of the Tuileries; he had ranked them in small detachments in order of battle here and there in the Court, their muskets resting. A great crowd had stopped on the Place de Carrousel, all along to the rails to observe the curious experiment.

"*Statue of Marshal Soult.*"—M. Pradier, member of the Royal Institute, is charged with the execution of a colossal statue in Carrara marble, representing the Duke of Dalmatia in the full costume of a Marshal of France. This statue of Soult is destined to be placed in the grand court of the Royal Castle at Versailles, where are collected the statues that were formerly on the Pont de la Concorde.

"*Monument of Cuvier.*"—The fountain erected in honour of Cuvier, on the Place de la Pieté, was uncovered and inaugurated on the 29th of July. The effect of the monument is truly beautiful. The whole invention and design is the work of M. Alphonse Vigoureux, one of the architects of the municipality of Paris. The principal group is in marble and colossal, and represents a woman personifying natural history, seated on the terrestrial globe. Around are finely distributed many animals in the same proportions; this is the work of M. Feucheres. All the ornaments and attributes belonging to the other kingdoms of nature are sculptured by M. Jules Pommatau.

TOULON.—"*Statue of St. Louis.*"—The statue of St. Louis is embarked in the brig *Palinure*, which is to transport it to Tunis. The captain commanding the division at the part of the coast called "*La Gouletta*," is charged, it is said, with the ceremony of the inauguration, to which the greatest solemnity is to given.

BOULOGNE-SUR-MER.—"*Column of Napoleon.*"—On the 15th the ceremony of the inauguration of the column and statue of Napoleon, on the spot where the army of Boulogne was formerly encamped, took place. The ceremony was almost wholly a military one; it lasted five hours. Generals Courbineau, Gourgaud, and Galbois presided. The Bishop of Angers officiated. The whole was conducted with great pomp. Many troops were present, and an immense assemblage of spectators. The effect of the column and statue, by Bosio, is beautiful.

### THE WILKIE MEMORIAL.

ON Saturday, the 28th ult., a meeting of the friends and admirers of the late Sir David Wilkie was held, according to previous announcement, at the Thatched House Tavern, in St. James's-street. The Committee met as early as twelve o'clock; and at two, the hour appointed for the general meeting, Sir Peter Laurie came from the committee-room and stated that there was a probability that as Sir Robert Peel might be detained by the business of the House of Commons, Lord Mahon had kindly consented to preside in his absence; but shortly afterwards, to the general satisfaction of the assembly, the same gentleman announced the arrival of Sir Robert Peel, who soon entered the room, accompanied by many noblemen and gentlemen, anxious to pay the tribute of respect to the artist whose memory they had met to honour.

Among the company we observed the Duke of Sutherland, Lord Burghersh, Lord John Russell, Lord Mahon, Lord Charles Townsend, the Hon. Mr. Melville, Sir Peter Laurie, Sir Augustus Colclough, R.A., Mr. Leslie, R.A., Mr. Collins, R.A., Mr. Landseer, R.A., Mr. Mulready, R.A., Mr. Uwins, R.A., Mr. Eastlake, R.A., &c. &c.

The chair was taken at half-past two o'clock, but before the business of the meeting could be opened, some persons, desirous of giving it a political character, objected to the proceedings, and to Sir Robert Peel as a chairman; but the speaker and his supporters having been silenced by the good sense and feeling of the assembly, Sir Robert Peel said, in allusion to this irregularity, that having been invited to preside upon this occasion, by abstaining from all comment upon this interruption, he would best, he was sure, consult the feelings of the meeting. Sir Robert dwelt at length on the worth as a man, and the talent as an artist, of his departed friend Sir David Wilkie; and was proud to say that he maintained an uninterrupted intercourse with him as well when absent on professional tours, as at home, and said that if ever the correspondence, which it had given him such pleasure to keep up with Sir David Wilkie, should come before the world, it would sufficiently testify the feeling with which he then spoke. Sir Robert concluded his address by proposing that it was the opinion of the meeting, that the genius of Sir David Wilkie be publicly recorded amongst those whom our country loves most to honour.

After another preliminary resolution, it was proposed by Lord Mahon, that a statue, preserving the personal characteristics of Sir David Wilkie, would be the most appropriate memorial. Before this was put, Mr. Kenzie begged permission of the Chairman to offer a few observations on the memorial proposed. This gentleman spoke at some length, and was desirous of showing, that the better way to perpetuate the memory of Wilkie would be to appropriate the sum subscribed in some way that might conduce to the promotion of the style of Art which he professed.

Dr. Dibdin then addressed the meeting, and suggested that the most honourable tribute to the memory of Wilkie would be to employ the subscribed sum in some way that would promote Historical Art, which, he regretted to say, was so much neglected in this country. He made his proposition with all due deference to the meeting, but felt that such a step as associating the memory of Wilkie with the rise of Historical Art in this country would be doing greater honour to his memory than could be done by any public monument.

Mr. Cochrane, R.A., offered some observations on the establishment of a fund for providing medals.

Mr. George Foggo then came forward, and said that he had brought with him an amendment, but that after what he had heard from others opposed to the proceedings of the Committee, he would not bring it forward. He could not coincide in an opinion that Sir David Wilkie would be most appropriately commemorated by a statue. He knew of only two artists to whose memory monuments had been erected—one was Michael Angelo, to whom a memorial existed at Florence. He was of opinion that the best and most lasting monuments of artists were their works. He instanced those of Hogarth and of Sir Joshua Rey-

nolds in the National Gallery, in which their memories were more honoured than elsewhere.

The motion of Lord Mahon, which was seconded by Mr. B. B. Cabbell, was put and carried.

Lord Charles Townshend then rose. He declined further to take up the time of the meeting. He proposed a resolution to the effect that the intended statue would best stimulate young artists to exertion, and fulfil the objects of the meeting if it were placed in the National Gallery; and that application be made to the trustees for the necessary permission.

Lord Burghersh, seconded by Mr. Maxwell Stuart, then proposed that a committee should be appointed to carry out the resolutions of the meeting, and that Sir Peter Laurie and Mr. Laurie be requested to act as treasurers; and that Mr. Allan Cunningham and Mr. Cunningham, jun. be requested to act as secretaries.

The thanks of the meeting were then proposed, by Sir Peter Laurie, to Sir Robert Peel, who had so kindly consented to take the chair on this occasion. The proposition was seconded by the Hon. Mr. Melville, and carried amid loud and continued cheering; by which the Right Honourable Baronet was so much affected, that, in replying, he was at first less distinct than usual; he however quickly recovered his self-possession, and briefly thanked the meeting; immediately after which it broke up. The sum already subscribed for the memorial amounts to 900 guineas.

### VARIETIES.

INJURY TO THE MONUMENTS IN WESTMINSTER ABBEY.—Our readers will join us in our feelings of indignation at the tenor of the following evidence. Surely in no country but our own were ever such barbarities perpetrated as those detailed below. It is deeply to be lamented that, upon occasions of ceremony, some artist is not appointed to advise in the erection of stands and other public accommodations. If the Government assume the direction in such cases, they are proportionably more culpable than a subordinate body. The estimation in which these monuments were held may be fairly ascertained by a consideration of the persons employed about them. It is true that among the monuments of the Abbey there are many that are in the worst taste; but the worst of these demand more care than is bestowed upon them. The following extract is from the evidence of Mr. Allan Cunningham, given before the Select Committee on National Monuments:—

Have you attended to the sculpture, and the armorial bearings that are upon any of the monuments?—Not particularly; many were injured during the coronation; I think I counted 24 toes, fingers, and bits of drapery which had been knocked off during the last coronation.

Had you an opportunity of seeing that mischief?—Not of seeing it done; I was putting up the statue of Sir John Malcolm immediately after the last coronation, and I observed that there had been great devastation among the monuments compared to what there used to be.

In what way?—Many tender and projecting parts were broken; the toes of a beautiful figure by Westmacott were broken by a plank falling upon them; other monuments were broken; among them that fine one by Flaxman to Lord Mansfield.

Do those fractures which you saw of those three or four-and-twenty appear to have been newly done?—Yes, they were newly done; I will tell you how I know it; I could not begin to work at Sir John Malcolm's statue for two days; and on going back, I saw some broken that were not broken before.

Did you make any observation to any body on seeing the injury that was done?—I noticed it to one of the attendants in the Abbey, and he said, "We had no charge of those, the Government took charge of them during the coronation; they took the Abbey from us;" and when I remonstrated, one of the labourers said, "What! can you expect a man who has only 18s. a week to take care of sculpture?"

Do you recollect who was the dean and chapter's man to whom you spoke?—I do not.

Did he tell you that they had no charge of the public monuments?—Certainly; he told me that during the coronation the Government took the charge of the monuments out of the dean and chapter's hands; that the men who were putting up the scaffolding in the Abbey had broken the monuments, and that he had no concern in it whatever.

You understood that the charge had been taken out of the dean and chapter's hands during the coronation?—Yes.

And they paid no attention to them, leaving them

under the direction of the Government officers?—This is from no knowledge of my own, but from what I was told.

**ETCHING BY ELECTRICITY.**—Among the papers read on the 17th ult. at the meeting of the London Electrical Society, was one "On a Voltaic process for etching Daguerreotype plates," by Mr. W. B. Grove, M.A., F.R.S. This paper was illustrated by many etchings obtained by this combination of the electrolyte and the Daguerreotype, the secret of which is to make the Daguerreotype the anode of a voltaic combination, in a solution which will not of itself attack either silver or mercury, but of which, when electrolyzed, the anion will attack these metals unequally. This is accomplished by employing a solution of two measures of hydrochloric acid to one of water, and placing it in the Daguerreotype plate as an anode with a plate of platinized silver of equal size as the other electrode. The result of the unequal action of the liberated anion upon the plate is to produce a perfect etching of the original design; and this, when printed from, gives a picture, having the lights and shades as in nature. From the nature of the case it will ensue, that if the plate is etched too deeply, the fine lines will run into each other; but if not sufficiently acted on to leave a perfect etching of the original design, which can be done with the greatest accuracy, the very cleaning of the plate by the printer destroys its beauty, and the molecules of the printing ink being larger than the depth of the etchings a very imperfect impression is obtained. From this the author concluded that at present the great object attained is this,—a Daguerreotype picture can be produced in the ordinary way, it can be etched according to the present process, and from this etching an infinite number of electrolyte copies can be obtained.

**BEARD v. CLAUDET.**—The injunction granted in this case, as reported last month, has been dissolved. Ulterior proceedings are, we believe, pending between the parties.

**GALVANOGRAPHY.**—M. Robell, a professor of Munich, has recently made known a process by which to obtain copper-plates, affording impressions similar to sepia, or India-ink drawings. It is well known that the grand principle of the formation of plates by the agency of electricity is that of chemical affinity; the surface on which the deposit is to be made must be a conductor, and of this fact the Munich professor has availed himself for the production of impressions resembling drawings. Thus, on the conducting-plate the figures are sketched with varnish, which forms of course a concave space in the plate about to be formed, as occupying that space, which must otherwise have been filled up by metallic deposit. Notwithstanding the interposition of foreign matter the precipitation proceeds, though at first slowly, and the metal forms a perfect mould upon the surface presented to it; and as soon as the varnish is perfectly covered, the precipitation becomes equalized over the entire surface. The process is as follows:—Mix oxide of iron with viscous essence of turpentine, and with this compound, make upon a copper or silver plate the drawing, the impression of which is to be conveyed to the plate about to be formed. The strength of the tone will of course depend upon the quantity of the material employed. When the sketch is dry, expose the plate to the action of the electrolyte, when metallic deposition will immediately take place; first, on those parts of the conducting-plate which are exposed, then on those on which the sketching matter lies the thinnest, and at length will cover those parts where the touches have been the strongest. Before the last parts are covered, withdraw the plate from the apparatus; and when dry, apply a couch of graphite to these parts yet uncovered; after which let the process recommence; and when the entire surface is covered, it is then only necessary to suffer the plate to acquire a consistency adequate to meet the action of the copper-plate press. When the plate is separated, wash the sketching matter off with ether, and a most accurate impression of the sketch will be presented in the new plate, which, when proved, will afford all the variety of tone, the strength or lightness of touch, with which the drawing had been treated.

**BURFORD'S PANORAMA OF JERUSALEM.**—The drawings from which this panorama has been

painted, were taken from the terrace of the house of the Aga, or governor, which occupies the site of the palace of Pontius Pilate; a point well chosen for a view of the city, since not only every edifice of importance is visible from the spot, but also many localities mentioned in Scripture. But for the rising here and there of occasional minarets and domes Jerusalem, formerly "beloved of God," presents much the appearance of a city of tombs, from the square style of its low flat-roofed houses. The edifice which strikes the spectator most is the mosque of Omar; it occupies the site of the Temple of Solomon, and is esteemed the finest piece of Saracenic architecture in existence. Near to this commences the Via Dolorosa, which may be traced in its ascent through the city, past the palace of Pontius Pilate towards the temple of the Holy Sepulchre and Calvary. Notwithstanding all the brilliancy of effect obtainable under an eastern sky, the barrenness of the place cannot be veiled; the sycamore and the cedar are no more, the vineyards have disappeared, and the blighted soil is scarcely equal to the support of the most sordid herbage. No Christian, however, can contemplate this representation of Jerusalem with common emotions. The artist has chosen the morning as the point of time; the sun is already advanced in the sky, so as to render even minute forms and distant objects visible. The foreground shadows are extremely clear, and assist very much the rich colouring in the lights, some of the near masses of which are perhaps too much frittered into distinctions of brick and mortar. The most has been made of the sunlight breaking upon the fine painting tone of the houses; the distances are well made out, without being hard or edgy; and, upon the whole, this panorama is worthy of the high reputation which Mr. Burford enjoys.

**THE LATE SIR ASTLEY COOPER.**—It will be remembered that the pupils of the late Sir Astley Cooper opened a subscription, for the purpose of erecting to the memory of that distinguished surgeon a testimonial of their grateful remembrance of the benefits they had derived from his tuition. The sketch for this monument has been submitted to, and approved by the committee: it consists of a marble bust, which will be placed over a tablet bas-relief, representing a wounded man being carried to Guy's Hospital, in the museum of which it is to be placed. Mr. Towne is the artist.

**HEAD OF THE LAOCOON.**—The following singular history of the original head of the Laocoon is extracted from a Lyons' paper, in which it appeared in the form of a letter, written by an artist of Brussels. In the gallery of the Duke d'Arenberg, there are many things which are not known to any but the initiated; among them is the original head of the Laocoon. This fine group, when first discovered in Italy, was without the head of the father, and an arm of one of the sons. The head was supplied by a celebrated artist, who copied it from an antique bas-relief. Some time afterwards the original head was found by some Venetian connoisseurs, and was ultimately sold to the grandfather of the Prince, for about 160,000 francs, and brought to Brussels. When Napoleon, during the Consulate, had the group transported into France, he knew that the real head was in possession of the Duke, and offered him its weight in gold for it. This was refused; and as it was known that Napoleon was not scrupulous in gratifying his desires, the Duke d'Arenberg sent this *chef-d'œuvre* to Dresden, where it remained concealed for ten years; but was brought back again into Brussels when Belgium became tranquil. It expresses, in the highest and most admirable degree, moral grief, mingled with physical pain. The compression of the teeth, and the contraction of the under jaw, are almost too horrifying to be long contemplated; and yet in this intense expression of suffering there is not the slightest grimace. The pupils of the eyes are so exquisitely executed, that they actually seem to flash from the marble. A cast from the head, now on the statue, is placed by the side of the original, and the vast difference between the two is at once evident.

**RUBENS' ALLEGORIES.**—As every circumstance having reference to the name of this great Artist must be deeply interesting, we offer a short description of a work in which have been preserved, by a series of engravings, some temporary designs by Rubens, which, but for this

method of preservation, had been lost after the occasion had been served for which they were executed. It has been supposed that but one copy of this work existed in England, and that in the British Museum. We have been invited, however, to inspect a second, which appears in a more perfect condition than that in the library of the Museum; inasmuch as the plates and the letterpress of the latter are inconveniently separated, and bound in two volumes. The letterpress is in Latin, and from the pen of Gevartius, who, in the title of the book, has taken up for himself a position in the foreground; relieving himself, as it were, by a passing mention of Peter Paul Rubens, to whom much of the honour was due; and not even mentioning the engraver, Thulden, whose merits, considering the state of his art at the time at which he lived, were greater than those of Casperius Gevartius. The title is curious; and as it describes characteristically the purpose of the designs, is extracted at length:—

"Pompa introitus honoris serenissimi Principis Ferdinandi Austriaci Hispaniarum Infantis S.R.M. Cara Belgarum et Burgundionum Gubernatoris, etc. A.S. P.Q. Antwerp. decreta et adornata; cum mox à nobilissimâ ad Norlingam parta vice, XV. Kal. Maii, Ann. Cl. C. XXXV. Arcus, peggmat, Iconesq. a Pet. Paulo Rubenis, equite inventas et delinectas inscriptionibus et elogiis ornatâ. Libroq. commentario illustratâ Casperius Gevartius J. C. et Archigrammæus Antverpius Laurea Callioana eodem auctore Descripta Antwerp, etc.

That particular copy of this rare work, which is the subject of this notice, is in the possession of Mr. Hilton, of No. 8, Penton-street, Pentonville, and has been the property of Sir James Thornhill; whose autograph, with the date, 1724, appears upon the title-page. The size of the work is a large folio, and the plates are forty-six in number; and, as being executed by one hand, must have been in progress during a series of years; indeed, this is evidenced by the different dates affixed to them. In all Rubens' allegorical works his alphabet is peculiarly his own, no less than that extraordinary power which enabled him with such facility, and with his own so strongly-marked material, to frame epic histories in such variety, and yet so pertinent to a proposed subject. We have, as usual, throughout these plates the same fair-haired lady whom Rubens has so often celebrated upon canvass, both as mortal and goddess; and the same little boys whom he loved so much to paint, that, not content with occasionally introducing them into works like these, he went so far as to form a wreath of them in a picture which is contained in the Louvre. Each of these designs, as may be expected, proclaims the honour and glory of those whom Gevartius has termed the "Austrian Cæsars." The compliments they contain are extravagant and fulsome, considering the merits of the man whose triumph they were intended to illustrate; but this was not the fault of Rubens, who, when once at work, could not help following out the promptings of his enthusiasm, despite the meagre virtues of the person complimented. There are accordingly representations of the homage of the earth and the ocean; in which the hand of the Artist is distinguishable not only in the manner, but by perfect repetitions of figures, found in his other works; for instance, 'A Cybele' is the same as that in his picture, 'The Horrors of War,' at Florence. They have in Antwerp a particular method of giving effect to designs of this kind. The triumphal arches are constructed of a wooden framework, over which is stretched cloth, painted so as exactly to imitate stone; and in this manner was the commemoration of Rubens celebrated last year, but the designs upon this occasion were altogether unworthy of the festival. One word of Thulden's engraving; some of the heads in these prints are executed in a manner that would do honour to any engraver of modern times; the style is free—precisely such as the drawing has been, but every line is true and effective. Notwithstanding the continued importations of rarities of every description from the Continent, this work is undoubtedly scarce in England; but, notwithstanding this, modern Artists have found means to avail themselves of its contents, by appropriating them with very little modification.

## CORRESPONDENCE.

## ON COLOUR.

SIR,—The oft discussed subject of Venetian Colouring has of late received considerable attention; I believe chiefly in consequence of several well written articles on Vehicles and Varnishes, which have appeared in Blackwood's Magazine, and recently in the ART-UNION. I should be sorry in any way to underrate the importance of investigations directed to so desirable an object as that of ascertaining the best, or of improving upon the general vehicles of colouring materials; I cannot, however, help thinking, that if ever we succeed in reviving those qualities of colour which are characteristic of the Venetian painters, we shall be indebted but in a very subordinate manner and trifling degree to any peculiarity either of vehicle or pigment.

I suspect that the essential points in which we are deficient as regards this matter, is a knowledge of the simple principles on which the practice of the Venetian masters was founded, and of their system of procedure in the conduct of a picture; in fact, I believe that it is only by working in the manner in which they worked that we can hope to arrive at similar results.

When Sir Joshua Reynolds (himself a great master of colour) said that "a well coloured picture, should look as though it were painted in two colours, *that it should possess an unity of light and an unity of shadow*," he described the most important characteristic of the colouring of the great Venetian masters; and at the same time afforded a key to the simplicity of the process on which I think it probable their peculiar beauties depend. In nature, light and shadow is one thing, and colour another. In the works of the best colourists, as in those of nature, simple light and darkness are represented by a negation or absence of colour, the extremes of which being the *neutral* white and the *neutral* black, their intermediates must, of course, be also neutral.

On successively removing the several layers of pigment from portions of a very characteristic and finely coloured picture by Bassano, I have found that the dead colouring (if such a term may be used to describe that which has no colour) is executed with a considerable body of a clear *neutral*, apparently composed of black and white. This part of the process was evidently carried much further, embraced more of detail, and represented more of the texture of objects than is usually practised in the dead colouring of modern pictures. In this state the work must have constituted a finished achromatic picture; wanting only the application of its appropriate colour to each object to render it complete as a representative of nature; due regard being had to the colour of the general light, whether natural or artificial, which illumined the models which would to a certain extent modify and assimilate the varieties of local colour; and so far tend to produce what I presume was intended by Sir Joshua's *unity of light and unity of shadow*. With regard to the manner of applying colour to such a preparation as the one described, it must have been, and evidently was, performed on the principle of what is technically termed glazing, that is, by covering it with colouring materials of a glass-like transparency. Pure white and black being themselves perfectly neutral cannot affect the nature of any colour; tints placed upon them have their full value, they preserve their purity throughout, only deriving from the ground by its reflective power, brilliancy in proportion as it is light, and depth without alteration of class where it is dark. We have, however, to contend with imperfections in all our materials; and we find that many transparent colouring materials, when mixed with oil or any other vehicle, and glazed over a white unabsorbent part of the picture, appear deficient in colouring power, that they look thin, and by no means so satisfactory as the similar portions of a fine Venetian picture. In order to ascertain how the Venetians obviated this evil, it was found, on carefully removing the coats of paint from our Bassano, that, although the simple plan of glazing over the neutral ground was acted upon as a general principle, and adhered to wherever the glazing colour was of sufficient power, as in the middle tones and shadows, yet it was evident that in the light parts of flesh, some draperies, and even in portions of herbage, assistance had been derived from a deviation into another mode of practice. In the flesh, for instance, after having done all that was practicable by glazing, the lighter portions were found to have been impasted with a body of solid paint (white tinged with red), which, though crude in itself, formed a suitable reflective ground for those various transparent tints which were placed upon it, and from

which it had acquired its rich and juicy appearance.\* In like manner a rich green drapery had been assisted by an underground of a raw opaque colour, approaching to the tint of verditer, and which would have been quite out of harmony, but for a rich glazing of warm green, seemingly compounded of separate coats of blue and yellow. If it be said that this is nothing more than the usual practice, and that most pictures are executed by means of alternate solid and transparent colouring, I reply that there is a vast difference between that kind of solid painting which aims at combining light, shadow, colour, and tone, in the same operation, almost in one admixture of colour; and that which I suppose to have been the method of Bassano, founded on the simple principle of considering light and shadow as distinct from, and independent of colour. As regards which principle (apart from other considerations) all colour may, in fact, be considered *arbitrary or accidental*; for, alter the colour of a model how we will, the light and shadow of that model remains the same, and ought to be represented accordingly.

As many artists are decidedly opposed to any thing but what is called "fair solid painting" in skies and extreme distances, it may, perhaps, be as well to observe, that in the pictures upon which my observations are chiefly founded, the blue of the sky is most undoubtedly glazed or scumbled over black and white; it certainly has a very luminous appearance, and could not have accorded so well with the rest of the picture had the blue been mixed up on the palette with white. Whether it be the more *natural* method is not now the question, my object being to describe such observations as I have made on certain Venetian pictures, with the hope of being enabled to throw out some hint that may prove useful towards ascertaining how their peculiar qualities of colour were produced. Should any of your London readers think it worth while to try the effect of this method, I do not think they could do so more effectually than by applying it in copying a part of the large upright Paul Veronese, of the National Collection; and I should be glad to hear the result, whatever it may be. I would beg leave to suggest that the dead colouring be performed on a *perfectly white* ground, with *white and black*, the black, for the sake of transparency, to be used as far as it can, like Indian ink on white paper; but where an appearance of opacity or texture is required, it must, of course, be mixed with white. I venture to recommend this adoption of a white ground, because I am convinced, that in those old pictures, where a dark coloured ground has been used, it has been chiefly for the sake of expedition in working; and that, in fact, a light ground has been substituted for it, piecemeal as it were, in the progress of the work, in order to obtain brilliancy. In many cases where a dark ground has been *thinly* painted out, it is evident that the picture has been rendered lower in tone than its author ever intended by the colours sinking into the ground. I think that the prevalence of dark "daylights" in the works of the old masters, is chiefly owing to this cause.

In the foregoing observations I have endeavoured to avoid the subject of vehicles—not that I consider it by any means an unimportant one, for whatever can, in the least degree, tend to preserve the beauty or increase the durability of fine colouring must be worthy the attention of every lover of the Arts; but, because, I feel assured that, with no better or with the same materials as those now in ordinary use, Titian, Paul Veronese, Tintoretto, or Bassano, would have found little difficulty in producing just such pictures as those which have been considered objects of emulation by all succeeding artists. *Consistently with this opinion*, I have taken pains in what appeared to me their real and useful order; I have tried first to ascertain the principle on which depends the method of producing a certain description of colouring—it would have appeared inconsistent to have discussed the means of *preserving* that, which I have taken for granted, no one knows

\* A peculiar mode of applying colour over highly reflective grounds, practised by those artisans who paint ornaments on japanned ware, appears to me not unworthy the consideration of artists. Having produced the desired pattern with a full body of white paint, as soon as it becomes "tacky," transparent colour is applied in the state of powder with a dry brush. This process is more of the nature of a scumble than of a glaze, and enables a great power of colour to be applied; it becomes transparent on the application of varnish, acquiring great brilliancy from the white ground. I would here also observe, that when glazing tints are of a compound nature (orange for instance), they are far more brilliant and clear when the two primitives are *separately* applied, than when the secondary is compounded of red and yellow on the palette.

how to produce; I shall, therefore, reserve for a future opportunity some observations on vehicles and grounds, including experiments on the recipes of your talented correspondent, J. E. I would, however, in the mean time observe, that I cannot find that such old pictures as I have examined, possess any greater degree of hardness than might be expected from a mixture of linseed-oil with metallic oxides and the usual pigments, after having undergone the action of the atmosphere and of mutual chemical affinities for a great number of years; nor does it appear to me that this extreme hardness, approaching to the nature of glass, can be a desideratum in a picture. What we want is tenacity, and any degree of hardness incompatible with that quality, is a thing to be avoided; neither ought we to allow much weight to experiments with the blow-pipe, such as those which have been adduced to prove that the Venetian vehicle, or the vehicle of Van Eyck, was of the nature of glass, and so far identical with those for which recipes are given in your last number; because many pigments used as well by the moderns as by the old masters, such as smalts and other preparations of cobalt, lead, &c., are either of the nature of glass or vitrifiable under the blow-pipe. Moreover, I cannot help thinking that the proportion of oxide of lead (litharge) in recipes of 6 and 7 is too great to admit of their being used with safety. I fear that its desiccative action on the oil would continue until their combination rendered the picture *brittle*, if not pulverulent; indeed, I should hesitate to use any combination of litharge with oil which was not a *bona-fide solution*, of which *transparency* is, I believe, the best criterion.

To prove that these recipes of your correspondent when prepared for use with oil and water as directed, are not in solution, nor even in a good state of mechanical admixture, it is only necessary to suffer the semi-fluid composition to stand for a time on a white plate; on examining it with a common magnifying-glass it will be found to consist of rather coarse white flocculi floating in a transparent coloured fluid; bearing, in fact, a resemblance to curds and whey. Nor have I been enabled by boiling or other safe means to bring about anything approaching a homogeneous combination. From the description of your correspondent, J. E., I am, nevertheless, induced to hope that silica, either alone, or in some other combination, may be found a useful medium for colouring.

Yours, &amp;c.,

J. H.

## ENCAUSTIC PAINTING.

SIR,—I had no intention of troubling you with this communication, but I am induced to send a few lines in answer to "A Subscriber," in your twenty-seventh number, as the letter signed "Another Subscriber" does not appear to contain *all* the information which your correspondent wished to obtain respecting the Art of Encaustic Painting, re-discovered by the late Mrs. Hooker, of Rottingdean.

This lady carried the practice of this method to much greater perfection than any one has been able to imitate; and though your correspondent appears to think that she meditated making further improvements, I believe they related merely to the process of covering the painting, when completed, with wax, so as to produce as uniform a surface as possible.

I have a copy of a pamphlet containing the result of her last experiments, and which was printed from the "Transactions of the Society of Arts" for the information of her friends, and I enclose it for you to use as you think proper.

The process of making the wax mixtures involves rather a delicate manipulation; I have had it put up by Sarel, of Brighton, who had the advantage of personal communication with Mrs. Hooker, but any practical man might doubtless after a few trials, succeed.

Mrs. Hooker's recipes are the result of many hundred experiments.—Yours &c.

C. S.

"Method of preparing and applying a Composition for Painting in Imitation of the Ancient Grecian Manner."

"Put into a glazed earthen vessel, four ounces and a half of gum arabic, and eight ounces, or half a pint (wine measure) of cold spring water; when the gum is dissolved, stir in seven ounces of gum-mastic, which has been washed, dried, picked, and beaten fine. Set the earthen vessel containing the gum water and gum-mastic over a slow fire, continually stirring and beating them out with a spoon, in order to dissolve the gum-mastic: when sufficiently boiled, it will no longer appear transparent, but will become opaque, and stiff, like a paste. As soon as this is the case, and that the gum water and mastic are quite boiling, without taking them off the fire, add five ounces of white wax, broken into small pieces, stirring and beating the different ingredients together, till the wax is perfectly melted and has boiled. Then take the composition off the fire, as boiling it longer than necessary would only harden the

wax, and prevent its mixing so well afterwards with water. When the composition is taken off the fire and in the glazed earthen vessel, it should be beaten hard, and whilst hot (but not boiling) mix with it by degrees a pint (wine measure) or sixteen ounces more of cold spring water, then strain the composition, as some dirt will boil out of the gum-mastich, and put it into bottles: the composition if properly made, should be like a cream, and the colours when mixed with it, as smooth as with oil. The method of using it, is to mix with the composition upon an earthen pallet, such colours in powder as are used in painting with oil, and such a quantity of the composition to be mixed with the colour as to render them of the usual consistency of oil colours; then paint with fair water. The colours when mixed with the composition may be laid on, either thick or thin, as may best suit your subject, on which account this composition is very advantageous, where any particular transparency of colouring is required; but in most cases, it answers best if the colours be laid on thick, and they require the same use of the brush, as if painting with body colours, and the same brushes as used in oil painting. The colours, if grown dry, when mixed with the composition, may be used by putting a little fair water over them; but it is less trouble to put some water when the colours are observed to be growing dry. In painting with this composition the colour-blend without difficulty when wet, and even when dry the tints may easily be united, by means of a brush and a very small quantity of fair water. When the painting is finished, put some white wax into a glazed earthen vessel over a slow fire, and when melted, but not boiling, with a hard brush cover the painting with the wax, and when cold take a moderate hot iron, such as is used for ironing of linen, and so cold, as not to hiss if touched with anything wet, and draw it lightly over the wax. The painting will appear as if under a cloud till the wax is perfectly cold, as also, whatever the picture is painted upon is quite cold; but if, when so, the painting should not appear sufficiently clear, it may be held before the fire, so far from it as to melt the wax but slowly; or the wax may be melted by holding a hot poker at such a distance as to melt it gently, especially such parts of the picture as should not appear sufficiently transparent or brilliant; for the oftener heat is applied to the picture, the greater will be the transparency and brilliancy of colouring; but the contrary effects would be produced if too sudden or too great a degree of heat was applied, or for too long a time, as it would draw the wax too much to the surface, and might likewise crack the paint. Should the coat of wax put over the painting when finished appear in any part uneven, it may be remedied by drawing a moderately hot iron over it again as before mentioned, or even by scraping the wax with a knife; and should the wax by too great or too long an application of heat form into bubbles at particular places, by applying a poker heated, or even a tobacco-pipe made hot, the bubbles will subside; or such defects may be removed by drawing any thing hard over the wax, which will close any small cavities.

"When the picture is cold rub it with a fine linen cloth. Paintings may be executed in this manner upon wood (having first, pieces of wood let in behind, across the grain of the wood to prevent its warping), canvass, card, or plaster of Paris. The plaster of Paris would require no other preparation than mixing some fine plaster of Paris in powder with cold water the thickness of a cream; then put it on a looking-glass, having first made a frame of bees-wax on the looking-glass, the form and thickness you would wish the plaster of Paris to be of, and when dry take it off, and there will be a very smooth surface to paint upon. Wood and canvass are best covered with some grey tint mixed with the same composition of gum-arabic, gum-mastich, and wax, and of the same sort of colours as before mentioned, before the design is begun, in order to cover the grain of the wood or the threads of the canvass. Paintings may also be done in the same manner with only gum water and gum-mastich, prepared the same way as the mastich and wax; but instead of putting seven ounces of mastich, and when boiling, adding five ounces of wax, mix twelve ounces of gum-mastich with the gum water, prepared as mentioned in the first part of this receipt; before it is put on the fire, and when sufficiently boiled and beaten, and is a little cold, stir in by degrees twelve ounces or three-quarters of a pint (wine measure) of cold spring water, and afterwards strain it. It would be equally practicable, painting with wax alone, dissolved in gum water in the following manner. Take twelve ounces or three-quarters of a pint (wine measure) of cold spring water and four ounces and a half of gum-arabic, put them into a glazed earthen vessel, and when the gum is dissolved, add eight ounces of white wax. Put the earthen vessel with the gum-water and wax upon a slow fire, and stir them till the wax is dissolved and has boiled a few minutes; then take them off the fire and throw them into a basin, as by remaining in the hot earthen vessel the wax would become rather hard; beat the gum water and wax till quite cold. As there is but a small proportion of water in comparison to the quantity of gum and wax, it would be necessary in mixing the composition with the colours, to put also some fair water. Should the composition be so made as to occasion the ingredients to separate in the bottle, it will become equally serviceable if shaken before used to mix with the colours.

"I had lately an opportunity of discovering that the composition which had remained in a bottle since the

year 1792, in which time it had grown dry and become as solid a substance as wax, return to a cream-like consistence, and became again in as proper a state to mix with colours, as when it was first made, by putting a little cold water upon it, and suflering it to remain a short time. I also lately found some of the mixture composed of only gum-arabic water and gum-mastich, of which I sent a specimen to the Society of Arts in 1792; it was become dry, and had much the appearance and consistency of horn. I found, on letting some cold water remain over it, that it became as fit for painting with as when the composition was first prepared.

"ENMA JANE HOOKER."

#### VEHICLES.

SIR,—In one of your numbers of the 'ART-UNION,' some person asks what is Glass of Borax. The following explanation is given in the Popular Encyclopedia or Conversations Lexicon (published by Blackie and Son, Glasgow) in the article on Boracic Acid. "Borax appears &c. . . . when exposed to heat, it swells up, boils, loses its water of crystallization, and becomes converted into a porous, white, opaque mass, commonly called *calcined borax*. A stronger heat brings it to the form of a vitreous transparent substance, in which state it is known under the name of *GLASS of borax*." My answer is, perhaps, too late to be of any service to him, but it may not be, and I think this chance worth my trouble; had I met with his question earlier I should have answered immediately, for surely to do unto others &c. is the duty of artists as well as of other men.

I take this opportunity of thanking all those who have written for the purpose of conveying information relative to improved vehicles for colours; I shall never tire of the subject whilst I believe that there is any thing to learn; in conclusion, I return you my thanks for the gratification the 'ART-UNION' affords me, and remain with pleasure a subscriber.

F. W. S.

#### MATTOO VARNISH.

SIR,—I beg to inform 'A Fellow Student,' that the manner in which I have made magyllum is by adding to three parts of old Mattoo Varnish one part of strong drying oil, and exposing the mixture to the external air for a week, or even longer.

I hope 'A Fellow Student' will not think me presumptuous if I venture to recommend him to abandon altogether the employment of magyllum; and if he will allow me to supply him with a substitute for it, I shall have much pleasure in so doing.

There is now a question which I would ask of 'A Fellow Student,' or any of your readers, Mr. Editor. It is this: in what part (vol. and page) of the works of Vasari is it mentioned, that any of the masters whose lives he wrote, mixed water with their oil medium after the discovery of Van Eyck was made public?

Yours, &c.

August 2.

A STUDENT.

#### LIVING MODELS.

SIR,—As all artists employed in the delineation of the human figure must, more or less, require the assistance of living models, I beg leave to recommend to your notice the names, qualifications, and addresses of some of the most useful now in the profession; trusting, at the same time, that other artists will take the same trouble in forwarding to the 'ART-UNION' any information upon this most important *accompagnement de l'atelier*. For almost faultless proportion, I should recommend Mrs. Dobson, of 21, Great Titchfield-street. Miss Glover, 38, Great Wild-street, Lincoln's-inn-fields, about seventeen years of age; a very good face, and much finer figure, fair with dark brown hair. Miss Neale, same address as Miss Glover; a very handsome face, and, like her companion, sits for the figure. Miss Lakeman; the most beautiful face Leslie ever painted, was a faithful portrait of this model; her residence is at 6, Peashell-place, Cambridge-terrace, Edgware-road. Margaret Welsh, an Irish peasant girl from the hills of St. Giles's; dark hair, and "wid raal Milasian features," her cabin is at 21, Southampton-court, Cleveland-street, Fitzroy-square. Mrs. Musgrove, a very interesting and piquante-looking brunette; the last time I heard of her address it was 9, Hanover-street, Long-acre, living with Mrs. Grubin. Mrs. Howard, 4, Eaton-lane, North Picnic; a Sidiinian figure; good for your tyrannical and sanguinary-minded heroines. There are several other female models whose addresses I have lost; for instance, Miss Clousley, Miss Tutfield, Misses Johnston and Lancaster. And there is a family of children who sit; their address could be obtained from Mrs. Dobson, or, I believe, at the Life Academy, St. Martin's-lane.

First on the list of male models, for strength and

muscular development, stands George Glenny; I should compare him with the Dancing Fawn, having all the youth and elasticity of that figure; he lives at 8, Denmark-street, Soho,—when unemployed professionally, he is to be seen personating a red Indian at Catlin's Exhibition, Egyptian Hall, Piccadilly. John Wilton, a "Zummurzetshire man," but with such a head, face, and beard, as would have rejoiced Salvator. This gentleman has for some years cultivated his mustachios and his vegetables at the same time (when he does not sit, he digs), of both of which he has a prolific crop. Sir D. Wilkie, speaking of Wilton, said, "This man, Sir, is a maist extraordinary model; in face, he looks perfectly apostolical;" but an artist from the "isle of the west" said, "Och! he's the beau ideal of a rapparee." Charles Landseer introduced his portrait as his 'Tired Huntsman'; and Macleise, as his 'Little John'; he lives at 2, Short-street, Edgware-road. Signor Marchi, an Apollo-like looking fellow, in high request; he has had the honour of sitting several times to Prince Albert; and if his Royal Highness does not know what a good model is, who does? His palazzo stands in Cross-street, Hatton-garden, No. 25. R. Sims, a Scotsman, of very great age; one of the most useful models that could be recommended; very little idealization is requisite to paint a perfect head of Lear, from this venerable man: his features are intelligent; the head bald; hair white, and reaching to his shoulders; very long beard and mustachios: he has been but a very short time in London, and before he was well known, met with a severe accident, being now in the hospital with a broken arm, but he expects to be out in a week: his address, 13, Hemming's-row, St. Martin's-lane. Mr. Ching, a good-looking man, between fifty and sixty, bald-headed, grey hair; 30, Charlton-street, New-road. John Coulton, 3, Crawford-passage, Clerkewell, a decayed landscape painter (vide one of Cope's etchings produced at the Etching Society); an old man with long, dark grey hair. John Eness, of 6, Old Brook's-court, Fitzroy-passage, Fitzroy-market; this man is ninety-three years of age! (the late Douglas Cowper introduced his head as Brabantio, in his celebrated picture of 'Othello,' now in the possession of the Marquis of Lansdowne); a most excellent model. — Emmet, 26, Union-street, Middlesex Hospital, a modern Antinous, much in request; he sits very much at the Royal Academy. M. Decour, a Frenchman of enormous muscular power, from the hips upwards (the lower extremities are deformed); he is a living pocket edition of the Farnesian Hercules: his address could be obtained at the Royal Academy. Watson, 6, Church-street, St. Giles, a man of 70, an excellent and patient sitter. At any time, should other names occur to me, I will do myself the honour of forwarding them to you.

I am, Sir, your humble Servant,  
A WORKING ARTIST.

[The above letter has been postponed for some time for want of room.]

#### TO CORRESPONDENTS.

In consequence of the Editor's absence from London, replies to several correspondents must remain over till our next number.

E. M. J.—We have received from artists, assurances of their success in the formation of the Silica vehicle; but this, of course, must depend upon the purity of the components.

Royal Academy.—"A Student" states that the pension and allowances granted by the Academy have been reduced from £80 for travelling expenses, and £180 per annum, to £60 and £100 per annum. The extract was made from a copy of the laws, &c., published, we think, within the period "A Student" mentions.

C. S.—This correspondent has not stated the department of Art he is pursuing. The works of which he complains are valuable to the artist only after a certain amount of experience. We infer that he has made some proficiency in drawing as he has commenced painting; he cannot, therefore, go wrong in working as much as possible after nature. A general application of favourite recipes is productive of mannerism in tone.

W. C., City of London Institution.—A subscriber to the Art-Union of London, is entitled to one chance, and one copy of the engraving issued, for each guinea subscribed. The distribution, briefly, is conducted thus:—Against the name of every member in the list is written a number; tallies, with corresponding numbers, are placed in a wheel at the general meeting; while into another wheel are placed similar tallies, with the amounts of the various prizes written singly on each. The wheels being turned, a number is drawn, and the name and address of the member it represents stated. A tally is then drawn from the second wheel, which determines the amount of the prize.

A MONTHLY JOURNAL OF THE FINE ARTS.

No. 33.

LONDON: OCTOBER 1, 1841.

PRICE 8d.

THIS JOURNAL BEING STAMPED, CIRCULATES, POSTAGE FREE TO ALL PARTS OF THE UNITED KINGDOM.

**THE FIRST ANNUAL EXHIBITION** of the WEST OF SCOTLAND ACADEMY of the FINE ARTS, for the Works of Living Artists, is NOW OPEN, in the Dilettanti-buildings, 51, Buchanan-street.  
J. A. HUTCHISON,  
Glasgow, Oct. 1, 1841. Secretary to the Academy.

**THE POET WORDSWORTH;** an Engraving from a Picture by Miss MARGARET GILLES; engraved by EDWARD M'INNES. To Subscribers, Proofs with the Autograph, £1 1s.—This being a private Plate, a few only are for sale.  
Apply to Mr. Moon, 20, Threadneedle-street.

Now ready,  
**A PORTRAIT** of MRS. S. C. HALL, from a Painting by H. MAC MANUS, A.R., H.A.; engraved by H. T. RYALL. Size, 10 inches by 8.  
Price: Prints, 12s. India Proofs, 21s.  
London: Published by Henry Graves and Co., Pall-mall; and How and Parsons, 132, Fleet-street.

**ETCHING CLUB.**—The Members of the Etching Club have completed their ILLUSTRATIONS of "THE DESERTED VILLAGE." The work consists of Eighty original Etchings by John Bell, Sculptor; C. W. Cope, Thomas Creswick, J. C. Horsley, R. Redgrave, A.R.A., C. Stothhouse, Frederick Tayler, Member of the Society of Painters in Water Colours, H. J. Townshend, and Thomas Webster, A.R.A., Painters.

The publication will be on the following plan, and the copies will be delivered strictly according to the order of subscription; and when the number specified has been printed, the plates will be destroyed:—

20 Reserved India Paper Proofs, before letters, half Columbian, at 13 Guineas each.  
50 India Paper Proofs, half Columbian, with the Poem engraved on the Plates, at 10 Guineas each.  
150 copies, India Paper, quarter Columbian, at 5 Guineas each.

Subscribers' names received by the Secretary, Mr. Redgrave, Hyde Park Gate, Kensington Gore; and by Mr. Griffiths, 14, Waterloo-place, Pall-Mall, where a copy of the work may be seen, between the hours of One and Four, any day of the week except Monday.

BY HER MAJESTY'S ROYAL LETTERS  
PATENT.

**WINSOR AND NEWTON'S TUBES** OF OIL COLOUR.—This beautiful invention obviates the numerous imperfections attendant on the use of BLADDER COLOURS, as the bladder in which the paint is enclosed being porous, allows the oil to exude; and thus, by admitting air, the colour necessarily hardens, becomes contaminated with skins, and frequently more than half of it is rendered totally unserviceable.

The PATENT TUBES are formed of stout cylinders of glass, hermetically secured with an air-tight piston, traversing the tube, and ejecting the colour by a gentle pressure.

The colour being visible through the glass, the artist immediately perceives the one he may require, and the air being excluded, no smell can proceed from them. They are also so perfectly clean to handle, that oil pictures may be executed without the least soil on the table, or on the hands of the artist.

To be had, wholesale and retail, at their Artists' Colour Manufactory, 38, Rathbone Place, London.  
Newly invented Zinc Panels for Miniatures and other highly finished Paintings in Oil, and all the new manufactures of the trade.

**HENRY GRAVES AND COMPANY**  
HAVE the honour to announce that they have published, during the present season the following splendid

**WORKS OF ART,**  
of which Impressions or Proofs may be had of all respectable Printers in the kingdom:—  
**ZUMALACARREGUI AND THE CHRISTINO SPY.**

Engraved in the finest style of Mezzotint by F. C. & C. G. LEWIS, from the splendid original Drawing by J. F. LEWIS, Esq.  
Price: Prints £3 3s. Proofs before Letters £6 6s.

**THE HIGHLAND DROVERS DEPARTING FOR THE SOUTH.**

Engraved in the Line Manner by J. H. WATT, Esq., from the splendid Picture exhibited at the Royal Academy, Painted by EDWIN LANDSEER, Esq., R.A.  
Proofs before Letters (now ready), £12 12s.

**LADY EVELYN GOWER AND THE MARQUIS OF STAFFORD.**

Engraved in the most exquisite manner by SAMUEL COUSINS, Esq., A.R.A., from the very beautiful Picture Painted by EDWIN LANDSEER, Esq., R.A., for his Grace the Duke of Sutherland, K.G.  
Prints, £2 2s. Proofs, £4 4s. First Proofs, £6 6s.

**HIS GRACE THE DUKE OF BUCKINGHAM AND CHANDOS.**

Engraved by JOHN PORTER, from the original Picture in his Grace's possession, painted by JOHN JACKSON, Esq., R.A.  
Prints, £1 1s. Proofs, £2 2s. Proofs before Letters, with Autograph, £3 3s.

**THE WORDS OF THE LATE SIR T. LAWRENCE, P.R.A.**  
Part IX., containing,  
The POPE, LORD LONDONDERRY and the DUCHESS OF SUTHERLAND and CHILD.  
Prints, 12s. Proofs, £1 1s., Proofs before Letters, £1 11s. 6d.

**HER MAJESTY QUEEN VICTORIA AND THE PRINCESS ROYAL.**  
Painted by A. COLE and Engraved in the finest style of Mezzotint by G. H. PHILLIPS.  
Prints, £1 1s. Proofs, £2 2s. Autograph Proofs, £3 3s.

Now ready,  
**LAWRENCE'S PORTRAITS** OF SIR ROBERT PEEL, BART., M.P., &c. &c.,  
AND  
HIS GRACE THE DUKE OF WELLINGTON, K.G.  
Engraved the full size of life by F. C. LEWIS, Esq., from the very beautiful original Drawings by Sir THOMAS LAWRENCE, P.R.A.  
Price: Prints, £1 1s. Proofs with Autographs, £2 2s.

**MÜLLER'S PICTURESQUE SKETCHES**  
OF THE  
**AGE OF FRANCIS THE FIRST.**

Price: Imperial folio, tinted, £4 4s. Half-bound, coloured and mounted, £10 10s., in a Portfolio.

**SCENIC BEAUTIES OF THE ISLAND OF JERSEY.**  
By PHILIP JOHN OULESS.  
Price: 25s. Half-bound, India paper, 35s.

GRAVES AND Co.—Continued.

**THE YOUNG SHAVER.**

Drawn on Stone by THOMAS FAIRLAND, from the original Drawing by W. HUNT.  
Price: Prints, 7s. 6d. Coloured, 12s.

London: Published by HENRY GRAVES and CO., Printers and Publishers to her Majesty and his Royal Highness Prince Albert, 6, Pall-mall.

**TO ENGRAVERS.—THE MANCHESTER ASSOCIATION** for the PROMOTION of the FINE ARTS are desirous of obtaining an ENGRAVING for DISTRIBUTION amongst the Subscribers of the present Year, and invite Engravers, who have any suitable Works in progress, to send Specimens for inspection, and to state the terms, per hundred prints, on which the requisite number of impressions would be supplied. The size of the Print to be not less than 15 by 12 inches, and Specimens to be forwarded within one month from this date, addressed to the Hon. Secretary, T. W. Winstanley, Esq., at the Royal Institution, Manchester. No Specimens to be sent unless the Prints can be ready for delivery by the end of February next.  
Manchester, September 27, 1841.

In folio, price 21s.,  
**ELEMENTARY STUDIES,** by the late H. W. BURGESS, Landscape Painter to his late Majesty William IV. Part I. is now ready. Published by his Widow, and may be had of Reeves and Sons, 150, Cheapside; Ackermann and Co., Strand; and all the principal Booksellers.

Preparing for Publication in October.  
In two volumes, small 8vo., with Illustrations by George Cruikshank,  
**CAKES AND ALE:**  
Tales and Legends. By DOUGLAS JERROLD.

BY THE LADY EMMELINE STUART WORTLEY.  
**THE MAID OF MOSCOW;**  
A Poem in Four Cantos.  
**ANGIOLINA DEL' ALBANO;** or, TRUTH AND TREACHERY. A Play in Five Acts.  
**ALPHONSO ALGARVES;**  
A Drama.  
**LILLIA-BIANCA;**  
A Tale of Italy.

In one handsomely-printed volume, royal 8vo., with Engravings, the subjects of which are selected from the most interesting passages of the Work, and containing faithful Portraits of Animals, Costumes, and Weapons, derived from Sketches made in India,  
**THE OLD FOREST RANGER;** or, WILD SPORTS on the NEILGHERRY HILLS, and in the GREAT WALIAR JUNGLE. By Capt. WALTER CAMPBELL, late of the Seventh Royal Fusiliers.

In November.  
In 8vo., illustrated with numerous Engravings,  
**THE SPORTING SKETCH-BOOK;**  
A Series of Characteristic Papers contributed by Crack Authorities. Edited by J. W. CARLETON, Esq.  
In imperial 8vo., illustrated with Fifty Engravings on Steel and Wood, by eminent Artists,  
**SKETCHES OF IRISH CHARACTER.**  
By Mrs. S. C. HALL.

A New Edition, with Additions.  
London: How and Parsons, 132, Fleet-street. Dublin: John Cumming.

**DRAWING AND PAINTING, No. 14, TOTTENHAM COURT-ROAD.**—Artists, Mechanics, and others, are respectfully informed that a Large Room, furnished with Casts from the Antique, Ornaments, &c., has lately been opened for STUDY, every Monday, Tuesday, Thursday, and Friday Evenings, from six o'clock till ten. The Subscription is 4s. per month.

A Class for the Study of the Living Model meet on Wednesday and Saturday Evenings.

**STUDENTS in GEOLOGY, MINERALOGY, or CONCHOLOGY,** can be supplied with an extensive assortment of Specimens to illustrate these interesting branches of Science, or with Elementary Collections carefully arranged and described, at 2, 5, 10, 20 to 50 guineas each, by J. TENNANT, Mineralogist to her Majesty, 149, Strand, London.

J. TENNANT, being an Importer and Manufacturer of Ornamental Works of Art, in Italian Alabaster, Marble, Bronze, and Derbyshire Spar, for the drawing-room, library, and dining-room, begs to submit to the inspection of the Nobility and Public a great variety of Figures, Busts, Groups, Vases, Obelisks, Candelsticks, Inkstands, Mosaic Tables, Paper-weights, Watch-stands, &c.

**TO ARTISTS & AMATEURS—BROWN'S PATENT COLLAPSIBLE METALLIC TUBES** for Colours, Oil, and Varnish.—THOMAS BROWN, Colourman to Artists in Oil and Water, returns his sincere thanks to his numerous Patrons for the many years of patronage bestowed on his late Father, and begs to inform them that he has the above New Invention for containing Oil Colours, &c.: it possesses all the advantages of bladders and syringes without any of their inconveniences, and he offers it at a price very little exceeding bladder colours; it effectually prevents all waste, dirtiness, and smell, and will preserve the colour good for years, and in any climate. T. B. also begs to say that he now manufactures Water Colours, and sells every Material for Drawing and Painting. Orders by post attended to immediately.—No. 163, High Holborn, London, 1841.

#### LAMP PHENOMENON.

**YOUNG'S PATENT OXYDATOR (price 5s.)** renders Common Oil equal to the finest Sperm at all seasons of the year. The distinguishing excellence of this instrument is, that it has no drawback, viz., no alteration of the lamp, no excessive heat, no breakage of chimney-glasses, nor stoppage of the lamp tubes by coagulation of the oil; in fact, no more is required than that the Oxydator should fit the lamp burner, to obtain a brilliant, innoxious, and powerful flame. As a lamp is kept burning for the free inspection of the public, those who value an invention for its real worth to the community will be gratified in seeing a scientific and chemical principle of the highest order carried into general usefulness by means at once simple and effective. The Trade supplied. Agents wanted.

UPTON and CO., Agents for the Patentee, 33, George-street, Hanover-square, and 66, Basinghall-street, City. Hours of attendance, from Ten till Seven.

**VAN EYCK'S GLASS MEDIUM.**—The SILICA, or GLASS MEDIUM, prepared by THOMAS MILLER, from the formula of J. EAGLES, Esq., as described in the ART-UNION of August last. This Medium has been tried by Artists of the first eminence, and found to be the grand desideratum for removing the existing evils of the modern school, namely, the destructive effects of varnishes, oils, and meguels, as all pictures painted with the latter, after a time, lose their brilliancy and transparency, and become horny, spotted, and dark-coloured; whereas, those painted with the Glass Medium, have a most brilliant effect, and will be found to remain perfectly unchanged, as their durability can only be compared to painting in enamel.

#### Glass Medium in Bottles.

No. 1. For mixing in colours already prepared in oil, it meguelps immediately upon being mixed with the colour.

No. 2. For general painting, and rubbing up powder-colours with.

#### Glass Medium in Powder.

For mixing with Madder Lakes and other colours requiring strong driers, giving at the same time additional transparency.

If this powder be mixed stiff upon the palette with a small portion of pure nut or poppy oil, it will enable the Artist to lay colour, pile upon pile, and to dip his pencil in water or oil at pleasure.

At the request of several eminent Artists, T. Miller has been induced to prepare colours in this Medium, which may be had at his Manufactory, No. 56, LONG-ACRE, LONDON.

T. MILLER, being the first who prepared this invaluable Medium, has had the honour of serving the following Gentlemen with it, some of them as early as the 5th of August last.

Sir A. W. Calcott, R.A.	C. L. Eastlake, Esq., R.A.
W. Etty, Esq., R.A.	W. Boxwall, Esq.
J. P. Knight, Esq., R.A.	D. Roberts, Esq., R.A.
R. Redgrave, Esq., R.A.	C. Stanfield, Esq., R.A.
C. Landseer, Esq., A.	F. Stone, Esq.
W. Taylor, Esq.	R. McInnes, Esq.

**THE SKETCHING SEASON.—GEORGE ROWNEY AND CO.'S PRESERVING ENVELOPES** to supersede the use of the Bladder for Oil Colours.

This mode of putting up Oil Colours for the use of Artists, will be found much more cleanly and portable than the old plan of employing the bladder or wasand, besides possessing the advantage of preserving the colour for an indefinite period of time.

Also a new red, called Palladium Red, which possesses a similar tone to Chinese Vermilion, but of greater brilliancy; it is perfectly permanent with a semi-transparent body; and having neither sulphur or mercury in its composition, it is not liable to form a black sulphuret when used in combination with white or any other colour.

And a new and permanent Blue, price 4s. the oz., equal in tone and colour to Ultramarine of the best quality.

Canvases prepared with Indian Rubber, Flemish, and other grounds. Panels, Millboards, and all other articles connected with the Fine Arts, at the lowest possible prices, and of first-rate qualities.

Sold, wholesale, retail, and for exportation, at the Artists' Repository, No. 51, Rathbone-place, Oxford-street.

**PURE DRAWING PAPER.—TO ARTISTS AND OTHERS.**—A Pure Drawing Paper has long been a desideratum, many valuable Drawings having been seriously injured by the chemical properties of the Paper, and its unsuitableness for the purpose. A Pure Drawing Paper, made under the advice and direction of an eminent Artist, and stamped with his initials, J. D. H., may now be had. Herewith is subjoined a copy of a letter addressed to the manufacturer on the subject.

[Copy.]

Gordon-square, June 14, 1841.

During these last six months I have made many trials of the new Drawing Paper, which you have made at my suggestion, and under my advice.

By the production of this paper I do not hesitate to say that you have conferred a real benefit on the art of Painting in Water Colours; as the painter can now procure a material on which he can perfectly rely, it being pure and free from those chemical ingredients now so universally used in the manufacture of all papers, and which so seriously endanger the permanence of every work of Art produced upon them. Nor are the texture and surface among the least of the advantages your new paper possesses.

You are welcome to make use of this in any way you may think proper.

(Signed) J. D. HARDING.

Sold by all the Drawing Houses.

**VITRIFIED SILICA MEDIUM,** discovered by Lieutenant R. W. H. HARDY, R.N., and F.M.B.S.—ACKERMANN and CO. have the satisfaction to offer this valuable Preparation made according to the Recipe of the Discoverer, and fully approved by him. They feel convinced that every Artist and Amateur will acknowledge its superiority to every Medium hitherto in use, and to those who admire in the old Masters the vehicle they used, it will be gratifying to learn that there is every probability of the Medium, now submitted to the Public, being the same as that of Van Eyck; and the effect of any Painting, of the Fifteenth Century, may be completely obtained by the VITRIFIED SILICA MEDIUM. Among other important advantages, it adds permanency to the colours. Even Naples yellow, when used with it, undergoes no change by the action of a steel knife. More oil or water may be added, according to the fancy of the painter. It adds such a brilliancy and lustre to the colours, that no varnish is requisite for a Picture painted with it. A small quantity of the Vitrified Medium, rubbed up with the colour, will enable the Artist, according to his pleasure, to dip his brush into water with oil. The Medium may also be rubbed up with equal quantities of water and oil, using a palette-knife, or a mortar, to work them together till they become of the consistency and appearance of cream. In this state it may be used as any other Medium. For those who desire to work in a more solid manner, the Vitrified Medium is made up in the form of powder, and sold in packets. In the "ART-UNION" of August, is an account of this desirable Medium, to which we refer Artists and Amateurs; and we heartily join in best acknowledgments to Lieutenant Hardy for his valuable discovery, and, further, for kindly consenting to superintend for us the Preparation.—Price 1s. per Bottle, or the Powder, 1s. per packet.

London: Ackermann and Co., 96, Strand.

"Walberton, near Arundel, Sussex.

14th August, 1841.

"GENTLEMEN,—I have tried the sample of Vitrified Medium which you sent me. I find that it has been prepared most accurately according to my Formula, and it therefore meets with my perfect approval.

"If this testimony is of any value, I beg you will make what use of it you please.

"I am, Gentlemen,

"Your most obedient Servant.

"R. W. H. HARDY.

"To Messrs. Ackermann, 96, Strand, London."

## THE ART-UNION.

LONDON, OCTOBER 1, 1841.

## ON FRESCO PAINTING.

BY CHARLES EASTLAKE, ESQ., R.A.

THE following paper on fresco painting was delivered by Mr. Eastlake to be read before the Committee of Fine Arts, as expressing his views of the subject under inquiry. A passage from this valuable essay was quoted in the Report in which it appears in our number of last month; but as the perusal of this fragment can but "whet the wish" for the paper in its entire form, it is here given at length; and we cannot but hope that the extensive knowledge and the sound opinions of the author will be sufficiently appreciated by any members of a future committee who may either feel diffident of native talent, or be infected with an unwholesome craving for foreign Art. On a question of such national importance as the embellishment of the new Houses of Parliament, we are but too happy of an opportunity of circulating the opinions of such an authority as Mr. Eastlake. The paper was not intended for publication; but all interested in the progress of Art must agree with the committee, that it was too important to be withheld, as embodying observations and results of the experience of one of the most accomplished artists of modern times, but "*quid nos hic illum commemoremus?*"

"The present German school of fresco painters has been formed within the last 25 years. Its first essays, to which I have alluded, were in a great measure the result of a general spirit of imitation, which willingly adopted all that was associated with the habits of the later middle ages. It may be as well to review the origin and progress of this state of feeling in the present century. The historians of modern German Art have, indeed, traced its rise to earlier influences; but all agree that the circumstances to which we are about to refer greatly promoted the introduction of a new taste in painting.

"The efforts to create a new style of Art in Germany in the beginning of the present century, were intimately connected with the struggle for political independence. The cathedrals and churches on the Rhine had been more or less desecrated and plundered, and the pictures by the early German masters dispersed and sold. The gradual recovery of these ended in the formation of collections of such works; this led to a higher appreciation of their merits, indulgently seen as they were by patriots anxious to restore and maintain all that especially characterized the German nation. With men thus inspired, the connexion of such feelings with the religion of their forefathers was obvious. German artists and writers again, who visited Italy, dwelt on the relation that had subsisted between Germany and Italy before and since the revival of letters, not only in politics but in the Arts. The tower at Pisa, the church of St. Francis at Assisi, and the other buildings, had been erected by Germans, and it was remembered with pride, that the new life of Italy had been kindled chiefly by the genius of the northern nations. The spirit of the middle ages was thus in a manner revived, and the Germans looked with a complacency on that period when the Teutonic nations, unassisted (as they assume) by classic examples, produced a characteristic style

of architecture; and developed their native feeling in the arts of design and in poetry. In those ages, architecture, the most necessary of the Arts, and therefore the first in date, had time to develop itself fully, especially in the north; but before painting could unfold itself in an equal degree, the thirst for the revival of classic learning and the imitation of classic models prevented the free formation of a Christian and national style. The early specimens of Art which were most free from this classic influence were thus regarded with higher veneration, and the Germans of the nineteenth century boldly proposed to throw aside all classic prejudices, however imposing, and follow up the imperfect beginnings of the later middle ages in a kindred spirit. This general aim connected the early efforts of Italian Art still more with those of Germany, and the German painters who visited Italy, recognised the feeling that inspired them in all works which were supposed to be independent of a classic influence.

"The degrees in which this spirit has prevailed have naturally varied. With many, the imitation of the earlier masters soon gave place to a juster estimate of the general character of the Art. The antique has even, to a certain extent, reassumed its empire; but, on the other hand, some of the best German artists have unflinchingly maintained the general principles above described, even to the present day; indeed not a few had at first returned to the old faith, and had imbibed with it a still deeper attachment to the spirit of the early painters.

"It is necessary to bear these facts in mind, in order to understand the particular aim which many (perhaps the best) of the German artists have in view. The veneration for the general spirit which prevailed at the revival of Art was accompanied by an imitation of the characteristics and even the technical methods of the early painters; the habits and the productions of mediæval Italy were, as we have seen, easily associated with German feelings; and to this general imitation the adoption of fresco painting is partly to be attributed, though that art was never before practised by the Germans. Fresco painting was, in short only one of many circumstances which had acquired interest and importance in the eyes of German painters from the above causes. The predilection for the early examples of Christian Art did not exclude the study of better specimens created in the same spirit, but the indications of a classic influence were sufficient to condemn the finest works; and hence the later productions of Raffaele were not considered fit models for study.

"Let us now consider how far we, as Englishmen, can share these feelings and aims. If the national ardour of the Germans is to be our example, we should dwell on the fact, that the Arts in England under Henry the Third, in the thirteenth century, were as much advanced as in Italy itself; that our architecture was even more characteristic and freer from classic influence; that sculpture, to judge from Wells Cathedral, bid fair to rival the contemporary efforts in Tuscany; and that our painting of the same period might fairly compete with that of Siena and Florence. Specimens of early English painting were lately to be seen,—some very important relics still exist on the walls of the edifices at Westminster. The undertaking now proposed might be the more interesting since, after the lapse of six centuries, it would renew the same style of decoration on the same spot. The painters employed in the time of Henry the Third were English; their names are preserved. Thus in doing justice to the patriotism of the Germans, the first conviction that would press upon us would be that our own country and our own English feelings are sufficient to produce and foster a characteristic style of Art; that although we might share much of the spirit of the Germanic nations, this spirit would be modified, perhaps refined, by our peculiar habits; above all, we should entirely agree with the Germans in concluding that we are as little in want of foreign artists to represent our history and express our feelings, as of foreign soldiers to defend our liberties. Even the question of ability (although that ability is not to be doubted for a moment) is unimportant; for, to trust to our own resources should be, under any circumstances, the only course. Ability, if wanting, would of necessity follow. Many may remember the time, before the British army had opportunity to distin-

guish itself, when continental scoffers affected to despise our pretensions to military skill. In the arts, as in arms, discipline, practice, and opportunity are necessary to the acquisition of skill and confidence; in both a beginning is to be made, and want of experience may occasion failure at first; but nothing could lead to failure in both more effectually than the absence of sympathy and moral support on the part of the country. Other nations, it may be observed, think their artists, whatever may be their real claims, the first in the world, and this partiality is unquestionably one of the chief causes of whatever excellence they attain. It is sometimes mortifying to find that foreigners are more just to English artists than the English themselves are. Many of our artists who have settled, or occasionally painted in Italy, Germany, Russia, and even in France, have been highly esteemed and employed. The Germans especially are great admirers of English Art, and a picture by Wilkie has long graced the Gallery of Munich.

"If, however, we are to look to the Germans, the first quality which invites our imitation is their patriotism. It may or may not follow that the mode of encouraging native Art which is now attracting attention at Munich is fit to be adopted here. We have seen that a considerable degree of imitation of early precedents is mixed up with the German efforts; this of itself is hardly to be defended, but the imitation of that imitation, without sharing its inspiring feeling, would be utterly useless as well as humiliating. The question of fresco painting is in like manner to be considered on its own merits, without reference to what the Germans have done, except as an experiment with regard to climate. The fresco painters of Munich generally work on the walls from May to September only; the greater part of the year is thus devoted to the preparation of the cartoons. Five months in the year would probably be the longest period in which it would be possible to paint in fresco in London. But assuming the new Houses of Parliament to be thus decorated, and that the works could not be completed before the rooms would be wanted, the paintings could be continued annually in the autumn without inconvenience. The climate of England and Germany might in some respects be more favourable to the practice of fresco than Italy. The surface of the wall is in the fittest state to receive the colours when it will barely receive the impression of the finger (when more moist, the ultimate effect of the painting is faint); this supposes the necessity of a very rapid execution in a warm climate, where the plaster would dry more quickly.

"Fresco painting, as a durable and immoveable decoration, can only be fitly applied to buildings of a permanent character. Not only capricious alterations, but even repairs cannot be attempted without destroying the paintings. There can be no doubt that the general introduction of such decorations would lead to a more solid style of architecture; at the same time the impossibility of change would be considered by many as an objection. This objection would not however apply to public buildings. In case of fires, frescoes would no doubt be more or less injured or ruined, but they might not be so utterly effaced and destroyed as oil pictures in the same circumstances would be. On the whole, the smoke of London might be found less prejudicial than that of the cauldens in Italian churches. 'The Last Judgment' of Michael Angelo could hardly have suffered more in three centuries from coal fires than from the church ceremonies, which have hastened its ruin. The superior brilliancy (looking at this quality alone) of frescoes which adorn the galleries of private houses, where they have not been exposed to such injurious influences, is very remarkable; as, for example, in the Farnese ceiling. The occasional unsound state of some walls, even in buildings of the most solid construction in Rome, is to be attributed to slight but frequent shocks of earthquake. A ceiling, painted by one of the scholars of the Carracci in the Costaguti Palace in Rome, fell from this cause. Such disadvantages might fairly be set against any that are to be apprehended in London. With regard to the modes of cleaning fresco, the description of the method adopted by Carlo Maratti in cleaning Raffaele's frescoes when blackened with smoke happens to be preserved; but no doubt modern chemistry could suggest the best possible means.

"The general qualities in art which fresco demands, as well as those which are less compatible with it, have been already considered. It may be assumed that it is fittest for public and extensive works. Public works, whether connected with

religion or patriotism, are the most calculated to advance the character of the Art; for as they are addressed to the mass of mankind, or at least to the mass of a nation, they must be dignified. Existing works of the kind may be more or less interesting, but there are scarcely any that are trivial or burlesque. This mortal dignity is soon associated in the mind of the artist with a corresponding grandeur of appearance, and his attention is thus involuntarily directed to the higher principles of his art. In my evidence, I expressed the opinion that although a given series of frescoes must be under the control of one artist, it would be quite possible to combine this very necessary condition with the employment of a sufficient number of competent artists by subdividing the general theme. Thus, if we suppose the general subject to be Legislation, it might combine the symbolic and dramatic styles, and even subjects of animated action. It might be subdivided, for example, into the history and progress of legislation, founded on religion and morals, and producing its effects in peace and war; exemplified in the one by industry and commercial enterprise, in the other by instances of the courage which results from a due appreciation of national benefits, and the feelings of loyalty and patriotism. Any subject of great and universal human or national interest might be made equally comprehensive. It has been assumed that the practice of fresco would be beneficial to English artists technically; we proceed to consider how it would affect them in other prospects.

"The painters employed on an extensive series of frescoes would have to devote a considerable portion of their lives to the object. Such an undertaking would require great perseverance on their part. It is needless to say that they ought not to encounter any impatience or want of confidence on the part of their employers: the trial should be a fair one. It would hardly be possible for the artists to undertake any oil-pictures while so employed; and I confess I have some fears that, when debarred from the exercise of oil-painting, and confined to a severer and drier occupation, they might find their task irksome. One of the first artists at Munich, in writing to me not long since, said he sighed to return to oil-painting. If the German fresco painters can feel this regret at giving up their first occupation, for so many years, it may be supposed that the English artists would experience such a feeling in a greater degree. When the King of Bavaria honoured me with a visit in Rome, he told me he had made an arrangement with Schnorr, and had given him employment in fresco for ten years: that excellent artist has now been occupied at Munich in public works for a much longer period. No hopes could be held out to the principal painters that they would find time for oil-painting as well, for their designs and cartoons would take up all their spare time. After a few years, when assistants were well formed, more leisure might be gained, and it was under these circumstances that Raffaele painted in oil when employed by Julius the Second in Rome; but for the first three years after he began the frescoes in the Vatican, he confined himself entirely to those labours; and Michael Angelo, as is well known, painted the ceiling of the Cappella Sistina alone.

"The more general practice was however to employ assistants, and this is one of the serious considerations connected with the present inquiry. Owing to the self-educating system of painters in this country, the younger artists are more independent than they are elsewhere, and they might have some reluctance to co-operate in works in which their best efforts would only contribute to the fame of the artist under whom they worked. In Italy, and in recent times in Germany, this subordination was, however, not felt to be irksome, and the best scholars were naturally soon intrusted with independent works. It is possible the talents thus created would be employed to decorate private houses; but the Government would incur a ~~most~~ <sup>great</sup> obligation not to leave a school thus formed unemployed, especially as the artists, from want of practice, might be less able to cope with those who had been exclusively employed in oil-painting. The result, however, might be that the school would gain in design, at some sacrifice of the more refined technical processes in colouring, in which the English painters now excel their

Continental rivals. It is true some Italian painters—for example, Andrea del Sarto, the Caracci and their scholars—were equally skilful in oil and in fresco. The earlier masters were, however, generally stronger in the latter; and Sir Joshua Reynolds observes that Raffaele was a better in fresco than in oil."

### THE CONTROVERSY CONCERNING "VEHICLES."

SIR,—Having written for the ART-UNION some papers on Vehicles, which have attracted the attention of artists of known eminence, as well as colour-makers; and having from many of these persons most interested in the subject received specimens of their trial in manufacture of the medium recommended, and some observations upon its use, I may be permitted now to consider Vehicles for painting in oil a matter of sufficient interest, to enlist the services of the ART-UNION. I do not, therefore, think it necessary to apologize for the few remarks I have to make, for the notice, which the former papers have already attracted, induces me to think they will not be unacceptable. I am happy to find your very sensible correspondent, "J. H.," using both experiment and reasoning upon the recipes I have proposed. He doubts if great hardness be desirable. I urge that the question with us, who wish to re-discover the old process, is not whether hardness be desirable, but whether it is found in the works of the old masters. He admits we want tenacity, and says, that "any degree of hardness incompatible with that quality is a thing to be avoided." I cannot but think he misunderstands what is meant by hardness; for it does not appear at all to be incompatible with tenacity (and tenacity is a remarkable quality of the recipes), the hardness spoken of being nothing more than the consolidation of the pigments, the hardness of substance the after, not immediate effect of the painting. His objections to litharge may be worth consideration; and I confess I have my doubts as to the expediency of using lead in any shape, and am happy to think it is not necessary, and I propose to his experiment the omitting it altogether; and I am obliged to him for drawing my attention to it; and it will lead me to refer to the experiments of my lamented friend, P. Rainier, Esq., who, in the last specimen of vehicle sent to me, had omitted it. But before I do refer to that, I would wish to remind him that it *may* not be necessary that the oil and water should be in perfect solution; that, at least, for *some* purposes of painting, the minute separation, which requires a magnifying glass to discover, may be far from objectionable, as by effecting in like manner the particles of paint, a more luminous power may be given to the general texture. Indeed, it would seem that the Venetian painters, not unfrequently, may have dipped their brushes in water only, the colours having been mixed up with oil, to produce this very texture. But I think he will find, if he make the medium properly, that, if he wishes, in any degree, to produce the effect spoken of, more water will be required than is at first given to the vehicle. Nay, I will remind him that I do not urge the necessity of mixing water at all, if he finds it inconvenient for his peculiar practice. The water does not necessarily make the medium. In fact, it is borax alone which gives its essential quality—anything else may be added or omitted at the pleasure of the painter. It is the borax that cures the oil, preserves the colours, and makes them luminous, and offers extraordinary facility in working. He says he has not been able, by any safe means, to bring about a homogenous combination. Does he not consider it such, when by the borax, the oil is converted into a kind of soap, which is not again soluble in water? Possibly, the litharge or sugar of lead and silica may have in his experiment prevented the more perfect combination. I think he will be satisfied with the admixture of borax and oil.

Your correspondent's observations upon the manner of the Venetian masters are sensible, and may be of much practical utility. Undoubtedly many painters worked as he describes their practice to have been; but this is a subject quite apart from vehicle. It would be better for our object to refer to those masters who evidently did not so paint. The Flemish painters for instance: Te-

niers's off-hand manner was quite different, as was that of Berghem, and all those of the thin and brilliant style of that school. It should rather be considered, whether their manner could be imitated by our common methods, because there can be nothing incompatible with the method of Bassano in the new proposed vehicles; that is most likely to be the best which will best serve for all schools and styles. The meaning of Sir Joshua Reynolds's expression, that "a well-coloured picture should look as though it were painted in two colours," may not go the whole length of the argument of J. H., not even with the additional sentence, "that it should possess an unity of light and an unity of shadow." Does not Sir Joshua rather mean, that no distracting colouring should be applied,—no such variety, nor so placed as would overpower the unity of light and unity of shadow; for there are pictures of such a tone, that cold colours act much as shadows to lights; and others again, where warm colours take that effect, and the cold the contrary. Sir Joshua did not, probably, go further than to recommend unity of effect and he may have borrowed the expressions from Leonardo da Vinci, who certainly gives more than a hint of the same thing; and it is after he had described a very great variety of compound mixtures of colours on his palette, he says,—"Now, by simple colours I mean, such as cannot be made or supplied out of the mixture of any other colours—white and black I do not reckon among colours—the one representing darkness and the other light; that is, the one being a mere privation of light, the other mere light itself, either original or reflected. I shall not omit to speak of these, however, their use being of the last importance in painting, *which is nothing in effect but a composition of lights and shadows; that is, of bright and obscure.*" This is, however, a digression which I should not have entered upon, were it not that the judicious remarks of J. H. lead me to hope that the arts may receive much useful information from his pen; and I would willingly draw him, not into a controversy, but a co-operation of studies for the elucidation of principles of art. The objections urged against lead has induced me to reconsider the subject, and to bring to mind the conversations I had with my friend Rainier. I remember that, at first, he used pounded flint glass—a broken wine-glass, for instance—(though years before we had tried pounded calcined flint). The common flint glass was rich and varnishy enough. Subsequently he used glass of his own making, but how or with what materials he did not acquaint me. I have now three or four different samples by me which were sent by him. I know, that the further he proceeded, the more he simplified his experiments—the last which he sent is, I think, nothing but vitrified borax. This I have been very careful to keep, as his lamented death deprived me of the means of obtaining any further supply, and I rather wished to keep it for experiment than for use. And I have resorted to borax, most frequently uncalcined, and without regard to the due proportions, and to borax and lac, lac being easily dissolved in boiling water by means of borax; yet I was very desirous to omit lac, though it is probably the hardest of all varnishes. Of late I have used the recipes No. 6 and 7, as given in the ART-UNION. The objections that have been made to the use of litharge or lead in any form in the vehicle, have made me go back to the last sample sent me by my friend Rainier, I have used it in the same manner as the recipes No. 6 and 7, and certainly was surprised to find in the working so little if any difference, that I should not know one from the other. In the mixing with water, however, it should be observed that this (which I call the vitrified borax only) admits of much more water, more immediately affects the oil, making it whiter, and is capable of being made thinner, and yet it will enable the colours to set; it may likewise be made thicker, using a greater proportion of the borax. Nor do I find any deficiency of brilliancy, of varnishing brilliancy, and it bears out well. It has likewise this advantage, *vitrified borax* is a dryer; silica, being the reverse, requires the litharge or sugar of lead in addition to render the oil seccative. Not satisfied with trying this myself only, and by myself, I have put it into the hands of an artist of some eminence, now on a visit with me, and who, in common with others, was perfectly fascinated

with No. 6 and 7; and he did not know the difference, and declares nothing can be better than that which I have given him. I do not pretend to any chemical knowledge, nor am I a sufficient judge as to the good or evil of litharge or sugar of lead. If they be bad I offer a medium in which they are omitted; and I confess I doubt the necessity of any admixture to it. The trial is so easy, so simple for any one; the vehicle is so readily made in a few minutes, that any artist can give a fair trial to this as well as the other recipes. It would be presumption in me to determine which he is to prefer.

Recipe.—Borax vitrified to a perfect and clear glass; equal quantity by weight to measure of oil.

Such were the proportions given by my friend; and in this he was particular; why, I know not, or that it should not be varied. Having no relish for assuming a merit that does not belong to me, I have disclaimed and here again disclaim, any other than that of making known the discovery of my friend: had he lived he would, I know, have offered it to the public freely. The addition of the water is alone my invention, if it deserve the name; and I care little if it be rejected; but I am jealous for my friend. He is the only discoverer; if any improve it, theirs be the merit so far. My most valued friend is no more, he cannot speak for himself; but I, on his part, will admit of no competition with his good fame in what he has done. The best part of his life and great talents were entirely devoted to the Arts, and most particularly to the discovery of the vehicles used by the old masters. I have given so full an account of this matter, however, that it may seem unnecessary that I should here repeat what has been so plainly stated. Yet I feel in my jealousy for my friend, compelled to do so, as, to my very great surprise, I find that Messrs. Ackermann have advertised "The Vitrified Silica Medium, discovered by Lieutenant R. W. H. Hardy, R.N., and F.M.B.S.—Ackermann and Company have the satisfaction to offer this valuable preparation, made according to the recipe of the discoverer, and fully approved by him!"

They proceed to enlarge upon its qualities, amongst others that Naples' Yellow undergoes no change under the action of a steel knife (an effect which is entirely owing to the borax, and not the silica, as the same is observed to be the case with borax only); and they "heartily join in best acknowledgments to Lieut. Hardy for his valuable discovery, and further, for kindly consenting to superintend for them the preparation." And to this is attached the following notice from Mr. Hardy:—"I have tried the sample of vitrified medium which you have sent me: I find that it has been prepared most accurately according to my formula, and it therefore meets with my perfect approval. If this testimony is of any value, I beg you will make what use of it you please.—I am, Gentlemen, your most obedient servant,

"R. W. H. HARDY.

"To Messrs. Ackermann, 96, Strand."  
(The *Italica* are mine.)

It is true Messrs. Ackermann do refer to the ART-UNION, but thus to attach the discovery to Lieutenant Hardy, who, even in the most favourable view, can only be looked upon as the improver, and to suppress, sink, annihilate the merit due to any others, is one of the most inconceivable of perversions. Whether or not he has improved it, I will not pronounce: he has certainly done no more. I was not even acquainted with Mr. Hardy at the time the following account appeared in "Blackwood's Magazine" of June 1839, which I extract from a review of M. Merimee's work. The valued friend there spoken of was P. Rainier, Esq., of the Albany.

"Quis desiderio sit pudor aut modus  
Tam chari capitis."

"A valued friend, now unhappily no more, of ample fortune, leisure, research, and unlimited accuracy and patience, with great chemical knowledge, for many years devoted himself to the subject in question. He had himself a fine collection of pictures by the old masters. His investigation was patient in the extreme. We deeply regret that his papers are not forthcoming; it was his intention to have published the result of his inquiry and his experiments. We were in constant

communication with him many years, and have still many of his colours, and his vehicles for them, which he sent to us. He simplified them more and more, and thought himself that he had rediscovered the medium, "Veterem revocavit artem." To speak confidently upon such a subject is only to ensure derision; we will not, therefore, do so—indeed, we do not know *certainly* what his discovery, if it be one, was; but we will give it, as we have had it analyzed, and every artist may try for himself: it is time to say what we ourselves saw. Some paint was scraped off an old picture, laid on some platina, and subjected to the blowpipe. The oil went off with a slight explosion, and the result was, that the paint was vitrified, it was positive glass. Before he tried the experiment, he assured us it would be so, and that the paint of all the old masters was the same. This led him to the use of glass of different sorts; and he assured us, the effect on some of the colours, which would not stand without it, was very striking. At first his vehicle was not facile, but he at last simplified it, that it became perfectly so. We once said to him, 'It is supposed the Venetian masters used water; if this medium, therefore, be substantially the same as theirs, you may dip your brush in water as well as in oil.' He thought a moment, and replied, 'I think you might,' upon which we tried the experiment, and found we could, with facility, dip the brush in oil or water as we pleased, and paint with either. We painted rather a large picture with it—using water; after a few months, wishing to paint over the canvass, we tried to rub down the surface with pumice-stone, it would not touch it; and with a razor we might as well have scraped a stone wall. In this state, a friend coming in, who was an artist, saw the picture, and thought it was an old picture destroyed by cleaners. We have some of the last medium he sent us; we know not if it be the same we painted the picture as above with, but suspect it is. This we have had analyzed, and are told it is borax. We rather suspect it had, in very small proportion, something else with it, at least so we are told; and our friend offered once to supply us with two substances, which we were to have made up by a chemist, but he changed his mind, and supplied us himself. We therefore invite artists, and scientific persons who take an interest in the subject, to try borax in every way they may please. The following method was given by our friend:—Equal quantity by weight, to measure of oil of the impalpably pounded borax, having been first made into glass. This mixture will have the richness of varnish, be very pleasant to use, and will, if required, by being made thicker, stand up on the palette. We have mended an old picture or two with perfect success. To those who may reject this without trying, or those who trying may abandon it, and consider their labour lost, we have only to say, we had rather the one should indulge his prejudice, and the other suffer the inconvenience of a little loss of time, than we should withhold a knowledge of anything which might possibly be beneficial to Art. And let the fact be tested, if the paint of the old masters does vitrify—if it does, it is no wonder if, under the file, it presents a shining appearance, and may be the 'the Glassa Romana.' It is not at all improbable, that the 'Arte Vetraia,' known so long before painting in oil, may have supplied Van Eyck with his discovery; and it is remarkable that the most celebrated places for the manufacture of glass, are the most celebrated for painting in oil—Holland and Venice. And the 'Chemical Dictionary' informs us (not having any idea of a medium for painting) that in Holland and Venice, the art of purifying borax was kept a secret."

After this is there any one that will consider such advertisements justifiable?

"Sic vos non vobis nificatis aves."

I too have been requested to "approve," but have declined, stating that I had no particular or individual interest to serve. I have offered most freely the Vitrified Borax Medium to all colour makers and all artists: let them improve it by all means if they can; none need appropriate it to themselves. I believe the fact will turn out to be that vitrified transparent substances are varnishes; that borax, from its peculiar effect upon oil, is the best, and that no addition will be found necessary or even advisable. J. E.

## REASONS FOR THE EMPLOYMENT OF FOREIGN ARTISTS IN THE EMBELLISHMENT OF THE NEW HOUSES OF PARLIAMENT.

ALLUSION only was made, in our last Number, to that which was advanced before the Committee of Fine Arts in favour of the employment of foreign artists for the decoration of the houses of Parliament; but we now propose to examine the pith of the arguments adduced in support of such a proposition. It is difficult to account for this German *furore*, otherwise than by ascribing to those consumed by it, an acquaintance rather with German professors than British Art. Such is the education of our artists, that it is true, that among a certain class of them that have by some means acquired a reputation, not one could be found to make an acceptable cartoon for the decoration of the Houses of Parliament; but there are also others who could execute designs which would not suffer in comparison with those of modern artists of any school. The latter are unknown in their loftier aspirations, because they have never been summoned forth of the sphere of the little dealings to which they are compelled to stoop, but which they heartily despise; in any other country but our own the former would sink to their proper level. All men understand the philosophy of "bread-winning," but they do not comprehend the wear and tear of heart and soul to which an artist is subjected, who with the finest qualifications for refined Art, is compelled in his works, to consult meaner tastes than his own. The building of the Houses of Parliament is truly said to be an opportunity for elevating the tone of our school; which, suffered to pass unimproved, no other equally favourable may again within any reasonable period occur; and if this were the sole reason that could be set up against the proposed importation, it ought to prevail in favour of the British artist. In the examination of Mr. W. J. Bankes, before the Committee of Fine Arts, the following questions and answers occur:—

"On the supposition that it were determined to encourage fresco painting, what course would you think most advisable; to endeavour to give existing artists an opportunity of studying in foreign schools, and applying themselves to new branches of Art, or would you think it advisable to invite over some foreign and distinguished artist, and allot him some portion of the apartments, and give English artists an opportunity of seeing the work which he executed? I think if one of the more experienced artists were invited over, it would produce infinitely better effect than sending any limited number of students abroad, because in the former case you are making the Art accessible to the students of the whole community.—Do not you think that bringing over a foreign artist would be considered humiliating to the present state of Art in England? I cannot be exclusively national where Art is concerned; the true patriotism seems to me to be in feeling a fervent desire to improve it and bring it to perfection. Under Henry the Eighth we adopted Holbein, and pensioned some of the scholars of Julio Romano, while the sculptor Torregiano was also brought over from Florence. Their influence upon Art would doubtless have been greater, and more permanent, had not the dissolution of monasteries, and change of religion followed; and in Charles the First's time, the beneficial influence of his patronage to Rubens and Vandyck was soon thwarted by the Civil War; yet the windows for King's College Chapel (executed in this very parish in Henry the Eighth's reign), and the histories that were painted on the walls at Cowdray, show the good direction that the Art of design was then taking; and we owe our native artists, Cooper, Dobson, and Stone, entirely to the pattern of excellence which Vandyck had set them, who, by-the-by, was at one time engaged by the king to have painted the whole interior of the Banqueting House with the history or procession of the Order of the Garter."

Now, from all that is said about the introduction of foreign instructors, strangers to the position that we hold in the schools of Europe, would suppose that our helpless condition required to be cared for *ab initio*. Those who advocate the introduction of German artists have never considered the amount of knowledge which these possess beyond ourselves, and the means adopted by them

for the acquisition of whatever balance may stand recorded in their favour; nor have they reflected that the same means of acquisition are within our reach. They seem also to have forgotten that the minor degrees of Art in Germany are comparatively a blank, which among ourselves is triumphantly filled up; and that, but for the recent State patronage which has elevated the schools of that country, they would be infinitely further behind us than we are now in the rear of them with all the Government succour that can be extended to them. Art in these kingdoms owes nothing to Government support; and never did its subordinate departments attain to so high a degree of perfection in any country as among ourselves. What then would be the position of our school after 20 years of cordial support from the State? Let a retrospective glance at our past progress answer this. The gentleman whose evidence is here particularly referred to, is not the only friend to the German style. Those who would invoke the aid of the professors of Germany, do not, in descending to the letter of the art, inform us of the elementary advantages to be derived—or of the particular instructions beyond the mere process of fresco, which they would persuade us are so much required—this, however, must be weighed even to the scruple. The method of painting known as *fresco*, is so called because the work is executed on a wall, the plaster of which is wet (*fresco*), inasmuch that the colours incorporate with the mortar. The design therefore cannot be drawn upon the wall; but a cartoon must be prepared of the size of the intended painting; this being perfected, it must be divided into as many portions as it will require days to finish, for the wall must be daily prepared with plaster for each day's work, and not more of it than can be painted while the mortar is in a moist state. An outline is obtained by placing the cartoon against the wall, and tracing the necessary portion on the wet surface, after which the colour immediately follows. And this is the process in which our artists are to receive instruction at the hands of foreign teachers; for, in examining the evidence above-mentioned, there is nothing beyond this in the shape of tangible advantage. Much is said about the recent refinement of public taste in Germany consequent upon a more elevated style of Art; the superiority of the drawing of the school of Munich is also mentioned, as well as our inferiority in that essential, which latter allusion is, be it said, only a dying echo of a former cry, which we trust never to hear so loud again. In the passages above quoted, "exclusive nationality" in matters of Art cannot be entertained. We may presume it is here meant, that for an exclusively national purpose, English artists are not to be employed; but if the project be carried out otherwise than in a manner exclusively national, the whole is a sad and sorry farce. Holbein, Torrigiano, and others, are spoken of as having been adopted; but this is sending us back three centuries with a witness. The employment of foreign artists under Henry VIII., cannot be instanced in support of a similar proceeding at the present day.

The following minutes also occur:—

"Do you think it desirable that Cornelius, or some other eminent artist who has studied the art of fresco painting, should be brought over to direct the work in the first instance? Yes; I was so much of that opinion that I had invited Cornelius, and had engaged him to execute a ceiling or two for myself: I thought it not improbable that he might get employed for the public, and I believe he thought so too; but the King of Prussia in the meantime stepped in, and has appointed him the head of the academy, and I am obliged to submit to the disappointment.—Do you think our most eminent artists would have any dislike or repugnance to acting under Cornelius? I should almost think that they would; but I think that would not prevent him from forming young scholars, and a school would arise out of it; then, possibly, some of those that are eminent, without placing themselves under him, would enter upon a sort of rivalry and emulation, which might be the most advantageous of all.—Do you think that a German artist could identify himself with the English character of such historical compositions as would probably be employed to adorn the Houses of Parliament? I think he might; our habits and institutions have much affinity with the

north; and the present taste in Germany is much directed to our history and literature.—Are you aware that Cornelius has given any opinion as to the peculiar character of English parliamentary history, particularly its adaptation to the embellishment of a large public edifice? The German artists generally, and the French also, entertain a very high idea of the picturesque qualities of many of the events in English history."

A very proper question arising from a well-grounded apprehension of the introduction of foreign character into English works of Art, was asked by the chairman of the committee; the answer, however, is neither direct nor intelligible—"There might be some danger of this, if they were painted abroad, and submitted only to foreign criticism." Now the question being that of the fresco decorations of the Houses of Parliament, how could these be painted abroad? Suppose them moveable oil pictures painted in Germany, and subjected only to German criticism, it is here allowed that they might have a German character—this is therefore drawing a line of distinction at once between the two nations. This foreign air, it is assumed, will be avoided if the pictures be painted in England; hence, we may understand, that the necessary qualifications are to be studied and acquired among ourselves by those who come to instruct us. But this would by no means be sufficient—the influence of the essential difference of education cannot be so easily repressed as to admit of this Protean change. This portion of the evidence must excite much surprise, as all encouragement to British Art is discontinued, and every argument brought forward in favour of foreign professors, though without the establishment of one really solid reason. The institution of a Fresco School is spoken of, and of course under foreign tutelage. Now the School of Munich, having risen to its present eminence in twenty years, and being allowed at all hands to be enfeebled by certain infirmities which must for a longer or a shorter period cling to its onward progress, it would be assuredly ill judged to super-add these to any defects that might blemish the productions of our own school. The German artists began their study of fresco at Rome; and since the same source is open to our own artists, why should they not imitate the former in this— unquestionably the very best means of attaining the same result? It is in this that the former are really worthy of imitation. In the evidence of the same gentleman we have the following extraordinary replies, which, of course, we are bound to receive as opinions:—

"You think that there would be no danger that English subjects would be treated with German faces? I do not quite see the distinction; Italian eyes might feel, perhaps, some difficulty in dealing with northern complexions, but the climate and physiognomy of the Germans is not materially different from our own.—Might there not be this danger, that there would be a German character given to the figures, which, in national and historical pictures, would be a very serious objection? There might be more danger of this, I think, if they painted abroad, and submitted only to foreign criticism.—Would not that difficulty, however, be obviated, by giving a judicious and liberal encouragement to any one or more eminent artists of England, who should be willing to devote themselves to fresco painting, and withdraw themselves therefore from their present profession? Yes; but I would rather train up a school.—Through the instrumentality of foreign instruction?—Yes, as a beginning. The school once formed, a preference should undoubtedly be given to native talent.—You think there would be no objection to German artists being intrusted with the conception of English historical subjects? I think not; and, in fact, with all the earlier historical subjects, I do not know that we have any advantage at all over them; our own knowledge can be derived only from pictures, statues, and monuments, which they have as good opportunities of consulting as ourselves.—Would not the English artist be much more likely to learn the whole process of fresco painting by going over to Munich than he would be by German artists brought over here? Possibly the individual might; but who is to select him? Whereas, if the Art is brought to our own doors, a sort of competition is excited, and the bent of genius will direct those to it who have the requisite qualities.—But the question

supposes that as soon as it is announced that the Houses of Parliament are to be adorned with fresco, English artists will go over, on the principle of free competition, as they have gone already to inform themselves on the subject? I think that would be a very great advantage."

Is it possible that this gentleman, who has travelled far and seen much, cannot recognise a nationality of feature or of manner? The differences of facial conformation are almost as striking as those of colour; and every new amalgamation of distinct character is productive of a new combination, markedly different from the parent sources. It is not necessary to go beyond our own islands for illustration of this fact. The blue-eyed and fair-haired Saxon is yet seen among us, and more especially in those parts of the country where one dialect has prevailed, little changed, and a certain cast of feature must have existed for nearly a thousand years. Will it be said that there is no national character of countenance in Ireland, in Scotland, or in Wales? If so, it must also be shown that no physical differences exist between other Europeans. All observant foreigners remark that the upper classes of English society are distinguished by a peculiarity of feature recognisable in the whole, in no other nation; and as for advancing that there is no difference between English and German features, it may as well be held that there is no difference between the Greek and the Tartar. There is every reason to believe that the characteristics of the Jewish countenance are the same as they were in the days of King Solomon. We cannot well fancy a German artist who has never seen a Jew; but, if such there were, would there be any truth in his picture, if he were to paint a Jew from a German model, and with the features of a German? If the witness could see no distinction between the German and English *physiques*, he cannot allow a difference between the German and the Jewish.

In another part of his evidence, Mr. Bankes declares it as his opinion, that the school of Munich is inferior to the old Italian schools. Of this there can be no doubt; and others have not hesitated to rank it below the French school, particularly in colour. There is evidence enough to show that the school of Munich has made extraordinary advances in Art since the introduction of fresco; but, under similar auspices, why should not the same success attend our own endeavours? That school is not yet old enough to be a parent seminary; and if it were so, it ought by no means to be imitated, while the finest frescoes that ever were painted are open to us at Rome. It is curious enough, and not the less true, that the fresco school of Munich owes its origin to accident, and not to any original and prompted enthusiasm for high art on the part of its patron. Certain German artists were employed by the Chevalier Bertholdi of Rome, to paint for him some frescoes, the style of which was so generally admired, that other and more considerable works in the same method were commissioned and executed. These, it is stated, suggested to the King of Bavaria the idea of promoting fresco painting in his own kingdom; and this example has been more or less imitated in other German states. To all our artists who have visited Germany the names of the principal native fresco painters are familiar, as Cornelius, Schnorr, Veit, Schadow, &c.; and these it is who were first employed by Bertholdi, and who now preside over schools of their own. We may here refer to a passage from the evidence of Mr. Eastlake, showing that the efforts of the fresco painters of Germany were at once successful; such being the case, there can be no form of necessity for the introduction of foreign masters:—

"Would it be at all advisable to give artists an opportunity of making some efforts previously?—That would be the safest plan; I was going to say, that I happen to remember the beginning of the great talent in fresco which now exists in Germany. I was in Rome when the first efforts were made, which were successful at once. I should conclude from that, that the technical process of fresco painting is not in itself difficult, provided the artists are previously grounded in the general principles of their art; on the other hand, a knowledge of the process of fresco is by no means necessarily accompanied with general skill in the art."

If this method be adopted, it would be desirable to all, and especially satisfactory to the artists, that

opportunity for experiment should be afforded before entering upon the main work; and even if this should in parts be wanting in excellence, there is good precedent for superseding the failures, inasmuch as some of the earlier frescoes in the Vatican were effaced to make room for the 'Last Judgement' of Michael Angelo; we also believe that others, in like manner, were replaced by works of Sebastian del Piombo.

Considering the impulse which fresco-painting has given to Art generally in Germany, it cannot be doubted that equal advantages await ourselves in the event of its cultivation to a sufficient extent. Fresco-painting has progressed gradually to its present excellence at Munich, and there the greatest works are now undertaken after the experience of twenty years. But here the case is different; our artists are likely to be called upon at once to execute works of the highest character in a manner to challenge all severity of criticism. If these works were to be done in oil, and our painters had been accustomed to work only in fresco, the undertaking would then be a failure; but as the transition is from oil to fresco, we do not apprehend that they will be less successful ultimately than others. English artists have been altogether unaccustomed to be employed on works in concert; it is, however, to be hoped, if this necessity arise in the execution of public works, that a perfect harmony may prevail. On an occasion of this kind, we may say the first instance of anything like effective patronage to the Art of this country, it is an anxious question among the artists themselves, how they are to be selected. On this subject questions were put by the committee to the president of the Royal Academy, which, together with the replies, are as follows:—

"How would you select the artists? That is a question of some difficulty. My general impression with respect to the promotion of the Fine Arts was, that competition was the best means of forwarding their improvement; but experience has proved, that the means of obtaining a competent tribunal to decide upon the merits of the competitors are not easily to be found in this country; so many difficulties stand in the way, so many obstructions, so many interests to be considered, and so many persons are to be consulted, that I think it is hardly possible to obtain a competent tribunal under any circumstances.—If the selection of artists were accomplished by means of competition, would there not be some danger also that artists of established reputation might decline to enter into competition? It is that view that induces me to believe that competition will not succeed in this country, because artists of established reputation will not risk that reputation by coming before a tribunal which they do not think competent to decide upon their merits, and which may very materially injure the reputation which they have obtained, by selecting persons of inferior capacity incompetent to the object required.—Why do you think the case of this country an exception to the case of other countries in which competition may be useful to the public? From the difficulty of forming a competent tribunal to decide as to their merits. It is a question which has been in my mind influenced by the result of experience. I was so firmly impressed with the advantages resulting from competition, that in a slight work which I formerly published I stated a plan which turned entirely upon that mode of decision; but I have since then been perfectly convinced that artists of established reputation and great eminence will not submit to any tribunal which will be likely to be formed in this country for such a purpose."

Whatever be the manner of selection genius cannot be overlooked if the present opportunity which the building of the Houses of Parliament affords be made really available for the promotion of the Fine Arts in this country. It is difficult to understand how the employment of foreign professors could aid us in this object. Admitting that the drawing of our school is open to improvement—it will correct itself when exhibited in the grand scale, as did that of the German schools. All, therefore, in which assistance might be acceptable would be the mere technical process of fresco; and this, if primary efforts are at once successful, must be so simple as to set aside the necessity of summing foreign assistance; about which although so much has been said, not one valuable reason can be adduced in its favour.

## FOREIGN ART.

**ITALY.—ROME.—MONUMENTS.**—That truly classical work entitled "Monumenti antichi plastici di figura e ornati," (Ancient plastic Monuments, Statues, and Ornaments), is proceeding admirably. The illustrations are accurately drawn and shaded, so as truly to appear beautiful friezes and statues, called "terra-cotta."

**BOLOGNA.—NECROLOGY,** Sept. 7.—We are here mourning the loss, though in mature years, of Francesco Rosaspina, the celebrated engraver, and the head of our school of engraving. Though seventy-nine years old, his death was wholly unexpected; two hours previous to it he appeared in perfect health, every faculty awake, and enjoying the society of his family. Rosaspina was born in 1762, in Monte Scudolo, near Rimini, where his father, Giambattista Rosaspina, a notary by profession, and a magistrate, resided.

When almost an infant he came with his parents to Bologna, where very early his taste for the beautiful began to develop itself, and turned to the art of engraving. But at that period Bologna did not possess one artist in that department who deserved the name; there were only Fabbri, Caponi, Foschi, and Norozzi, who have left some very poor productions. The first rather excelled the others, and from him Rosaspina learned how to prepare the plate, and little else. He was his own teacher: some engravings by Bartolozzi having fallen into his hands, he formed his style in emulation of them in his greater works; in his smaller ones, we find he adopted the graceful manner of Borsi. His studies were truly labours, for he found his art in its infancy: how he left it may be judged by all who can appreciate the free and light manner of his line engravings, the careful study of the extremities, and a clearness in the flesh parts, which seems rather to be produced by the touch of the pencil than the burin. He used aquafortis with singular success; and some of his engravings, in imitation of the drawings of the old masters, can scarcely be distinguished from the original: he executed these with a perfection, we may almost say, peculiar to himself. Many of his best engravings are stippled; among these we may mention the 'St. Francis,' from the Zambecari Gallery, which, if famous as possessing that picture from Dominichino, is no less so from the engraving of it by Rosaspina.

It was this engraving that first spread his fame over Europe, and many commissions were sent to him. Among his celebrated large works may be named 'The Dancing Children,' after Albano; 'The Repose in Egypt,' Guercino; 'The Deposition from the Cross,' Correggio; 'The Last Judgment,' Rubens. One very beautiful work, 'Abraham receiving the Angels,' after L. Carracci, is dedicated to H. R. H. the Duke of Sussex, who resided, we believe, at Bologna at the time it was published. One of Rosaspina's greatest labours is the work known as 'The Gallery of Bologna,' being engravings of one hundred of the best paintings in our Pinacoteca. All the drawings are executed by his own hand, and most of the engravings; the rest are by his brother Giuseppe, and his pupils Tomba, Aiolli, Marchi, and Guadagnini. We cannot avoid observing with what admirable skill, the style—we may almost say the touch—of the different masters are characterized in this work; it is a mine of study for him who would become acquainted with many of the greatest Italian painters. The whole of the letter-press is written by himself in a simple and clear style, and with reflections so just and appropriate, that every judge of Art must be charmed with them. If Rosaspina was great as an engraver, he was equally great as the head of a school of engravers. His last pupils are his best—Guadagnini, who succeeds him in his professional chair at the Academy, Marchi, Spagnuoli, Martelli, Paradisi, and others who now shed lustre on the *Felsinean* school. Rosaspina was a member of many academies, including those of France and Turin. In private life his character was singularly amiable in all its relations: he was unwearied in instructing the young to the last day of his existence; he loved to be surrounded by them, not from the vain glory of having many pupils, but that he might assist youths of talent and advance Art. He used to say, "As an artist or a master, I know not what I am; but as an old patriarch I deserve to be remem-

bered." All his colleagues in the Academy, his friends, and the students of the fine arts assembled at his funeral in the church of St. Magdalene. The music was magnificently grave, and was executed by the Academicians of the Lyceum Philharmonicon. The family were not permitted to be at any expense for the funeral, not because they were poor, but because they were Rosaspinas.

Among the inscriptions to his memory we select the following:—

A  
**FRANCESCO ROSASPINA**

BUON CITTADINO

OTTIMO PADRE

ARTISTA DOTTO, INCISORE PRECLARO,

ALL' AMICO

DEI STUDIATORI LE BELLE ARTI,

UN ASSENTE COLLEGA

PER MEMORIA PERENNE

DI AFFETTO,

QUESTA MARMOREA LAPIDE

SOSPESO

PONEVA.

n. 1762. m. 1841.

**VENICE.**—The celebrated professor of the Royal Academy, the Bolognese Ludovico Lipparini, continues employed on many pictures which are commissioned from him. The brilliancy and force of his colouring attest that his success is deserved, and that fame calls him justly a rival of the old Venetian masters. His last picture represents 'The Death of Marco Botzaris,' and he intends to paint, as a companion to it, 'Lord Byron at Missolonghi, swearing on the Tomb of Botzaris to defend for ever the cause of Greece.'

**RUSSIA.—ST. PETERSBURGH.—IMPERIAL WINTER PALACE—IMPERIAL GALLERY—THE HERMITAGE.**—Aug. 26th.—In the winter palace, which is being rebuilt, the great hall of St. George has fallen in, and consequently the fine Italian pictures and precious vases which decorated it are destroyed; the damage is estimated at many millions of roubles. Happily we have not to lament any life lost, and the rest of the palace is safe. The very evening previous to the accident, a Chapter of the Order of St. George had been held in the hall, which now exists no more. The following circumstances are connected with this subject:—After the fire which several years since destroyed a large portion of this palace, the Emperor ordered it to be rebuilt with greater magnificence; and that it might be completed without delay, many hundred labourers were employed, and fires and other artificial means were used to dry their work as it proceeded; so that the palace, which was expected to occupy three years in rebuilding, was finished in eighteen months. But this last catastrophe has proved how just was the prophetic opinion of Signor Morandi, one of the imperial architects, who entirely disapproved the plans and proceedings of the other architects employed in the building. In this palace were provisionally many of the pictures belonging to the Gallery of the Hermitage, where Signor Morandi is now occupied in enlarging the halls and rearranging the collection of pictures, now one of the most admirable in the world, alike for the pictures it contains and the judicious disposition of them. The paintings of each nation are separated and arranged with their respective subdivisions of schools and epochs. The gallery not being sufficiently rich in Italian pictures, many were purchased last year, and have not yet been shown to the public; and many, we know, will be purchased to replace those recently destroyed. It is understood to be the Emperor's wish to form a real GALLERY, a name which the British National Gallery can never deserve, till the number of masters is greatly increased, and a system of classification followed out. We annex a short account, taken from the catalogue, of the number of pictures shown in the Gallery of the Hermitage in 1840; besides which there are belonging to it above 300 pictures of the Italian school, and 200 of other schools, not yet placed in the collection. Schools of Italy, 120 masters, 472 paintings; of Spain, 54 masters, 110 paintings; of France, 69 masters, 222 paintings; of Germany, 20 masters, 75 paintings; of Flanders, 52 masters, 302 paintings; of Holland, 105 masters, 482 paintings; of England, 4 masters, 6 paintings; of Russia, 17 masters, 23 paintings. Total—441 masters, 1692 paintings.

**MOSCOW.—THE KREMLIN.**—Three hundred

workmen are constantly employed in rebuilding the Kremlin. It is fire-proof; the roof is of iron, the floors only are wood. The palace is to be warmed by heated air, the fire being in the vaults below. The gildings alone have cost 250,000 roubles.

GERMANY.—MUNICH.—THORWALDSEN.—His Majesty the King has sent to the sculptor Thorwaldsen the Grand Cross of the Order of St. Michael, accompanied by the following letter:—"It was my earnest desire, dear Thorwaldsen, to see once more in Munich, where all admire one of your superb monuments, the greatest of sculptors since the beautiful days of the Hellenes. The statue of the elector Maximilian I. is unequalled. Not being able, personally, to present to you the Grand Cross of the Order of St. Michael, I have charged my Minister of Foreign Affairs, Baron Giese, to transmit it to you; and you will receive this new proof of the gratitude of him who knows how much the world is indebted to you. Your affectionate, LOUIS."

NEW ROYAL RESIDENCE IN MUNICH.—FRIEZES.—The second part of the copper engravings of the plaster friezes in the new palace here has been published. The friezes are the work of Louis Swankhaler, and the engravings are made from the original drawings, under the direction of Professor S. Amsler. They are historically illustrated by Charles Schnaaf. The first part of this beautiful work may perhaps be known to our readers—it contained the Mythus of the Aphrodite. The subject of the second part is the Crusade of Frederick Barbarossa, as represented in bas-relief on a frieze, 226 feet in length, and 4 feet 3 inches in height, on the four walls of the great hall of the palace. Here we have not only the rich inventive fancy of Swankhaler, he also proves its versatile power. In the former work he seemed imbued with the spirit of antiquity: here, he brings before us the life of the middle ages. The engravings from the first wall present to us Saladin, victorious after the field of Tiberias, seated in his tent on a lion's skin; behind him are two of his barbarian soldiers; at his feet stands a slave, who watches with the bow-string in his hand, his death-giving glance. Near Saladin stand some officers of the imprisoned king, Guido of Lusignan, with their hands bound; among them is Chatillon, the origin of the present hostilities between the Turks and Christians, who disregarding a truce, had attacked a Turkish caravan. A slave holds him by the hair of his head, and seems preparing to lead him to death. In front, a Turkish soldier leads a horse without a rider; and stepping on the headless body of a Christian knight, exemplifies the rage and cruelty of the Turks. Further on appear the close lines of Saladin's army advancing to Jerusalem; the leaders mounted on light Moorish horses, while their individual physiognomies mark the different race from which they spring. Advancing towards them appear an Aga and Dervish from the unhappy city which, after so many struggles, is about to be the prey of a victorious army. The Turks entered Jerusalem on the 3rd of October, 1187: the destruction of the temple was their first work; we see the golden cross thrown down and trampled on by the Mussulmans, and the despair of the Christians who, before their flight, worship for the last time in the holy place. Further on appears Saladin, in battle array, at the gate of Jerusalem; influenced by the mild counsels of his brother Malek-Adel, he has granted a safe conduct to the Christians, and Malek watches to see it enforced as they pass through the gate, while he distributes money to the sufferers—an aged knight is accepting it, probably the last governor of Jerusalem; near is Queen Sybilla, with her children, while behind follow a long train of priests and patriarchs, and the poor inhabitants. The other walls represent the events of the crusade, closing with the victory of the Christians, the death of their great leader, and the return of the army with his body to Antioch, where it is received by the archbishop, priests, &c. The strongest expression of solemnity and grief characterize this scene. We see that with his life have disappeared all hope of further success for the Christians. This imperfect sketch can convey no idea of the varied historical facts with which Swankhaler has enriched his work; still less the life and depth of feeling that it ex-

hibits, combined with the antique beauty of the forms. The engraver has excellently done his part, and has shown his understanding of the originals in the delicacy of the outline and careful finishing of the whole.

FRANCE.—PARIS.—Prizes.—Sculpture.—In the last competition in works of sculpture, whose subject was the death of Demosthenes, the second first great prize was gained by M. Godde; he is a pupil of M. Radier; his age is 19. This decision of the learned academicians has received the general sanction of competent and disinterested judges.

Architecture.—The Academy of Fine Arts have adjudged prizes in the competition in architecture to the following artists:—First grand prize, M. Alexis Paccard, of Paris, age 28, pupil of Professors Hugot and Hubert. Second ditto, M. Jacques Martin Tetaz, of Paris, age 23, pupil of Professors Hugot and Lebas.

Louvre.—The halls of the Louvre are now occupied by artists of every nation. The number of easels is above six hundred.

Madeleine Church.—The decorations with statues in stone of the colonnade and peristyle of the Madeleine is completed: the statues and the names of the artists are as follow:—To the right of the great door of bronze, 'St. Philip,' by Nanteuill; to the left, 'St. Louis,' by the same. In the gallery to the right, 'The Angel Gabriel,' by Duret; 'St. Bernard,' by Husson; 'St. Theresa,' by Feuchère; 'St. Hilary,' by Huguénin; 'St. Cecilia,' by Dumont; 'St. Irene,' by Gourdenne; 'St. Adelaide,' by Bosio (the nephew); 'St. Francis of Sales,' by Molcheneck; 'St. Helen,' by Mercier; 'St. Martin,' by Grevenick; 'St. Agatha,' by Dantan, jun.; 'St. Gregory,' by Terasse; 'St. Agnes,' by Dusseigneur; 'St. Raphael,' by Dantan, sen. Front to the Rue Tronchet, 'St. Luke,' by Ramey; 'St. John,' by the same; 'St. Matthew,' by Dupré; 'St. Mark,' by Lemoine. Gallery to the left, 'Guardian Angel,' by Bra; 'St. Margaret,' by Cannois; 'St. John of Lateran,' by Jeither; 'St. Genevieve,' by Debag, sen.; 'St. Gregory the Great,' by Maindron; 'St. John Devallois,' by Gaillon; 'St. Jerome,' by Lanneau; 'St. Christina,' by Valsher; 'St. Ferdinand,' by Jalley; 'St. Elizabeth,' by Calhouet; 'St. Charles Borromeo,' by Jouffroy; 'St. Anne,' by Debeuf; 'St. Denis,' by Debay, jun.; 'Michael,' by Raggi. The statues are in all thirty-two.

#### THE GLASGOW STATUE.

"A Statement of Facts, and a Narrative of the Proceedings of the Sub-committee on the Glasgow Wellington Memorial, since the last meeting of the General Committee," has been just published in Glasgow, by the minority of the select sub-committee on the Glasgow Wellington Memorial; who have, throughout the proceedings, opposed the employment of a foreign artist in the execution of the work. So far as we have learned, the contents of this pamphlet have not been impugned; and as the disclosures made in it are of the most extraordinary nature, we should have felt inclined to give the document at full length to our readers, had the space required permitted our doing so. We shall, therefore, at present confine ourselves to a brief abstract of the contents of the statement, reserving to ourselves a discretionary power of recurring to the consideration of the subject at a future opportunity. The chief feature in the contents of this singular document, would seem to owe its interest to the fact of the majority in the Glasgow Wellington sub-committee, in despair of bringing the minority into their measures, having adopted a resolution, unheard of, as we believe, in the annals of corporate bodies; and which seems to have consisted in casting overboard this troublesome and recusant minority, in so far as any matters of vital or urgent importance were concerned, whilst, at the same time, a show of publicly consulting the gentlemen, whose confidence was thus shamefully abused, was maintained. Utterly unjustifiable and essentially absurd, as such conduct must be deemed, it loses much of its character of strangeness and wonder, when we find that it only formed part of a tissue of gross, though successful, deception practised

upon the Duke of Wellington. Our readers are then to be informed, that Mr. William John Banks, of Old Palace-yard, Westminster, some time in May last brought to his house in London the Baron Marochetti, the Parisian sculptor. This fact he announces to Mr. Robert Lamond, the secretary of the Glasgow Wellington Committee, and succeeds in extracting from Mr. Lamond a letter of introduction, in the name of the subscribers to the Glasgow Statue, to the Duke of Wellington, Mr. Banks having, in his letter to Mr. Lamond, intimated that an invitation for himself and Marochetti, to Strathfieldsaye, during last Whitsuntide, was made contingent upon the Baron being supplied with such credentials. Mr. Lamond, in his letter to the Duke (which is printed in the statement of facts), tells his Grace, that the select sub-committee having chosen Marochetti as the artist to make the Glasgow Statue, humbly request, in common with the subscribers, that his Grace would permit the Baron to model a bust likeness for the work. The consequence is, that these two persons, by means of this contrivance, smuggled themselves into the hallowed precincts of Strathfieldsaye; and thus most unwarrantably succeed in inducing the Duke to sit for his bust to this impudent foreigner. The whole of these extraordinary and underhand proceedings were, it appears, utterly unknown to the body of subscribers, and wholly unauthorized even by the sub-committee, who were never convened or assembled in respect to them. It is very strange, that, although the question of the invitation of Marochetti to Britain, and of his introduction to the Duke by the secretary in the name of the subscribers and sub-committee, had never been in the most distant manner mooted at any of the meetings of the sub-committee—that the letters of Mr. Banks and of Marochetti to Mr. Lamond, and of the latter to Mr. Banks and the Duke of Wellington, are actually (as set forth in the "Statement of Facts") entered in the minute book of the sub-committee, as if meetings of sedentary of that body had taken place in reference to the subject matter of their contents; whilst, in reality, no such meetings were ever either held or convened. On the contrary, it would seem, that the first intimation which the minority of the sub-committee (thus unceremoniously thrown overboard by their colleagues) had of these furtive proceedings, was contained in a circular issued by the convener on the 12th of June, 1841, intimating that the Baron Marochetti had arrived in Glasgow, and desiring the attendance of the members of the sub-committee to meet and confer with him. This meeting the minority of the sub-committee refused to attend; but at it was exhibited a bust of the Duke of Wellington and a model of the proposed statue of his Grace by Marochetti; the latter altered, plastered, and cobbled up in a very ludicrous and preposterous manner, avowedly under the directions of Mr. Banks, in London. Of these productions the "Statement of Facts" avers, that "the bust of the Duke which Marochetti has sent to Glasgow, instead of representing his Grace in the prime of his life, represents him with the marks of age disagreeably exaggerated." And in reference to the model we are assured, "that if such a statue as this model exhibits be erected in Glasgow, the compliment which the subscribers intended to pay to the Duke of Wellington will be frustrated, and their money worse than thrown away upon a work which the present and succeeding generations will hold in scorn and derision." Further the statement alleges, "that it is to be supposed that in producing this work (the model) the Baron did his best, and leisurely considered his models; for he has actually cast the whole in bronze. Now, it is plain to the most cursory observation of the most inexperienced eye, that besides its total want of anatomical correctness, the position of the horse is so offensively indelicate, that were it erected in Glasgow, it would be held as an insult offered to the feelings of the community." Again, "the whole model is so false in its proportions, and so anatomically incorrect, as to induce a doubt whether the sculptor who could cast such a model in bronze be acquainted with the very rudiments of his art. Much of this, indeed, he seems to have discovered himself, for the bronze model is almost in every part amended—and clumsily amended—with clay." Such, it appears, are the productions which the meeting of the Glasgow sub-committee,

held on the 18th of June, 1841, agreed, on the motion of Mr. Sheriff Alison, seconded by the Lord Provost (Campbell), to prefer to all others as suitable for the adoption of the subscribers to the Glasgow Wellington Memorial. It is meet that the names of those assembled upon the occasion should be known to the world at large; they are as follows:—Michael Rowand, Esq.; William Stirling, Esq.; Archd. M'Lellan, Esq.; J. D. Hope, Esq.; John Houldsworth, Esq.; Charles Hutcheson, Esq.; Kirkman Finlay, Esq.; Andrew S. Dalglish, Esq. (Convener); Robert Finlay, Esq.; The Lord Provost (Campbell); Robert Lamond, Esq. (Secretary); William Leckie Ewing, Esq.; the Duke of Hamilton; James Campbell, Esq.; Sheriff Alison.

It is but justice to the Duke of Hamilton to state, that upon this occasion he, in so far separated himself from the foreign faction as to move, "That under the circumstances of the case, the sub-committee should delay coming to a decision on the subject of the bust, and the model of the statue of the Duke of Wellington, prepared by the Baron Marochetti." The motion was seconded by Mr. M'Lellan, but lost. The sub-committee seemed to be hurried on in their insensate career by Sheriff Alison, in spite of the opposition offered by Messrs. Stirling, M'Lellan, Hutcheson, and Leckie Ewing. That the minority of the sub-committee should feel deeply the affront upon them, is only natural; they have, however, the consolation of having been fooled simultaneously, and by the same persons and practices, as the illustrious warrior and statesman, against whom the efforts of banded antagonists had heretofore been essayed in vain; for, in this instance, Mr. Banks and his associates, have, by their own showing, succeeded in not only beating up the quarters of the old General; but invaded by their presence even the sacred privacy of the veteran's fireside. We conclude by directing the reader's attention to a passage in Mr. Banks's letter of the 19th of May to Mr. Lamond: "It will be better," writes Mr. Banks, "to confine your communication [to the Duke] to a simple transcription of the resolution [no such resolution being in existence]; and an intimation of Marochetti having been invited over for the purpose [that of taking the Duke's likeness]; and in so far as the Glasgow subscribers, and the sub-committee, to whom Lamond was secretary, are concerned, a gross and palpable falsehood", if a request, as suggested, must entail delay. \*\*\*\* Since the communication is of an official nature, and on behalf of the subscribers [another gross falsehood as it appears], it will be best that my name should not be mentioned in it at all!" The caution thus intuitively displayed in this quarter, might here be calculated to provoke a smile, did not recent events tend to awaken sorrowful thoughts, and sterner reflections.

We know not whether it be the intention of the minority of the sub-committee to appeal to the subscribers in respect to the concealed proceedings of part of their number in collusion with Messrs. Banks and Marochetti, and the introduction into their minute book of the private, furtive, and garbled correspondence with these gentlemen,—or whether they intend to enlarge upon the entrapment of the Duke into sitting to Marochetti for his bust, by the devices mentioned,—or if it simply be their desire to endeavour to arouse the general committee to a sense of the fact of the instructions contained in their resolution having been grossly and perversely disobeyed by the sub-committee; and thus even at the eleventh hour, possibly to avert the threatened evil: but from the resolution with which the minority have hitherto combatted every inch of ground in this onslaught on the Arts and artists of their country, we cannot for an instant suppose that they will give in so long as a shadow of the hope of success remains.

The "Statement of Facts" affords no explanation as to the cause of the influence exercised throughout these proceedings by Mr. Banks: he seems indeed from the first, in a great measure, to have controlled them: this part of the subject, however, still continues shrouded in mystery!

## VARIETIES.

**ARTISTS' GENERAL BENEVOLENT INSTITUTION.**—This invaluable Institution has published a balance-sheet showing the state of its funds up to the 31st December, 1840, by which it appears that £648 have been disbursed for the relief of artists overtaken by misfortune, and surviving relations left unprovided for by the decease of others. Forty-three cases of distress have been alleviated during the past year, in donations of from £7 to £50. It is one of the best features of the Institution that its benefit does not terminate with one act of charity; the donation of the last year was, to one individual the twenty-second, and to others, the eighteenth, fifteenth, fourteenth, &c. &c., amounting in fact in benefit to an annuity. Those who pursue professions in art are proverbially improvident, and this is sufficiently seen by a glance at the descriptions of the cases relieved, among which are mentioned those of many widows and daughters of artists; and even of artists themselves, who are described by the word "eminent," which painfully reminds us that there is no other profession to which a man may rise to distinction and yet be compelled to appeal to a charitable institution for relief. We know of no other profession but that of art in which fortune always fails to attend eminence. Since the establishment of this admirable Institution 697 cases have been relieved, by sums amounting to £6729 7s. 10d.

**NATIONAL GALLERY.**—This is an account of public money paid for the collection of pictures which belonged to the late J. J. Angerstein, Esq., and for other pictures purchased for the National Gallery:—

1824. Purchase of the Angerstein collection (grant of Parliament) .....	£.	s.
1825. Purchase of pictures (paid from civil contingencies) .....	60,000	0
1826. Ditto (grant of Parliament) .....	3,800	0
1834. Ditto ditto .....	9,000	0
1837. Ditto ditto .....	11,550	0
1839. Ditto ditto .....	9,030	0
1840. Ditto ditto .....	7,350	0
	2,530	10
	103,260	10

A Sum of £3500 is included in the Estimates of the present year, for the purchase of two pictures.

The grants for the building were, in 1832	15,000	0
Ditto ditto	1823	10,000 0
Ditto ditto	1834	12,000 0
Ditto ditto	1385	12,000 0
Ditto ditto	1836	29,912 0
Ditto ditto	1840	680 0
	80,592	0

**WILKIE'S OPINION OF THE CORREGGIO'S.**—On the occasion of the purchase of the Correggio's in the National Gallery, Sir David Wilkie's opinion was expressed in the following letter to Mr. Seguer:—

"7, Terrace, Kensington, March 1, 1834.

"My Dear Sir,—After reviewing with much attention the two pictures by Correggio, 'The Ecce Homo,' and the 'Mercury Teaching Cupid to Read,' belonging to the Marquis of Londonderry, I have great pleasure in expressing to you my hope that they become the property of the nation.

"They are undoubtedly originals of this great Italian painter, possessing, with the fascinations of light and shadow and surface so peculiar to him, that richness of colour and intensity of expression which give to his works so much of their value and influence; and whether to interest the public in the higher purposes of Art, or to guide the taste of the student, would to the gallery now forming be a most desirable acquisition.

"Of the justness of the sum for which they are offered, £12,000, I cannot from my experience in such transactions be a judge; it is certainly a large sum for two pictures; but giving this difficulty its due weight, I would decidedly concur in giving this sum rather than let them go out of the country, considering the rarity of such specimens even in foreign countries, and their excellence as examples of the high school to which they belong, to which it must be the aim of every other school to approximate.—I have, &c.,

"(Signed) DAVID WILKIE."

"Wm. Seguer, Esq."

**THE TOWER.**—Additions have been made to the collection of ancient armour contained in the Tower, which if more accessible to artists for sketching than it is, would afford an opportunity for the study of ancient armed costume, in which it is to be regretted so many who paint it, err in their representations as adapted to the periods of their stories. There is a chronology in mail and plate armour as well as in civil costume, and the propriety of observing accuracy with regard to the one is not more necessary to truth than in seeking it with respect to the other. But it is complained of by all who have ever visited the collection at the Tower, that they are hurried through the armoury without an opportunity of profiting in anywise by their visit beyond seeing the mere arrangement. A suit of plated armour of the time of Henry the Seventh, as also a suit of the period of Richard the Third, have been added; likewise a suit of engraved and gilt armour, formerly the property of Count Hector Oddi, of Padua, together with the horse and horse armour belonging to it; a suit also of cuirassiers armour of the time of Cromwell, together with several other suits, partial equipments and sundries; among which are two English long-bows recovered from the wreck of the Mary Rose sunk at Spithead in 1545.

**MILLER'S "PERFECT MEDIUM."**—We have received from Mr. Miller, artists' colourman, of Long Acre, a small pot of a preparation which he names as above; and which he has compounded according to recipes given in the articles of our invaluable correspondent "J. E." This vehicle is white, opaque, and perfectly fluid, without the slightest tenacity or tendency to the consistence of megilp. It mixes kindly with colour, but we have not yet had an opportunity of observing the settled appearance which it will assume with time.

**PAPIER MACHÉ.**—We have been favoured with a view of the elegant and ingenious papier-maché productions of Mr. C. F. Bielefeld, of Wellington-street North, which comprehend almost every article of furniture capable of being rendered tasteful in design, or to which the enrichment of carving can be applied. Carved oak and walnut-wood is most successfully imitated. There are among the specimens which we were afforded an opportunity of examining, beautiful Louis Quatorze frames and mouldings in imitation of the renaissance and Elizabethan periods. Plaster, we know, is used in following these and other styles, but certainly not more successfully than is here shown in this medium, which assumes all the crispness of wood-carving. Columns are formed of it of every order and degree of enrichment, including not only the capitals and bases, but the entire shafts, whether plated in the classic style, or fretted over with arabesques, &c. In Paris, the carton-pierre, a substance similar to papier-maché, but in everyway inferior to it, especially as regards its durability, being very absorbent of moisture, and therefore liable to become soft, is largely used for exterior ornaments, even in buildings of the most sumptuous and important character. As there is good evidence of the durability of the old papier-maché in the open air, it follows of course, that for interior work its permanency may be still more implicitly relied upon. There are many pier-glass frames, chimney-pieces, &c., composed of this substance, remaining in a perfectly sound good condition, that must have been made early in the last century; and a recent examination of the old papier-maché work at Chesterfield-house has most satisfactorily proved, that in ceilings it is equally durable; the component parts are, in fact, such as to render it much less likely to decay than the laths or other wood-work to which it may be attached; and in no instance that has ever come under the observation of the manufacturer, has he detected the least indication of its having been attacked by worms, one of the ingredients used being very obnoxious to them. The papier-maché work now remaining in many houses in London and the country, which was put up in the time of Sir Wm. Chambers, appears, wherever it has been examined, in a perfectly sound state, notwithstanding many defects in its composition and manufacture which have lately been effectually corrected. We ascertained on inquiry that the cost of the papier-maché is 20 per cent. cheaper than composition, which, together with its other recommendations, must eventually bring it into very general use.

**PARLIAMENTARY VOTES.—1. NATIONAL GALLERY.**—On Tuesday, the 22nd ult., when the resolution for a grant of money was agreed to in the House of Commons for the National Gallery, Sir C. Burrell said, he had been informed that some pictures of a very inferior description had lately been purchased for this institution. It was said that a work of Perugino, sold to Mr. Beckford originally for £40 or £50, had been bought for the National Gallery out of that gentleman's collection for £800. If what had been stated to him were true, the picture would be a disgrace to it. The picture had been so much altered that it had been nearly repainted, and a *bandeau*, which was formerly on the forehead of one of the figures, had been entirely removed. If, indeed, his information were correct, a very indifferent painting had been palmed off on the public at a very large price. His only object in mentioning this was to call the attention of the right hon. baronet to the subject, that care might be observed in future in purchasing pictures for the National Gallery.

**2. BRITISH MUSEUM.**—When the sum of £21,000 was proposed in Parliament for the new buildings of the British Museum, Mr. Hawes said, he regretted that in consequence of the librarian and his assistant being engaged in making a new catalogue for the library and occupying the apartments, the public were still excluded from that most interesting part of the building. At all events, he thought the objection not sufficient to justify the exclusion of the public; and he trusted that the trustees, some of whom were present, would take the subject into consideration.—Dr. Bowring inquired when it was likely that the catalogue would be completed and printed?—Sir R. Peel was understood to reply, possibly in the course of a few weeks. With regard to the observations of the hon. member for Lambeth, the questions whether the public should be allowed promiscuously to enter the library for the purpose of seeing the place, or to examine and read the books, were very different. There was every disposition on the part of the trustees to allow access to the library for the purpose of study, but to make the library a public promenade would certainly be to destroy the design of the institution.—Mr. Hawes did not think by allowing the public to walk through the room those who went to study would be disturbed, particularly as an apartment was especially provided for their accommodation.—Dr. Bowring said there was no difficulty in the public obtaining access to the libraries on the Continent.—Sir R. Inglis ventured to say, that the hon. gentlemen had never seen ten persons at one time in the library of the Vatican; and though the visitors to the library at Paris were numerous, sometimes amounting to 30,000 in a short space of time, there were no readers seen there.—After a few words from Mr. J. S. Wortley, the vote was agreed to.

**3. SCHOOLS OF DESIGN.**—On the vote of £5000 towards defraying the expense of establishing schools of design in provincial towns in aid of local subscriptions for that purpose being put,—Mr. Williams greatly approved of this object. A superior taste for designs had arisen in other countries in various manufactures, entirely from the support given them by such institutions as these. He thought that district schools ought to be encouraged by small sums, and would suggest to her Majesty's Government that this plan should be adopted.—Sir R. Peel did not object on the score of economy to a grant of public money for this purpose. He thought it would be of great public benefit if these schools of design were established generally in all manufacturing districts; but he was quite certain that the Government alone could not do it. The wealthy in the districts ought to come forward and support such objects.—Mr. Ewart said this was a subject which had come under the consideration of a committee of which he had the honour to be chairman six years ago, and that committee had recommended precisely the same course as the right hon. baronet, namely, assistance, but not interference with local supervision. Casts, busts, &c., might with advantage be furnished to these schools by the Government. He was convinced of the soundness of the right hon. baronet's views.—Dr. Bowring said, the most successful schools on the Continent were those where individuals in the localities had taken the chief burden, assisted by the Government.—The vote was then agreed to.

### THE WORTH OF ART.

THE influence which the Plastic Arts have over human culture—over manners, dispositions—over life and comfort—is so significant and so vast, that we commonly hold it as established, that we are to prize, according to this standard, the worth of ages and nations. We know and admire those in which Art flourishes, and a sort of contempt accompanies those that have been unable to raise themselves up to this stage of development, whether barbarism kept them back or a fortunate opportunity was wanting to them. Inwardly we feel ourselves persuaded, that the intelligence and love of the beautiful secured to man the highest perfection, toned his spirit softer and clearer, opened his heart to refined pleasures, and brought him, above all things, nearer to the good. We furnish ourselves, by the view of beautiful works of art, with a more genial tone of feeling; when their grace charms and delights us, then our spirit, through the earnest and the vast, grows ennobled; admiringly we pass from the pictures on to their authors; we esteem high the artist or the race in whom we meet with such correct thoughts, such beautiful feelings; we enjoy ourselves with them, and find friends, allies, and often models, amongst them.

Thus said Goethe, in his "Propylæon," in the end of the last century, and, theoretically, even we, in England, agree with him, confessing how the palmist days of a state are ever crowned with some great excellence in Art, like the garland that adorns the victor in his triumph.

We have made, of late years, great progress in Plastic Art, a progress, on the whole, in quality, but a very great one in quantity. The number of persons who devote themselves to it has vastly increased, a certain degree of intelligence on the subject is almost universally possessed, and a certain degree of interest everywhere taken. The different feeling with which annual exhibitions are now approached from what they were some years ago is obvious, although perhaps the amount of change, which has been working gradually and silently in our national character, as regards all the higher walks of Art, is hardly yet capable of exact appreciation, or open to general acknowledgment.

We are preparing, therefore, to give, at some time, a more than mere distant and theoretical assent to this creed of the intellect which Goethe has set forth; but as yet it is with us the struggling and doubting period of a half faith, unsupported by practice. Nor are we yet ready to affirm that our minds are fully made up as to the value we place upon excellence in Art. Are we quite certain that we should wish to become celebrated as a nation of painters, sculptors, and musicians, were it in our power to do so? And have we quite got over the impression, that our inferiority in Art is somehow or other connected with our superiority in more important matters? In other words, have we entirely dismissed the contempt with which every kind of inferiority and ignorance preserves and consoles its existence? We fear not.

Have we even arrived at giving a distinct answer to this obvious question: What is the purpose we desire to answer by criticism? A question which, as regards Art, our English public is so far from having decided, that we doubt if its importance be at all rightly understood; and thus our criticism is too often a time-serving, shifting coward, now and then praising under some temporary excitement, or with a view of drawing forth patronage; but far more often bent only on depreciating the judgment which other nations, or the cosmopolites amongst our own, might pass on our shortcomings, than fulfilling any lofty or definite vocation, and serving to the artist either as a guide or a warning. We are in too much fear of being convicted and condemned for bad taste or national blindness, to give the artist a fair chance, and hasten to condemn him in our own defence.

Whilst hand in hand with our condemnation of what we have to patronise, we carry on a warfare of reproaches against our public, for its sins and deficiencies in not patronising the very artists we condemn.

We turn to the glorious days of popes and princes, who issued their magnificent orders to a Roman, a Venetian, or a Lombard school: we profess ourselves indignant at the supineness of

patrons who refuse to tapestry their walls with paintings we are half ashamed of. We desire a prospective patronage, one that shall not reward but prepare merit; accustomed to the views and language of the political economist, we talk with philosophical accuracy of a demand creating a supply. It does so, of the gross article, of whatever the average of human power can supply, but it can go no further. All the distraction, all the misery, all the bloodshed in Spain, though they have produced a plentiful crop of soldiers, adventurers, and political quacks, have not called forth one great man able to subdue or to save, however imperative the need—in other words, the demand. It is so always; a demand only settles the direction in which such human powers as exist shall put themselves forth; it creates no power. Want of patronage or demand may, perhaps, deter the man gifted an artist from the pursuit of Art, or may deny him the means of livelihood by it; though to judge from the continually increasing number of pictures painted and sold, it does not appear as if we need fear any such excuse for want of illustrious talent, especially as on the whole (though, perhaps, not strictly) the best artists find the best demand. Amongst portrait painters for instance, it does not appear that Sir Thomas Lawrence sat disregarded with his portrait of Canning before him waiting for a buyer; or, in another branch of the Art, that Edwin Landseer's exquisite animals look in vain for an owner. And there are some others of our artists who have equally little reason or inclination to complain personally of want of patronage.

Portrait painters have at all times and in all countries, and more especially at the present time, and in England, the surest market for their commodity; and the animal painter has a ready patron in the taste amongst our aristocracy for field sports; but if this taste gifted us in Landseer, with one whom Rubens and Vandyke alone equal in the splendour of life, and we had almost said intellect he bestows, even Snyders himself falls far below in this respect: however as pictures and in general grandeur his works may excel, why has not our family taste produced a Vandyke to groupe us within doors and on serious occasions, or at least a Watteau to represent us taking our pleasure in our beloved park or garden?

Do we then think that to deficiency of talent we are to attribute the yet unsatisfactory state of Art in England; the uneasy alternation of boasting and depreciation, of complaint for and complaint of the artist? This we might disprove by many signs of promise, by many actual performances, far too numerous to particularize; the name of Etty in the very highest branch of Art, and of Stanfield in one we particularly excel in, are enough. We attribute it mainly to *ignorance*, ignorance of our object as public and of the artist's in his pursuit.

Add to the child of this ignorance our want of *reverence for Art*. A far greater obstacle in the artist's path than want of patronage is this want of reverence for Art. Anterior to the question of whether a man excel, is the *worth* of what he strives for; more fundamental still, *what* he strives for. Do those around, does he himself, look upon what he desires to do, as to be sought for its own sake? Is he ready to give everything for excellence, time, health, wealth, and hold it to be cheaply bought at the price? Is he content even to die, so that his work may be immortal? and do the public sympathies, the sympathies of all hearts and heads go with him? For if so, the Art is safe, whatever be the fate of that artist; nay, that artist is most likely safe.

To this criticism answers, that we have already been too often deceived by such pretensions; and that in crying up the merits of men who believe they ought to be immortal, we have only exposed ourselves to the ridicule of foreigners, and the contemptuous disavowal of our own cosmopolites. We cannot afford to support with any warm interest or sympathy the artist who, in the absence of patronage, is labouring from the pure love of Art for excellence; for those who have told us so, we have found had mistaken the paternal affection with which men view their own performances for devotion to Art. And public criticism pursues its own prudent path of coldness and discouragement; for to be too difficult is to prove refinement of taste and acumen as a connoisseur.

Whilst meanwhile in the eagerness of his zeal the artist declares the works of himself and his

contemporaries the only legitimate object of interest, since the purchase of them is encouraging the vitality of Art, and denounces our National Gallery as a Hortus Siccus, our utmost fostering of which will not cause the springing of a single flower. Is it then the object of our criticism to prove our fastidious tastes in Art, or to cause money to be spent upon pictures merely because they are new? Is it a reputation as serves critics, or the making Art into a profitable profession, that we desire?

There is something far nobler, far more enduring to be accomplished—the possession of a great School of Art. For this we must first fully convince ourselves of its worth, of the connexion of high excellence in Art with all other high and noble things. We must then raise to ourselves the loftiest conceptions of what Art can do; become acquainted, to the best of our power, with all that has been done most excellent in it; persuade ourselves that the man who brings a masterpiece into our country, and places it where the public can aid its taste by contemplating it, is a public benefactor, not merely as he may offer the artist inspiration, but as he helps to prepare an intelligent and a sympathizing public for him. And then our criticism need not fear to be misled by mistaken enthusiasm, or to err through partial lenity. He who feels that *true reverence for Art*, which will not rest and cannot exist without full understanding and appreciation of its miracles, *cannot* deceive himself, and *will* not others. That which has been done by immortal spirits; more, that which glorious Art reveals as yet to be done, he tries not to lower to his own standard, but rather exaggerates his own defects for his own short comings.

For the man with eyes, and mind, and hands, gifted by nature, and prepared by study for the reverence of Art, may be unduly distrustful of his own powers, may underrate his own performances, but cannot overrate them. He may be conceited and overbearing as an artist to ungifted men, but as regards Art he must be humble.

In Art, cultivation is, above all things, necessary; cultivation of the mass and of the artist; cultivation of sympathy and of knowledge. We cannot form too high an idea of how great and glorious Art may be; we cannot too much reverence its purpose, its influences, and its independence; nor can we, on the other hand, easily exceed in the leniency of our criticism on the young artist, if we desire to have a great school of Art. In England there is much false shame, or we might better call it doubting pride, the misery of the half enlightened, which equally exacerbates our criticism, and palsies the hand of the artist. When conscious of this, we would assert ourselves, too much defiance necessarily mingles itself with the effort for sober judgment. We paint and criticise, as if, by a decree of our will, we could become great masters, and have the world's acknowledgment as such. At the beginning of this century we were resolved to prove our greatness by the roods of canvass we covered; and in receding from this pretension we have, perhaps, run into the other extreme, as if we could prove that our pictures are highly finished by their being so small. What is the fact? That the number of great artists whom the world has produced is soon told; that they are gifts of God, aided, not created by circumstances. Unsurrounded by the picturesque nature, the stirring scenes, the miracles which Art had already wrought around the great names of Italy or the Low Countries; hampered, too, by the palsy effect which portrait painting is apt to exercise on it, no wonder if our artists people their canvass with masks and postures, or surround and costume with a sketch, instead of painting a picture. We want much labour to supply to ourselves the place of those accessories. Whatever be the state of the Art, up to it only can the greater number reach. As we educate our eyes and hands, elevate the general state of the Art, and enable the greater number to reach a higher point, we prepare the way for the masters of the Art that may arise amongst us, and aid their vocation. But if, in the mean time, we expect impossibilities, and rail at those who do not accomplish them; if we care very little about the artist, and very much for our own reputation as critics, we do our most to stifle talent and frustrate vocation. F. B.

## EXHIBITIONS—PROVINCIAL.

## ROYAL MANCHESTER INSTITUTION.

THE Twentieth Exhibition of the Manchester Society, consisting of the works of modern artists, opened early in September. It contains 622 paintings and nine works in sculpture. Several of the most striking and important are familiar to those who have visited the Metropolitan Exhibitions, but there are many of very considerable merit, shown for the first time in Manchester; the collection being indeed, as a whole, much above mediocrity, and a decided improvement upon that of last year. We understand it is the intention of the Committee to bestow a prize for the "best picture"—the best picture, that is to say of a peculiar class; for they have, we think very unwisely, limited themselves to a selection from "Interiors"—of which it happens they have an unusually poor assemblage; a circumstance that will, we trust, induce them to alter their original design.

No. 5. 'On the Sands at Dieppe,' H. Lancaster. The excellent artist exhibits several capital works, of which this, perhaps, is the best example; they are exceedingly rich in tone, and marvellously true to nature, but remind us somewhat too forcibly of a painter whom he seems to have "looked at" too often.

No. 11. 'An Italian Girl,' J. Inskipp. Painted with the vigorous hand of a master; but in the "sketchy" style, against the too frequent adoption of which the accomplished artist will do well to guard.

No. 16. 'The Lagoon—Venice,' G. E. Hering. A graceful and pleasant copy of a familiar subject.

No. 17. 'An Interior in the Olden Time,' W. Müller. In all respects an admirable work; true and accurate in design and character, and painted with a degree of force, rarely to be met with in modern art. Mr. Müller, in all his productions, comes up to the expectations the public have formed of him. He continues on the right road to fame.

No. 51. 'An Old Mill, Warwickshire,' H. Jutsum. A picture of great merit, by an artist who has made large strides of late; and who, if he continue to improve in equal proportion, will soon "achieve greatness." There are three other works of his in the collection, and all admirable. No. 86. 'A Shady Lane,' is a work that all persons of taste and judgment will covet.

No. 73. 'Rocky Landscape,' J. Tennant. Of the four pictures contributed by Mr. Tennant, this is, by many degrees, the best; its qualities are of a very high order, and it amply maintains his reputation, which his other works in the Gallery do not.

No. 88. 'The Dead Bird,' Wm. Patten. A sweetly conceived and excellently painted portrait, with the introduction of a touching episode. We remember it as one of the leading attractions of the Society of British Artists.

No. 105. 'Venice,' Clarkson Stanfield, R.A. One of the most masterly productions of the great modern master, with all the high qualities for which he has been long remarkable.

No. 111. 'A Hawk,' T. Smart. A very clever picture; the promise of better things hereafter.

No. 113. 'Sancho's Feast as Governor of Barataria,' F. P. Stephanoff. The humour and character displayed in this production have been rarely surpassed in modern Art. The artist has caught the very spirit of the author; the expression of the unfortunate governor, as a tempting dish is removed from him by the mandate of the physician, is quite inimitable; and all the minor parts are of equal merit.

No. 151. 'A Little Beggar Boy of Rome,' F. Y. Hurlstone. An exquisitely painted work; one of the leading attractions of the Exhibition.

No. 161. 'Heidelberg on the Neckar,' H. Gritten, jun. The artist is an extensive contributor, and his works show to great advantage. He has, manifestly, the right feeling for his Art, and studies both abroad and at home.

No. 162. 'Barmouth Sands, North Wales,' A. Clint. We have seen this picture before, but rejoiced to see it again; although we did so with no little surprise, for we could scarcely have believed that a work of such rare beauty and intrinsic merit could be left in the keeping of its producer. There are few productions of modern Art at once

so interesting and so admirable; so perfectly true to nature, and so exquisitely touching in character. Here is an opportunity for the Manchester committee to encourage and recompense genuine ability; ability trusting for success to no meretricious aid, but depending for it, altogether, upon truth happily and skillfully conveyed to canvass.

No. 164. 'On the Rhine, Moonlight,' J. B. Crome. A fine example in a style in which the artist continues to be unrivalled.

No. 167. 'Tyrolean Boy,' No. 287. 'Prayer,' No. 455. 'Thekla at the grave of Max (Wallenstein),' H. O'Neil. Three cabinet pictures of rare excellence, conceived in the true spirit of grace and beauty, and painted with marvellous delicacy and skill. The artist is already entitled to a very foremost rank in his profession.

No. 184. 'Fairies assembled at Sunset to hold their Revels,' R. Dadd. Mr. Dadd is emphatically the poet among painters. Blended with an imagination akin to that of the most fanciful of our "inventors," he exercises a degree of judgment rarely combined with it. He seems to paint in a dream; but it is a dream in which the images are all naturally arranged. His picture suggests a volume of thought as certainly as does a passage from Shakspeare. He is, moreover, a master of professional "technicalities," and in drawing the nude figure he is surpassed by very few. He has a "walk in Art" entirely to himself, and no competitor is likely to approach him. This is saying much in these days, when "creators" are unfortunately less numerous than "copyists."

No. 207. 'Returning from Pasture,' H. J. Boddington. One of several delicious "bits," the contributions of an artist who is always true to Nature and also to Art.

No. 225. 'The Garden of the Capuchin Convent at Amalfi,' J. Uwins. A capital copy of a genuine piece of Italy; the production of an artist whose onward progress has been safe and sure.

No. 230. 'Geneva,' A. Egg. A vigorously-painted work, and very graceful in design.

No. 237. 'View on the Thames, at Chelsea,' T. M. Richardson. A masterly landscape, of the highest and purest class; full of matter, and abundant in incident, yet in no degree confused.

No. 235. 'Source of the Ravensbourne,' J. Stark. A good example of an artist who is always excellent in the estimation of those who prefer truth to fiction in copying the real. As a sound and vigorous painter, essentially English, Mr. Stark is surpassed by very few. No. 431. 'Hayes Common,' and No. 435. 'Lane Scene,' are works that many will covet.

No. 224. 'Irish Hospitality,' J. Zeitter. A capital version of a touching incident—a family, preserved from shipwreck, in the cabin of an Irish peasant.

No. 276. 'Rebecca and Ivanhoe in the turret of the castle of Front de Bouaf,' W. P. Frith. The subject has been taken too often to leave room for any novelty in conception; but the artist has displayed considerable taste and skill in his treatment of it. It is admirably executed, and is in all respects a picture of the thoroughly good class. No. 359, though a small work, pleases us better; it is a simple portrait of a merry maiden—the 'Dolly' of 'Barnaby Rudge,' giving the "killing twist" to her abundant tresses; a sweet and very graceful production.

No. 293. 'Pastoral Figures,' H. Le Jeune. Undoubtedly the work of the highest merit in the collection. The spirit of the old masters pervades it: it affords abundant evidence of thought and study in the true school, where excellence only is taught. There is amazing delicacy, blended with force, in the execution; and a more perfectly graceful conception we have very seldom witnessed. The female figure is entire loveliness. There are in the exhibition two or three other pictures by the same artist, which manifest powers of the highest order, and sure guarantee that their producer must fill, at no distant period, a prominent place in the professional muster-roll of great men. One of them, No. 427, 'From the Fairy Queen,' is a gem of the purest water.

No. 297. 'Autumn,' T. Creswick. This and two or three others by Mr. Creswick cannot be classed among the more successful works of the accomplished painter. They are, of course, great attractions in this gallery, but may scarcely be compared with other productions of his pencil.

No. 298. 'Solitude,' E. Hassell. A capital

landscape, of a deep, full tone, introducing a solitary angler ("though solitary, he is not alone") on the bank of a rushing river.

No. 329. 'The Guitar,' J. Stewart. A very elegant and graceful portrait, of the minor size, painted with much skill and power.

No. 333. 'Road-side Repast,' W. Bowness. An excellent picture of an Italian boy sharing his scanty meal with his monkey by the road-side.

No. 360. 'Lane near Chapel Curig, North Wales,' A. Vicars. A sweet landscape; one of several agreeable and finely-painted subjects by this artist.

No. 397. 'Sophia Waiting the Return of Olivia,' J. J. Jenkins. A manifest improvement; if the painter will labour to avoid the sacrifice of nature to prettiness, he will yet produce great things. He displays a "nice" feeling in all he does, but must use a stronger pencil before he reaches excellence.

No. 437. 'Flowers,' G. Evans. Painted with great vigour, yet with considerable delicacy.

No. 464. 'The Vintage,' G. F. Marshall. A beautiful work, of much good promise; a child in the fore-ground might have been painted by Mr. Uwins. The artist must aim at greater originality; the faculty is, we are sure, in him.

No. 488. 'View near Sorrento, Bay of Naples,' T. C. Hofland. "Though last not least." This and some other of Mr. Hofland's Italian pictures are valuable acquisitions to the gallery.

Before we close our necessarily limited notice of the collection, we must recommend the visitor to look at a specimen of carved wood, in the passage to the rooms. It is, we understand, the production of an artist of Manchester, Mr. J. Holding, and obtained a prize medal there in 1840. It is of great merit, and will amply recompense those who may have an opportunity to examine it.

[The exhibitions at Liverpool and Birmingham are both open. We shall notice their contents next month. In reference to that at Birmingham, we copy the passage introductory to a lengthened and very sensible notice in the *Midland Counties Herald*—a paper conducted with great ability, and essentially serviceable to the cause of Art, to which it usually devotes considerable space:—

"The Exhibition of the Society of Arts opened on Monday, the 20th of Sept., and certainly with a better general collection than even that of last year. There are not so many large pictures, but the interest is not lost, since, instead of one or two "lions," we have half a dozen, or more, of the great works of the day. We observe that the room has been re-coloured, and with good taste and discretion; the pictures tell very effectively against the soft grey of the walls. The hanging is certainly highly creditable, since we do not see any work of Art that is not suitably hung, both as to height and in relation to other pictures."

## CORRESPONDENCE.

### EDINBURGH ASSOCIATION FOR ILLUSTRATING LOCAL ANTIQUITIES.

SIR,—Our attention having been directed to a notice in the ART-UNION for August, of some of the evidence adduced before the Committee of the House of Commons, on the subject of National Monuments and Works of Art, in particular to that portion of it relating to the organization in France of the COMITE' DES ARTS ET MONUMENS under the authority and auspices of the Government; we are desirous of stating our delight at the institution of such a Committee, and, at the same time of expressing our regret that no such step has been taken by our own Government for preserving and elucidating, in a combined and systematic form, the history of those works of Art with which our country abounds, many of them of the most exquisite design and execution, and all of them interesting in the highest degree, in illustrating the domestic and the public history of the Arts, and of the respective stages of civilization among our countrymen.

Under these impressions, it affords us much pleasure to state that, a considerable time since, a few individuals, artists and others, zealous for the preservation of the important local features of our country, and for the diffusion of information upon the subject of their historical associations, have formed ourselves into a body under the title of the EDINBURGH ASSOCIATION FOR ILLUSTRATING LOCAL ANTIQUITIES, having for its object the collecting of accurate sketches and au-

thentic historical records of the leading architectural and artistic remains with which our city is enriched, and which, we are sorry to add, are now rapidly passing away into oblivion. With this view we have already collected a considerable number of sketches, and are vigorously engaged in the accumulation of others.

We are induced to trouble you with this note, in the hope that its insertion in your valuable paper may lead to the extension of so desirable a feeling to every city in the kingdom, as the preservation of its public and private monuments; and that private enthusiasm and enterprise may achieve an object of so much national importance, and such a one as in other countries is generally undertaken as a part of the public duty of the State.—Yours, &c.

JOHN WILLOX,

Secretary to the Edinburgh Association for Illustrating Local Antiquities.  
Edinburgh, Aug. 20.

## ARTISTS' MODELS.

SIR,—Allow me to address a word to you on the subject of a paper introduced into the last number of the ART-UNION; I mean the list, description, and addresses of the models. I fear the list must have been sent by some mischievous or very inconsiderate person. Such a publication as this will go very far to destroy that which all artists have taken so much pains to establish, I mean the respectability of the persons therein named. It will offer a temptation to prurient curiosity, and subject many modest and retiring individuals to impertinent applications, not less offensive to their feelings than opposed to their wishes. There may be some, I grant, who will be pleased with this sort of notoriety, but these are not of the class that artists prize or value; and I have reason to know that much mischief has been already done by the publication; and that many most respectable individuals have received an injury which all the penitence of the author will never be able to repair.—Yours, &c.

Athenaeum, Sept. 13.

T. UWINS, R.A.

[It is, we hope, unnecessary for us to assure our correspondent, that our motive in publishing the letter referred to was a just and right one. It was communicated to us by an artist for whom we have the highest esteem and respect, and whose intention we cannot for a moment suspect to have been wrong. We now perceive that it would have been wiser to have withheld it.]

## ARTISTS' SCHOOLS.

SIR,—I am occupied during the day in business until six o'clock. After that hour I am anxious if possible to obtain some assistance in drawing from casts, &c., and occasionally to paint in oil. Can you or any of your correspondents inform me if there is any place in town where evening instructions or assistance can be procured at a moderate charge; I believe there are places of this description, and being anxious to improve myself during the time I have to spare should feel extremely obliged if you could point out to me where, by this or any other method, I could procure my desired object.—Yours, &c.

W. M.

London, Sept. 3.

## WORKS ON ART.

SIR,—The subject of Vehicles having been brought before the public by your talented correspondent, J. E., in the two last numbers of your excellent periodical, allow me to suggest that the following authorities, quoted by Lanzi, be forthwith sought for and translated.

1st. The MS. of Andrea Cennini, bearing date 1437, upon Painting. It is preserved in the library of S. Lorenzo, at Florence.

2nd. The Treatise of Theophilus, the Monk, preserved in one of the libraries of the University of Cambridge.

3rd. The Works on Painting by Malvasia, wholly, or in so far as they relate to the fragments preserved by him of the Writings of Francesco Albani.

4th. Palomino's *Teorica e Pratica della Pittura*, two vols. folio; rare out of Spain.

5th. Boschini's *Carta del Navegar*. This was printed in 1660, and gives an account of Titian's method of colouring among other things.

6th. The Work of Zanetti. He gives an account of the Tenebrosi, distinguishing such as were of that sect through their own fault, and those who came to be of it owing to the bad priming of those times.

7th. Lomazzo's *Treatise*, published in 1584. This work, the Idea of the Temple of Painting, requires considerable weeding; but it contains matter of the most valuable kind in reference to the practical part of the Art.

8th. Geo. Batista Armenini's *Veri Precetti della Pittura*, published in 1587. This work will be very useful also.

tura, published in 1587. This work will be very useful also.

The above works, faithfully and judiciously translated by a person conversant with terms of Art and with Art itself, would confer an immense advantage at the present time upon the profession in all its branches. I say faithfully and judiciously: faithfully, as being substantially correct; judiciously, as to the omission of all matter which does not strictly refer to Art.

Should it be necessary, in order to carry into effect the plan I have proposed, to raise a subscription for the purchase of the works referred to, I shall be most happy to contribute the sum of one guinea.—Yours, &c.  
Sept. 15. H.

## TEST FOR LEMON-YELLOW.

SIR,—Since your valuable journal, the ART-UNION, has become so useful a vehicle for conveying and answering inquiries connected with the Fine Arts; I shall feel obliged by your ascertaining, for the benefit of such provincial artists as myself, who have few opportunities of conversing with eminent persons in the profession, what is a good test by which we may prove the genuineness of Lemon-yellow. It is a colour highly appreciated by Mr. Field, who at the same time informs us in his work entitled "Chromatography," that there are several colours "ended under the same denomination." Now, since a bright and TRANSPARENT yellow is of great importance in painting, and this seems the only TRANSPARENT one that he (Mr. Field) can venture to place in the list of permanent yellows (the rest being all of them ochres), and we have tests for ultramarine and vermilion, I think this inquiry may be of service to many who are not acquainted with the chemical properties of colours, but who are fully aware of the importance of at least one TRANSPARENT colour of each of the primary ones being good of its kind, and perfectly to be relied upon in all respects. Having a transparent colour we can test of the madder-lake class, my attention has been had particularly to this yellow.

Yours, &c.

Welbach.

WILLIAM HUGHES, jun.

P.S. I forgot to state that one reason for my inquiry is, that of the colour in question Mr. Bachhoffner says it will not stand the sun's rays.—See his work entitled "Chemistry as applied to the Fine Arts," page 123.

## PORTRAIT BY HOLBEIN.

[The writer of the following letter to the Lord Chamberlain, on a subject of some interest, has favoured us with his name—which we do not consider it necessary to publish. His communication, however, cannot fail to interest many.] 20th March, 1841.

MY LORD,—Although I have not the honour of being personally known to your Lordship, I consider it my duty to her Majesty to rectify an error that has long prevailed at Windsor, in reference to one of the paintings in the Royal collection. The portrait to which I allude is confessedly by Holbein, but it has always been considered and catalogued as designed by that painter for Luther. It is thus that your Lordship will find it described in every edition of the Windsor Guide, and also by Pyne in his *Royal Palaces*, (see vol. I, p. 142.) In like manner, when the Society for the Diffusion of Useful Knowledge, not many years since, engraved this portrait, it was treated as that of Luther; and I believe it has at no period any more been doubted to be a likeness of that Reformer, than to be the work of Holbein. It so happens that I have for many years possessed a duplicate of this painting (the artist is known to have executed duplicates of most of his works), corresponding with that at the Castle, in every the most minute particular. I purchased it of Mr. Christie, after the death of the celebrated collector Mr. Maitland, of Woodford, who had it many years before from the collection of the Countess of Holderness, in Park Lane, which came to the hammer after the Earl's death. I never, till lately, doubted that the Royal painting, and my own, were equally of Luther; except, indeed, that the portrait in question always appeared to me wholly unlike any other existing portrait of the Reformer, nor did it appear either that Luther was ever in this country, or that Holbein was in his part of the continent. A long illness has lately left me much time to investigate this question, and the result of my inquiries has been, that the portrait is not that of Luther, but of Dr. Stokesley, the Bishop of London, from 1530 to 1539. I owe the discovery to the arms which appear in the upper part of these interesting pictures, through the kind investigation of my friend Mr. Fulman, of the Herald's College and the House of Lords, a gentleman most probably well known to your Lordship. It appears that in the year 1529, Dr. Stokes-

ley was sent by King Henry VIII. to some foreign universities, as well as to the Emperor and the Pope, upon a mission respecting the then contemplated divorce of the Queen. It is well known that Holbein came over here, upon the recommendation of Erasmus, to Sir Thomas More (then Chancellor), in whose house he remained two or three years, and as Sir Thomas took the Seals in 1530, and died in 1533, it is very probable that the portrait of the then Bishop of London, who had previously been accredited as an Envoy on the most confidential embassy, was one of the Chancellor's collection of pictures, which is known to have excited the admiration of the King, upon one of his visits to Chelsea, and led to the employment of Holbein as painter to the Court. The Bishop died in 1539, and was interred in old St. Paul's; the inscription on his monument being recorded by Dugdale, and a translation of such inscription being given by Wood in his "Athenæ Oxonienses." That Dr. Stokesley shared much of the Royal confidence is certain, not merely from the trust confided to him which has been already mentioned, but from his having been the principal person employed in conducting the examination of Philpot (the martyr), at which the King presided in person, and took an active part.

I have judged that I ought not to keep back from your Lordship the information which I have thus been so fortunate as to obtain upon a subject more or less connected with the official department over which your Lordship so worthily presides.

I have the honour to be, &c.

The Right Hon.

The Lord Chamberlain, &c.

### SEPULCHRAL MONUMENTS.

THE time is not long gone by when the oldest and most interesting monumental reliques contained in our Cathedrals were held of no more account than any ordinary modern tombstone, save by those who had apprenticed themselves to the "antiquarian trade;" but those sections of the public to whom such things were utterly indifferent, now begin to understand that they are valuable, though for them to explain wherein that value may consist would be another thing. The evidence given before the Select Committee on National Monuments furnishes a melancholy account of the wanton injuries suffered by the monuments in Westminster Abbey; not only from ill-disposed persons who have visited it, but also in a great measure from the Westminster scholars and other persons by whom especially such reliques should be held sacred. It is however to be observed, that mischief from the first source is not now so common. Formerly monuments in this Cathedral were so infamously mutilated as wholly to destroy their beauty, entire heads having been broken off from many works, and especially from the sculpture of the tombs of Mr. Thynne and Major André. This wholesale destruction arose from the want of a sufficient number of persons to attend visitors, a default which must be set to the account of the Dean and Chapter. Among the public at large there is undoubtedly a marked advance in the appreciation of monuments and works of Art, compared with what existed even twenty years ago; but we cannot concur in the opinion so generally entertained that the opening of so many stores of pictures and antiquities has already educated the people up to an apprehension of many of the beauties of Art. Such knowledge can only be acquired *guttatim* as it were, and we are content that it is so. Comparing the former destruction of works such as we have remarked in Westminster Abbey, with the growing respect for all similar productions, there is very much of gain on the side of civilisation, and that the multitudes that we now see in our galleries are better conducted than such an assemblage would have been years ago, is certainly an earnest of better things, but not yet a proof that they yield to the full influence which Art exercises on greater refinement. So much has this been a point of interest with us, as to induce a Sunday visit to Hampton Court, with a view to test the impressions made by the works upon the lower classes; but the human tide moved on, and scarcely made a sign. It is true that the pictures at Hampton Court are not such as would move the multitude: the large works of the modern French school, such as are seen in the Luxembourg at Paris, by Vernet, Delaroche, Deveria,

and others, could not have failed of effect; but it is highly gratifying to see that popular respect for works of Art which is preparatory to their full appreciation. There is among our countrymen of a certain rank in life a proneness to mischief, which distinguishes them from the same class of every other nation; but certainly the gross absurdity of seeking amusement in injuring and destroying valuable property, is distinctly on the decrease. Mr. Allan Cunningham, however, in his evidence before the Select Committee, says that "they would take a finger yet." The following passages refer to the monuments of Westminster Abbey:—

"From what you know of the recesses of the Abbey, do you think that a guide taking round eight or ten individuals, can have his eyes round him to prevent dilapidations if some of the party were disposed to do it? If there were double the number of men you have there now, probably it could scarcely be done.—If the number of individual visitors were increased, would not there be check against others doing mischief? I do not know; I cannot answer that question.—Do you think that they would be more scrupulous where there were many visitors than when there were only a few? I have seen people take advantage to do mischief amongst numbers, and also I have seen them do it when there were only a few.—Is there not among English people in general, not only in lower orders, rather a disposition to take away pieces? They have better taste now, but they would take a finger yet.—Is that tendency increased or decreased? Decreased.—Does that hold among the higher class as well as the poor? Certainly. Do you think it is decreased with regard to both classes? Yes; few relics are now taken by visitors. As the facility of admission to objects of art has increased, so the tendency to injury has decreased.—Would not the freer access, and the more they had the opportunity of admiring the beauties of sculpture, tend to afford greater protection?—Decidedly; the greater number the people that go, and the more the place is thrown open, the more the taste is diffused."

The weakness of abstracting reliques and mementoes is prevalent in all classes of English society; and that the appetite for profitless mischief is still indulged wherever it can be so with security, was strongly instanced but a few years ago at Florence. All who have visited that city are of course well acquainted with the Boboli Gardens—to those who do not know the place, it may be necessary to say, that they are attached to the palace of the Grand Duke—are extensive, abounding with sculpture, such as it is—and open on certain days to the public. One or two servants in livery are always in the gardens on public days, but they are rarely met with, which was an opportunity not to be lost by some witty English lover of a practical *jeu d'esprit*. Accordingly, a bag was picked up one morning by one of the servants of the Grand Duke, near the palace, containing fingers, and even entire hands, feet, noses, heads, in short all the most practicable portions of some of the best statues in the garden. The author of this excellent joke was never discovered by the authorities, although he was afterwards known to some of the English circle in Florence, who were so stupid as not to see the wit of the thing. Such are the feats of persons, who rather than give up all claim to distinction, will thus signalize themselves; and it cannot be doubted that many of the comparatively retail injuries sustained by the monuments in Westminster Abbey have been done in a similar spirit.

If nothing be done for the restoration of the ancient monumental memorials in the Abbey, surely something might be done to preserve them in the condition in which they remain to us; but instead of such a proceeding, they are more than ever exposed to desecration. They are not perhaps generally of a distinguished style, but they are of importance to the history of Art, and are of abundant interest in all their circumstances; indeed, all those of ancient date are among the great links that connect us with the past, and assist our inquiries about those who are gone before us. They are incalculably useful to the historian, since many of them contain in their sculpture facts that are not to be found otherwise recorded. We are already indebted to these monuments, and the Gothic architecture in which they are contained, for a style of Art, which if not strictly historical in the higher sense, is yet so in another acceptance which has a value second only to the former. We may instance the works of Mr. Cattermole, and also those of Mr. Joseph Nash, which combine truth of architecture and costume, such as never could have been attained without long study within the walls of our sacred edifices

so rich in historical antiquities. It was sufficiently shown in May last, before the Select Committee on National Monuments, that the superintendence, however careful, of Deans and Chapters is not sufficient for the preservation of monuments. In September 1837, the French government instituted a commission, consisting of eight persons, who were instructed to collect documents relative to the national monuments of France, and to advise on every subject connected with their support and preservation. The power vested in this commission is the authorisation of persons to visit the various buildings valuable for their antiquity, to report to the Minister of the Interior their condition, and to point out what repairs may be necessary for their future preservation. The government allots annually a sum of money for the furtherance of the purposes of this commission, which has already effected much in the best spirit. A very strong argument in favour of such a committee, under a department of our own government, may be found in a passage of the evidence of Mr. Britton, the well-known veteran antiquarian, who says,—

"Since I commenced my architectural and antiquarian studies, I have seen infinite and important changes in the conduct, in the knowledge, and in the taste of the deans and chapters of the respective cathedrals: when I commenced my architectural and cathedral antiquities, those officers seemed to have been regardless both of the history and of the architectural merits and beauties of the respective buildings; within the last 15, 20, or 30 years a greatly improved taste has prevailed amongst the clergy; they are ambitious to study the subject, and of preserving the buildings in a very material degree, but not to the extent that I think the history and the interest of the churches require from the public."

Several valuable works have resulted from the labours of the French commission; and under all circumstances a better example than this could not be followed for the preservation of our own cathedrals and the monuments they contain, which in the whole are more interesting than those of France. To many ecclesiastical bodies the appointment of such a committee would be acceptable, as they would then perhaps be enabled to effect such necessary repairs as they cannot otherwise undertake. Had such an authority existed, we should not have had to complain of the removal of so much of the curious iron work which was placed round the monuments at the time of their erection. That it was old was the best reason for its preservation, but this it was that caused its removal: these elaborate ornamental screens and railings were actually portions of the memorials as originally set up, and they ought not to have been destroyed.

It would be a most ungrateful task to dictate in any way to feelings of a family seeking to pay honour and respect to the memory of a deceased parent: such feelings naturally set at nought every other consideration; but if such a commission as that alluded to existed among ourselves, there would be no reason for such complaints as that of Mr. Britton, of the confusion and unmethodical arrangements in some of our most remarkable sacred edifices. Speaking of Bath Abbey, he says:—

"Perhaps there is not a church in England, not excepting that national mausoleum, Westminster Abbey, so crowded with sepulchral memorials as the sacred edifice now under notice. Besides the floor being nearly paved with slabs, there are at least 450 tablets, &c., of all descriptions, affixed to the side walls and pillars of the building; nearly the whole interior surface of the walls, floor, and columns is lined or covered with slabs and tablets, of all sizes, forms, colours, and materials; brass, copper, stone, slate, marble, and wood are distributed over the surface, to attract the eye of the visitor. From their number, and diversified forms and colours, they may be said to counteract the destined purpose of each,—sympathy and awe. Instead of solemnity and repose, they produce fitter and confusion; the eye cannot rest, nor can the mind be serene, where such distraction and incongruousness prevail. Here is neither order nor symmetry; nor has there been any attempt at systematic arrangement; in excuse it may be said that it would be impracticable, if not impossible, to remedy such a defect, where the fancies of so many persons are allowed to prevail. The beginning of the evil is not of the present day or present age; and few have the courage and good taste to commence a reform where so much is to be undone, as well as done. Here is another part that applies also to Westminster Abbey and St. Paul's, which was the subject, at that time, of a good deal of discussion: 'Although these remarks are applied immediately to the church under notice, they are alike applicable to Westminster Abbey,

to St. Paul's Cathedral, and to many other ancient and modern fabrics. If "Committees of Taste" be officially or voluntarily organized, they should give proofs of taste in the choice of situations, as well as choice of subjects, for interior monuments."

It is highly probably that to these remarks of Mr. Britton, the improvement effected by a judicious distribution of the monuments is owing; for since these observations were written much has been done to produce something like an orderly arrangement.

Such confusion is partially remediable; but when portions of ancient memorials are removed, their integrity destroyed, and their interest consequently diminished, it is surely time that a voice should be heard in behalf of their maintenance against spoliation and wanton injury. We may congratulate ourselves that the Reformation in England was not attended by the incendiary and savage excesses which marked the reforming spirit in the Low Countries as described by Schiller. The remnants of early times that are left, have originated a charming though subordinate style of art, in which our professors have far outdone all attempts at rivalry. It is the opinion of Mr. Britton, who may be said to have lived in cathedrals for the last fifty years of his life, that by opening these fabrics to the public and familiarizing them with their contents, as a means of imparting information and stimulating inquiry, the risk of injury would be diminished and finally abated. This opinion is supported by that of Mr. Brayley, the author of the historical account in Neale's Westminster Abbey. When Sir Henry Ellis was examined in 1836 before a Committee of the House of Commons, he declared, it seems, an impression unfavourable to the opening of the British Museum; but before the late Select Committee on National Monuments, a revolution had been wrought in his sentiments, as he himself states.

"In the evidence before the Select Committee on the British Museum, in 1835-6, you expressed fears with respect to the conduct of the public if admitted to the Museum during the great holidays of Easter and Whitsuntide; will you now state, from the experience you have had since, what is your opinion of the conduct of the populace? My fears have not been realized; on Easter-Monday and on Whit-Monday the numbers are very great; on one Whit-Monday they amounted to 32,000 visitors.—In what year was that? I believe it was in 1837, between nine in the morning and seven in the evening.—During that day in which the numbers were so great, was there any difficulty in maintaining order, or was the conduct of the people perfectly correct? There might have been some few irregularities, but nothing of consequence; nor have I ever had occasion on the crowded days, or on any days, to give any single individual into custody for misconduct."

Much as the monuments of Westminster Abbey have suffered from wilful mischief, they have sustained yet more injury from a want of due appreciation. On occasions of recent coronations they have been broken and mutilated in order to afford room for accommodations for spectators. In allusion to this, the following passage occurs in Mr. Brayley's work: the monument spoken of is that of Edmund Crouchback, Earl of Lancaster:—

"This monument is more complete in its design, and much larger than that of Valence, yet its style and execution are very similar: like that, also, the upper part of its canopy has been most vilely mutilated. Even at the last coronation (that is, of George IV.) its remaining pinnacles and finials were disgracefully taken down, for the purpose of obtaining room for a few additional seats in a temporary gallery; and they are now lying unrestored beneath the ancient arch, over the tomb of Vaughan, in the chapel of St. John the Baptist. It is thus that our most elegant sepulchral memorials become progressively deteriorated and eventually destroyed, through the ill taste or negligence of those who ought to take an interest in preserving them."

About 20 years ago, on the occasion of the removal of the iron guards of the tombs, those of the monuments of Queen Elizabeth, Mary Queen of Scots, Edward the First, and others scarcely less interesting, were taken away, among which was a wrought-iron head, supposed to be a portrait of Edward the First. The gates also of Henry the Fifth's chapel were taken away. They are thus described by Mr. Brayley:—

"In the tenth volume of Rymer's 'Fœdera' is the copy of an order for the payment of £12 to John Arderne, clerk of the works, for 36 tons of Caen stone (*doliatis petreæ de Caen*), by him purchased to make the king's tomb, and £23 6s. 8d. more for making the tomb. This order bears date in the first year of Henry the Sixth; and it is therefore evident that the tomb

was then completed. In the same volume is also an agreement for the fabrication of the iron-work around the tomb, made by Roger Johnson, smith, of London, and copied from the patent-rolls of the ninth year (anno 1431) of Henry the Sixth. Not a doubt can be entertained but that the iron-work therein mentioned is the same that still remains, though Dart has erroneously assigned it to the time of Henry the Seventh; and it is evident that it could not have been put up till the front, at least, of the chantry chapel was completed. The ornamental parts of the gates which enclose the tomb are entirely allusive to the armorial insignia of Henry the Fifth, and the devices and workmanship of the whole are very curious. The recess in which the tomb is placed is nearly a square, enclosed by iron grates and gates; the latter open under a handsome pointed arch of stone, surmounted by an elegant arrangement of canopied niches turreted (including statues and other ornaments), and flanked by octagonal towers. The general pattern of the open work of the gates consists of small-sized squares, each containing four trefoils, and their impost or fascia is divided into 13 compartments, which have been painted alternately blue and red; on each blue space were placed three gilded fleurs-de-lis, and on each red space three gilded lions; below these, near the middle of the gates, were fixed alternately a row of swans and a row of antelopes, but only one swan and two antelopes are now remaining."

Under the superintendence of an officer of the Crown these memorials must have remained in an entire state; and considering the satisfactory proceedings of the French Committee, it is to be hoped that they will not be much longer overlooked. But the removal of the railings is not the only reason calling for some such supervision; for from the very process of cleaning, which is committed to ignorant persons, many of the armorial bearings have been obliterated. With respect to the free admission of the public, that would be a new source of information; and from past experiments, such a proceeding may be as free from risk in this case as in others.

#### REVIEWS.

PICTURESQUE SKETCHES OF THE AGE OF FRANCIS I. Drawn by WILLIAM MÜLLER. Lithographed by LOUIS HAGHE. Publishers, HENRY GRAVES and Co.

The splendours of this period of French history have occupied very much the pencils of native artists; but these have failed to produce anything approaching the valuable realities of the work before us—a series of twenty-six charming tableaux of the architectural reliques of the *renaissance*; some of which have been deemed worthy of modern imitation, and accordingly removed to Paris as models for study. It is a matter of surprise to all foreigners who visit France, that the taste which prevailed during the reigns of Francis I. and Henry II., whose age was the French *cinq-cento*, should have been superseded by that which gave rise to the heavy piles and pyramidal roofs of the period of Louis Quatorze. The French must regret that the sensitive and constitutional egotism of the *grand monarque* led him to adopt that which was absolutely bad, rather than give his suffrage in favour of the fine perceptions of another—rather than not work out for himself an entire identity, whether for better or worse. In comparing the edifices of the two periods, it may fairly be said, that the taste of the former was put out by the huge extinguishers which capped the buildings of the latter time. Nothing in this style of art can ever surpass the beauty of these sketches, which present us the remains of the magnificence of the *roi chevalier*. The series contains views of—the Terrace, Chambord—the Gallery at Fontainebleau—Monument of Francis of Brittany—the Tournament, Chambord—the Guard-room, Chambord—Bed-room of Diana of Poitiers—the Court of Honour, Fontainebleau—Drawing-room, Fontainebleau—Grand Dining-room, Chenonceaux—Bed-chamber, Azay-le-Rideau—Chamber of Marie de Medicis, Blois—House of Francis I.—Chapel at Amboise—Tomb of Maréchal Brezé, Rouen—Ball-room of the Palace, Fontainebleau, &c. &c. This work cannot be confounded with the

ephemerals of art got up for the drawing-room table, for it is identified with the history of one nation, and does honour to the progress in art of another. The sketches commence at the Castle of Chambord, which is situated about four leagues from Blois, and is one of the most perfect remains of the time. It was commenced in 1526, and was in progress of building during the reign of its founder Francis, and of those of Henry II., Henry III., and Charles IX. Francis began its erection so earnestly, that he employed 1800 men upon the works; but as his successors were not moved by the same spirit, it was never completely finished. The sketch is the terrace, which is viewed through an arch, the shadow and solidity of which, contribute additional lightness and elegance to the *tourelles* seen through it. This plate is moreover the frontispiece; and the more appropriate as being everywhere deviced with the cognizance and initial of Francis. We are next transported to Fontainebleau, and set down amid the gorgeous decorations of the *Salle des Fêtes*, or Gallery of Francis the First, which, in its style, is unrivalled. Before the time of this king, the Palace of Fontainebleau was of little note; but he so improved it as to bestit the magnificence of his court. This famous gallery, which we find so faithfully represented in the plate, is the finest existing specimen of the elaborate detail which characterized the interior decorations of the *renaissance*. It is enriched with large pictures, by Primaticcio, Rosso, and other celebrated artists, contemporaries of Francis; and between these are placed cariatides, which give an inconceivable air of grandeur to the whole interior. In panellings below these are set numerous carvings of the royal trophies, arms, and ciphers above and around which appears inscribed *François, of Francisus rex Francorum*. There are also innumerable sculptures of high merit, masks, frescoes, medallions, &c.; in short, Art in every form of perfection enriches this truly regal gallery. To complete the picture, the artist has represented Francis himself attended by the dames and cavaliers of his court, and receiving a vase from the hands of Benvenuto Cellini, who presents it kneeling. The grouping is admirably effective, and the character of the throng accords perfectly with the splendours by which they are surrounded, for every figure wears the picturesque costume of the days of Titian and Raffaele.

*The Tournament at the Chateau-Chambord.*—In this plate the principal front of the chateau is exhibited, showing that the plan of its founder was to construct a Moorish pavilion of unparalleled splendour. This is really a picture of high merit, for the foreground derives life from a joust, which, of course, has attracted a concourse of spectators who surround the lists on all sides. Knights mounted, and in full panoply, are waiting before their respective tents to be summoned to break a lance with their antagonists; and squires, pages, and men-at-arms, are everywhere seen busied in their duties, or interested as spectators.

*Bed-room of Diana de Poitiers.*—Diana de Poitiers, it will be remembered, was the mistress of Henry II., and this plate represents her bed-chamber at Chenonceaux, a chateau in the department of the Indre and Loire; the only one in that district remaining entire. Chenonceaux was the property of Diana, and there she was accustomed to receive and entertain her royal lover, when on his hunting expeditions in the neighbouring forest of Loches. The whole of the furniture in the apartment is designed and carved with the nicest art; nothing, indeed, seems to have escaped the care of the artist, for the minutest detail is followed out with the utmost accuracy. The furniture in this apartment bears the initials H. and D.

*Chamber of Marie de Medicis, Blois.*—The castle of Blois is one of the most remarkable in France. Having arisen gradually to its present extent from additions received through a long series of ages, it consists of a mixture of the architecture of all times. The sketch describes an apartment in it, furnished and ornamented in the taste of the *renaissance*. Blois was the scene of the murder of the Guises by Henry III., and it is probable that this was the apartment occupied by Catherine de Medicis during the perpetration of those base and cowardly assassinations. One-third of this superb plate is occupied by one of the highly ornamented fire-places of the period, on which are set portraits of Francis and Henry in medallion frames, surrounded by carvings of the most beautiful design; in short the paneling of the entire apartment is covered by carvings and arabesques, chaste and elegant beyond description.

*Chapel of the Chateau at Amboise.*—This chapel has lately been restored by the present King of France in its original style—the gothic of the middle ages; of which it is, on a small scale, one of the finest specimens in Europe. The drawing is so finely executed, that the delicately sculptured tracery with which this interior abounds is nowhere lost. The artist has represented the ceremony of the baptism of one of the princes in a manner so forcible, as to claim for his work the consideration of a valuable picture.

*Tomb of Maréchal Brezé, Rouen.*—This is one of those splendid mausolea of the sixteenth century, on the designs and ornament of which were exerted the greatest talents of the time. It was erected by Diana of Poitiers, in memory of her husband, Louis de Brezé, and is constructed of white and black marble, the effects of which, respectively, are most faithfully preserved in the lithography. The effigy extended on the tomb, contrary to ordinary forms, is not only exposed without the usual funeral parade, but almost naked. Above, the *maréchal* is again seen, but as in life, sheathed in steel, reigning a spirited destrier, barded as if for the tournament. Diana has caused herself to be represented as a mourning widow at the head of the naked figure, and to be graven on the tomb an inscription, somewhat impudent considering her *morale*, and the tenor of her life.

*Tomb of the Cardinals Amboise, Rouen.*—Another of the magnificent tombs at Rouen; it was finished in 1525. The two cardinals, uncle and nephew, are represented kneeling on cushions, their heads uncovered, and their hands joined in prayer. This sepulchre affords certainly one of the finest specimens of monumental sculpture in the world; its inimitable beauties have received full justice at the hands of the artist.

*Ball-room of the Palace, Fontainebleau.*—Another portion of the *Salle des Fêtes*, commenced by Francis and finished by Henry II. The abundant decorations of the noble fire-place are here exhibited in large; every practicable space may be observed to be occupied by the initial of Henry entwined with that of Diana of Poitiers, or their devices. Gigantic cariatides occupy the side of the fire-place, and high over their heads, and between columns extending almost to the ceiling, are seen the arms of France surmounted by the crown, supported within the Poitiers crescent.

*Monument to Louis XII., St. Denis.*—This tomb is constructed of white and black marble. On the upper platform are the figures of Louis and Anne of Brittany, his queen, in the act of praying, while the same are extended as in death in the lower division, within the open arches of which are seated life-sized figures of the apostles. Nothing can exceed the beauty of the arabesques so profusely distributed over this monument: they were designed by Raffaele.

This valuable work cannot fail to be as popular in France as it must be in England: it is impossible to do it justice in a notice necessarily limited: a description worthy of its subject-matter would fill a volume.

Of Mr. Müller we have had frequent occasion to speak, and always in terms of the highest commendation. His genius is of the best order, and in energy and perseverance no artist surpasses him. He has by this publication added materially to his already-established reputation.

**ELEMENTARY STUDIES, by H. W. BURGESS.**  
Published and sold by Mrs. H. W. BURGESS,  
Sloane-street.

The author of this work, the late Mr. Burgess, has for many years been favourably known as a most successful instructor in pencil drawing. This work is a lithographic copy of drawings executed by Mr. Burgess, and originally intended by himself as the first number of a series of three, which intention Mrs. Burgess now proposes to realize, provided she sustain no loss by the publication of this, the first. The manner in which these copies are lithographed is a most successful imitation of the decided and powerful touch which distinguished the sketches of the late Mr. Burgess. The studies are purely elementary, and commencing with the simplest forms, lead the student gradually to the more complicated objects likely to engage his attention afterwards; he is also introduced to the first principles of drawing trees, generally a difficult study, but here inculcated with ease and address.

**THE STUDENT'S GUIDE; OR ELEMENTS OF DRAWING AND PERSPECTIVE. By H. M. WHICHELO.** Published by SMITH, ELDER, and Co., Cornhill.

This little work dwells upon a knowledge of perspective as an essential to correct drawing, in which we concur most heartily. It embraces a few illustrations with the perspective rules attached, arranged in such a manner as to afford progressive studies, as well as directions for enabling the student to use the lead pencil with good effect, and even to proceed from that to sepia and water colours. The student will find in this little treatise much useful knowledge, conveyed in a form more simple and intelligible than may be met with in more elaborate works. The perspective lessons are easy, and the instructions for the mixture of colours and for using them plain, and well adapted for beginners.

**PORTRAIT OF WILLIAM WORDSWORTH.** Engraved by E. MC INNES, from a Miniature by Miss MARGARET GILLIES. Publisher, F. G. MOON.

What a world of "happy thoughts" does the name of the poet summon into existence—all, and only, happy—for it is associated with nothing low or mean, or grovelling, much less vicious. It sends the care-worn student into the green-lanes to hold companionship with Nature. The hum of the home-bound bee—the merry song of the milk-maid—the note of the robin (a little too soon, perhaps, for he anticipates winter)—the "crisping" of the leaves, that have already fallen—and the breeze that murmurs a pensive yet not a melancholy good-bye to the foliage of the hedge-rows—memories of them all, and of many others with them, are awakened by the name; for awhile our dream is far away from books, and the dull atmosphere of the lamp, and we are breathing the pure air of the hills and valleys, changed as effectually, for the moment, as was poor Susan when she beheld

"Volumes of vapour through Lothbury glide,  
And a river flow on through the vale of Cheapside."  
Great man! Good man! The eloquent advocate of truth and virtue. No "maker" of old times, or of our own age, has more consistently or per-

severingly maintained the poet's privilege to give us—

"Nobler loves and nobler cares."

He has made mankind his debtor while the world lasts. How delightful it is to those who know him, through his works, and love him for his sound and manly heart, laid open by his verse, to look upon this most welcome copy of his fine benevolent and expressive countenance. It is just the man, in one of his happiest moods—when his loftiest aspirations are with the simple truths of simple nature; and the hero he pictures is one whom the Creator has ennobled. The portrait is like—very like him, as we knew him some half-a-dozen years ago; his features, never handsome, though strongly marked, and with a character peculiarly *generous*, had been improved rather than impaired by years, and his white hair was growing thin about his broad and lofty brow; but there was a dignity with a freedom in his firm step—and his age seemed "as a lusty winter," healthful and invigorating. A most acceptable gift, therefore, is that which the fair and accomplished artist has sent us; it has given us an hour's enjoyment already; we shall return to it, again and again, as to a draught of refreshing water when the soul is thirsty; and, as we look upon it, repeat, over and over, some of the divine conceptions he has "married to immortal verse."
